

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

RECORDS SECTION

SEP 16 1941

ENTERED, according to Act of Congress, in the year 1886, by
D. APPLETON AND COMPANY,
In the Clerk's Office of the District Court of the United States for the Southern District
of New York.

P R E F A C E .

THE present volume of the ANNUAL CYCLOPÆDIA for the year 1865 embraces the final military operations of the war in the United States, the disbandment of the armies, the reduction of the fleets, and the peaceful occupation of the Southern States. The change in the administration of the Federal Government by the shocking death of President Lincoln, and the accession of Vice-President Johnson, are described in its pages, together with the various measures to re-establish the State governments and to restore the authority of the Federal Government in all parts of the Union.

The debates in Congress during the year on the relations of the Southern States to the Union, the recognition of the Louisiana government, the admission of a Senator from Virginia, etc., present the preliminary views of that body on one of the most important questions of the time. The views of Presidents Lincoln and Johnson, as expressed in their public addresses, have been included, as also their messages to Congress, the report of the Lieutenant-General, and the public documents of the Government.

The achievement of emancipation by the almost universal assent of the country; the measures taken by the Federal Government relative to the freedmen; those adopted by the Conventions and Legislatures of the Southern States to raise them to a position of civil rights; and the successful adaptation of the former master and servant to the new mode of life—forming one of the most interesting chapters of human history—are presented in this volume. No less interesting was the sudden change in the aspect of the country on the disappearance of military lines; the unobstructed passage back and forth to the North and South; the reunion of belligerents as “one people, one country, one destiny.” This has not been overlooked in these pages.

The details of the internal affairs of the country embrace the disappearance of the armies among the citizens; the resumption of commercial inter-

course ; the commerce of the country ; the finances of the Federal Government and its banking system ; the acts of State Legislatures ; the results of elections ; the progress of educational and charitable institutions under the care of the State governments ; the debts and resources of the States ; and all those political movements, the results of which are to transfer the public power from one to another portion of its citizens.

The relations of the United States to foreign nations, as developed in its Diplomatic Intercourse, are fully presented ; and also the civil, military, and commercial history of all the States of Europe and South America, and the more important kingdoms of Asia, with some countries of Africa, is fully brought up.

The progress and peculiar features and mode of treatment of those scourges known as the Asiatic Cholera, the Cattle Disease, and the disease of Swine, with the latest investigations, have been carefully described.

The advance in Astronomy, Chemistry, and many other branches of science, with the new applications to useful purposes which have been developed, have not been overlooked.

Geographical explorations have been earnestly continued in all quarters of the globe, and the discoveries which have followed have been fully presented.

The record of Literature is not less interesting than that of any previous year. The titles of all important works of the various classes to which they belong, are stated in detail.

A notice of the principal religious denominations of the country states their branches, membership, views on civil affairs, and the progress of their distinctive opinions.

The number of distinguished men who closed their career has been large. A brief tribute is paid to their memory.

All important documents, messages, orders, despatches, and letters from official persons, have been inserted entire.

THE ANNUAL CYCLOPÆDIA.

A

AFRICA. The French Government were disappointed in their expectation that the insurrection of some of the native tribes in Algeria was effectually subdued at the close of the year 1864. New outbreaks occurred during the year 1865, and at its close the most formidable of the insurgent chiefs, Si Lala, was still in the field. Very alarming rumors that Si Lala, at the head of 50,000 men, held the whole south of Algeria, circulated in Paris, in November; but the *Moniteur* denied their correctness, and asserted that, on October 19th, he had only made his appearance in the southern districts of Algeria with 2,000 horsemen and 1,400 soldiers on foot. According to the *Moniteur de l'Algérie* of November 12, Si Lala, finding his efforts to be fruitless, his resources exhausted, and his cavalry fatiguing themselves in vain, decided upon retreating rapidly toward the southwest, and was actively pursued by the French forces. Gen. Lacroix, marching from Daya, overtook and defeated, on November 8th, at Oud-bon-Lerdjem, to the west of Maïa-Chott, the Hamian tribes and the fractions of the Djembas and Chafas who had joined Si Lala. Official news from Algeria reached Paris on December 15th, which stated that Col. Colomb, reinforced by the tribes recently subjected, had on several occasions beaten the tribes still in insurrection, who were seeking refuge in the desert of Sahara, that the tribes who had been defeated had asked for pardon, and Col. Sonis had cut off the retreat toward the east of Si Lala. In May the Emperor Louis Napoleon visited Algeria, where he received an enthusiastic reception on the part of many chiefs and tribes, and was met by special ambassadors from Tunis and Morocco. On his return to France, it became known that the Emperor was preparing a pamphlet on French colonization in Algeria, but its issue was delayed until November 3d,

when it appeared in the form of a letter to Marshal McMahon. It concluded as follows: "I would turn to account the valor of the Arabs rather than bear hardly upon their poverty; render the colonists rich and prosperous rather than establish settlements of emigrants, and maintain our soldiers in healthy situations rather than to expose them to the wasting climate of the desert. By the realization of this programme we shall appease passions and satisfy interests; then Algeria will be to us no longer a burden, but a new element of strength. The Arabs, restrained and conciliated, will give us what they can best give, namely, soldiers, and the colony, become flourishing by the development of its territorial riches, will create a commercial movement eminently favorable to the mother country."

In accordance with the views of the Emperor, the French Government, on June 22d, brought forward the draft of a decree respecting Algeria. It provides that the native Mussulman be considered a Frenchman. He will, nevertheless, continue subject to the Mussulman laws of the country, but can, on application, be admitted to the rights of French citizenship. The native Israelite also is to be considered a Frenchman. He will continue to be governed according to the peculiar statutes of the Hebrew race, but, on application, can enjoy the rights of a French citizen. Foreigners, upon proving three years' residence in the country, are entitled to the rights of citizenship. An administrative regulation will determine the conditions of admission to the public service and of advancement in the army for native Mussulmans and Israelites, and also the offices to which they can attain. This draft was adopted by the Senate without important modifications. In July, Mr. P. H. Rathbone, the President of the Liverpool Chamber of

Commerce, on returning from a visit to North Africa, presented an interesting report on the commerce of Algeria. Mr. Rathbone is of opinion that Algeria might rapidly be developed into a "paying" colony if ruled by France on more sound economic principles, and if the colonists were not, as at present, subordinate to the army, and the colony to Marseilles. Mr. Rathbone also advocates the opening of the ports and the establishment of regular steam communication with Great Britain. The Arabs he denounces as dishonest and lazy, and encouraged by the laxity of the Bureau Arabe to cheat Europeans, particularly in the sale of wool. The Kabyles, he says, are both industrious and honest. With more business freedom, Algeria, he thinks, would easily produce immense quantities of good wool, cotton, wine, oil, and corn, as well as useful grass, called *crin végétal*, much used by upholsterers in place of horse-hair.

In Morocco, a fresh insurrection broke out in the neighborhood of Rabat, in May, but it was soon quelled. In July, the Emperor of Morocco issued an important edict commanding that no person, poor or rich, should be punished contrary to law, and prohibiting the exaction of any fines except as prescribed by law. It also forbids people to present money or other gifts to any governor or employé; and if any governor imposes fines contrary to imperial decrees, the people have the liberty of appeal to his Majesty, who promises complete satisfaction. The Emperor also appointed a day in each week for receiving, and determining the complaints of his poor subjects.

The Suez Canal has made sufficient progress to enable light boats to pass from the Mediterranean to the Red Sea. The completion of the work, and its opening for navigation, the company expects to take place by the 1st of July, 1868. (See SUEZ, CANAL OF.)

The English Government had not, at the close of the year, obtained from the Emperor of Abyssinia the release of Consul Cameron and other British subjects who have been kept in prison nearly two years. A parliamentary paper issued by the Government on June 20th, contains full and interesting information respecting the relations of the Emperor Theodore of Abyssinia with England and France.

The Island of Madagascar continued to be agitated by internal convulsions. In October, the French Government received despatches stating that Raharia, governor of Tamatava, persisted in his refusal to pay to the commander of the French squadron on the station the sum due to the French Government as an indemnity. His refusal was approved by the Queen, and a reinforcement of 1,000 men was sent to him to guard the house where the money was deposited, thus raising the force stationed there to 3,000 men. The Government of the Hovas moreover resolved to burn the treaties in the public square of Tamatava between King Radama and the agent of the French Government.

The accounts given by the Rev. Mr. Ellis, the pioneer missionary, were more favorable. He stated in a public address delivered in England, that the Government of Madagascar upheld religious toleration, that Christianity was spreading very rapidly, not only in the capital, but in the most remote parts of the country, and that there was reason to hope that the next generation would be predominantly Christian, and witness the extinction of Paganism.

South Africa was throughout the year the scene of hostilities between the Orange Free State and the Basutos, which sometimes threatened the peace of the frontier of the English Colony of Natal. In reply to representations from the Governor of the Cape Colony, Moshesh, the chief of the Basutos, stated that he had met the demand of the Natal Government for invading their frontier. He also urged the governor to take possession of his country and people, alleging that they were desirous of becoming British subjects. The governor declined to take steps at the present juncture, and doubted the sincerity of Moshesh, but lamented the war, which, he said, if continued much longer, would cause much misery and destitution among the Basutos, and largely increase their cattle thieving.

The Government of the Cape Colony proposed to the Colonial Parliament the annexation of British Kaffraria to the colony, and carried the measure, although considerable opposition was made to it.

AGRICULTURE. The year 1865 was, on the whole, a favorable one for agricultural products, though the extreme moisture of May and June in some sections affected the earlier grain crops, and the extraordinary drought of the autumn in New England and portions of New York, affected the late crops, and especially the fruits, unfavorably. So vast is the extent of the country, however, and so varied its climate, that with our abundant and constantly multiplying means of communication, a deficiency of a particular crop in one section is readily made up by its excess, or at least abundance, in another.

Of the cereal grains, the *wheat* crop is smaller both in the number of bushels and the weight of the grain than in any year since 1860. The following are the crops of this grain, according to the estimates of the Agricultural Department during six years past, omitting the crop of 1861.

1860.....	182,984,782 bushels.
1862.....	181,158,089 "
1863.....	179,404,086 "
1864.....	160,695,328 "
1865.....	148,522,329 "

By this table it appears that there has been a decrease in the amount of the wheat crop each year since 1862, when it attained its maximum, and that this decrease in 1865, as compared with the crop of 1862, was nearly 33 millions of bushels, being a little more than 12 millions of bushels less than the crop of 1864.

This reduction in the amount of this important crop was not, however, uniform throughout the wheat-growing States; Vermont, Connecticut, Michigan, Iowa, Minnesota, and Nebraska produced larger crops than in any previous year since 1860, and Maine, New Hampshire, New York, and Wisconsin, reported a larger yield than in 1864. The principal falling off was in Ohio, Indiana, and Illinois, and the loss in these three States as compared with 1862 and 1864, will appear from the following table :

	1862. Bushels.	1864. Bushels.	1865. Bushels.
Ohio.....	80,796,082	20,407,508	17,601,472
Indiana.....	20,292,160	22,821,876	18,020,808
Illinois.....	82,218,500	88,871,173	25,266,745
Totals of three States	83,801,692	76,100,052	55,589,020

The reduction it will be observed in these three States is about 27,500,000 bushels from the crop of 1862, and of over 20,000,000 from the crop of 1864. Illinois is still the leading wheat-growing State, but Wisconsin has passed all its other competitors and ranks second in the list, while Ohio ranks third, and Michigan fourth.

The *Rye* crop, a far less important one than the wheat, is a trifle and but a trifle below that of last year. Its range during the past six years has been limited, as the following table will show :

Rye crop in 1860.....	18,793,198 bushels.
" 1862.....	91,239,451 "
" 1863.....	20,792,732 "
" 1864.....	19,873,975 "
" 1865.....	19,548,905 "

The principal rye-growing States, in the order of their production, are, Pennsylvania, New York, New Jersey, Wisconsin, Illinois, Connecticut, and Ohio. No other States produced in 1865 a half million of bushels.

The *Barley* crop is not a large one, but compares favorably with that of former years, having been exceeded only in 1862, and then only about 1,100,000 bushels. The following table shows the production of the past few years :

Barley crop in 1860.....	10,926,765 bushels.
" 1862.....	12,458,022 "
" 1863.....	11,868,155 "
" 1864.....	10,682,178 "
" 1865.....	11,391,286 "

Nearly two-fifths of the whole barley crop is produced in the State of New York, while the greater part of the remainder is raised in Ohio, Illinois, Wisconsin, Maine, Pennsylvania, and Iowa.

The *Oat* crop of 1865 was largely in excess of any former year, as will appear from the following table :

Oats produced in 1860.....	151,290,980 bushels.
" 1862.....	171,468,405 "
" 1863.....	173,500,575 "
" 1864.....	176,600,064 "
" 1865.....	233,252,295 "

The excess over the crop 1864, it will be seen, is about 48,500,000 bushels, and over

that of 1862, nearly 54,000,000 bushels. In this crop New York takes the lead, its production being 48,675,090 bushels, and Pennsylvania follows with 46,571,661 bushels. The other principal oat-growing States are, in the order of their production, Illinois, Ohio, Wisconsin, Iowa, Indiana, Michigan, New Jersey, Maryland, Kentucky, Vermont, Minnesota, Missouri, Connecticut, and Maine.

The *Hay* crop was also very large, exceeding by nearly 5,500,000 tons the crop of 1864, and by more than 3,000,000 that of any preceding year, as the following table will show :

Hay crop of 1860.....	18,793,029 tons.
" 1862.....	20,257,963 "
" 1863.....	19,786,847 "
" 1864.....	18,116,731 "
" 1865.....	23,588,740 "

In this crop New York leads largely, producing considerably more than one-fifth of the entire crop. Illinois, Pennsylvania, and Ohio come next, and Maine, Indiana, Michigan, Wisconsin, Iowa, Vermont, Massachusetts, New Hampshire, Connecticut, Missouri, and New Jersey, follow in order. The production of hay by the other States is comparatively small.

The *Corn* crop of the Northern States was a very large one, 22.7 per cent above the average. The amount raised in the Southern States was also large, but its amount is not readily ascertained. The following statistics show the amount of this crop in twenty-two States and territories, the States lately in rebellion and those on the Pacific coast not being given for want of complete statistics. The crop of 1865 is estimated from the returns to the Agricultural Department :

Corn crop in 1862...	536,226,805 bushels.
" 1863.....	451,947,959 "
" 1864.....	530,581,408 "
" 1865.....	642,730,247 "

In this crop Illinois takes the lead, producing nearly one-fourth of the entire crop; Indiana follows, and then in their order, Ohio, Iowa, Kentucky, Missouri, Pennsylvania, New York, Michigan, Maryland, Wisconsin, and New Jersey. Adding the crop in the Southern States, and the aggregate production of corn for the year cannot fall much, if at all, short of 900,000,000 bushels.

The *Cotton* crop of 1865 was larger than that of 1863 or 1864, though in some sections it was materially affected by the rain and worms, and much of it was planted very late owing to the continuance of the war in the early months of the year, and the necessity of the corn crop for the subsistence of the people. The amount given can as yet be only approximately ascertained, but probably falls but little short of one million bales. Eleven or twelve hundred thousand bales of the crops of former years also remained over, so that the supply of cotton in the country at the beginning of 1866, was about one-half the amount of the crops of 1860, or of 1859.

The *Tobacco* crop was a fair average, except

in Kentucky, where there was a falling off of about 13 per cent. The amount planted was not quite as large as usual in some of the tobacco-producing States, in consequence of the apprehension of a tax upon the unmanufactured leaf.

The *Potato* crop is slightly above the yield of the preceding year. The rot prevailed to some extent, but not sufficiently to excite serious fears in regard to the crop.

The *Sorghum* crop, now becoming a very important product in the West and South, where the syrup or molasses has, to a large extent, taken the place of the molasses from the sugar cane, was, owing to the lateness of the frosts, gathered in excellent condition, and the yield was, as a whole, very satisfactory.

The *Buckwheat* crop was also a trifle larger than the crop of 1864, and of excellent quality. The crop of *Hops* was poor, being in many districts, especially in Central New York (which produces about nine-tenths of the entire amount raised), seriously injured by the lice, which for the last three years have made great havoc with the hop yards. The ravages of these insects during the year 1865, were singular in their character. Yards which the previous season had been so thoroughly ruined by them that the hop-growers had been tempted to root up the plants and cultivate other crops, were this year entirely free from the pest, and those which had escaped the previous year were subjected to its ravages. The crop of 1865 was probably about 7,000,000 pounds against 10,991,996, in 1864.

The *Root* crops were never better than in 1865. The yield was more than ten per cent. in advance of 1864, though that had been a remarkable year.

The larger autumnal fruits, apples, pears, quinces, &c., were very abundant in the States bordering upon the great lakes in Central and Western New York, Ohio, Michigan, Wisconsin, Iowa, and Northern Indiana and Illinois; but in New England, Pennsylvania, New Jersey, and the region bordering on the Ohio River, the crop was almost a total failure. In New England, the drought, severe and long continued, prevented their coming to maturity; in the central district, especially along the Ohio River and its tributaries, the severe frosts of the winter of 1863-'64 had killed the taproot of the apple trees, and probably rendered them permanently barren.

Peaches were very abundant in Delaware, New Jersey, and Pennsylvania, but there were very few in the region bordering on the lakes.

Of the *small fruits*, strawberries of the later varieties were abundant, while the early sorts were in small quantity and not of the usual quality. The other summer fruits were in about the same quantity.

The *Grape* crop suffered severely in the States on the Atlantic coast, and those bordering on the Ohio River, from rot, the result of the very

wet weather of June and July. In the region lying in the vicinity of the lakes and in the belt visited by the trade winds, as California, Nevada, Utah, Colorado, Kansas, and Nebraska, the crop was excellent both in quality and quantity.

The *Wool* crop has been constantly increasing in magnitude during the last five years. The attention of many agriculturists has been turned toward the raising of sheep, which has been rendered extraordinarily profitable both by the large demand for wool and its consequent high price, and the increasing use of mutton for the table. In 1860, the whole number of sheep in the United States, according to the census, was 22,471,275, and in the twenty-three States and territories, from which alone during the war returns could be obtained, 15,104,272. In 1864, the number of sheep in these States had risen to 24,846,391, and in 1865, to 28,647,269. In 1860, the wool-clip of the whole United States was 60,264,913 pounds, and of the twenty-three States already named, 47,900,862 pounds. In 1864, owing not only to the great increase in the number of sheep, but to the improvement in the breeds, it was 97,385,564 pounds, or more than double the yield of 1860; in 1865, it had further increased to 114,589,076 pounds, and is still rapidly on the increase, as it should be, for the demand for wool still causes a considerable importation from Great Britain and Canada as well as from Germany, the South of Europe, South Africa, and South America. California will probably soon supply the grade of wool hitherto imported from South America. The importation of 1864 was in round numbers 75,000,000 pounds. Owing to the increased tariff on foreign wools the importation of 1865 would probably not much exceed 30,000,000 pounds, but there is very little of this which might not be grown to advantage on our own territory.

The *Pork* crop was, in the number of hogs slaughtered, about ten per cent. below that of 1864, but the hogs were much better fattened though generally of smaller size than the previous year. The number of hogs packed in the winter of 1863-'64, is stated by the *Cincinnati Price Current* as 3,328,884; in the winter of 1864-'65, as 2,422,779; while the number for the winter of 1865-'66 is estimated at 2,180,000.

With the exception of sheep, and milch cows,* all classes of live stock have materially diminished during the war. The following tables show this conclusively, while they also give the present valuation and the average price of each description of stock. The diminution of number, is of course due to the extraordinary demand for horses and mules for army purposes, and for beef and pork for commissary supplies.

* Taking the whole country through, these, too, have probably diminished, though they have nearly or quite held their own in the loyal States east of the Rocky Mountains.

TABLE, showing the total numbers of Live Stock for 1864 and 1865, the increase and decrease thereof, the general average price of each kind, the value of each, and the total value, in twenty-three loyal States and Territories east of the Rocky Mountains.

	1860.	1864.	1865.	Increase from 1864.	Decrease from 1864.
Horses.....	4,297,428	4,049,143	8,740,983		80,209
Mules.....	811,864	890,847	247,538		83,294
Cattle and Oxen.....	8,028,815	7,946,439	7,072,091		892,548
Cows.....	5,530,459	6,066,743	5,768,150		298,618
Sheep.....	15,104,223	24,846,591	8,647,209	4,300,578	
Hogs.....	17,888,429	16,148,713	18,070,387		8,077,823
Total.....	50,682,260	53,857,279	55,547,868	4,300,579	4,610,794

Number, average price, and total value for January, 1865.

	Number.	Av. Price.	Total Value.
Horses.....	8,740,983	\$80 84	\$302,425,499
Mules.....	247,538	102 03	25,041,488

Hogs.....	18,070,387	8 55	111,796,818
			\$990,879,128

The following table, extracted from the monthly reports of the Agricultural Department, is of importance, as giving the comparative exports of farm produce in 1864 and 1865, and the prices ruling at New York and Chicago at the beginning and close of the year.

It will be observed that in most articles there was a decided falling off in prices, though not to an extent commensurate with the fall of gold.

Exports from New York of the leading agricultural products from January 1, 1865, to December 19, compared with those for the same time in 1864, and their prices in New York and Chicago.

ARTICLES.	1864.	1865.	At New York, Jan. 25, 1865.	At Chicago, Jan. 25, 1865.	Prices, December 19, New York.	Prices, December 19, Chicago.
Wheat Flour, bbls.....	1,374,508	1,399,988	\$9 20 a \$11 80	\$7 00 a \$10 00	\$7 00 a \$9 85	\$9 75 a \$11 00

In the ANNUAL CYCLOPEDIA for 1864, the culture of the grape was discussed at considerable length, and the various wine districts of the country described. The experience of 1865 indicates that in the districts near the Atlantic coast, or on the Ohio and Mississippi Rivers, the frequent occurrence of wet seasons makes the wine crop an uncertain one, both as to quality and quantity. The same difficulty is experienced in most of the wine districts of Europe, where of late years hardly one year in five proves a "good wine year." In the region lying on Lake Erie, and embracing the southern islands of that lake in Western Missouri and Kansas, and probably also in Texas, there is less difficulty experienced in making wine. But California is preëminently the wine region of the United States. Its dry climate, semi-tropical in its character, its deep, rich, and aromatic soil, and the fact that all the tenderest

varieties of grapes of the South of Europe grow freely in the open air there and are readily acclimated, render it the future wine-producing region of the continent. There are probably not less than 10,000,000 vines which have been set within the past ten years, of which one-half were set in 1864 and 1865. The wine product of 1864 exceeded 4,000,000 gallons, although the extreme drought diminished it somewhat. While the production of wine in that State is still comparatively in its infancy, and every year increases the amount and improves the quality, we may ere long expect to receive from thence wines which shall compete successfully with the best products of the best vintages of Europe, for with the choicest varieties of wine grapes they have also the most skillful wine makers of Europe.

The culture of the hop though restricted to comparatively small tracts of country, and more

largely produced in the central counties of the State of New York than elsewhere, is deserving of attention from the thorough cultivation necessary to produce the crop, and its importance as an article of export. There were a few hops grown in every State in the Union except Florida in 1859, and in every territory except Dacotah and New Mexico, but the only States which reported over 100 bales=20,000 pounds, were Indiana, Maine, Michigan, Massachusetts, New Hampshire, New York, Ohio, Pennsylvania, Vermont, and Wisconsin. Of these New York was by far the largest producer, its yield being 9,671,931 pounds, while the aggregate production of the country was only 10,991,996 pounds. Vermont which came next had 638,677 pounds, and Wisconsin, New Hampshire, Massachusetts, and Maine were the only other States which produced 100,000 pounds or anywhere near the quantity. In New York, Otsego County has taken the lead in hop culture, reporting in 1859, 3,507,069 pounds, Madison following with 1,520,657 pounds, and Schoharie, with 1,441,648. Oneida, Herkimer, Montgomery, Chenango, Ontario, Franklin, and St. Lawrence, were the only other counties which produced any considerable quantity of hops in that year.

The New England Hop District, which produced in 1859 about 1,000,000 pounds, includes those counties of Vermont, New Hampshire, Maine, and Massachusetts, lying on or near the upper waters of the Connecticut River and its affluents. The hops from this source, distinguished in the New York market as "Eastern" Hops, while those from central New York and elsewhere rank as "Western," ripen earlier, are smaller, and of milder flavor than the Western, and do not command so high a price as the latter. The advance in the production of this crop has been remarkable. It was first enumerated in the census of 1840, when the quantity produced was stated at 6,000 bales, or about 1,200,000 pounds. In 1850 the product had increased to 17,000 bales, or about 3,400,000 pounds; in 1860, as we have seen, it was 55,000 bales, or about 11,000,000 pounds. In 1862 it reached 80,000 bales, or 16,000,000 pounds, a figure which, owing to the diseases to which it has been subject, it has never since attained. In 1863 it fell off to 65,000 bales, or 13,000,000 pounds, much of the crop being of inferior quality. In 1864 it was affected by the aphid or plant louse, and to some extent by the mould also, and not more than 45,000 bales came to market. The product of 1865 was good, except in the Hop District of New York, where it was again and still more seriously affected by the aphid.

The crop is quite as variable and uncertain in Great Britain as in the United States; and when the crop fails there either partially or wholly, the brewers import largely from other countries whatever the price, while in favorable years their importation is very small. In 1859 only 248,640 pounds were imported into Great

Britain, while in 1861 the importation was 16,707,712 pounds, or almost seventy times as much, and in 1863 about the same amount. There is a home demand for from 8,000,000 to 10,000,000 pounds in the United States, yet in 1861, 8,835,837 pounds were exported, at about twenty cents per pound, while the preceding year exports were only 273,257 pounds. The prices have fluctuated from four to ten cents a pound in 1855-1858, to thirty-five to sixty cents in 1865. The hop can be grown in ordinary times and at the usual price of labor for from twelve to fifteen cents per pound.

The hop requires a deep, well-pulverized, and highly fertile soil for its successful cultivation. If the subsoil is clay it should be thoroughly underdrained. Good wheat lands are generally good hop lands, though the hop requires more silica, lime, and sulphuric acid and less magnesia and phosphoric acid than wheat. It is an exhausting crop, and in most sections requires frequent and liberal administration of manures, especially plaster of Paris, guano, and the like. The plants are usually set about seven feet apart each way, giving not far from 900 plants to the acre. Two poles, if they are sixteen or eighteen feet in height, are set for each hill, and three if they are not more than twelve or fourteen feet. These are usually spread apart somewhat at the top. Two vines or plants are usually left to grow for each pole, though if there is danger from the wire worm it is better to reserve more till this danger is past. They are usually propagated from cuttings, as the hops grown from the seed are of uncertain quality. The plants should be selected about one male to fifty female plants. The crop is usually best in the third or fourth year after planting, though it yields moderately before that time. It requires careful and thorough tillage, the weeds being removed and the soil kept well pulverized. The hop yard must be so located as to be protected from high and violent winds, yet should be open to the sun and a free circulation of air. The cost of a hop yard which will bear freely for ten years, is from \$400 to \$500 per acre, including plants, poles, manure, etc. The processes of picking, drying, and packing the hops are very accurately described by Mr. Rouse, of Oneida County, N. Y., in the Patent Office Report for 1853:

"The hops having reached maturity, or nearly so, the operation of picking commences. This, to have the fruit in full perfection, should not be done until it is ripe; at which time the seed will be found to have changed from a bright straw color to a pale brown, and will emit a fragrant smell. With us hops are usually ripe about the 5th of September; but as it is better they should be harvested rather green than be permitted to stand till over-ripe, liable to be injured by the early frosts, as they cannot all be gathered at once, it is necessary in large fields to commence somewhat earlier—usually about the first of September—in order that the work may be completed in season. The pick-

ing is usually done by females. For this purpose girls are frequently engaged several months, and even a whole year, in advance.

"The hops are commonly picked in large boxes, containing from twenty-four to forty bushels. These boxes are divided lengthwise by a thin partition, and then subdivided into quarters. They are raised a little from the ground, and have handles at the ends to facilitate their removal from place to place, as may be desirable. One man and four girls are allowed to each box. Each girl deposits the hops she picks in her own division of the box. An industrious hand can pick twenty bushels in a day without difficulty. It is the business of the man to supply the boxes with poles, which he raises from the ground as needed, cutting the vines about a foot high; to see that the picking is properly done, to remove the empty poles, clear them of the vines, and stack them in a systematic manner. In picking, the hops should be kept free from stems and leaves, and all blasted or immature ones should be rejected. The boxes should be emptied at least once a day; at all events, no hops should be left in them over night. It is of great consequence that they should be dried as soon as possible after they are picked, as they are quite liable, if left together in any quantity, to heat and spoil in a few hours. They may be most conveniently conveyed from the field to the dry-house in large sacks.

"*Drying.*—The hop-house, or kiln, should be of a size proportionate to the quantity of hops to be cured, so that they may not accumulate on hand. To avoid this, it will generally be necessary to keep the kiln heated both day and night. It is commonly built of an oblong form, and two stories, the lower part being occupied by the kiln and the press-room, and the upper part by the drying-floor over the kiln, and by a room of about equal size for storing the dried hops, which will of course be over the press-room. Kilns are sometimes built of bricks or stone, of a circular form, with a round opening in the apex of the roof, surmounted by a movable cowl, or swinging ventilator, to enable the vapor of the drying hops to escape easily. If the building is of wood, the sides of the kiln should be lined with brickwork, or thoroughly lathed and plastered. It is found to be most convenient and economical to heat it with stoves, from two to four of which will be necessary, according to the size of the kiln. The drying-floor should be ten feet from the ground, that there may be no danger of scorching the hops in drying. This floor is formed of slats about one and a half inch in width, and the same distance from each other. These are covered with a strong coarse cloth, of open texture, so as to admit a free transmission of the heated air from the kiln below. The drying-room should be of comfortable height for a person to work in it, and the sides should be lathed and plastered, that there may be no irregularity of the heat in different portions of the room dur-

ing high winds. A good ventilator should be provided in the roof, as described above. Openings should be left in the walls near the bottom of the kiln to admit fresh air from without, the draught to be regulated by means of flues, or sliding doors. The cloth for the drying-floor should be well stretched over the slats and firmly nailed. On this floor the hops are spread to the depth of six or eight inches. The proper thickness will depend somewhat on the condition of the hops; if they are very full of moisture, they should be laid on quite thin; but if gathered when fully ripe, and in fine weather, a depth of ten inches will be allowed.

"The hops being spread as evenly as possible, the fires are immediately kindled in the kiln, and the temperature regulated to one uniform degree of heat. This, however, may be quite high at first, as there will be at that time but little danger of scorching the hops if the floor is sufficiently high. If the hops are rusty, or discolored from any other cause, it is usual to burn a little sulphur under them, which will bring them to a uniform appearance. This is done as soon as the hops are well warmed through, and feel somewhat moist. Great prejudice formerly existed against the use of sulphur in drying hops; but no objection is now made to it by the brewers, and it is generally thought that the use of it improves the appearance of all hops, and that it also facilitates the drying.

"During the drying process the fires should be kept up, and there should be a free supply of fresh air below, sufficient to keep up a regular succession of heated air from the kiln, passing through the hops and out at the ventilator, carrying with it the vapor expelled from the drying hops. This will be found far preferable to a still, dead heat. As soon as the upper part of the hops appears to have felt the fire, the lower part may be considered as nearly dry, and will rattle a little. The heap may then be turned. Before this is done the heat should be suffered to abate a little, and increased again after the turning is finished. I am aware that many do not turn their hops while drying, nor suffer them to be disturbed at all until they are ready to be removed from the floor. Still, the better opinion, I think, is in favor of turning as tending to facilitate the drying and render it more perfect by the more effectually exposing every portion of the mass to the action of the heated current of air, than would be case were they allowed to remain as first deposited on the floor, containing many inequalities in density even when the utmost care is exercised in their distribution. If turned at the right time, and in a careful manner, there need be no injury done to the hops. When sufficiently dried they should be allowed to cool off a little, if time can be afforded, otherwise there will be great danger that they will break in moving, or a portion of them shell off and waste. Ten or twelve hours are required to dry a kiln of hops. Two kilns may be dried in twenty-four hours

by keeping the heat up through the night. A twenty-foot kiln will thus dry 400 bushels in a day, as they come from the vines, making about 750 pounds of hops when dry.

"*Baling*.—The hops being dried, the next process is to bale them. This should not be done immediately after they are taken from the kiln, but they should be allowed to lie a few days in the store-room till they become a little softened, otherwise their extreme brittleness will cause them to be much broken in baling and the sample be thereby greatly injured. The bales should be of symmetrical and convenient form, and should contain about 200 pounds. They are formed in a box or bin prepared for the purpose, in the press-room, of such shape as will give the desired size and form. Across the bottom and sides of this box the baling cloth is first laid, and the hops are then let down into it from above, and trodden down as they are dropped in until it is filled. Another cloth is then carried over the top, a follower applied, and the screws of the press turned down upon it until the whole is brought into a compact mass. The box is then taken apart, the cloth neatly secured round the bale, the screws are run up, the bale taken out and the ends cased, when it may be considered finished, and the same process is repeated in forming another."

We have referred to the diseases and injuries to which the hop is liable. These are numerous, more so in England, perhaps, than in the United States, but the most destructive here are the *aphis* or hop-louse and the *mould*.

Dr. Harris, in his "*Insects Injurious to Vegetation*," thus describes the *aphis*, a genus which commit serious ravages on many of our deciduous plants and trees, but on none, perhaps, are more destructive than on the hop:

"The winged plant-lice provide for a succession of their race by stocking the plants with eggs in the autumn. These are hatched in the spring, and the young lice immediately begin to pump up the sap from the tender leaves and shoots, increase rapidly in size, and in a short time come to maturity. In this state it is found that the brood, without a single exception, consists wholly of *females* which are wingless, but are in a condition immediately to continue their kind. Their young, however, are not hatched from eggs, but are produced alive, and each female may be the mother of fifteen or twenty young lice in the course of a single day. The plant-lice of this second generation are also wingless females, which grow up and have their young in due time; and thus brood after brood is produced, even to the seventh generation or more, without the appearance or intermixture, throughout the whole season, of a single male. This extraordinary propagation ends in the autumn with the birth of a brood of males, which in due time acquire wings, and pair; eggs are then laid by the females, and with the death of these winged individuals, which soon follows, the race becomes extinct for the season."

The eggs of these insects are not destroyed by

cold or wet, and only multiply more rapidly in drought. Wet weather, long continued, does somewhat hinder their development, but exposes the plant to injury from mould. Morton, in his "*Cyclopædia of Agriculture*," thus describes the effect of their attacks upon the hop vine:

"When the first attack of these upon the hops is severe, and early in the season, the growth of the plant is commonly stopped in the course of three or four weeks. If the attack be late—that is, about midsummer, or afterwards—the bine has then attained so much strength that it struggles on against the blight to its disadvantage, and the result is a total failure of the crop at last; for the leaves fall off, and the fruit-branches being already formed, there is no chance of recovery. At this time and in this condition the stench from the hop plantation is most offensive. In an early blight, however, we may have many instances recorded of extraordinary recoveries; for these insects are remarkably susceptible of atmospherical and electrical changes, and on a sudden alteration of the weather we have known them perish by myriads in a night. The condition of a plant is never hopeless, however severe the attack may be, provided there is time for it to put forth its lateral or fructifying branches.

"Their multiplication is so rapid that the leaves become so thickly covered as scarcely to allow a pin to be thrust between them. They quickly abstract the juices of the bine, so that the leaves assume a sickly brown hue, and curl up, and the bine itself ceases to grow, and falls from the pole, the lice continuing till they perish for want of food; and thus, without the intervention of a favorable change, the crop is destroyed, and the grower may often consider himself fortunate if the plant recover a due amount of vitality to produce a crop in the following year.

"When atmospherical change occurs, the lice die off by thousands in a day. As they die they turn a brown color. The first indication of a favorable change is the clustering of the lice to the extremities of the bines and branches. This fact is well worthy of notice, since to all but close and accurate observers of the hop plant, the outward appearance is the reverse of a favorable change; for the small leaves and heads of the bines are densely covered with lice. But while the lice are thus gathering in countless myriads at the extremities, apparently threatening the utter destruction of the plant, the large leaves at the bottom of the bine and the leaves of the branches next the stem are becoming clean. At this *clustering* period the lice evidently cease to suck the juices of the plant; for the attentive observer will perceive the bine resuming its erect position, and recommencing its upward growth, though still covered with lice. At this crisis they usually disappear altogether in the course of a week or ten days, and then the plants should be liberally rewarded, if not lavishly stimulated, with manure,

there being no danger of over-manuring under such circumstances.

"The best manure to be employed in these cases is guano, at the rate of 450 to 900 pounds per acre. The ground should be continually stirred, but this stimulus should not be given until it is certain the lice are disappearing."

Injurious insects are much lessened in number by natural enemies. That which is most destructive of these lice is the lady-bug, or, as called in England, the lady-bird. Of these the work just quoted from says:

"They, in the first instance, destroy multitudes of lice, a single one killing eight or ten in as many minutes; and where the lice are not too numerous, the lady-birds will clean the hop plantations. But, generally, the lice have time to deposit some of their young on the under side of the leaves before their enemies attack them, especially if the weather be clouded, when the lady-birds are sluggish and inactive. The lice are seldom devoured at this time, but the lady-birds lay their eggs also on the under side of the leaves, usually in clusters of about twenty each. These eggs adhere to the leaves, are yellow in color, and of a long, oval shape; they are soon hatched, and the progeny which creeps forth is the 'black nigger' or 'serpent,' as they are called in the districts. They are ferocious-looking creatures, greatly resembling in shape, though not in size, the lizards of the olden time. As soon as they are hatched they commence the work of destruction upon the lice-eggs, which are their peculiar food, as the lice are of their parents, the lady-birds; and if the lice are not extremely numerous, they often succeed in clearing the plant of the vermin, otherwise they devour them until they are literally gorged with food, and then, attaching themselves to the leaves of the hop, after remaining dormant in the larva state, they cast off their outer cuticle, and are transformed into the perfect lady-birds, when they again pursue their good work of destroying the enemies of the hop—consuming about thirty lice daily."

We have described the depredations of the lice, and the good work of the lady-bugs, at some length, that the hop-grower might see the necessity of two things: 1, having the ground in the highest condition as to richness and tillage, that the plant may be enabled to overcome the attack of the lice; and 2, the very great importance of preserving the lady-bug, one of the most useful of the beneficial insects. The lice could be destroyed by syringing the vines with whale-oil-soapsuds, but this remedy is too tedious for hop cultivation.

2. *The mould.*—There are various diseases to which common parlance has given this name, but the one now described is the most fatal to the hop. These diseases, like the lice, are parasitic, that is, both exist upon the juices of the hop-plant, which, being deprived of them, are blighted. Hence the term *blight* does not designate the cause, but the result of the attack of the disease or insect. Morton's "Cyclopæ-

dia of Agriculture" thus speaks of the disease now under consideration:

"The mould is a disease rather than a blight. We believe it to be a parasitical vegetable fungus, usually generated in wet seasons and in damp situations. It is of all diseases the most dreaded by the hop-grower, inasmuch as there is no known remedy for it, and as it steadily progresses in its attack, with more or less rapidity, according to the character of the season, till the crop is gathered. It often originates from the negligence and inattention of the cultivator, and thus prevention is better than cure. It is intimately allied to, if it be not precisely the same, as the white mildew which we see in hawthorn hedges and on rose-bushes, especially if the latter grow in shady situations. When the mould appears to any considerable extent upon the hops so early as the end of June or beginning of July, however luxuriant the vine may then appear, there is no hope of a crop worth picking. Dampness and a want of a free circulation of air and light seem to be the predisposing cause of mould, and thus we often see it emanate from wild hops, which are carelessly allowed to grow in neighboring hedges. As soon as this violent disease appears, it spreads in every direction with astonishing rapidity, diminishing in intensity as the distance increases from the centre of mischief. It is first noticeable upon the upper side of the leaf as a white speck, not larger than a small pin's head, the spot increasing in size till it attains the diameter of about one-eighth of an inch; below this white spot, on the under side of the leaf, there is a corresponding indentation, which renders this incipient indication of mould unmistakable. From the spots on the surface of the leaf the seeds of this parasitical fungus, as we imagine it to be, are blown in all directions, and the minutest particle of this white dust when it settles on another leaf in a few days becomes a minute speck of mould. Each new spot then propagates the disease, and thus we perceive this vegetable pestilence advances with fearful rapidity of geometrical progression, and if the season be damp, acre after acre falls a victim to the attack, which often originates from sheer inattention."

Mould spreads fastest in warm, damp weather. It commences near the ground, and therefore great attention ought to be paid to the frequent pulling off of the suckers, as they sprout through the hill in the summer months. Every spotted leaf should be destroyed. And here we now see the necessity of making such selection of the site of the hop plantation as will secure a free access of air and sunlight, for dryness is a check to this disease.*

ALABAMA. At the commencement of the year 1865, the determination to prosecute the war with all the resources at command, had not been

* The meteorological returns for 1864 were not received in season to be used in this article, but will be given, with those for 1865, in the next volume.

weakened in the minds of the people of southern Alabama. Their views of the measures demanded at the time, to promote the success of their cause, were expressed in a series of resolutions adopted at a large and enthusiastic meeting assembled in the theatre at Mobile, on Feb. 19th. These resolutions declared an unalterable purpose to sustain the civil and military authorities in their efforts to achieve independence of the United States; that the battle-cry henceforth should be, "Victory or death;" that there was no middle ground between treachery and patriotism; that they still had an abiding confidence in their ability to achieve independence; that the government should immediately place one hundred thousand negroes in the field; that reconstruction was no longer an open question; that an order reinstating General Joseph E. Johnston in command of the Army of the Tennessee would effect more to restore confidence, increase the army, and secure the successful defence of the State, than any other order that could be issued from the war department.

Meanwhile the preparation of the Federal Government for an irresistible attack upon the important places yet remaining unoccupied in the State, were pushed forward. A combined military and naval expedition against Mobile was in progress at New Orleans, to be commanded by Maj.-Gen. Edward R. S. Canby and Rear-Admiral Henry K. Thatcher; and a cavalry expedition, under Maj.-Gen. J. H. Wilson, was ready to cooperate by a southern march from Eastport, Tennessee, the headquarters of Maj.-Gen. Thomas. As early as March 3d, the Governor of the State, T. H. Watts, appealed to the people by proclamation, to come forward voluntarily to the conflict, or the State could not be successfully defended against the impending dangers. The militia of the State, under an act of the Congress at Richmond, had been divided into two classes. The first class was composed of boys between sixteen and seventeen years of age, and men between fifty and sixty years. The second class consisted of those of intervening ages, and had, by the acts of Congress, been reduced to a very few, so that united with the Confederate troops they were insufficient for defence. The first class was estimated at thirty thousand in number, of whom about four thousand were boys; under the operation of the State laws this class could not, without their consent, be ordered beyond the limits of their respective counties. To them the Governor now made an appeal. He urged as motives for action, the rejection of all peace propositions by the authorities of the United States. He said: "We must either become the slaves of Yankee masters, degrading us to equality with the negroes, subjecting us and our children and our children's children to a slavery worse than Egyptian bondage, or we must, with the help of God and our own strong arms and brave hearts, establish our freedom and independence."

He also urged that a common fortune would

befall all alike, if they were overcome, saying: "It matters not now what were your opinions at the time Alabama seceded from the United States. We are all now placed on the same footing. All have, in some form, participated in the war. We have sent to the bloody field of battle our sons, our fathers, or our brothers; we have equipped them for the conflict; we have sustained them by our acts; we have encouraged them by all the powers of language, by our smiles and our tears, to fight for all that freemen prize or freemen hope. We have all taken part in electing to the presidency, to the governorship, to Congress, and to our State Legislatures, those who have sworn to support the Constitution and the cause of the Confederate States. In every form in which mankind can be bound in law and morals, we have all been, and are still, involved in maintaining the Confederate States as 'free, sovereign, and independent.' Our lives, our property, protection to our wives and children, our liberty and honor are staked on the result of the war. Common weal or common woe awaits us all. The fate of the traitor and the tory ever will be, as it ever has been, to deserve and receive the execration of the living and the curses of posterity."

The Federal military movements portended nothing less than the complete subjugation of the State. On the 20th of March Gen. Canby and Admiral Thatcher were below Mobile with an irresistible force, and on the same day the advance of General Wilson began, and the whole force was on the way from Chickasaw on the 22d. The success of these expeditions has been described elsewhere (*see* ARMY OPERATIONS), but the desolations of war which followed the footsteps of the cavalry, were thus subsequently related by the Provisional Governor Parsons, to an audience in New York city.

It will be in your recollection, ladies and gentlemen, that during the last of March and in April, the rebellion suddenly collapsed. At that time public attention in the North was doubtless turned mainly to the operations around Richmond, and to those which attended the movements of the vast armies of General Sherman. But it also happened that General Wilson, with a large force of cavalry, some seventeen thousand, I believe, in number, commenced a movement from the Tennessee River and a point in the northwest of the State of Alabama, diagonally across the State. He penetrated to the centre, and then radiated from Selma in every direction, through one of the most productive regions of the South.

That little city of about ten thousand inhabitants—its defences were carried by assault on one of the first Sunday evenings in last April, sun about an hour high. Before another sun rose, every house in the city was sacked, except two; every woman was robbed of her watch, her ear-rings, her finger-rings, her jewelry of all descriptions, and the whole city given up for the time to the possession of the soldiers. It was a severe discipline to this people. It was thought necessary by the commanding General to subdue the spirit of the rebellion.

For one week the forces under General Wilson occupied the little town, and night after night, and day after day, one public building after another—first the arsenal, then the foundry, each of which covered eight or nine acres of ground, and was con-

ducted upon a scale commensurate with the demand that the military supplies for the war created—rail-road depots, machine shops connected with them—every thing of that description which had been in any degree subservient to the cause of the rebellion, was laid in ashes. Out of some sixty odd brick stores in the city, forty-nine, I think, were consumed. On the line of march, you were scarcely out of sight of some indication of its terrible consequences.

Indeed, after three weeks had elapsed, it was with difficulty you could travel the road from Plantersville to that city, so offensive was the atmosphere in consequence of decaying horses and mules that lay along the roadside. Every description of ruin, except the interred dead of the human family, met the eye. I witnessed it myself. The fact is, that no description can equal the reality. When the Federal forces left the little town—which is built on a bluff on the Alabama River—they crossed at night on a pontoon bridge, and their way was lighted by burning warehouses standing on the shore.

The expedition of Gen. Wilson which terminated in the interior of Georgia, was in many respects a most remarkable one. Consisting entirely of cavalry, it captured during its progress no less than six strongly fortified towns. The surrender of the armies of Lee and Johnston was followed by that of Gen. Taylor, by which all opposition to the Federal forces ceased, and the State became entirely subject to their military control. The war suddenly ended, the authority of the United States was again recognized, and a restoration to their position of citizens became the object of the people.

On May 29th the proclamation of President Johnston was issued, granting amnesty and pardon to all citizens of the Southern States who had been engaged in the rebellion, with certain exceptions. This amnesty and pardon was accompanied with the restoration of all rights of property except as to slaves, and in cases where loyal proceedings for confiscation had been commenced, but on the condition of taking an amnesty oath. (*See UNITED STATES.*) This measure restored a large mass of the people to peaceful citizenship in the United States. None of the political institutions of Alabama were recognized as existing until they had been changed to suit the views of the conquerors. To accomplish this object a person was selected in each Southern State, and authorized by the President to set on foot a series of measures which should result in a reconstructed State Government. On June 21st, the President issued his proclamation appointing Lewis E. Parsons a Provisional Governor for the State of Alabama, and recognizing a portion of the previous institutions of the State. The authority by which this appointment was made and the plan of proceedings were thus stated in the Proclamation:

Whereas, The fourth section of the fourth article of the Constitution of the United States declares that the United States shall guarantee to every State in the Union a republican form of government, and shall protect each of them against invasion and domestic violence; *and, whereas*, the President of the United States is, by the Constitution, made Commander-in-chief of the army and navy, as well as chief civil executive officer of the United States, and

is bound by solemn oath faithfully to execute the office of President of the United States, and to take care that the laws be faithfully executed; *and, whereas*, the rebellion which has been waged by a portion of the people of the United States against the properly constituted authorities of the Government thereof in the most violent and revolting form, but whose organized and armed forces have now been almost entirely overcome, has, in its revolutionary progress, deprived the people of the State of Alabama of all civil government; *and, whereas*, it becomes necessary and proper to carry out and enforce the obligations of the United States to the people of Alabama in securing them in the enjoyment of a republican form of government:

Now, therefore, in obedience to the high and solemn duties imposed upon me by the Constitution of the United States, and for the purpose of enabling the loyal people of said State to organize a State government, whereby justice may be established, domestic tranquillity restored, and loyal citizens protected in all their rights of life, liberty, and property, I, Andrew Johnson, President of the United States and Commander-in-chief of the army and navy of the United States, do hereby appoint Lewis E. Parsons, of Alabama, Provisional Governor of the State of Alabama, whose duty it shall be, at the earliest practicable period, to prescribe such rules and regulations as may be necessary and proper for convening a convention composed of delegates to be chosen by that portion of the people of said State who are loyal to the United States, and no others, for the purpose of altering and amending the Constitution thereof; and with authority to exercise within the limits of said State, all the powers necessary and proper to enable such loyal people of the State of Alabama to restore said State to its constitutional relations to the Federal Government, and to present such a republican form of State government as will entitle the State to the guarantee of the United States therefor, and its people to protection by the United States against invasion, insurrection, and domestic violence. Provided, that in any election that may be held hereafter for choosing delegates to any State Convention, as aforesaid, no person shall be qualified as an elector or shall be eligible as a member of such convention, unless he shall have previously taken and subscribed the oath of amnesty, as set forth in the President's proclamation of May 29, A. D. 1865, and is a voter qualified as prescribed by the Constitution and laws of the State of Alabama, in force immediately before the 11th of January, A. D. 1861, the date of the so-called ordinance of secession. And the said convention, when convened, or the legislature that may be thereafter assembled, will prescribe the qualification of electors and the eligibility of persons to hold office under the Constitution and laws of the State—a power the people of the several States composing the Federal Union have rightfully exercised from the origin of the Government to the present time. And I do hereby direct:

First. That the military commander of the department, and all officers and persons in the military and naval service, aid and assist the said Provisional Government in carrying into effect this proclamation; and they are enjoined to abstain from in any way hindering, impeding, or discouraging loyal people from the organization of a State Government as herein authorized.

Second. That the Secretary of State proceed to put in force all laws of the United States, the administration whereof belongs to the State department, applicable to the geographical limits aforesaid.

Third. That the Secretary of the Treasury proceed to nominate for appointment assessors of taxes and collectors of customs and of internal revenue, and such other officers of the Treasury Department as are authorized by law, and put in execution the revenue laws of the United States within the geographical limits aforesaid. In making appointments the pref-

erence shall be given to qualified loyal persons residing within the districts where their respective duties are to be performed. But if suitable residents of districts shall not be found, then persons residing in other States or districts shall be appointed.

Fourth. That the Postmaster-General proceed to establish post-offices and post-routes, and put into execution the postal laws of the United States within said State, giving to loyal residents the preference of appointment; but, if suitable residents are not found, then to appoint agents, etc., from other States.

Fifth. That the district judge for the judicial district in which Alabama is included, proceed to hold courts within said State, in accordance with the provisions of the act of Congress, and the Attorney-General will instruct the proper officers to libel and bring to judgment, confiscation, and sale property subject to confiscation, and enforce the administration of justice within said State in all matters within the cognizance and jurisdiction of the Federal courts.

Sixth. That the Secretary of the Navy take possession of all public property belonging to the Navy Department within said geographical limits, and put in operation all acts of Congress in relation to naval affairs having application to said State.

Seventh. That the Secretary of the Interior put in force the laws relating to the Interior Department applicable to the geographical limits aforesaid.

In testimony whereof I have hereunto set my hand and caused the Seal of the United States to be affixed. Done at the city of Washington, this 21st day of June, in the year of our Lord one thousand eight hundred and sixty-five, and of the independence of the United States the eighty-ninth.

ANDREW JOHNSON.

By the President :

WILLIAM H. SEWARD, Secretary of State.

The Governor thus appointed immediately entered upon his duties. After an investigation of the condition and views of the people, he issued a proclamation stating the plan of proceedings for the reorganization of the State. He described the condition of the State before the war, its population, wealth, and improvements, and said :

"In the prosecution of the war, for the last four years, into which Alabama was precipitated, about 122,000 of her sons have been carried to the field of battle, 85,000 of whom will never return; and it is probable an equal or larger number are permanently injured by wounds or disease while in the service. A very large proportion of our material wealth has been exhausted. Our fields are laid waste, our towns and cities, our railroads and bridges, our schools and colleges, many of our private dwellings and public edifices are in ruins. Silence and desolation reign where once stood the comfortable home which resounded with the joyous laugh of childhood and innocence.

"The State has contracted a large war debt during this period, and has on hand as near as can now be ascertained about \$—— in Confederate Treasury notes, which are utterly worthless, and about \$—— in good funds.

"Untold sufferings have been, and are still endured by thousands of our women and children, and the aged and helpless of our land.

"There is no longer a slave in Alabama. It is thus made manifest to the world that the right of secession for the purpose of establishing

a separate Confederacy, based on the idea of African slavery, has been fully and effectually tried, and is a failure.

"Yet, amid all the ruin, suffering, and death which have resulted from it, every political right which the State possessed under the Federal Constitution is hers to-day, with the single exception relating to slavery."

He then urged the importance of sustaining the measures proposed by President Johnson, and ordained the following regulations for that purpose :

Now, for the purpose of carrying into execution the commands of the President, and to enable the loyal people of Alabama to secure to themselves the benefits of civil government, I do hereby declare and ordain :

1. That the Justices of the Peace and Constables in each county of this State, the members of the Commissioners Court (except the Judges of Probate), the County Treasurer, the Tax Collector and Assessor, the Coroner and the several municipal officers of each incorporated city or town in this State, who were respectively in office and ready to discharge the duties thereof, on the 22d of May, 1865, are hereby appointed to fill those offices during the continuance of this provisional government. And as it is necessary that the persons who fill these several offices should be loyal to the United States, the power is hereby reserved to remove any person for disloyalty or for improper conduct in office, or neglect of its duties; and I earnestly request all loyal citizens to give me prompt information in regard to any officer who is objectionable on any of these grounds.

The Judges of Probate and Sheriffs, who were in office on the 22d of May, 1865, will take the oath as herein required of other officers, and continue to discharge the duties of their respective offices until others are appointed.

2. Each of these persons thus appointed to office must take and subscribe the oath of Amnesty, as prescribed by the President's proclamation, of the 29th day of May, 1865, and immediately transmit the same to this office. At the end of said oath, and after the word "slave," he must add these words, "and I will faithfully discharge the duties of my office to the best of my ability." Each of these officers must also give bond and security payable to the State of Alabama, as required by the laws of Alabama on the 11th day of January, 1861. If any person acts in the discharge of the duties of any of the aforesaid offices without having complied with the foregoing regulations on his part, he will be punished. This oath of amnesty and of office may be taken before any commissioned officer in the civil, military, or naval service of the United States; and the Judge of Probate in each county in this State, on the 22d of May, 1865, may also administer it, unless another Judge of Probate shall have been appointed by me in the mean time, and approve and file the bond which is hereby required to be given. But no one can hold any of these offices who is exempted by the proclamation of the President from the benefit of amnesty, unless he has been specially pardoned.

3. The appointment of Judge of Probate and Sheriff in each county will be made specially, as soon as suitable persons are properly recommended, and when appointed they will take the oath of amnesty prescribed in the foregoing section, and give bond and security as required by the law of Alabama on the 11th of January, 1861. And vacancies in any of the county offices will be promptly filled when it is made known and a proper person recommended.

4. If the loyal citizens of the State find it necessary to have other officers appointed, viz. : Clerks of the Circuit Courts, Solicitors, Judges of the Circuit Courts, Chancellors and Judges of the Supreme

Court, when that necessity is satisfactorily established, the appointments will be made.

5. An election for delegates to a convention of the loyal citizens of Alabama, will be held in each county in the State on Monday, the 31st day of August next, in the manner provided by the laws of Alabama on the 11th day of January, 1861; but no person can vote in said election, or be a candidate for election, who is not a legal voter as the law was on that day; and if he is excepted from the benefit of amnesty, under the President's Proclamation of the 29th of May, 1865, he must have obtained a pardon.

6. Every person must vote in the county of his residence, and before he is allowed to do so, must take and subscribe the oath of amnesty prescribed in the President's Proclamation of the 29th of May, 1865, before some one of the officers hereinafter appointed for that purpose in the county where he offers to vote; and any person offering to vote in violation of these rules or the laws of Alabama on the 11th of January, 1861, will be punished.

7. There will be elected in each county of the State, on said day, as many delegates to said Convention as said county was entitled to representatives in the House of Representatives on the 11th day of January, 1861; and the delegates so elected will receive a certificate of election from the sheriff of the county, and will assemble in Convention at the Capitol in Montgomery, on the 10th day of September, 1865, at 12 M.

8. From and after this day, the civil and criminal laws of Alabama, as they stood on the 11th day of January, 1861, except that portion which relates to slaves, are hereby declared to be in full force and operation; and all proceedings for the punishment of offences against them, will be turned over to the proper civil officers, together with the custody of the person charged, and the civil authorities will proceed in all cases according to law. Suits in civil cases now pending, whether an original measure, or final process, before any officer acting under military authority, will also be turned over to the proper civil officer, and will be governed in all things by the laws of the State aforesaid.

9. All unlawful means to punish offenders are hereby strictly prohibited. No "vigilance committee" or other organization, for the punishment of supposed offenders, not authorized by the laws of the State, will be permitted, and if any such are attempted, the person or persons so offending, will be promptly arrested and punished. The lovers of law and order throughout the State are appealed to and solemnly urged to aid, by all lawful means, in sustaining the cause of law and order. If the people of the State will do this willingly and promptly, we shall be able to restore peace and security to every home in our beloved State; but if offenders become too strong, the military power of the United States will aid us. Henceforth that power will act in aid of, and in subordination to the civil authority of the State.

10. The oath which is required to be taken by those who desire to vote for Delegates to the Convention, may be administered by the Judge of Probate of the county where the voter lives, or by any Justice of the Peace in said county and by officers specially thereunto appointed. Blanks will be furnished these officers by the Judge of Probate, to whom they will be sent on application, where they cannot be printed. One copy of said oath will be given to the voter and another will be kept by the officer before whom it is taken, which must be filed with the Judge of Probate and endorsed by the Judge of Probate, with affiant's name, and numbered from one up, and preserved by him as a part of the records of his office. The Judge of Probate must make out a certified list of names numbered to correspond with the affidavit, and transmit it to this office by some one of the Delegates to the Convention. It is important the lists should all be here on the 10th day of September next, when the Convention meets.

The several officers will also transmit their accounts for these services at the same time, and if the list of voters, made in a proper manner, accompanies them, the accounts will be promptly laid before the Convention for adjustment.

11. There are no slaves now in Alabama. The slave code is a dead letter. They who were once slaves are now free, and must be governed by the laws of Alabama as free men. It is the dictate of wisdom, and we owe it to ourselves and them, to produce the best possible results for both races, from the new order of things.

12. All good citizens are respectfully and earnestly urged to set the example of engaging cheerfully, hopefully, and energetically, in the prosecution of industrial pursuits. In so doing, they will exert a good influence upon those who are despondent and cast down by the calamities which have befallen us.

13. The idle, the evil-disposed, and the vicious, if any such there be within the limits of our State, must distinctly understand that all violations of law will be promptly punished. The Sheriffs of the several counties are hereby required to keep in readiness a sufficient force of deputies or assistants to enable them to execute all legal process and arrest all offenders promptly, and they will be held strictly accountable for any neglect of duty in this respect. Rights of person and property must be respected—law and order must be preserved. If seriously impeded in the execution of these orders, Sheriffs will immediately report to me, that prompt and effectual measures may be taken to repress violence and assert the supremacy of the laws.

Done at Montgomery, Alabama, on the 20th day of July, A. D., 1865. LEWIS E. PARSONS,

Provisional Governor of Alabama.

This proclamation renewed the powers of the persons holding the township offices in the State; called a State Constitutional Convention to assemble on September 10th, and reordained the civil and criminal laws, except those relating to slaves as they existed previous to the adoption of the Secession Ordinance of 1861, and prescribed other incidental regulations.

These measures were well received by the people of the State, and a disposition was promptly and generally manifested to cooperate with the Provisional Governor. Candidates for members of the Convention were soon nominated, and in a quiet and orderly manner elected on the appointed day. The vote given was large, but many who were qualified electors did not act.

The Convention duly assembled at Montgomery on September 10, and after the roll was called Provisional Governor Parsons administered the oath to support the Constitution of the United States and the union thereof, and to support all proclamations relative to the emancipation of slaves. He then declared the Convention authorized to make a permanent organization. This was done by the election of ex-Governor Benjamin Fitzpatrick unanimously as chairman, and W. H. Ogbourne as secretary. A resolution was then adopted that a committee of one member from each judicial district should be appointed by the President to report such amendments to the Constitution as might restore the State to her proper relations with the Federal Government; and also a similar committee to report relative to the act of secession, and further relative to the manner

in which certain acts adopted during the war might be ratified without infringing upon the Constitution of the United States. Other committees were appointed relative to the State debt, &c.

On the 19th the Convention passed an ordinance providing for an election on the first Monday of November, of a Governor, members of the Legislature, and all county officers except Judges of Probate, and for an election of municipal officers in the cities of Mobile and Montgomery on subsequent days. It also authorized and requested the Provisional Governor to issue writs of election for members of Congress, and further provided that the General Assembly so elected should meet at the capital on the third Monday of November. An interesting debate arose on this ordinance relative to the power of the Convention to fix the time of electing members of Congress. The Constitution of the United States requires the Senators to be elected by the Legislature of a State. The day of election for members of the House is also to be fixed by the Legislature and not by a Convention. Three opinions prevailed in the Convention; one, that the Convention was a legislative body within the meaning of the Constitution, and authorized to act as a Legislature in this instance; another, that only the Legislature, *i. e.*, the General Assembly, could appoint the time, and a third opinion that the office of Representative being vacant, the Governor, under the code of Alabama, should order a special election.

The question was one of importance, and was strongly debated, because it was apparent that there was hardly sufficient time to obtain a Legislature to fix the time and get the representatives elected and in Washington on the day of the meeting in Congress, the first Monday in December.

It was finally disposed of by authorizing and requesting the Governor to issue writs as above stated.

In relation to the institution of slavery, a majority of the committee to whom the subject was referred, reported the following ordinance:

Be it ordained by the people of the State of Alabama, in Convention assembled, That as the institution of slavery has been destroyed in the State of Alabama, hereafter there shall be neither slavery nor involuntary servitude in this State, otherwise than for the punishment of crime, whereof the party shall be duly convicted.

And be it further ordained, That the Constitution be amended by striking out all provisions in relation to slaves and slavery.

And be it further ordained, That it shall be the duty of the Legislature, at its next session, to pass such laws as will protect the freedmen of this State in the full enjoyment of all their rights of person and property, and guard them and the State against any evils that may arise from their sudden emancipation.

To this ordinance a substitute was reported by the minority of the committee, consisting of an ordinance in favor of supporting the President's proclamation and the laws of Congress

abolishing slavery until they were declared void by the Supreme Court of the United States. The debate which ensued is thus summarily reported:

Mr. Coleman, of Choctaw County, contended that on our action depended the right of the property of the people. The proclamation of the President and the act of Congress had destroyed slavery, but to make it complete required our ratification, and, before doing so, the validity and constitutionality of the proclamation and act of Congress should be tested before the Supreme Court of the United States. He recognized the right of the United States to pass laws for the punishment of crime, but as a State could not commit treason—the commission of that offence being confined to individuals, who were alone responsible—and they could not be deprived of their property except on trial and conviction, those who had not been guilty of treason, could not be deprived of their property, although in slaves. Congress had no right to seize the property of an offender, after death, when it should revert to his heirs. He believed that the acts of some men in their haste to get back into the Union, would cause us to lose the respect of the conservative men of the North. To admit the right of the Federal head by proclamation to nullify the Constitution of a State, was to concede the loss of a republic and the sovereignty of the States. The present course proposed by the majority report was one of expediency, and he was not prepared to sacrifice rights, honor, and property to it, although there was a great anxiety to get members elected to Congress. He denied that the President's Proclamation demanded of the State the abolition of slavery as a test of loyalty, although the bayonet had done its work; that a State could not forfeit its rights, but citizens might. This was the loyal State of Alabama, and must be so regarded, yet were it not through force no member would vote to abolish slavery. We had no guarantee that the sacrifice would be accepted or that our members of Congress would be admitted; nothing would satisfy the Radicals of the North. He contended that on this great principle of State rights the North was as deeply interested as the South, and that the precedent of yielding as proposed by the majority report was too dangerous. We should accept the freeing of the slaves by the act of the Federal Executive and the bayonet, and it was not the free and voluntary act of the people of Alabama. He believed that when the country returned to its reason, those who had lost their property and who had not participated in the rebellion, would be compensated, but the ordinance proposed put an estoppel on all reclamations.

Judge Foster, of Calhoun County, replied as follows: The war had settled two questions forever, one that of secession, the other of slavery. They had been settled by a power whose decision was binding and final, and from which there was no appeal—the power of the sword. Disputes between individuals could be settled by events, but they have no power to adjust differences between States and nations. They must be adjusted by compromise and negotiation or submitted to the arbitrament of the sword. The decisions of the Supreme Court were not respected or obeyed even by political parties. In *McEndrick's* case the court decided the United States Bank to be constitutional, yet the United States Bank was destroyed mainly on the ground of its unconstitutionality. The decision had no power to preserve the Constitution. So in the *Dred Scott* case, the decision gave the South all they claimed on the slavery question. It had no practical effect, only to exasperate the Republican party. The State of Georgia, at an earlier period, set at defiance the mandate of the Supreme Court.

The substitute offered by Mr. White proposed to await the action of the Supreme Court. It was immaterial what that action was, so far as it secured us

any practical benefit. If we went no further than this substitute proposed, the convention have assembled prematurely, and we ought to adjourn.

The first ordinance reported by the committee asserted a fact, apparent to every one, that the institution of slavery had been destroyed, not deciding when or how, whether constitutionally or unconstitutionally. Gentlemen could select their own ground. First, the act of Congress and the President's Proclamation; second, by the military power of the Government of the United States—the occupation of our country by armed soldiers—the establishment of the Freedmen's Bureau, and the practical severing of the tie between master and slave. The ordinance also asserted the proposition that we would not revive slavery. This was an impossibility. The Government of the United States in every department was unalterably determined that slavery should no longer exist. The edict had gone forth, and we were powerless to resist it. We were a subjugated people, and our conquerors could dictate their own terms. We could not resist the power of the Government. The overpowering force of public opinion at the North, backed by a million of bayonets, and the universal sentiments of the civilized world, were against us. We had tried this in the way of our strength and failed.

We could not reduce the negroes to slavery if the United States would withdraw their forces and stand aloof. We were exhausted, and the attempt would lead to a reenactment of the bloody scenes of St. Domingo. The Assembly of France abolished slavery in that island—no insurrection followed. Afterwards the Assembly repealed the law, the planters attempted to subject the negro again to slavery, and then the insurrection broke out in all its force. Such would be the case now, and after scenes of horror, and carnage, and blood, one race or the other would be exterminated and Alabama a desert.

The country needed repose. The people had made up their minds that slavery was gone, and were accommodating themselves to the new order of things. It was wrong to awaken delusive hopes that could never be satisfied. Our wisest course was in good faith to accept the situation and restore our relations with the Federal Union—reorganize our State Government, that law and order might again prevail in the land. By industry and energy our national prosperity may be restored, our fields ripen again with the richest harvest, commerce and manufactures revive; our cities rebuilt and schools crowded with scholars; peace, and order, and happiness over our land, and Alabama again become a great State in this great nation.

The substitute was rejected by a vote of yeas 66; nays 17. The ordinance reported by the majority of the committee was then adopted, yeas 89; nays 8.

On September 22d the Convention adopted the following ordinance relative to the acts of the State Legislature during the war:

AN ORDINANCE ratifying certain laws of the State passed since the 11th day of January, 1861.

Be it ordained by the people of the State of Alabama, in Convention assembled, That all the laws enacted by any Legislature since the 11th of January, 1861, that have not since been repealed, and which are not in conflict with the Constitution of the United States and laws made in pursuance thereof, or of the Constitution of this State, be and the same are hereby ratified, and declared to be valid from their respective dates; and shall remain in full force and effect until repealed according to law: except, however, all such laws as authorized the issue of Bonds, Treasury Notes, and Change Bills by the State; and all laws which authorized the payment of all debts to the State, for moneys loaned to individuals or corporations in Confederate money or bonds, and

the payment of dues and taxes to the State in Confederate Bonds and State Treasury Notes, and all laws in relation to taxation.

Be it further ordained, That in computing the time necessary to create the bar of the statutes of limitations and non-claims, the time elapsing between the 11th day of January, 1861, and the passage of this ordinance, shall not be estimated.

This ordinance excepts from ratification all laws authorizing the creation of any debt by bond, or treasury note, or change bills, or authorizing payment to be made to the State of taxes and other dues in Confederate or State Treasury notes or change bills passed since January 11th, 1861.

During its consideration a motion was made to except from such ratification all laws authorizing executors, guardians, and trustees to make sale of property, and receive Confederate notes or other currency issued during the war for the same, and all laws authorizing persons acting in such fiduciary capacity to invest funds in Confederate or State securities. The ground taken was that the estate of the orphan had been lost by such investments, and that the guardian or executor should not have invested the estate in such uncertain and doubtful security, and one dependent not only upon success in the war, but upon the popular will to pay so large a debt, even if successful, and because it enabled the guardian or other trustee to retain the funds for speculative purposes while money was good, and at last to invest in these securities when they had become of little value. The answer was that the guardian, executor, or trustee, was invited or encouraged to make such investment by the State law, under which he held his appointment; that the whole property of the country and every thing it contained was dependent upon the successful maintenance of the struggle; that there was often a necessity to sell such property in order to support those who were dependent upon it for means to live upon, having often no other resource; that, besides, to disturb the laws on that subject would be to ruin many persons who had acted fairly and in good faith, and that in many cases innocent persons who were security for such trustees, executors, or guardians would be impoverished by it, and in order to protect one set of persons another class must be injured. The latter argument prevailed, and those laws were not excepted from the general ratification.

A still more earnest discussion arose upon an amendment to except from the ratification laws authorizing payment to be made to the State in the currency existing during the war, of loans made by the State to corporations and individuals prior to the war. The object of this was to invalidate a payment of \$225,000 due to the State from the Alabama and Tennessee River Railroad Company, for money loaned to them out of funds in the possession of the State for purposes of internal improvement, and of which the State was trustee for such purposes. This loan was made in specie funds before the war, and the debt is not yet due, but in 1864 the Com-

pany by some arrangement between it and the then Governor paid the debt in Confederate notes.

As the State was only a trustee as to this fund and bound to act in good faith, and as the debt was paid in currency nearly worthless at the time and before the debt was, in fact, due, it was considered inequitable and unjust to ratify it, and the amendment was adopted.

There was also a discussion on the general policy as affecting the whole ordinance. It was shown to be necessary in order to prevent a flood of litigation, uncertainty as to rights and property, and consequent derangement and trouble in every department of business.

On the same day the Provisional Governor, in answer to a request of the Convention, sent in a message, calling their attention to the importance of making some provision for the payment of the interest due on the State debt; also for the support of the destitute poor, etc. He stated, that when the war closed the State was furnishing meal and salt to 88,772, the individual members of which numbered in the aggregate 189,042. Forty thousand rations had been given by the Federal Government for the inhabitants of Cherokee County alone.

The condition of the State finances on Sept. 1st, he thus reported :

Balance in the Treasury 30th September, 1864.	\$3,713,950 71
Receipts from 20th Sept., 1864, to 24th May, 1865 (including \$964, 760 93 transferred from Military Department).....	8,776,188 57
	<hr/>
	7,490,148 28
	6,698,358 78
Disbursements to 24th May, 1865.....	<hr/>
	791,294 50
Balance in the Treasury, 24th May, 1865.	
This balance is in the following described funds, to wit:	
Check on Bank of Mobile, payable in Confederate Treasury Notes.....	11,440 00
Certificate of Deposit, same Bank, payable in Confederate Notes.....	1,830 00
Confederate and State Treasury Notes in Treasury.....	517,890 60
State Treasury Note Change Bills.....	239,004 05
Notes of State Bank and Branches.....	353 00
Bank Notes.....	424 00
Silver.....	387 45
Gold on hand.....	\$497 84
On deposit in Northern Bank.....	582 89

PROVISIONAL GOVERNMENT.	
Receipts from 20th of July to date.....	\$1,766 00
Disbursements to date..	\$1,512 86
	<hr/>
Balance in Treasury of Prov. Government...	253 14

The committee to whom was referred the ordinance of secession, to consider what action was necessary for its abrogation, made a majority and minority report, as follows:

An ORDINANCE to be entitled an ordinance declaring the Ordinance of Secession null and void.

Be it ordained by the people of the State of Alabama, in Convention assembled, That an ordinance adopted by a former Convention of the State of Alabama, of the 11th day of January, A. D. 1861, entitled "An ordinance to dissolve the Union between the State of Alabama and other States united under the compact styled the Constitution of the United

States of America," be and the same is hereby declared null and void.

The minority made the following report :

The minority of the second special committee to whom were referred sundry ordinances and resolutions declaring the so-called ordinance of secession null and void, not being able to agree with the majority, respectfully report the following ordinance, viz.:

Be it ordained by the people of the State of Alabama, in Convention assembled, That the so-called ordinance passed by a former Convention of the people of Alabama on the 11th day of January, 1861, entitled "An ordinance to dissolve the Union between the State of Alabama and other States united under the compact styled the Constitution of the United States of America," was unauthorized, and is hereby declared to have been and is null and void; and ask that the same may be adopted in lieu of the ordinance reported by the majority.

The report of the majority was, that the ordinance of secession should be declared "null and void." That of the minority was, that the ordinance of secession was "unauthorized, and is hereby declared to have been and is null and void."

The 25th was devoted to the consideration of the reports.

Mr. Clarke, of Lawrence County, urged that the Convention of 1861 represented only a minority of the people as shown by the popular vote in the election of delegates; that a majority of several thousand voted for the Union and for coöperation; that the Convention refused to submit the question to the people, by whom it would have been voted down; and, therefore, that the people were misrepresented, and that the ordinance of secession was not authorized by them.

He further contended that the report of the majority of the committee left the question of the right of secession without final disposition. That report admitted only that the ordinance of secession was now void, but not that it was unconstitutional and void from the beginning; that if the majority so intended by their report, then they should so state it, fully and fairly, as it is stated in the minority report.

In favor of the majority report, the general scope of the argument was, that there was no real difference between the two reports other than in the use of the term "unauthorized" by the minority of the committee. The majority declare the ordinance of secession null and void; this satisfied the most ultra Union men in Mississippi and was understood to be satisfactory at Washington; it can mean nothing less than that the ordinance was and is void from the beginning. The words null and void mean of no effect, empty, having no force or validity. If a deed is pronounced null and void, it is the same as to declare that it never had any legal validity, and no rights accrued or duties were imposed by or under it.

In reference to the authority of the Convention, it was shown that as early as the session of the Legislature of 1859-'60 joint resolutions were adopted requiring the Governor, in the

event of the success of the Republican party in the fall of 1860, to appoint a day for election of delegates to a Convention, which body it was provided, should "consider, determine, and do what the interest, honor, and dignity of the State should require." It was shown that the Convention met under the most regular sanction of law, and were unrestricted in the power conferred: the people voted with the understanding that the Convention might and probably would determine on secession at once as the proper remedy; and the authority conferred under the question submitted to the people in its resolution by the Legislature was ample to do what a Convention as a body should determine to be wise and expedient.

The term "unauthorized" was further objected to as implying, first, that the wrongs of the South were not such as to warrant the action of the Convention, whereas that question was submitted distinctly to that Convention; and secondly, that it seemed to deny the right of the people to secede as a revolutionary right—a right inalienable, and that belongs to all people, everywhere, and often the only remedy of those who deem themselves oppressed, a right vindicated by our ancestors in the revolution of 1776. It was said the term might imply an assent to the doctrine of passive obedience, which held no place in this country, and had no sympathy in the Convention. That word was further objected to as implying a usurpation of power by the Convention of 1861, and those who supported the action of that body. It was said, "we thereby impliedly should leave the memory of our dead, who died for their country, or as they deemed for their country, to be branded as traitors and rebels, and turn over the living survivors, so far as we are concerned, to the gibbet."

The minority report was rejected by a vote of 69 to 21. After this a variety of amendments were offered, and much spirited discussion ensued upon the majority report. The amendments were, one after another, voted down, and the majority report finally adopted unanimously.

The following ordinance was also adopted on the same day:

AN ORDINANCE, to be entitled, "An Ordinance declaring null and void certain ordinances and proceedings of a Convention of the State of Alabama, adopted in January and March, A. D. 1861."

Be it ordained by the people of the State of Alabama, in Convention assembled, That all ordinances, resolutions, and other proceedings of a Convention of the people of the State of Alabama, begun and held on the 7th of January, 1861, and on the 4th of March, 1861, together with so much of the Constitution adopted by said Convention for the State of Alabama as conflicts with the Constitution of the United States, are hereby null and void.

An ordinance was also passed authorizing the Provisional Governor to act until a successor had been duly elected by the people and installed.

The following ordinance relative to the State

debt contracted during the war was adopted—
yeas, 60; nays, 19:

AN ORDINANCE declaring the War Debt void, and for other purposes.

Be it ordained, etc., That all debts created by the State of Alabama in aid of the late war, directly or indirectly, are hereby declared void, and the General Assembly of the State shall have no authority, and are hereby forbidden to ratify the same, or to assume, or to provide for the payment of the same or any part thereof.

And be it further ordained, That the General Assembly of the State shall have no authority, and they are hereby forbidden to assume, or make any provision, for the payment of any portion of the debt contracted or incurred, directly or indirectly, by the Confederate States or by its agents, or by its authority.

Ordinances were passed declaring void the laws of the State forbidding free colored mariners to leave their ship on arriving within the State; requiring judicial officers to act as agents of the Freedmen's Bureau as to negro cases; legalizing former marriages of freedmen where they live together, making the children legitimate, and requiring the father to support the family; requiring a license to marry; authorizing county commissioners to make provision for indigent, infirm, and helpless freedmen; also an ordinance confirming decrees in courts of record during the war, and judicial sales; and confirming private contracts, but allowing parole proof as to the real value of the consideration; authorizing executors and administrators to compromise for property sold upon the real value, etc. The entire Constitution of the State was revised and amended by the Convention, and many important ordinances of a local nature adopted. The Governor was also requested to reorganize and call out one or more companies of militia to repress disorder and preserve the public peace.

On September 30th the Convention adjourned. The submission of their proceedings to a vote of the people was refused in consequence of the delay such an election would cause. The number of persons who had taken the registration oath previous to September 22d, was 65,825.

The election for Governor, Members of Congress, and the State Legislature, took place immediately. For Governor, Robert M. Patton was elected. The vote was as follows: Patton, 21,422; M. J. Bulger, 15,234; W. R. Smith, 8,194. Total, 44,850. The total vote of the State at the Presidential election in 1860 was 89,572.

The Legislature assembled on November 20th, and was organized by the choice of Walter H. Crenshaw President of the Senate, and T. B. Cooper Speaker of the House. A message from the Provisional Governor was delivered on the 23d. He called the attention of the members to the Constitutional amendment proposed by the Congress of the United States, and to their duty respecting the freedmen, as prescribed in the State Constitution adopted by the Convention, in these words: "To pass such laws as will protect the freedmen of this

State in the full enjoyment of all their rights of person and property, and to guard them and the State against any evil that may arise from their sudden emancipation."

Respecting the proceedings of the Convention he said :

Recognizing the fact that slavery and the right of secession had been destroyed by the result of the war, without consuming precious time in useless regrets, or worse than useless criminations, they declared the one forever prohibited, except as a punishment for crime, and quietly yielded the other, notwithstanding one-half of the entire property of the State was invested in the former, and many of them had been educated in the belief that "State Rights" included the latter.

Let us indulge the hope that the wisdom of their action may be more and more apparent as each successive year rolls round, and that our children's children for many generations to come will sit in this pleasant land of ours beneath their own roof trees, around their own firesides, in the midst of unnumbered blessings, and call them blessed who had the wisdom and firmness under such trying circumstances, while surrounded by the ruin which attends, and the exhaustion which follows four years of fierce and relentless war, to lay anew the foundations of government, and upon the broadest principles of liberty to all consistent with public good.

He stated that the corn and small grain crops throughout the State were not more than one-fifth of the usual amount, and that by his estimates there were 250,000 inhabitants in the State who must be furnished with food until they could raise it for themselves. The causes of the small crop were a want of the necessary labor and a severe drouth which prevailed over most of the productive lands.

The entire debt of the State is as follows, except the interest on the University and Common School funds. This the State has assumed in perpetuity, and the annual interest is \$134,367.80 :

Outstanding State Bonds issued for the capital of the State Bank and branches, viz.:	
Due in New York in 1863.....	\$1,889,000 00
Five per cent. interest payable May 1st and November 1st, due in New York in 1865....	52,000 00
Five per cent. interest payable May 1st and November 1st, due in New York in 1872....	168,000 00
Five per cent. interest payable May 1st and November 1st, due in London in 1866.....	648,000 00
Five per cent. interest payable January 1st and July 1st, due in London in 1870.....	688,000 00
Six per cent. interest payable June 1st.....	
Total.....	\$3,445,000 00
The annual interest on the bonds payable in New York is.....	
The annual interest on the bonds payable in London is.....	\$105,450 00
The interest on the bonds due in New York was paid up to and including the dividend due November 1st, 1861; and there has since accrued instalments of interest, in all amounting to...	80,870 18
Of which there has been paid at Bank of Mobile,	121,800 00
	58,400 00
Leaving due and unpaid....	\$368,400 00

The bonds due in New York in 1863 were authorized to be extended by an act passed at the called session of 1861. The new bonds were issued, and some of them given in exchange for those in 1863.

The interest on the bonds due in London was paid up to and including the dividend due

January 1, 1865, and there has since accrued as follows :

On June 1, 1865.....	\$45,023 24
On July 1, 1866.....	17,670 96
Due and unpaid in London.....	\$26,699 17
And there will be due on January 1, 1866.....	17,670 96
RECAPITULATION.	
Due and unpaid on bonds in New York.....	\$368,400 00
Due and unpaid on bonds in London.....	62,699 17
	\$431,099 17
Due in London on January 1, 1866.....	17,670 96
Total amount.....	\$448,770 18

Measures to preserve and increase the efficiency of the school system were recommended. The institutions for deaf mutes and the insane have continued in successful operation. The battle flags of the volunteer regiments were deposited in the capitol, and when Montgomery was occupied by Federal troops they were undisturbed. The Governor recommended their preservation, saying :

"We should preserve these sacred souvenirs of the courage and endurance of those who went forth to battle under their folds, and who manfully upheld them with their life-blood. They were our sons and brothers. Alas! that so many of them shall never return to us again. Shall we ever forget them? We cannot. We must be more or less than men if we could.

"The brave and generous people with whom they fought do not expect it. They do not wish us to return to the Union emasculated, divested of all manhood and natural feeling. They are proud to know that the survivors of the bloody fields on which they fought are willing, as true knights and brave men, to accept the result of the battle, and to rally once more round the Flag of our Fathers. They feel it will not be less secure in the future because our hands and hearts are united with theirs in its support."

Among the officers chosen by the Legislature at this session, were three judges of the Supreme Court, A. J. Walker, Wm. M. Byrd, and Thomas J. Judge; John W. A. Sanford, Attorney-General; S. K. McSpadden, Chancellor Northern Division; N. W. Cocke, Southern Division; J. Q. Loomis, Middle Division. The Provisional Governor, Lewis E. Parsons, and George S. Houston were elected Senators to the Federal Congress.

The amendment to the Federal Constitution prohibiting the existence of slavery was adopted in the House by a large vote. The principal resolution was as follows :

Resolved, By the Senate and House of Representatives of the State of Alabama in General Assembly convened, That the foregoing amendment to the Constitution of the United States be, and the same is hereby ratified, to all intents and purposes, as a part of the Constitution of the United States.

To this joint resolution, Mr. Williams, of Jackson County, offered the following amendment :

Resolved further, That any attempt by Congress to legislate upon the political status of the former slaves or their civil relations, would be contrary to the Con-

stitution of the United States, as it now is or as it would be by the proposed amendment, and the exercise of such power is protested against by the State of Alabama.

Mr. Bethea introduced the following as a substitute for the amendment offered by Mr. Williams, which was accepted:

Be it further Resolved, That this amendment to the Constitution of the United States is adopted by the Legislature of Alabama, with the understanding that it does not confer upon Congress the power to legislate upon the political status of freedmen in this State.

The propriety of adopting this amendment was discussed by several members, and the question being taken, by yeas and nays, it was adopted—yeas, 75; nays, 15.

An act was passed to provide for the more effectual distribution of food to the destitute families in the State, and also the following act to protect freedmen in their rights of person and property:

Be it enacted, &c., That all freedmen, free negroes and mulattoes, shall have the right to sue and be sued, plead and be impleaded, in all the different and various courts of this State, to the same extent that white persons now have by law; and they shall be competent to testify only in open court, and only in cases in which freedmen, free negroes and mulattoes are parties, either plaintiff or defendant, and in civil and criminal cases for injuries to the persons and property of freedmen, free negroes and mulattoes, and in all cases, civil or criminal, in which under this act a freedman, free negro or mulatto is a witness against a white person, or a white person against a freedman, free negro or mulatto, the parties shall be competent witnesses, and neither interest in the question in suit, nor marriage, shall disqualify any witness from testifying in open court.

An act concerning apprentices was adopted, which authorizes the probate courts of each county to apprentice all freedmen, free negroes and mulattoes under the age of eighteen years, who were orphans, or whose parent or parents have not the means, or who refuse to provide for and support such minors. The act contains provisions for the protection of both master and apprentice, and allows any freedman, free negro or mulatto having a minor child or children to apprentice the same. An act was also passed to regulate contracts with freedmen, and to enforce the same. It grants the right to contract to all freedmen; requires all contracts for a longer period than one month to be in writing and subscribed in presence of two white citizens. It prescribes penalties in damages for the non-performance of the contract, and makes every freedman who runs away or abandons the service he agreed to perform, without good cause, guilty of a misdemeanor, and liable on conviction, to forfeit his wages and become subject to the vagrant laws. A large number of acts respecting local affairs were introduced and considered or adopted, and about the 15th of December the Legislature took a recess to January 15th, 1866.

On December 13th, the newly elected Governor, Robert Patton, was inaugurated. In his address he traced the progress of Alabama from

1819 to 1861, to show, "that as a peaceful and quiet member of the Federal Union, we had grown from an infant State, to one of greatness, wealth, and power. Our growth was gradual, healthful, vigorous, and substantial." On the 11th of January, 1861, "we were brought to a sudden and violent halt in our proud and rapid march on the high road to prosperity and happiness." "My judgment did not approve of either the doctrine or act of secession." "But while firmly entertaining this opinion, I deemed it a duty as a citizen of Alabama, to yield a peaceful obedience to what had been done." The act of secession, he states, caused from 35,000 to 45,000 of her brave sons to perish in the service, and the "loss in actual and substantial wealth of at least \$500,000,000!" "I think we may all profit much by contrasting the prosperity and happiness which our country enjoyed at the beginning of the recent war, with its present crippled and almost ruined condition."

The Governor then reviews and commends the President's policy, which has been unhesitatingly accepted by the people of Alabama. He says: "We may rightfully claim, therefore, that our State is fully entitled to be placed in that position in the Union where she will stand as the political equal of any other State under the Federal Constitution."

With reference to emancipation, he said: "The extinction of slavery is one of the inevitable results of the war." "We will not only extend to the freedman all his legitimate rights, but will throw around him such effective safeguards as will secure him in their full and complete enjoyment." "At the same time it must be understood that, politically and socially, ours is a white man's government. In the future, as has been the case in the past, the State affairs of Alabama must be guided and controlled by the superior intelligence of the white man. The negro must also be made to realize that freedom does not mean idleness or vagrancy. Emancipation has not left him where he can live without work."

On December 18th the Secretary of State, at Washington, sent the following despatch to the Provisional Governor, Parsons:

SIR:—The time has arrived, in the judgment of the President of the United States, when the care and conduct of the proper affairs of the State of Alabama may be remitted to the constitutional authorities chosen by the people thereof, without danger to the peace and safety of the United States.

By direction of the President of the United States, therefore, you are relieved from the trust which was heretofore reposed in you as Provisional Governor of the State of Alabama, whenever the Governor elect shall have accepted and become qualified to discharge the duties of the executive office. You will transfer the papers and property of the State now in your custody to his Excellency the Governor elect.

It gives me especial pleasure to convey to you the President's acknowledgment of the fidelity, the loyalty, and the discretion which have marked your administration.

You will please give me a reply, specifying the day on which this communication is received.

I have the honor to be, your Excellency's most obedient servant,
WM. H. SEWARD.

On the same day the Secretary addressed the following despatch to the newly inaugurated Governor, Patton:

DEPARTMENT OF STATE, WASHINGTON, Dec. 18, 1865.

SIR:—By direction of the President, I have the honor herewith to transmit to you a copy of a communication which has been addressed to his Excellency Lewis E. Parsons, late Provisional Governor of Alabama, whereby he has been relieved of the trust heretofore reposed in him, and directed to deliver into your Excellency's possession the papers and property relating to that trust.

I have the honor to tender you the coöperation of the Government of the United States whenever it may be found necessary in effecting the early restoration and the permanent prosperity and welfare of the State over which you have been called to preside.

I have the honor to be, with great respect, your obedient servant,
WM. H. SEWARD.

At the close of hostilities and the recognition of emancipation by the white inhabitants, the freedmen, in large numbers, left the plantations and resorted to the cities. Of this class a meeting was held in the neighborhood of Mobile, on Sunday, August 13th, of which the "Advertiser" of that city gave the following report:

Nine hundred of them assembled to consider their condition, their rights and duties under the new state of existence upon which they have been so suddenly launched. Our informant was surprised at the hard, practical sense and moderation of tone with which the spokesmen of the meeting urged their views. After long talk and careful deliberation, this meeting resolved, by a vote of seven hundred voices to two hundred, that they had made a practical trial for three months of the freedom which the war has bequeathed to them; that its realities were far from being so flattering as their imagination had painted it; that they had discovered that the prejudices of color were by no means confined to the people of the South, but, on the contrary, that it was stronger and more marked against them in the strangers from the North, than in the home people of the South, among whom they had been reared; that negroes, no more than white men, can live without work, or be comfortable without homes; that their northern deliverers from bondage had not, as they had expected and been taught to expect, undertaken to provide for their happy existence in their new state of freedom, and that their old masters had ceased to take any interest in them or have a care for them; and finally, that their "last state was worse than the first," and it was their deliberate conclusion that their true happiness and well-being required them to return to the homes which they had abandoned in a moment of excitement, and go to work again under their old masters. And so the resolutions were passed, and at last accounts the wanderers were packing up their little stock of movable goods, preparatory to the execution of their sensible purposes.

Near the close of the year, on November 22d, a Convention of colored persons was held at Mobile, at which the following series of resolutions was adopted:

Whereas, Under the providence of a gracious God, the colored people of the United States are permitted to enjoy the inestimable boon of liberty, and now have the privilege of demonstrating what they can do as a people; and

Whereas, The unprecedented privilege is now granted us of peaceably assembling in convention in this city of Mobile, and conferring and deliberating

upon matters involving our common interests; therefore

Resolved, That we shall ever inculcate the truth that our freedom is the gift of God, and that we are under the highest obligations to Him so to improve our new privilege as that His gift shall not be in vain.

Resolved, That we shall labor to foster in the hearts of our people sentiments of peace, friendship, and good will toward all men—especially toward our white fellow-citizens, among whom our lot is cast; and while we would relinquish none of the rights of our common manhood, we will studiously, according to our best knowledge and ability, so conduct ourselves as to be profitable to them and to ourselves.

Resolved, That we know and admit the fact, that labor, faithfully and judiciously performed, is the only just foundation of wealth, and that it will continue to be our purpose and effort to work industriously and honestly for the support of our families and the prosperity of the community in which we live.

Resolved, That we will perform faithful labor for every man who will pay us just wages; nor do we either expect or desire to receive any man's property without giving him a just equivalent.

Resolved, That we feel that our new condition of freedom not only presents new motives to industry, but also imposes new obligations upon us to cultivate all the virtues of good citizenship, and that, therefore, it is our purpose to fulfil all the duties of our new positions according to the ability which God has given us.

Resolved, That we recognize civil government as an ordinance of God, and that it shall be a matter of conscience with us to obey the laws, and to discountenance in every way all violation and all contemplated violation of law.

Resolved, That the assertion made in certain quarters, that there is a plot among our people to rise in insurrection, is utterly without foundation, inconsistent with our history as a people, and the farthest from our desires and possible intentions.

Resolved, That we feel in our hearts the glow of gratitude and the purpose of unfaltering fidelity to the Government of the United States, and shall ever regard as pledged to its support our lives, our fortunes, and our sacred honor.

Resolved, That we regard the education of our children and youth as vital to the preservation of our liberties, and true religion as the foundation of all real virtue, and shall use our utmost endeavors to promote these blessings in our common country.

The principles upon which the Freedmen's Bureau was organized are stated under the proceedings of Congress. The plan of its operations in each State is described under the title FREEDMEN.

During the existence of the Confederate Government, the Protestant Episcopal Church South was organized, and the prayer for the President of the United States and all in Civil Authority in the Book of Common Prayer was changed to one for the Confederate authorities. Upon the restoration of the United States authorities, the prayer for the President was omitted altogether by the recommendation of Bishop Wilmer. Whereupon Maj.-Gen. Woods issued an order, of which the following is an extract:

It is therefore ordered, pursuant to the directions of Maj.-Gen. Thomas, commanding the Military Division of the Tennessee, that said Richard Wilmer, Bishop of the Protestant Episcopal Church, of the diocese of Alabama, and the Protestant Episcopal Clergy of said diocese be, and they are hereby suspended from their functions, and forbidden to preach or perform divine service.

Bishop Wilmer urged the following reason for his recommendation to the clergy:

Now the Church in this country has established a form of prayer for the President and all in Civil Authority, the language of that prayer was selected with careful reference to the subject of the prayer—all in *Civil Authority*—and she desires for that authority, prosperity and long continuance. No one can reasonably be expected to desire a long continuance of *military rule*. Therefore the prayer is altogether inappropriate and inapplicable to the present condition of things, when no civil authority exists in the exercise of its functions. Hence, as I remarked in the circular, we may yield a true allegiance to, and sincerely pray for grace, wisdom, and understanding, in behalf of a government founded on force, while at the same time we could not, in good conscience, ask for its continuance, prosperity, &c.

In reply to this the order stated, that at the time when the recommendation was issued, there was a President of the United States, a Cabinet, Judges of the Supreme Court, etc., and that since then a civil government and other civil officers for the State of Alabama had been appointed, but the prayer had not been restored. The prayer, it was further stated, was not a prayer for the continuance of military rule, but simply for the temporal and spiritual weal of the persons in whose behalf it was offered.

One of the closing paragraphs of the order was the following:

The advice of the bishop to omit this prayer, and its omission by the clergy, is not only a violation of the canons of the Church, but shows a factious and disloyal spirit, and is a marked insult to every loyal citizen within the department. Such men are unsafe public teachers, and not to be trusted in places of power and influence over public opinion.

The order was subsequently set aside by President Johnson.

Immediately upon the cessation of hostilities the work of repairing the railroads was begun with much energy. All public institutions prepared to meet the changed order of affairs.

ALLEN, Hon. PHILIP, formerly U. S. Senator and Governor of Rhode Island, born in Providence, R. I., September 1st, 1785, died there December 16, 1865. His rudimentary education was completed in his native town, but he subsequently studied at the Taunton Academy, and was for three years a pupil in the celebrated school of Robert Rogers, of Newport. He graduated in 1803 at the Rhode Island College, now Brown University, and having lost his father in 1801, became actively engaged in the mercantile business and foreign commerce, and particularly in the West India trade, which his father had carried on. As early as 1812, foreign commerce being suspended by the war with Great Britain, Mr. Allen was manufacturing cotton in Smithfield, and soon became one of the foremost manufacturers in the State. Gifted by nature with unusual mechanical ingenuity, he had by careful study acquainted himself with the sciences which facilitated manufacturing processes, and possessed remarkable skill in the wisest applications of his scientific knowledge. He was the first importer of the improved bobbin and fly frames, now in general use, and the

lapping machines for cotton cards. Having been successful in this early enterprise, he extended his business to *printing* the cotton goods made by himself and other manufacturers. He began printing calicos in 1831, at the large establishment, still known by his name, situated on the river north of Providence. The perfection of the styles of prints made at these works has justly given them a celebrity all over the Continent. He was an ardent advocate of a protective tariff, and by his ultimate knowledge of all the statistical and scientific facts bearing upon the question, was most influential in procuring the passage of laws which fostered home manufacturing interests. In 1819 Mr. Allen entered upon political life, serving that year and the two succeeding years as representative from Providence in the General Assembly, and was also one of the Commissioners of the fund appropriated for the settlement of the old State debt. In 1851 he was elected, as the candidate of the Democratic party, Governor of Rhode Island, and was reelected in 1852 and 1853. At the May session in 1853, he was elected United States Senator for six years from the 4th of March preceding, when he resigned the gubernatorial office to accept that of Senator. He served his full term at Washington, and was a member of the Committees on Commerce and Naval Affairs. Since the close of his Senatorial career Mr. Allen had retired from public life.

AMERICA. The civil war which had convulsed the United States since 1861, drew rapidly to a close after the beginning of the year 1865. The armed resistance to the Federal authority virtually ceased after the surrender of General Lee (April 9), and the work of reconstruction began in all the seceded States, not, however, through President Lincoln, who was assassinated on April 14th, but through his successor, Andrew Johnson. Provisional governors were appointed in all the States that had formed part of the Southern Confederacy. The subsequent measures are stated elsewhere in these pages. On January 31st, the House of Representatives at Washington, adopted, by a two-thirds majority, the Constitutional Amendment abolishing slavery throughout the United States, which had been adopted by the Senate, on April 8, 1864. The Amendment was sent by the Secretary of State, in accordance with the provision of the Constitution, to the legislatures of the several States for ratification. (*See UNITED STATES.*)

The scheme of a British American Confederation did not make, during the year 1865, the progress which its friends expected. The plan agreed upon by the conference of Quebec was adopted by the Canadian Parliament, but some of the Lower Provinces continued to oppose it. The Home Government favored the adoption of the scheme. (*See BRITISH NORTH AMERICA.*)

The war of the Republicans of Mexico against the establishment of the Empire continued throughout the year. The Mexicans were too feeble to meet the combined forces of

the French, Austrians, Belgians, and the native adherents of the empire in pitched battles, and their main army, under Porfirio Diaz, was compelled to surrender at Oaxaca. But no considerable part of the empire remained free from the guerrilla war in which the Republican forces, from time to time, gained considerable successes. President Juarez had, on the approach of a French army, for a time to leave Chihuahua, which was the seat of his Government, on January 1, 1865, and to retreat to El Paso. He returned to Chihuahua in November, but had to retreat again to El Paso in December. The Presidential term of Juarez expired in November, but as the continuance of war made it impossible to hold a general election, he continued in office with the general consent of the Republican party until it would be possible to hold another election. Maximilian, strongly endorsed by the Government of France, made several attempts to obtain the recognition of the United States; and France intimated that, in case of such recognition, she would begin to make preparations for the withdrawal of her troops from Mexico; but the Government of Washington refused to enter into negotiations with Maximilian, and declared to France, that the United States were deeply concerned about the continuance of a foreign army in Mexico, and strongly desired its speedy withdrawal. (*See MEXICO.*)

The war of independence which the people of San Domingo had for several years sustained against the Spanish rule, ended, in 1865, in the complete success of the Dominicans. The Government of Spain determined to abandon the island, and the Cortes in April enacted a bill brought in by the Government to that effect. (*See SPAIN.*) The republican form of Government was consequently restored in San Domingo, but the island remained subject to internal disturbances. (*See SAN DOMINGO.*)

The island of Jamaica was, in October, the scene of serious disturbances. The black population of the parish of St. Thomas, in the east, rescued some prisoners, who, as their friends said, had been convicted wrongfully, and when the resistance to the authorities became general, the conduct of the Colonial Government as well as of the military authorities on this occasion gave rise to the most intense indignation throughout England. In compliance with an almost universal demand, the Home Government suspended the Governor of Jamaica from his functions, and appointed a commission of inquiry, which repaired to Jamaica to investigate the whole affair. (*See JAMAICA.*)

The difficulties between Spain and Peru culminated on January 25, 1865, in an ultimatum presented by the Spanish Admiral Pareja. The Government of Peru submitted (January 28th) to all the essential demands of Spain, and the Spanish admiral restored the Chincha Islands. The dissatisfaction of the majority of the Peruvian people with the conduct of their Government called forth imme-

diately a revolution, which continued through the greater part of the year, and ended in the overthrow of the administration of President Pezet, and the establishment of a new Government decidedly hostile to Spain. (*See PERU.*)

The sympathy shown by the Government and people of Chili with Peru against Spain, led to difficulties between Spain and Chili. In May, the Spanish Minister in Chili, Tavora, stated that he was satisfied with the declarations of the Chilean Secretary of War. The Spanish Government, however, disapproved the conduct of Tavora, recalled him (July 25th), and sent Admiral Pareja to Valparaiso to demand immediate reparation for offences given. On the refusal of the Chilean Government to comply with this demand, Pareja declared a blockade of the Chilean ports (September 24th), to which the Chilean Congress answered by a declaration of war. Hostilities at once commenced and continued until the close of the year. (*See CHILI.*)

On the Atlantic coast of South America, the insurrection in Uruguay, aided by the Brazilian Government, ended in the overthrow of the existing government. Paraguay followed up its protest against the interference of Brazil in the civil war of Uruguay, by a declaration of war (November, 1864) against Brazil. In April, 1865, the Argentine Republic was also invaded by the troops of Paraguay, and joined Brazil and Uruguay in their war against the latter power. The war was still progressing, according to the last advices (December 1865). (*See ARGENTINE REPUBLIC, BRAZIL, PARAGUAY, URUGUAY.*)

The United States of Colombia, Ecuador, Bolivia, Hayti, and San Salvador, were all disturbed by civil wars. In Bolivia, the chief of the insurrection, Melgarejo, was successful, while in the three other States the existing Governments succeeded in quelling the rebellion. (*See BOLIVIA, COLOMBIA, ECUADOR, HAYTI, SAN SALVADOR.*)

The "American Congress" of the representatives of Chili, Bolivia, Peru, Ecuador, Guatemala, San Salvador, the Argentine Republic, the United States of Colombia, and Venezuela, which had assembled in November, 1864, at Lima, for the purpose of forming a defensive alliance against aggressions of monarchical powers, closed its sessions on March 13, 1865. The main object of the alliance is fully defined in the following official document:

Alliance of the American States for Common Defence.—In the name of God:—The States of America, which are hereinafter mentioned, desiring to unite in order to provide for their exterior security, to strengthen their relations, to maintain peace among themselves, and to promote other common interests, have determined to secure these objects by means of international compacts of which the present is the first and fundamental one.

To that effect, they have conferred full powers as follows: By Salvador, to Don Pedro Alcantara Herran; by Bolivia, to Don Juan de la Cruz Benavente; by the United States of Colombia, to Don Justo Arosemena; by Chili, to Don Manuel Montt; by Ecuador, to Don Vincente Piedrahita; by Peru, to Don

Jose Gregorio Paz Soldan, and by the United States of Venezuela, to Don Antonio Leocadio Guzman.

And the Plenipotentiaries having exchanged their powers, which they found sufficient and in due form, have agreed herein to the following stipulations:

ART. 1. The high contracting parties unite and bind themselves to each other for the objects above expressed, and guarantee to each other mutually their independence, their sovereignty, and the integrity of their respective territories, binding themselves in the terms of the present treaty, to defend each other against any aggression which may have for its object the depriving any one of them of any of the rights herein expressed, whether the aggression shall come from a foreign power, whether from any of those leagued by this compact, or from foreign forces which do not obey a recognized government.

ART. 2. The alliance herein stipulated will produce its effects when there shall be a violation of the rights expressed in article 1, and especially in the cases of offences which shall consist—

First—In acts directed to deprive any one of the contracting nations of a part of its territory, with the intention of appropriating its dominion or of ceding it to another power.

Second—In acts directed to annul or alter the form of government, the political constitution or the laws which any one of the contracting parties may give or may have given itself in the exercise of its sovereignty, or which may have for their object to change forcibly its internal system, or to impose upon it authorities in the like manner.

Third—In acts directed to compel any one of the high contracting parties to a protectorate, sale, or session of territory, or to establish over it any superiority, right, or preëminence whatever, which may impair or offend the ample and complete exercise of its sovereignty and independence.

ART. 3. The allied parties shall decide, each one for itself, whether the offence which may have been given to any one of them is embraced among those enumerated in the foregoing articles.

ART. 4. The *causa fœderis* being declared, the contracting parties compromise themselves to immediately suspend their relations with the aggressive Power, to give passports to its public ministers, to cancel the commissions of its consular agents, to prohibit the importation of its natural and manufactured products, and to close their ports to its vessels.

ART. 5. The same parties shall also appoint plenipotentiaries to conclude the arguments necessary to determine the contingents of the force, and the land and naval supplies, or of any other kind, which the allies must give to the nation which is attacked, the manner in which the forces must act, and the other auxiliary means be realized, and every thing else which may be proper to the best success of the defence. The plenipotentiaries shall meet at the place designated by the appended party.

ART. 6. The high contracting parties bind themselves in furnishing to the one which may be attacked the means of defence which one of them may think itself able to dispose of, even though the stipulations to which the foregoing articles refer, should not have preceded, provided the case should, in their judgment, be an urgent one.

ART. 7. The *causa fœderis* having been declared, the party offended will not have authority to conclude conventions for peace or for the cessation of hostilities without including in them the allies who may have taken part in the war and should desire to accept them.

ART. 8. If (which may God avert) one of the contracting parties should offend the rights of another one of them, guaranteed by this alliance, the others will proceed in the same manner as though the offence had been committed by a foreign Power.

ART. 9. The high contracting parties bind themselves not to concede to, nor to accept from, any nation or government a protectorate or preëminence

which impairs their independence and sovereignty; and they likewise compromise themselves not to transfer to another nation or government any part of their territory. These stipulations do not hinder, however, those parties which are conterminous to make the cessions of territory which they may deem proper for the better demarcation of their boundaries or frontiers.

ART. 10. The high contracting parties bind themselves to appoint plenipotentiaries, who shall meet every three years, as nearly as possible, to adjust the conventions proper to strengthen and perfect the union established by the present treaty. A special provision of the present Congress shall determine the day and the place at which the first assembly of the plenipotentiaries shall meet, which assembly shall designate the following one, and thus thereafter until the expiration of the present treaty.

ART. 11. The high contracting parties will solicit, collectively or separately, that the other American States which have been invited to the present Congress shall enter into this treaty; and from the moment the said States shall have made known their formal acceptance thereof, they shall have the rights and obligations which emanate from it.

ART. 12. This treaty shall continue in full force for the period of fifteen years, to be reckoned from the day of this date; and at the end of this period any one of the contracting parties shall have authority to terminate it on its part by announcing it to the others twelve months previously thereto.

ART. 13. The exchange of the ratifications shall take place in the city of Lima within the period of two years, or sooner if it be possible.

In testimony whereof, we, the undersigned, Ministers Plenipotentiary, sign the present and seal it with our respective seals, in Lima, this 23d day of January, in the year of our Lord one thousand eight hundred and sixty-five.

ANGLICAN CHURCHES. The general statistics of the Protestant Episcopal Church of the United States, in 1865, were, according to the "Church Almanac" for 1866, as follows:

Dioceses.....	84
Bishops.....	41
Priests and Deacons.....	2,396
Whole number of Clergy.....	2,467
Parishes.....	2,322
Ordinations—Deacons.....	94
“ Priests.....	91
Candidates for Orders.....	220
Churches Consecrated.....	40
Baptisms—Infants.....	24,639
“ Adults.....	5,297
“ Not stated.....	91
Confirmations.....	15,880
Communicants—added.....	12,943
“ Present number.....	154,118
Marriages.....	7,487
Burials.....	15,650
Sunday School Teachers.....	17,583
“ Scholars.....	150,400
Contributions.....	\$2,700,004 08

A comparison of the following table, which presents the statistics of the Church by dioceses, with the one in the ANNUAL CYCLOPEDIA for 1864, giving the statistics of that year, will show an increase in every diocese save Missouri and Minnesota, in which there was a small decrease. The statistics from the Southern dioceses are still imperfect, but more full than in the previous years.

DIOCESES AND MISSIONS.	Clergy.	Parishes.	COMMUNICANTS.		SUNDAY SCHOOLS.		Missionary and Charitable Contributions.
			Adm.	Present Number.	Teachers.	Scholars.	
Maine.....	20	18	156	1,589	137	1,861	\$11,689 21

The Triennial General Convention of the Church, which is composed of the House of Bishops (consisting of all the Diocesan and Missionary Bishops in the American Church), and of the House of Clerical and Lay Deputies (consisting of four clergymen and four laymen from every diocese), met at Philadelphia on October 4, 1865. Long before the meeting of the General Convention, the question of a reunion of those Southern dioceses which, in consequence of the political separation of the Southern States from the Union, had withdrawn from the general convention and organized a Southern "General Council," had prominently engaged the attention of the Church. After the close of the war, and the disappearance of the Southern Confederacy, several of the Southern Bishops, and a considerable number of the Southern ministers and laymen, declared in favor of an immediate and unconditional reunion. The diocesan convention of Texas passed resolutions declaring its connection with the Southern General Council terminated, and its reacknowledgment of the authority of the General Convention of the United States. They accordingly elected delegates to the General Convention to meet in Philadelphia, but none to the meeting of the Southern General Council. The Bishops of Virginia, North Carolina, and Arkansas, likewise expressed themselves in favor of an immediate return, and of an attendance at the Convention in Philadelphia. The

diocesan convention of North Carolina so far agreed with its bishop, as to elect delegates to both the National and the Southern Conventions, and to make the attendance at either, or both of the Conventions, dependent upon the option of the bishop, who decided in favor of the Philadelphia Convention. The diocesan convention of Virginia, while also desirous of reunion, yet declared against attendance at Philadelphia, and in favor of common action on the part of the Southern bishops and dioceses. The diocesan convention of Georgia had also authorized the delegates chosen for the General Conventions, to go to Philadelphia if the bishop should deem this course proper; but Bishop Elliot (the Presiding Bishop of the Southern General Council), while strongly advocating the reunion of the two churches, thought it better to act in common with the Southern dioceses. When the General Conventions met in Philadelphia, the bishops of North Carolina, Arkansas, and the Bishop Elect of Tennessee, and delegations from Tennessee, North Carolina, and Texas were present. No objection was made to their unconditional readmission as members of the General Convention. Some opposition was, however, made to the recognition of Bishop Quintard, of Tennessee, on account of his having been involved in the late rebellion, and still more to that of Bishop Wilmer, of Alabama, as having not only been "disloyal," but as having been elected

and consecrated since the formal separation of the diocese of Alabama from the National Convention. The General Convention, by an overwhelming majority, recognized both bishops, but with regard to Bishop Wilmer, the House of Bishops waived the examination of "certain canonical irregularities in the election and consecration," and expressly declared that its present action should never be construed or accepted as a precedent. The House also passed the following resolution in regard to a pastoral letter of the Bishop of Alabama, instructing the clergy of his diocese not to use the prayer for the President of the United States until the removal of martial law in the State of Alabama:

Resolved, That we do hereby express to the Bishop of Alabama our fraternal regrets at the issue of his late pastoral letter, and assured confidence that no further occasions for such regrets will occur.

This resolution was, however, not entered on the Journal of the Convention. An animated discussion arose in the House of Delegates on the following resolution introduced by the Hon. Horace Binney, a lay delegate of the diocese of Philadelphia.

Resolved, That this house in most cordially concurring, as it has done, in the resolution of the House of Bishops, appointing a day of thanksgiving for the return of peace to the country, and union to the Church, most respectfully express to the House of Bishops its most earnest desire that, in the religious services to be appointed for the day, especial thanks be offered to Almighty God for the reestablishment of the national authority over the whole country, and for the removal of that great occasion of national dissension and estrangement, to which our late troubles were due.

This resolution was defeated, as was also a motion to reconsider the vote of the Convention by dioceses. The question to lay the motion to reconsider on the table (the effect of the passage of this motion being to prevent the question from coming up again during the meeting of this Convention), stood thus: Clerical—20 yeas, 6 nays; Lay—15 yeas, 7 nays. Seven of the Bishops (the Bishops of Maine, Massachusetts, Ohio, Iowa, Kansas, Delaware, and the Assistant Bishop of Ohio) published a declaration to the effect that they had been in favor of the adoption of a resolution touching the restoration of the national authority and the abolition of slavery by the House of Bishops. With regard to the Provincial System, the following canon was adopted by the General Convention:

It is hereby declared to be lawful for the dioceses now existing or hereafter to exist within the limits of States or commonwealths, to establish for themselves a federate convention or council representing such dioceses, which may deliberate and decide upon the common interests of the Church within that State, and exercise any delegated powers not inconsistent with the constitution and canons of this Church.

The General Convention also gave its consent to the division of the diocese of Pennsylvania. The Primary Convention of the new diocese, containing twenty-five counties of Western Pennsylvania, met at Pittsburg, on November

15, and, after debate, adopted the name of "Diocese of Pittsburg." The Rev. Dr. John Barrett Kerfoot, President of Trinity College, Hartford, Connecticut, was elected the first bishop.

With regard to Home Missions, it was resolved to increase the number of missionary bishops to five, appointing, in addition to the missionary bishops of Arkansas and Oregon, others for Nebraska, Colorado, and Ne-

The expectation entertained by many members of the Church, that the course pursued by the General Convention of Philadelphia would induce all the Southern dioceses to consummate the reunion without further delay, was not realized. The Second General Council of the Southern dioceses met at Augusta, Georgia, on November 8th. It was composed of the Bishops of Georgia, Virginia, Mississippi, and Alabama, and delegates from the same dioceses, and from South Carolina. The Council did not take decided action on the reunion question. The resolutions adopted by it, commend "the spirit of charity" exhibited by the Convention in Philadelphia, and declare it proper for any of the Southern dioceses to decide for herself whether she shall any longer continue in union with the General Council, or reconnect herself with the General Convention. They change the term "Confederate States," in the standards of the Church, into that of the United States, and adopt for their organization the name "General Council of the Associated Dioceses in the United States." Charleston was appointed as the place for the next meeting of the General Council. But a few weeks after the meeting of the council, the Bishop of Mississippi issued an address to the clergy and laity of his diocese, in favor of the diocesan return to the normal relations with the General Convention. Bishop Elliot, of Georgia, the Presiding Bishop of the Southern General Council, in a letter dated Jan. 3, 1866, notified Bishop Hopkins, the Presiding Bishop of the Protestant Episcopal Church in the United States, that, on that day, he had given official notice to the bishops who were for a time united with him in the confederation of the Southern dioceses, of his withdrawal from that confederation, and of the return of Georgia to the Protestant Episcopal Church in the United States.

The 30th annual meeting of the Board of Missions was held at Philadelphia on October 5th. The receipts of the Domestic Committee were larger than in any former year, and amounted to \$72,514, against \$66,581 in 1864, \$37,458 in 1863, and \$35,223 in 1862. The expenditures were \$70,126. The receipts of the Foreign Committee were \$78,504.

In November, 1864, the Rev. Dr. Nicholson, who had for nine years been connected with missionary work in Mexico and New Mexico, started on a tour of exploration through Mexico, and on his return, reported that a reform party in the Roman Catholic Church of that country was favorably disposed toward the adoption

of the distinctive principles of the Protestant Episcopal Church, and that under his advice and supervision a society had been organized in Mexico for assisting the reform party.

The Episcopal Mission to Western Africa, reported seven permanent church buildings, one Hospital, Orphan Asylum, High School, and seven Mission Houses, erected at an expense of over \$100,000. There are 21 mission stations; and 816 communicants; 182 boarding scholars; 760 day scholars.

In the Church of England, the case of Bishop Colenso continued to excite a deep interest. On March 29, 1865, his appeal from the decree of the South African Bishops, by which he was, on account of heresy, deposed from his See of Natal, to the Queen's Privy Council, was acted upon. The decision of this court, which is final, was delivered by the Lord Chancellor. The Court on the part of the counsel of Bishop Colenso, had been requested to admit the appeal, and on the part of the counsel of the Bishop of Capetown to "advise Her Majesty to pronounce for protest and against the said pretended complaint and appeal." On these points the Lord Chancellor decided as follows: "As the question can be decided only by the Sovereign as head of the Established Church and depositary of ultimate appellate jurisdiction, their lordships will humbly report to Her Majesty their judgment and opinion that the proceedings taken by the Bishop of Capetown, and the judgment or sentence pronounced by him against the Bishop of Natal, are null and void in law." It was allowed by the Court that the letters patent to Bishop Gray, of Capetown, gave him the rights of Metropolitan, but it was also denied that the Queen's letters patent had in themselves any authority whatever, not having been authorized by any statute of the Imperial Parliament, nor confirmed by any act of the Legislature of the Cape of Good Hope, or of the Legislative Council of Natal. As in England or Ireland the Queen has no power to create a new diocese, or to appoint a bishop to such, without an act of Parliament, so it was ruled that in a crown colony an act of Parliament is necessary; and in colonies which have their own legislatures, the sanction of those legislatures must be obtained to give validity to the establishment of a diocese. The Queen has the prerogative right to command the consecration of a bishop, but no power to assign him any diocese not constitutionally created. Therefore the colonial bishoprics already founded, with the exception of Calcutta, Bombay, and Madras, sanctioned by acts of Imperial Parliament, and Jamaica, sanctioned by the local legislation, have no position in the eyes of the English law. The judgment is most sweeping in its consequences, since it renders all jurisdiction in such unsanctioned bishoprics, not only of metropolitans over bishops, but of bishops over the inferior clergy, invalid. While it, therefore, denied the jurisdiction of the Metropolitan of Capetown over Colenso, it also

denied the jurisdiction of Colenso over the clergy of his diocese. In accordance with this judgment, Colenso resolved to return to his diocese, while on the other hand a large portion of the diocesan clergy pledged themselves not to recognize his spiritual authority, and the Bishop of Capetown declared in favor of appointing another bishop in place of Colenso. In the latter part of the year Colenso returned to his diocese, which was greatly agitated at the new aspect of this important controversy.

The English Order of St. Benedict, in June, 1865, was shaken by a revolt of a majority of the monks against their Superior, Father Ignatius. The latter restored his authority, but his health was so completely prostrated in consequence of the excitement, that he was obliged to retire in September from the monastery of Norwich. In December, 1865, he had not yet been able to resume the direction of the order. The "third order" of St. Benedict made a considerable progress in England, and was also established in the Protestant Episcopal Church of the United States.

The endeavors to bring on a closer union of the Church of England with all those churches which hold to the doctrine of the Apostolical Succession of the Bishops, were eagerly continued during the year, and seemed to call forth a greater attention and a livelier interest than in previous years. An important meeting for the special purpose of establishing a regular and formal intercommunion between the Church of England and the Russian Church was held in London on November 15th, under the presidency of the Bishop of London. Among those present were the Bishop of Lincoln, the Bishops-Coadjutor of Edinburgh, Dr. Pusey, Dr. Williams, Canon Wordsworth, and letters of sympathy were read from two archbishops, ten bishops, and a number of eminent men, among whom was Mr. Gladstone. The Bishops of Oxford and Edinburgh urged that, in their opinion, the churches should not content themselves with preparing the ground, leaving the harvest to be reaped by future generations, but, deferring all dogmatical debates, proceed to celebrate the Lord's Supper by intercommunion, if such were the wish of the chiefs of the Russian Church. It was stated, and confirmed by the bishops present, that orthodox Christians might receive the communion in Anglican churches even now. The representatives of the Russian Church at this meeting expressed full sympathy with the movement, but were unable to say how far the heads of their Church were willing to go, and, in general, advised great caution in taking any decisive steps. The Archbishop of Canterbury expressed to Prince Orloff, one of the representatives of Russia at the above meeting, a desire to send two bishops to Russia; but hearing what the Prince had to say against the plans, put it off. (See GREEK CHURCH.) As regards the union with Rome, a great sensation was produced by the appearance of several letters from Dr. Pusey, stating that, in his convic-

tion, there was no "insurmountable obstacle to the union of the Roman, Greek and Anglican communions," that he had long been convinced that "there is nothing in the Council of Trent which could not be satisfactorily explained to us (the Anglicans), if it were explained authoritatively—namely, by the Romish Church itself, not by individual theologians only," and that, on the other hand, "there is nothing in our Articles which cannot be explained rightly, as not contradicting any thing held to be *bona fide* in the Roman Church." With regard to the supremacy of the Bishop of Rome, Dr. Pusey made this important declaration: "We readily recognize the primacy of the Bishop of Rome; the bearings of that primacy upon the other local churches we believe to be matter of ecclesiastical, not of divine law; but neither is there any supremacy in itself to which we should object." While there appeared to be entire unanimity among the High Church party of the English Church, as to intercommunion with the Eastern Churches, a strong opposition was made to the above declarations of Dr. Pusey, and to a translation of the Book of Common Prayer into Latin, in which the Scriptural passages were taken from the Vulgate and several similar publications.

The number of Colonial Bishoprics of the Church of England was increased, during the year 1865, by the establishment of a See at Dunedin, New Zealand. The agitation for an increase of the Episcopal Sees in England continued, without, however, leading to any result.

ANHALT, a duchy in Germany. Area 1,017 square miles. Population in 1861, 181,824; in 1864, 193,046. At the establishment of the German Confederacy, in 1815, the territory of Anhalt was divided into three duchies: Anhalt-Dessau, Anhalt-Bernburg, and Anhalt-Koethen. The line of the reigning family in the latter became extinct on November 23, 1847, and the duchy, in virtue of a treaty between the two remaining lines, signed on May 2 and 7, 1853, was united with Anhalt-Dessau. On August 18, 1863, the line of Anhalt-Bernburg became likewise extinct, and thus the whole territory of Anhalt, which since 1603 had been divided into several sovereignties, was reunited. The duchy has twenty-two towns, of which the following have above 10,000 inhabitants: Dessau, 16,806; Bernburg, 12,171; Koethen, 11,935; Zerbst, 11,379. Receipts and expenditures of the year 1865 amounted to 3,815,247 thalers. On January 1, 1865, the public debt of Anhalt-Dessau-Koethen was 1,827,593 thalers; and that of Anhalt-Bernburg, 1,618,634 thalers.

ARGENTINE REPUBLIC. President (from October 12, 1862, to October 11, 1868), Bartolomé Mitre; Vice-President, Marcos Paz; President of the Chamber of Deputies, Aristides Villanueva. The Ministry, which was appointed in 1862, is composed as follows: Interior, Dr. W. Rawson; Exterior, Dr. R. de Elizalde; Fi-

nances, L. Gonzales; Justice, Dr. E. Costa; War, Gen. J. A. Gelly y Obes.

Minister of the United States at Buenos Ayres, Robert C. Kirk.

The Federal Constitution of the Argentine Republic was adopted in May, 1853, and revised, in consequence of the reunion of Buenos Ayres with the Republic, on June 6, 1860. According to this Constitution the Legislature consists of two Chambers, a Senate and a House of Representatives, the Senate having twenty-eight, and the House of Representatives fifty-four members.

The area of the Republic is 820,000 square miles. The following table shows the provinces which belong to the Confederation, and the population and capital of each:

Provincia.	Population.	Capital.
Jujuy	88,200	Jujuy.
Salta	66,600	Salta.
Catamarca	50,000	Catamarca.
Tucuman	88,500	Tucuman.
S. Jago del Estero	60,000	San Jago.
Corrientes	65,000	Entre Rios.
La Rioja	84,500	La Rioja.
Cordova	180,000	Cordova.
Santa Fe	40,000	Santa Fe.
Entre Rios	80,000	Concepcion.
San Juan	62,000	San Juan.
San Luis	32,000	San Luis.
Mendoza	60,000	Mendoza.
Buenos Ayres	850,000	Buenos Ayres.
Total	1,171,800	

Of the inhabitants of the province of Buenos Ayres, 126,000 were foreigners (25,000 Spaniards, 25,000 English and Irish, 30,000 French, 80,000 Italians, 3,500 Germans, 3,000 North Americans, 2,500 Portuguese, and 7,000 natives of other countries).

The number of immigrants into the Argentine Republic in 1864, was 11,682 persons (5,435 Italians, 2,737 French, 289 Germans, 329 Swiss, 1,586 Spaniards, 1,051 Englishmen, 291 persons of other countries).

The receipts of the Republic in the year 1865 were estimated at 8,293,800 pesos, and the expenses at 8,595,087 pesos. The paper money in circulation amounted in 1864 to 340,457,656 pesos.

The regular army consists of 10,700 men. For the war against Paraguay, the Government pledged itself to contribute a contingent of 43,250 men. The fleet is composed of seven steamers and ten sailing vessels.

The invasion of the province of Corrientes on April 18th, by a Paraguayan army, without a previous declaration of war, involved the Argentine Republic in the war of Brazil and Uruguay against Paraguay. On April 16th the official declaration of war was issued, and on May 4th the Government concluded, at Buenos Ayres, with Brazil and Uruguay, an aggressive and defensive alliance against Paraguay. The war was chiefly carried on upon the soil of the Argentine Republic, until October 24th, when the last division of the invading army reentered the territory of Paraguay. (See PARAGUAY.) This invasion had continued one hundred and

ninety-two days, and was signalized by an enormous destruction of property. Before the war there was in the invaded provinces much sympathy with Paraguay and hostility to Brazil, which was suspected of a design to annex Uruguay, and thus to obtain absolute control of the rivers Uruguay and Parana. The contingent to the Argentine army from these provinces disbanded on the approach of the Paraguanians, and even its leader, Urquiza, was by many suspected of disloyal intentions. After the occupation of the town of Corrientes by the Paraguayans, a provisional government of three citizens of the province was appointed, and this province, as well as that of Entre Rios, declared to be annexed to Paraguay. On the withdrawal of the Paraguayans the members of the Provisional Government sold their property and left with the invading army.

ARKANSAS. The reorganization of the State of Arkansas took place in 1864. The proceedings were based on the amnesty proclamation issued by President Lincoln (*see ANNUAL CYCLOPEDIA, 1864—Arkansas*). The reorganization was recognized and sustained by the Executive Department of the Federal Government. The members elected to the 38th Congress were not admitted at the second session which commenced December, 1864. The Legislature, consisting, however, of less than the full number of members, assembled in March, 1865. On April 14th it adopted the amendment to the Constitution of the United States relative to slavery, by a unanimous vote. The State Convention which assembled in 1864, amended the Constitution, thereby abolishing slavery in the State, and repudiating the debt contracted to aid in carrying on the war against the United States. Thus the three most important measures required by the Federal Government for the restoration of the State to the Union, have been adopted.

The Legislature at the same session in April, also passed an act, disfranchising all citizens who had aided the Confederate cause subsequent to April 18th, 1864, at which time the present State Government was reorganized. The law was greatly discussed during the year, especially as the time approached for the Congressional elections in October. Those who opposed the act of the Legislature, urged as objections that it prescribed qualifications for voters different from those required by the State Constitution. They said the Legislature had no power to make such a change. "In our form of government all power is in the people; they meet in *Convention* and make the supreme law, not to be changed, save by a particular mode of procedure, which, it is admitted, has not been done in this instance. The Legislature, as the representative of all the power of the people, may do almost any thing, except that they cannot add to or take from any of the specifications in the Constitution. Any attempt to do this, is null and void; for the people agreed and declared that it so should be, when they formed

and adopted the charter of their rights." It was further urged, that to require every voter to make oath that he had not aided the Confederacy since April, 1864, violated those portions of the letter and spirit of the Federal and State Constitutions, being the supreme law, which declared:

That no person shall be held to answer for a capital or infamous crime, unless on a presentment or indictment of a grand jury.

Nor be compelled to give evidence against himself.

That no man shall be put to answer any criminal charge but by presentment, indictment, or impeachment.

That no free man shall be deprived of his freehold, liberties, or privileges but by the judgment of his peers or the laws of the land.

Therefore, that the act in question, so far as it attempted to deprive a man of his privileges, without judicial conviction of crime, was contrary to the foregoing provisions; and if the Legislature exceeded its powers in the enactment of the law, it was no part of "the law of the land."

Meanwhile the State Government continued to extend its operations to many counties which had been previously occupied by Southern soldiers until their disappearance on the cessation of active hostilities. The Governor, Murphy, then issued a proclamation to the people, urging them to assemble and renew their local organizations in the counties thus far disaffected. This address was favorably received, and the State Government was soon acquiesced in throughout the State. After the disbanding of the Southern forces outrages soon ceased, and at the end of two months, or early in July, the judicial districts were organized in nearly every county. Some of the courts had been in session, and most of them were prepared to meet regularly. Taxes were as quietly collected as before the war, and civil process could be executed in every part of the State. Hundreds of persons had returned from the South to the places of their former residence, and the pursuits of peace were resumed as rapidly as could be expected. As the time for the election of members of Congress approached, the Governor issued an address to the people, urging them to elect persons who could take the oath required by Congress. Three members were chosen, viz.: William Ryers, G. H. Kyle, and James M. Johnson, who subsequently appeared at Washington and presented their credentials.

In October, the Secretary of State, Robert J. T. White, reported to the President the peaceful and orderly condition of affairs which existed, and the following despatch was sent to the Governor:

EXECUTIVE OFFICE, WASHINGTON, Oct. 30, 1865.

To Gov. Murphy, Little Rock, Ark.:

There will be no interference with your present organization of State government. I have learned from E. W. Gantt, Esq., and other sources, that all is working well, and you will proceed and resume the former relations with the Federal Government, and all the aid in the power of the Government will be given in restoring the State to its former relations.

ANDREW JOHNSON,
President of the United States.

The number of slaves in Arkansas in 1860, was 111,115. They were generally under the supervision of the Freedmen's Bureau, aided by the commander of the Department, Major-Gen. Reynolds. An inspector of that Bureau reported in July, "that in the Little Rock district about four thousand freedmen are employed under orders from the War Department; that first-class men received from twenty-five to fifty dollars per month, and first-class women from fifteen to eighteen, one-half of which was paid every two months, and the balance at the end of the year; that two thousand of them were employed by the forty-three lessees of abandoned plantations at these rates; that very harmonious relations existed between the freedmen and their employers; that the negroes were generally contented; that the lessees complained that the rate of wages was higher than was paid anywhere else in the Mississippi valley, and so high that their cotton would cost them from twenty to twenty-five cents per pound before being ready for market, and that they would not make any thing on the crop; that there were about one thousand freedmen at work for citizens of Little Rock; that large numbers were working for themselves, at remunerative wages; that the colored people are building two school-houses in the place; that there was abundant work for all who were able to labor; that fair wages were generally paid; and finally, that the condition of the freed people in Arkansas was probably better than in any other section of the country."

Great destitution, however, prevailed throughout the State. In the month of May, the Federal Government issued 75,097 rations to refugees, and 46,845 to freedmen. As late as December 9th, the Governor addressed the following letters to two charitable agents, in which he thus stated the extent of the destitution:

EXECUTIVE OFFICE, LITTLE ROCK, December 9, 1865.

Mrs. H. W. Cobb, Sec. A. U. Commission:

DEAR MADAM: Yours of October 27th was received last mail. We feel deeply grateful for the benevolent interest evinced for our suffering population. The desolations of war in our State are beyond description. Suffering and poverty are, perhaps, more general in this than the other rebel States, from the fact that during the entire war an internal and bloody strife existed between the Union element and their rebel neighbors, resulting in the exile of nearly all the loyal families who could escape, stripped of all their property, and thrown helpless on the charity of the benevolent. A great many of these families have returned, others are striving to get back to their old and once happy homes, ignorant or regardless of the destitution that will meet them there. Besides the utter desolation that marked the track of war and battle, guerrilla bands and scouting parties have pillaged almost every neighborhood north of the Arkansas River, also in the country south of the river, lying near the Indian boundary. It would be safe to say that two-thirds of the counties in the State are in destitute circumstances, and many will suffer for food and clothing this winter and spring, unless relieved by the noble kindness of the people of the Northern States.

ISAAC MURPHY, Governor of Arkansas.

EXECUTIVE OFFICE, LITTLE ROCK, December 9, 1865.

Rev. J. H. Leard:

DEAR SIR: Understanding that you leave in the morning on a mission of charity in behalf of the destitute in Arkansas, I feel constrained to throw in my mite of encouragement and approbation of your praiseworthy services.

The confession comes from me with reluctance—but, still, come it must—that there are thousands suffering in Arkansas for want of food and raiment, and who, unless speedily relieved, will, in many instances, during the winter, die from the effects of hunger and cold. These people reside generally in the western part of the State, and are chiefly the widows and orphans of Union soldiers, or the helpless connections and dependents of the aged and infirm, who have been reduced by robbery or exhausted in means and strength while flying from their enemies.

By next harvest, with the blessing of God, I trust our people will be able to spare of the first-fruits for a thank-offering and bless the hands reached out to help them. This is designed to be sent by — who intends to start for your city in the morning. He is acquainted with the wants of the people, and worthy of all confidence. For full particulars I respectfully refer you to him.

With high respects, yours,

ISAAC MURPHY, Governor of Arkansas.

An Emigrant Aid Society was formed at the capital to induce white settlers to occupy lands in the State. Arkansas has an area of 52,198 square miles, and extends in the great valley of the Mississippi from the line of 33 to 36½ degrees of north latitude, and is adapted alike to agriculture, commerce, and manufacturing. The Mississippi, along the eastern boundary, receives the water of six navigable rivers—the land is very fertile and adapted to almost all growths, from the apples and cereals of the Northwest to the cotton which is the great staple in the valleys of the Arkansas, Red, and Ouachita Rivers. Prices range from one to five dollars an acre, many large plantations having been subdivided with a view to sale since the abolition of slavery. There is plenty of wood and timber, oak, cedar, hickory, black walnut and yellow pine; in short, every material element of prosperity.

ARMY, CONFEDERATE. The numbers of the Southern forces in the field were greatly reduced by various causes during the winter of 1864-'65, and their final surrender and disappearance is described under the title ARMY OPERATIONS.

ARMY OF THE UNITED STATES. The year 1865, unlike its immediate predecessors, witnessed no new calls to fill up the depleted ranks of the army, but was distinguished rather by the ease and rapidity with which the immense hosts, assembled for the overthrow of the rebellion, were dispersed and merged into the active, industrial life of the country, so soon as the necessity ceased for their continuance in the service. The commencement of the year found the Government busily engaged in repairing the losses sustained in the recent bloody campaigns in Virginia and the South, and in preparing for the campaigns of the ensuing spring, which, it was rightly judged, would decide the war. The actual available force at

that time must have been below 500,000 men. Fortunately, however, the Government possessed not merely the authority but the machinery to remedy the ravages of war, and was about carrying into operation the President's call of December 20, 1864, for 300,000 men, which, as has been stated in the preceding volume of this work, was in point of fact equivalent to a call for 1865, as the men authorized by it were mostly obtained in the latter year. By the terms of the call all quotas or parts of quotas not filled by February 15, 1865, were to be filled by draft. In previous years, such had been the difficulty of persuading able-bodied men to forsake remunerative occupations and submit to the hardships of military service, that quotas were rarely filled at the appointed time, and in consequence either a draft or a new call became necessary. Fortunately in the present instance several events, happening subsequent to the call, such as the disastrous rout of Hood before Nashville, the triumphant march of Sherman through Georgia and Carolina, and the capture of Fort Fisher, by foreshadowing the speedy collapse of the "Confederacy," and consequently brief and probably not very arduous terms of service, gave a great stimulus to recruiting, and by the end of February the number of men obtained by this means was so large, that the draft lost much of the terror commonly associated with it.

The main features of the enrolment and conscription acts of 1863 or 1864, were given in the volume of this work for 1864 (pp. 39, 40). An additional act was passed at the second session of the Thirty-eighth Congress, which provided that, in case of the revision of any future enrolment, quotas of districts might be adjusted and apportioned to such revised enrolment; that persons mustered into the service should be credited to the place where they belong by actual residence; that substitute brokers, mustering officers, and persons liable to draft or drafted, shall be held to a strict accountability for improper persons admitted into the service through their connivance; and that all deserters from the military or naval service "shall be forever incapable of holding any office of trust or profit under the United States, or of exercising any rights of citizens thereof." Persons leaving the district in which they are enrolled, or going beyond the limits of the United States, with intent to avoid any draft into the military or naval service, duly ordered, are made liable to a similar penalty. The President, in conformity with a special provision of the act, by his proclamation of March 10th, notified deserters that they would be pardoned upon condition of returning within sixty days to their regiments, and serving for a period of time equal to their original term of enlistment. The twenty-third section enacted:

That any person or persons enrolled in any sub-district may, after notice of a draft, and before the same shall have taken place, cause to be mustered into the service of the United States such number of

recruits, not subject to draft, as they may deem expedient, which recruits shall stand to the credit of the persons thus causing them to be mustered in, and shall be taken as substitutes for such persons, so many of them as may be drafted, to the extent of the number of such recruits, and in the order designated by the principals at the time such recruits are thus as aforesaid mustered in.

This provision the Attorney-General, in a elaborate opinion, decided did not conflict with that section of the act of 1864 which enable any enrolled person, before a draft, to furnish "an acceptable substitute who is not liable to draft, nor at the time in the military or naval service of the United States," and provides that the person so furnishing such substitute, "shall be exempt from draft during the time for which such substitute shall not be liable to draft, not exceeding the time for which such substitute shall have been accepted." On the contrary, he was of the opinion that it provided for quite another case than that contemplated in the act of 1864, and was designed to offer inducement and present a stimulus to numbers or associations of individuals to obtain volunteer recruits for the army, and thus to encourage recruiting rather than the purchase of substitutes. The right, however, of the enrolled person, before the draft, to furnish a substitute, with the qualification above stated, and thus secure his exemption during the time for which such substitute shall have been accepted, is not in any respect disturbed. He also held that recruits, obtained in accordance with the section above quoted, are to be considered as other volunteer recruits obtained at the expense of the United States, and not as substitutes, in the ordinary sense of the term, who are furnished at the cost of the principals.

Subsequent to February 15th enlistments increased rather than diminished, and official reports show that on March 1st the aggregate national military force of all arms, officers and men, was 965,591.

This force was augmented on May 1st by enlistments to the number of 1,000,516 of all arms, officers and men, of whom probably about 650,000 were available for active duty. This nearly corresponds with the figures for May 1, 1864, which placed the aggregate national force at 970,710 men, of whom 662,345 were present for duty. The fact that after a year of almost unparalleled fighting and slaughter the army was recruited up to its original standard, speaks volumes in favor of the energy of the Government and the determination of the people.

Of the whole number of troops in the service on May 1, 1865, 194,635 were obtained under the call of December, 1864, for 300,000 men, as will appear by the following table:

Volunteers (white)	180,620
Volunteers (colored)	10,065
Regulars	6,958
Seamen	2,106
Marine Corps	819
Drafted men held to personal service	12,566
Substitutes for drafted men	12,014
Substitutes for enrolled men	12,997

Whole number raised under December call, 194,635

The general suspension of hostilities after the middle of April rendered it unnecessary to proceed with the draft, and the remainder of the 300,000 men required by this call were never put into the service.

The payment of the bounties to recruits authorized in the previous year continued during the early part of 1865, until recruiting was stopped. In reply to a communication from the House Committee on military affairs of the Thirty-ninth Congress, asking for information concerning the amount required to equalize the bounties of volunteers during the rebellion, the Secretary of War presented reports from the Provost-Marshal General and the Paymaster General, showing that 1,722,590 enlisted men received bounties as follows:

1,154,563 at \$100 each	\$115,456,300
10,696 at \$200 each	2,121,200
296,709 at \$300 each	119,012,700
153,599 at \$400 each	63,402,900
1,722,560	\$300,222,800

The number of enlisted men who received no bounties was 738,372. To pay each soldier or his representative enough to bring his bounty up to \$400, the largest bounty paid by the General Government, would require \$684,197,800. To pay each soldier such highest bounty, in proportion to the time of his service, would require \$551,392,900. After reverting to these figures the Provost-Marshal General adds:

I will take the liberty of reminding the Secretary of War that the foregoing inquiries and answers relate only to the expenditure that would result from an attempt to equalize the bounties of the General Government; and if this object were attained, even at the enormous cost shown above, it would be but a partial advance toward equalizing all the bounties, Government, State, and local, which have been paid to men for enlisting during the rebellion. The subject of requiring the General Government to assume all the bounties paid is already discussed, and if affirmatively decided, the present attempt to equalize Government bounties, if carried out, would establish a precedent for a further equalization of the expense of the Government of all bounties, and this would cost probably thousands of millions, instead of hundreds of millions. I feel justified in saying that in either attempt to equalize, but a small fraction of the money will ever reach the soldiers for whom it is intended.

From returns made by the Provost-Marshal General, it appears that the aggregate quotas charged against the several States under all the calls made by the President from April 15, 1861, to April 15, 1865, amounted to 2,759,049; and that the aggregate number of men credited on the several calls and put into the service during the same period was 2,656,553, leaving a deficiency on all calls, when the war closed, of 102,496, which would have been obtained in full if recruiting and drafting had not been discontinued. This number does not embrace the "emergency men" put into the service at various times during the summer of 1863, amounting to upward of 120,000 men, who served periods of two or three weeks. The following tables, furnished to Congress by the Secretary of War, in compliance with a

resolution of the House of Representatives adopted in December, 1865, give the latest official information with respect to the number of volunteers called for by the President at various periods:

Number of troops furnished by States.

STATES.	Aggregate.	Aggregate reduced to three years' standard.
Maine.....	71,745	56,595
New Hampshire.....	84,605	80,837
Vermont.....	86,356	29,002
Massachusetts.....	151,785	123,944
Rhode Island.....	23,711	17,573
Connecticut.....	57,270	50,514
New York.....	455,568	890,980
New Jersey.....	79,511	55,785
Pennsylvania.....	866,826	267,558
Delaware.....	13,651	10,303
Maryland.....	49,780	40,693
West Virginia.....	80,008	27,658
District of Columbia.....	16,873	11,506
Ohio.....	317,183	289,976
Indiana.....	195,147	152,288
Illinois.....	253,217	212,694
Michigan.....	90,119	80,565
Wisconsin.....	96,118	73,935
Minnesota.....	25,064	19,675
Iowa.....	75,860	63,183
Missouri.....	108,778	86,192
Kentucky.....	78,540	70,943
Kansas.....	20,097	19,654
Total.....	2,658,062	2,129,041

Number of troops furnished under different calls.

	Number of men.	Terms of enlistment.
Call of April 15, 1861, for 75,000 men....	98,285	3 months.
	2,715	6 months.
	9,056	1 year.
Call of May 8 and July 23 and 25, 1861, for 500,000 men.....	30,952	2 years.
	657,863	3 years.
Call of July 2, 1862, for 500,000 men....	419,627	3 years.
Call of August 4, 1862, for 300,000 men....	84,860	9 months.
Proclamation of June 15, 1863, for militia, Calls of October 17, 1863, and February 1, 1864, for 500,000 men.....	16,861	6 months.
	874,307	3 years.
Call of March 14, 1864, for 200,000 men.....	234,021	3 years.
Militia mustered into service in spring of 1864.....	68,612	100 days.
	149,256	1 & 2 yrs.
Call of July 18, 1864, for 500,000 men....	234,798	3 years.
	728	1 year.
	151,105	1 year.
Call of December 19, 1864, for 300,000 men.....	5,076	2 years.
	48,063	3 years.
	812	4 years.

In estimating the number of men called into the service, it has been the rule of the War Department to take into account only the whole number of men mustered, without regard to the fact that the same persons may have been previously discharged, after having been accepted and credited on previous calls. Hence, as volunteers have been accepted for terms varying from three months to three years, many thousands of persons were enlisted under two or more calls. A notable instance of this practice was the reenlistment of nearly 150,000 "veteran volunteers" in 1863 and 1864. In order, therefore, to ascertain the number of men entering the service for the first time under the different calls, the number credited should be reduced in the same ratio that the enlistments of the same persons have been repeated. To what extent this reduction must

be made it is not now possible to determine with any degree of accuracy. The only fact at present settled beyond a doubt is, that the tax upon the military resources of the country has been less than would appear by considering simply the number of men embraced in the different calls for troops, or the number of credits allowed upon these calls.

The colored troops continued, during 1865, to form a large and efficient portion of the army, and at the several battles before Nashville, the capture of Fort Fisher, the final operations around Richmond, and numerous minor engagements, sustained their previous well-earned reputation for bravery and soldierly qualities. Such was the popularity of this branch of the service that, in addition to the 101,950 colored soldiers reported in arms in November, 1864, 49,509 were enlisted within the next six months, which, considering the difficulties of recruiting from this class of the population, must be considered a very large number. Of these 4,244 were recruited in the insurrectionary States and credited to the other States under the provisions of the act of July 4, 1864. The whole number enlisted into the service during the war was 178,975, and the losses within the same period from sickness, desertion, or casualties incidental to military life, amounted to 68,178. On July 15, 1865, the number of this class of troops in the service was 123,156, organized as follows:

One hundred and twenty regiments of infantry.....	98,888
Twelve regiments of heavy artillery.....	15,682
Ten batteries of light artillery.....	1,811
Seven regiments of cavalry.....	7,245
Total.....	123,156

This was the largest number of colored soldiers in service at any one time during the war. The following table shows that commissions in these organizations, which at the outset few competent officers were willing to accept, subsequently became in considerable request:

Number of applicants for commissions.....	9,019
Number examined.....	3,790
Number rejected.....	1,472
Number appointed.....	2,818
Total number of appointments and promotions.....	3,578

From the returns made at the bureau for colored troops, it appears that the whole number of claims for compensation on account of the enlistment of slaves from Delaware and Maryland was 3,971, of which twenty-five have been paid, amounting in the aggregate to \$6,900. Two hundred and ninety-four were rejected, and the remainder are under consideration by the local boards, or the commission established by General Orders of October 3, 1863.

The surrender the army under Gen. Lee, on April 9, 1865, gave the death blow to the Southern cause; and although considerable forces under Johnston, Taylor, and Kirby Smith still kept the field, the speedy termination of the war seemed so certain that the Government determined at once to curtail its immense military establishment, and thereby reduce the ex-

penses, which were rapidly eating into the resources of the nation. The immediate release of half a million or more of men was also urgently needed in the agricultural districts, where in the preceding year the want of able-bodied farm laborers had been keenly felt. Accordingly, as an earnest of what was to follow, the Secretary of War issued on April 18th, four days before Lee's surrender, the day before the assassination of President Lincoln, the following notice:

WAR DEPARTMENT, WASHINGTON, April 18—6 P. M.
The Department, after mature consideration and consultation with the Lieutenant-General upon the results of the recent campaigns, has come to the following determinations, which will be carried into effect by appropriate orders to be immediately issued.

First—To stop all drafting and recruiting in the loyal States.

Second—To curtail purchases for arms, ammunition, quartermaster and commissary supplies, and reduce the military establishment in its several branches.

Third—To reduce the number of general and staff officers to the actual necessities of the service.

Fourth—To remove all military restrictions upon trade and commerce, so far as may be consistent with public safety.

As soon as these measures can be put in operation it will be made known by public order.

EDWIN M. STANTON, Secretary of War.

Before the close of April, the measures contemplated in the foregoing notice began to be carried into effect, with a rapidity surprising to those who could not appreciate the perfection to which the necessary machinery had been brought by four years of experience; and in an almost incredibly short time, the great bulk of the armies scattered over the country was returned to the peaceful pursuits of civil life. The following general order gave the necessary details:

General Orders No. 77.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, April 28, 1865.

For reducing the expenses of the military establishment, ordered, 1st, that the chiefs of the respective bureaus of this Department proceed immediately to reduce the expenses of their respective departments to what is absolutely necessary in view of an immediate reduction of the forces in the field and in garrison, and the speedy termination of hostilities, and that they severally make out statements of the reductions they deem practicable.

2. That the Quartermaster-General discharge all ocean transports not required to bring home troops in remote departments. All river and inland transportation will be discharged, except that required for the necessary supplies of troops in the field. Purchases of horses, mules, wagons, and other land transportation will be stopped, also purchases of forage, except what is required for immediate consumption. All purchases for railroad construction and transportation also to be stopped.

3. That the Commissary-General of Subsistence discontinue the purchase of supplies in his department, except such as, with what is on hand, be required for the forces in the field to the first of June next.

4. That the Chief of Ordnance stop all purchases of arms, ammunition, and materials therefor, and reduce the manufacture of arms and ordnance stores in Government Arsenals as rapidly as can be done without injury to the service.

5. That the Chief of Engineers stop work on all field fortifications and other works, except those for which specific appropriations have been made by Congress for their completion, or that may be required for the proper protection of works in progress.

6. That all soldiers in hospitals who require no further medical treatment be honorably discharged from service, with immediate payment. All officers and enlisted men who have been prisoners of war and are now on furlough or in parole camps, and all recruits in rendezvous, except those for the Regular Army, will likewise be honorably discharged. Officers whose duty it is under the regulations to make out rolls and other final papers connected with the discharge and payment of soldiers, are directed to make them out without delay, so that this order may be carried into effect immediately.

7. The Adjutant-General of the Army will cause immediate returns to be made by all commanders in the field, garrisons, detachments, and posts of their respective forces, with a view to their immediate reduction.

8. Quartermasters of Subsistence, Engineers, and Provost-Marshal Generals of departments will reduce the number of their clerks and employés to that absolutely required for closing the business of their respective departments, and will without delay report to the Secretary of War the number required of each class or grade. The Surgeon-General will make similar reductions of surgeons, nurses, and attendants in his bureau.

9. The chiefs of the respective bureaus will immediately cause proper returns to be made out of the public property in their charge and statements of property in each that may be sold upon advertisement and publication without prejudice to the service.

10. The Commissary of Prisoners will make out the name, residence, time and place of capture and occupation of all prisoners of war who will take the oath of allegiance to the United States, to the end that such as are disposed to become good and loyal citizens of the United States, and who are proper subjects of Executive clemency, may be released upon terms that the President shall deem fit and consistent with the public safety.

By order of the Secretary of War.

W. A. NICHOLS, Assistant Adjutant-General.

Official: THOMAS W. VINCENT, A. A. G.

In furtherance of this order, regulations were prepared and promulgated for the muster out and discharge of the volunteer troops in the service. Accordingly rendezvous were established in the field as well as in most of the States, at the former of which all surplus property was taken possession of by the staff officers of the respective supply departments, and the muster out rolls and other discharge papers prepared under the direction of the commissaries of musters and their assistants. Corps and department commanders were instructed to see that the work was pushed with energy, using for that end the division and brigade commanders and their respective staff officers to superintend it. As soon as a regiment or other organization had its muster-out papers prepared, it was placed en route to its State for payment and final discharge. At the State rendezvous was stationed the chief mustering officer of the State, or one or more of his assistants, with paymasters, quartermasters, commissaries of subsistence, and ordnance officers, who were charged with the payment and final discharge of the troops; their care while awaiting the same; the reception of the public property surren-

dered by them, and their transportation to their homes after discharge. By these arrangements the disbanding of the troops was conducted with regularity and despatch, and order and discipline were maintained during their progress to their respective States and after arrival therein. The rapidity with which the work was carried on will be apparent from the following statistics:

Troops mustered out to August 7	640,906
Do. do. August 22	719,883
Do. do. September 14	741,107
Do. do. October 15	753,905
Do. do. November 15	800,968

From which it appears that during the quarter succeeding the promulgation of general orders No. 77, troops were disbanded at the rate of nearly 300,000 a month, and that within six months after the complete suspension of hostilities four-fifths of the army had disappeared. Such a speedy and quiet absorption of so large a body of armed men into the industrial life of a nation, with scarce a trace left behind of the influence or evil effects of their recent calling, is probably unexampled in the history of the world. A partial exception to this general disbanding was made with respect to the colored troops, of whom 85,024 remained in the service in November, 33,334 having been mustered out.

Upon the discharge of troops the services of a great number of staff, field, and other officers were no longer required. Many of these at once resigned, many were honorably mustered out, and until the close of the year the Government continued to rid itself of superfluous generals as occasion required. Those who held commissions in the regular army as a general rule resumed them, but many of these, not caring to lapse into the condition of a subaltern of regulars, after having been general officers of volunteers, and dreading, too, the inertness of military life in peaceful times, availed themselves of the opportunity to engage in civil professions or a political career. "No doubt," says the Secretary of War in his annual report, "in many instances it has been painful for gallant and accomplished officers to leave that service to which they have been accustomed, and where they have won honorable distinction. But it is to the credit of the volunteer service that they have recognized the obligation of the Government to reduce the military establishment with the occasion that called it into existence, and that their own wishes or interest have not been importunately urged against the necessities of the service." In another part of the same document, alluding to the rapidity with which troops were raised during the war, he says: "Our experience on this point is significant. When Lee's army surrendered, thousands of recruits were pouring in, and men were discharged from recruiting stations and rendezvous in every State. On several occasions when troops were promptly needed to avert impending disasters, vigorous exertion brought them into the field from remote States with incredible speed. Official reports show that after

the disasters on the Peninsula in 1862, over 80,000 troops were enlisted, organized, armed, equipped, and sent to the field in less than a month. 60,000 troops have repeatedly gone to the field within four weeks. And 90,000 infantry were sent to the armies from the five States of Ohio, Indiana, Illinois, Iowa, and Wisconsin within twenty days." As a corollary from the above he concludes that our resources in men, arms, and ammunition, clothing, transportation, and subsistence supplies are so extensive as to enable the Government to reduce its standing military force in time of peace to a lower degree than any other nation.

Accordingly the estimates for the fiscal year ending June 30, 1867, are \$33,814,461.83 as against \$516,240,131.70 for the preceding year, and are based upon a standing force of 50,000 men, so organized as to admit of an increase, without additional organizations, to 82,000 troops of all arms. The public mind does not, however, appear to be yet settled with regard to the size or composition of the force to be retained as a standing army in time of peace, and several projects for the reorganization of the army have been initiated at the first session of the thirty-ninth Congress. A bill reported by the Senate Committee on military affairs provides that the army shall consist of—

Five regiments of artillery.....	9,000 men.
Twelve regiments of cavalry.....	12,000 "
Fifty-five regiments of infantry.....	85,000 "
Total.....	50,000 "

to be called the Army of the United States. The artillery regiments are to have the same organization as at present, and the President may at his discretion cause four of the cavalry regiments to be drilled as infantry. The infantry regiments are to consist of the ten regiments of ten companies each now in the service; the remaining nine regiments made into twenty-seven, by adding to each of the three battalions of eight companies each, of which they are composed, two companies; ten regiments of colored men, and eight of disabled men, or men discharged by disability. The officers of the two latter classes of regiments are to be taken from the officers of colored troops, the veteran reserve corps, and other officers of volunteers disabled in the service. No officer below the rank of general officer is to be promoted without passing an examination, and those failing in such examination are to be suspended or dropped. No persons are to be commissioned in any regiment until examined by boards convened by the Secretary of War, which are to ascertain the candidate's attainments in military history, his services during the war, and general qualifications. The infantry regiments can be increased if necessary to fifty-five thousand men, which would make an army corresponding, both on a peace and a war footing, very nearly with the estimate of the Secretary of War. The general officers contemplated by this bill are one lieutenant-general, five major-generals, and ten brigadier-generals.

Another project for the reorganization of the army provides for a force of 160,000 men, composed of regiments ten companies strong each, and commanded by a general-in-chief, three generals, sixteen major-generals, and thirty-two brigadier-generals. A field staff and department staff are also provided for. One-half of the promotions are to be made according to seniority and the other half according to merit, to be determined by boards of examiners. It requires an officer to serve two years in the line before entering the staff of the army, and makes West Point a staff school. Any one who can pass the necessary examination may enter the army as second lieutenant. The plan exempts officers' salaries from taxation, allows officers to be retired after twenty-five years' service, and gives them the right to hold civil office while in retirement. It incorporates the old regular army as a part of the new army, and prescribes rules for uniform, leaves of absence, furloughs, and court-martials.

Pending the adoption of a plan of reorganization, the forces in the service at the close of 1865 comprised the old regular army, viz.: nineteen regiments of infantry, of which ten are of ten companies each, and nine of twenty-four companies each; six regiments of cavalry, and five of artillery, together with somewhat over a hundred thousand troops, white and colored, of all arms, the remains of the veteran reserve corps and old volunteer organizations. The latter are being gradually mustered out as occasion ceases for their services, while active efforts are making to recruit the regular regiments, service in which was never so popular during the war as in the volunteer organizations. From the report of the adjutant-general it appears that the number of regular recruits enlisted for all arms from October 31, 1864, to October 1, 1865, was 19,555. The regular regiments are now distributed over all parts of the country, and have an authorized strength of 952 officers and 41,819 men. Their actual strength in January, 1866, according to a return made by the Secretary of War, was 1,124 officers and 23,795 men, an aggregate of 24,919. Of the officers, 100 in the cavalry are absent, 113 in the artillery, and 368 in the infantry. Of the men, 5,472 are recruits assigned since the last return. All the regiments except the 17th are assigned to military departments. At the close of the year several thousand applications for commissions in the regular service were on file, and for the purpose of securing the requisite number of competent officers, a board was appointed to examine applicants and determine their relative merits. Two years' actual service in the war are indispensable for appointment.

With the termination of the war, the operations of the Provost-Marshal General's bureau, which in former years were of great importance and extent, have been very considerably curtailed. At the close of the year, the surgeons and commissioners of boards of enrolment in

all the districts, three hundred and seventy in number, had been discharged, and but thirty-three provost-marshals were in the service, all of whom, it was supposed, could soon be dispensed with.

The following statement exhibits the operations of the Paymaster General's Department:

Balance in hands of paymasters and unissued requisitions in the Treasury at the beginning of fiscal year (July 1, 1864)	\$36,039,803
Received from the treasury during the fiscal year (including unissued requisitions in treasury on June 30, 1865)	837,300,000
Received by paymasters from other sources, exclusive of sums transferred among themselves,	6,815,187
Total to be accounted for	\$430,054,946
Accounted for as follows:	
Disbursements to the regular army	7,839,225
Disbursements to the Military Academy	153,009
Disbursements to the volunteers	300,798,683
Total disbursements	\$899,370,960
Amount of unissued requisitions in the treasury on June 30, 1865	65,900,000
Balance actually in hands of paymasters on June 30, 1865	55,422,985
Total	\$430,054,946

Since the commencement of the current fiscal year, besides the above sums in the hands of paymasters, and the unissued requisitions, \$94,000,000 were disbursed or distributed for disbursement, making a total expenditure, from June 30, 1864, to October 31, 1865, of \$524,054,946. Of this large sum, more than one-half, \$270,000,000, was paid to disbanded volunteer troops mustered out of service, and who numbered in the aggregate over 800,000 men. The total amount of money disbursed by the pay department during the four years of war, was \$1,029,239,000, at an expense of \$6,970,600, or less than seven-tenths of one per cent. of the sum disbursed. The total losses and defalcations during the same period amounted to \$541,000, of which it is estimated that fully one-half will be recovered.

The operations of the Quartermaster General's bureau during the year were on an unusually extended scale, and those connected with the transportation of large bodies of troops, as that of the 23d Corps, in January, from Nashville to the Atlantic seaboard, a distance of 1,400 miles, afforded, to quote the language of Secretary Stanton, "striking illustrations of the improvements in the art of war which have been developed in the late contest." In that instance the transfer was made in the depth of an inclement season, in the brief space of eleven days. Transportation was promptly supplied, during the spring and summer, to the disbanded armies, and in this service, as well as for the conveyance of stores, upward of 1,000 vessels were employed on the ocean and inland waters. The ocean fleet alone numbered seven hundred vessels, of which only three were lost. At the close of the year nearly all of these had been put out of commission or sold, and the monthly expenses of this branch of the service were reduced \$1,814,130. Until the cessation of hostilities the construction corps of the depart-

ment was actively employed in the repair and maintenance of the great railroad lines of communication in the Southern States. The surrender of the Confederate armies, and the pacification of the South, enabled the department to return to their former possessors most of the railroads which had been in military possession during the war. Under the direction of the executive, the great quantities of rolling stock on these roads accumulated by the department during the war, have been distributed to the different companies, who are required to pay for it within two years, at a valuation fixed by a board of officers and experts assembled by the Government. The supplies furnished during the year from the depots of the department are indicated by the following table:

Bushels of Grain	22,000,000
Tons of Hay	400,000
Cords of Wood	896,000
Tons of Coal	832,000

The supplies furnished during the war were:

Bushels of Corn	23,000,000
Bushels of Oats	73,000,000
Bushels of Barley	98,000
Tons of Hay	1,500,000
Tons of Straw	20,000
Cords of Wood	550,000
Tons of Coal	1,600,700

From Sept. 1, 1864, to June 30, 1865, 20,714 artillery horses were purchased; and from July 1, 1864, to June 30, 1865, 58,818 mules. During the fiscal year ending June 30, 1865, the number of cavalry horses purchased amounted to 141,632. The reduction of the army has enabled the department to dispense with large numbers of horses and mules, the sums realized from the sale of which amounted, at the close of the year, to upward of \$3,000,000. In all, 83,887 persons employed by the department had been discharged at the end of December, 1865, reducing the monthly expenses \$4,083,093; and the sales of property of all kinds reported and recorded on the books of the Quartermaster General's office, from April 20 to Nov. 8, 1865, amounted to \$13,357,345. In the single item of forage alone the saving in Sept., 1865, was \$2,160,000, as compared with the expenditure of the preceding March.

The burial records of the Quartermaster's Department, which do not include the names of those who fell in battle, and were buried on the field by their comrades, show the interment of 116,148 persons, of whom 98,827 were loyal, and 12,596 disloyal; and 95,803 were whites, and 22,345 colored persons. A detail of men was sent to the prison at Andersonville, where the graves of 12,461 Union soldiers were identified, and marked with appropriate headboards. On 451 graves the inscription, "Unknown U. S. Soldier" was placed.

At the termination of active military movements 204 general hospitals, with a capacity of 136,894 beds, were in operation. Within the next eight months, upward of 170 of these establishments were discontinued, and the vast accumulations of surplus medicines and hospital supplies were disposed of at auction. Most of the

surgeons of volunteers and chaplains attached to these hospitals, were mustered out of service during the year. The health of the troops was fully equal to that of preceding years, notwithstanding military movements of unprecedented magnitude were pushed to a successful completion, and, except among the returned prisoners, who were more or less affected by typhoid fever, no unusual epidemic prevails. The returns of sick and wounded show that the number of cases treated in general hospitals from 1861 to July 1, 1865, amounted to 1,057,423. The medical bureau is in possession of 30,000 special reports of the more important forms of surgical injuries, of diseases and operations, which, together with an extensive pathological collection, it is proposed to employ in the preparation of a medical and surgical history of the war.

The sea-coast defences progressed during the year only to such an extent as the services of competent officers to superintend them could be spared from active military operations. The permanent forts on the Gulf have, since their repossession by the Government, been repaired and put in a defensive condition, and great activity has been manifested in mounting these works, as well as those on the Atlantic coast, with guns of a heavier calibre than were employed before the war. Efforts have also been made to increase the capacity of manufacturing sea-coast carriages, and it is contemplated hereafter to mount all siege and field-pieces on iron carriages. The Ordnance Department has discovered nothing yet to supersede the large smooth-bore cast-iron pieces, of which the Government now possesses so considerable a number. No rifled cannon that can be implicitly relied upon have been yet manufactured. Nearly a million of good Springfield muskets, and about half as many of foreign or captured muskets, are now in the national arsenals, and, in view of such a supply, the enormous manufacture of small arms carried on at the armories during the war was, subsequent to the termination of hostilities, reduced to the peace standard. Notwithstanding many experiments have been made, no satisfactory breach-loading musket has yet been invented, and the infantry continue to be armed with the muzzle-loading piece heretofore in use. Experiments have latterly been instituted, however, with reference to converting the old muzzle-loaders into breech-loaders. The immense amount of equipments, projectiles, and other material of war which accumulated during the progress of military operations, has, as far as was practicable, or consistent with economy, been stored away for future use, rendering the Government far better prepared for hostilities than at any previous period of the national history. "The artillery on hand," says the Secretary of War, "tasks the department for its means of storage. The manufacture of ammunition requires materials for which we have in some degree relied upon other countries, because they could be had cheaper. For

this reason, and to guard against mischance, three years' stock of material for ammunition has already been kept in store, and the supply on hand is ample for any war that can be waged against us by any nation." The number of arms in the national depositories would have been much greater at the close of the year, had not the soldiers been allowed, when mustered out of the service, to retain their arms at a nominal price, which most of them willingly paid.

The signal corps, which at the close of 1864 numbered over 1,500 officers and enlisted men, was, subsequent to the termination of hostilities, reduced to about one-tenth that number. On account of the usefulness of the services rendered by the corps during the war, it has been determined to retain in the service this nucleus of an organization, which can be hereafter enlarged as circumstances may require. To the 12,000 miles of military telegraph in operation at the close of 1864, over 3,000 were added previous to the close of the war. Upwards of 6,000 miles are still in use.

The business of the Bureau of Military Justice has experienced no diminution since the close of hostilities. The Judge-Advocate General reported that subsequent to March 2, 1865, 16,591 records of general courts-martial had been received, reviewed, and filed, and 6,123 special reports made as to the regularity of proceedings, the pardon of offenders, &c., besides numerous miscellaneous questions. A new and enlarged edition of the "Digest of Opinions of the Judge-Advocate General" is about to be published. For the discharge of military prisoners and the military departments of the country, *see* ARMY OPERATIONS.

In compliance with a resolution of the thirtieth Congress, adopted at its first session, the Secretary of War, early in 1866, reported the following general officers of the regular army and of volunteers in service on February 1st, 1866:

Regular Army.

LIUTENANT-GENERAL.

Ulysses S. Grant, Washington, D. C., commanding Army United States.

MAJOR-GENERALS.

Henry W. Halleck, San Francisco, Cal., commanding Military Division Pacific.

William T. Sherman, St. Louis, Mo., commanding Military Division Mississippi.

Geo. G. Meade, Philadelphia, Pa., commanding Military Division Atlantic.

Philip H. Sheridan, New Orleans, La., commanding Military Division of the Gulf.

George H. Thomas, Nashville, Tenn., commanding Military Division of Tennessee.

BRIGADIER-GENERALS.

Irvin McDowell, San Francisco, Cal., commanding Department of California.

W. S. Rosecrans, on leave of absence till July 1, 1866.

Philip St. George Cooke, New York, General Recruiting Service.

John Pope, St. Louis, Mo., commanding Department of Missouri.

Joseph Hooker, New York, commanding Department of the East.

W. S. Hancock, Baltimore, Md., commanding Middle Department.

J. M. Schofield, on leave of absence.
O. O. Howard, Washington, D. C., Bureau of Freedmen.

Alfred H. Terry, Richmond, Va., commanding Department of Virginia.

John A. Rawlins, Washington, D. C., Chief of Staff.
Lorenzo Thomas, on inspection duty, Special Instructions.

Joseph Holt, Washington, Judge-Advocate General.
Jas. B. Fry, Washington, Provost-Marshal General.
M. C. Meigs, Washington, Quartermaster-General.
Amos B. Eaton, Washington, Commissary-General.
Joseph K. Barnes, Washington, Surgeon-General.
Richard Delafield, Washington, Chief-Engineer.
A. B. Dyer, Washington, Chief of Ordnance.

Volunteers.

MAJOR-GENERALS.

Ethan A. Hitchcock, Washington, D. C.; under special orders of the Secretary of War; in charge of Office of the Commissary-General of Prisoners.

Irvin McDowell, San Francisco, Cal.; commanding Department of California.

John Pope, St. Louis, Mo.; commanding Department of the Missouri.

Samuel R. Curtis, Commissioner to examine the Union Pacific Railroad under the direction of the Secretary of the Interior.

Edward O. C. Ord, Detroit, Mich., commanding Department of the Ohio.

Joseph Hooker, New York City; commanding Department of the East.

John G. Foster, Tallahassee, Fla., commanding Department of Florida.

Christopher C. Augur, Washington, D. C.; commanding Department of Washington.

George Stoneman, Memphis, Tenn., commanding Department of Tennessee.

Oliver O. Howard, Washington, D. C., Commissioner of the Bureau of Refugees, Freedmen, and Abandoned Lands.

Daniel E. Sickles, Charleston, S. C., commanding Department of South Carolina. (Lost a leg in battle.)

Winfield S. Hancock, Baltimore, Md., commanding Middle Department.

John M. Palmer, Louisville, Ky., commanding Department of Kentucky.

Frederick Steele, Fort Vancouver, W. T., commanding Department of the Columbia.

Joseph J. Reynolds, Little Rock, Ark., commanding Department of Arkansas.

John M. Schofield, on leave of absence.

Andrew A. Humphreys, in charge of work on levees on the Mississippi River.

James B. Steedman, Augusta, Ga., commanding Department of Georgia.

Edward R. S. Canby, New Orleans, La., commanding Department of Louisiana.

Horatio G. Wright, Galveston, Texas, commanding Department of Texas.

Alfred H. Terry, Richmond, Va., commanding Department of Virginia.

Thomas J. Wood, Vicksburg, Miss., commanding Department of Mississippi.

Gresham Mott, Washington, D. C., under orders of War Department. Member of special commission.

Nelson A. Miles, Fort Monroe, Va., commanding District of Fort Monroe.

Alvan C. Gillem, Chattanooga, Tenn., commanding district of East-Tennessee.

Francis Fessenden, Washington, D. C., under orders of Major-General Augur. (Lost a leg in battle.)

BRIGADIER-GENERALS.

Thos. W. Sherman, New Orleans, La., commanding Eastern District of Louisiana. (Lost a leg in battle.)

James B. Ricketts, Annapolis, Md., president of a general court-martial.

Seth Williams, Washington, D. C., Acting Inspector-General Armies of the United States. Member of a Special Commission.

Charles R. Woods, Mobile, Ala., commanding Department of Alabama.

Walter Q. Gresham, New Ind. On leave of absence.

John M. Corse, St. Paul, Minn., commanding District of Minnesota.

John W. Turner, Richmond, Va., commanding District of Henrico.

John R. Brooke, Annapolis, Md.; member of a general court-martial.

Emory Upton, Denver City, Colorado Territory; commanding District of Colorado.

William F. Bartlett, on leave of absence on account of wounds.

John B. McIntosh, Annapolis, Md., member of a general court-martial. (Lost a leg in battle.)

George H. Chapman, Department of Missouri, under orders of Major-General Pope.

Joseph A. Haskin, Washington, D. C., commanding defences around Washington. Member of a general court-martial.

John W. Sprague, St. Louis, Mo., Assistant Commissioner of the Freedmen's Bureau for the States of Missouri and Arkansas.

Robert K. Scott, Napoleon, Ohio, assigned to duty in the Freedmen's Bureau.

Galusha Pennypacker, West Chester, Pa., on leave of absence. (Severely wounded in battle.)

Wager Swaine, Montgomery, Ala., Assistant Commissioner of the Freedmen's Bureau for the State of Alabama.

Stewart Van Vliet, New York city, chief depot quartermaster in New York.

Thomas M. Harris, under orders to report in person to the Secretary of War.

Frederick T. Dent, Washington, D. C., commanding garrison.

Lewis B. Parsons; supervising the disposition of Government boats and barges on the Western rivers.

Louis D. Watkins, Louisville, Ky., commanding post.

John M. Brannan, Savannah, Ga., commanding District of Savannah.

George W. Cullum, West Point, N. Y., Superintendent of the Military Academy.

Jefferson C. Davis, Louisville, Ky., commanding First Division Department of Kentucky.

William S. Ketchum, Washington, D. C., on special duty in the War Department.

James H. Carleton, Santa Fé, New Mexico, commanding District of New Mexico.

Abasalom Baird, New Orleans, La., Assist. Com'r of the Freedmen's Bureau for the State of Louisiana.

John C. Robinson, Albany, N. Y., commanding District of Northern and Western New York. (Lost a leg in battle.)

Henry Price, Alexandria, Va., member of a general court-martial.

George S. Greene, Alexandria, Va., President of a general court-martial.

Henry J. Hunt, Fort Smith, Ark., commanding Frontier District, Department of Arkansas.

George W. Getty, Baltimore, Md., commanding District of Baltimore, Middle Department.

Alfred Sully, Clinton, Iowa, commanding District of Upper Missouri.

Clinton B. Fisk, Nashville, Tenn., Assistant Commissioner of the Freedmen's Bureau for the States of Kentucky and Tennessee.

Thomas G. Pitcher, Indianapolis, Ind., commanding District of Indiana, and Chief Mustering and Disbursing officer, &c., for the State of Indiana.

Frank Wheaton, Omaha City, Nebraska Territory, commanding District of Nebraska.

John S. Mason, Prescott, Arizona Territory, commanding District of Arizona.

Romeyn B. Ayres, Winchester, Va., commanding District of the Shenandoah.

John E. Smith, Memphis, Tenn., commanding District of West Tennessee.

Thomas H. Huger, Raleigh, N. C., commanding Department of North Carolina.

Davis Tillson, Augusta, Ga., Assistant Commissioner of the Freedmen's Bureau for the State of Georgia.

George J. Stannard, St. Albans, Vt. (Severely wounded in battle.)

Patrick E. Connor, Great Salt Lake City, Utah Territory, commanding District of Utah, Department of the Missouri.

Gabriel R. Paul, Harrodsburg, Ky., in charge of Soldier's Home. (Severely wounded in battle.)

Adelbert Ames, Columbia, S. C., commanding District of Western South Carolina.

Daniel H. Rucker, Washington, D. C., Chief Depot Quartermaster.

Robert Allen, Louisville, Ky., Chief Quartermaster Valley of the Mississippi.

Rufus Ingalls, Washington, D. C., on duty at headquarters armies of the United States.

ARMY OPERATIONS. The severe weather of the winter months of 1864-'65, caused no cessation in army operations. Maj.-Gen. Thomas, after pursuing the retreating forces of Gen. Hood from Tennessee, collected his troops at Eastport. Thence a considerable body of his men, consisting of the 23d corps under Gen. Schofield, were moved by railroad to the Atlantic coast, and landed on the North Carolina shore. Another small portion was sent to Gen. Sherman at Savannah. To Gen. Thomas was now assigned the defence of that extended portion of the country from Atlanta north and westward, which belonged to the department under Gen. Sherman, when he commenced his march upon Savannah. The large garrisons which had been required at Memphis and other places on the Mississippi River, also in Tennessee and Kentucky, had been set free by his new position, and were able to join his forces. At the same time, the army of Gen. Hood had been fatally reduced. The situation of Eastport, on the Tennessee River, near the junction of the lines of Tennessee, Mississippi, and Alabama, placed the northern portion of the two latter States at the mercy of Gen. Thomas.

On Jan. 16th, 1865, Gen. Croxton, with a division of the 16th corps and the 1st division of cavalry, reconnoitred from Eastport toward Corinth, passing through Iuka and Brownsville. It appeared that a small force of Gen. Hood's army held Corinth, while the main body was at Tupelo. Thirty-five of the enemy were captured at the depot, and a hotel at Corinth burned. Deserters, averaging from thirty to fifty daily, were coming within Gen. Thomas's lines, from Hood's army. Subsequently a part of Gen. Hood's forces were marched by land eastward across the State of Georgia, to assist in opposing Gen. Sherman. This movement left Gen. Thomas free in the latter part of February to coöperate with Gen. Canby against Mobile, and Southern Alabama, and Mississippi.

Thus far the quiet of the Army of the Potomac, since its operations last described, had been undisturbed, except by those incidents usual to hostile armies when near each other. No important movement had been attempted. Under the call for troops in December, 1864, large numbers were going forward to fill its ranks. The withdrawal of a portion of the fleet and of the forces of the Army of the James for the second attack on Wilmington, tempted the enemy at Richmond to make a demonstration for the purpose of breaking the pontoon bridges over the James, and cutting the communication between the Federal forces on the two banks. If successful, it was undoubtedly the purpose to follow it up by an attack on the forces on the north bank. A fleet, consisting of the Virginia, Fredericksburg, and Richmond, iron-clads carrying four guns each, and the wooden vessels Drewry, Nansemond, and Hampton, with two guns each, the Buford, one gun, the steamer Torpedo, and three torpedo boats, left Richmond on Jan. 23d. About midnight the fleet passed Fort Brady, and began to pass the obstructions. A fire was now opened by the fort, to which the enemy replied, dismounting a hundred pounder in the fort, and escaping beyond its range. The chain in front of the obstructions beyond the lower end of the Dutch Gap Canal was cut, and the Fredericksburg passed through. But the Richmond, Virginia, and Drewry, in attempting to follow, grounded. The Drewry could not be got off, and was abandoned as daylight appeared, and was blown up subsequently by a shell from the battery on shore. The report of the affair by the enemy was as follows:

The flagship of the expedition was the Virginia, commanded by Lieutenant Dunington. The Richmond was commanded by Lieutenant Bell, who was First Lieutenant on the Alabama at the time of her fight with the Kearsarge. The Fredericksburg was commanded by Lieutenant Sheppard. The latter vessel, being of light draught, passed clean through the obstruction, but the others found a lower tier of obstructions deeply submerged, and which had not been moved by the freshet; the depth of water over them being impassable by vessels of their draught. The Virginia received a shot in the centre by a three hundred pounder Parrott shell, fired from a Yankee Monitor, being struck when trying to get off sunken obstructions in the river. The shot displaced a few of her bolts, and killed five of her crew. No other damage was done, but it was found that her engines were fouled, not in consequence of the shot, and that she was not in fighting order; in the mean time the fire of our vessels had completely silenced the Yankee shore batteries, and a number of shots were exchanged with the Monitor, with what effect is not known. In consequence of the condition of the Virginia's engine, it was decided, on a consultation of the officers of the flotilla, to withdraw all vessels, which was done without further casualty. It had been impossible to survey the channel to any great extent on account of the enemy's picket fire, and the submerged obstructions of the river were found to be more effectual than they were supposed to be.

This was followed by shelling between the hostile batteries on the river throughout the day, and during the night the fleet returned to Richmond.

On the night of Jan. 31st, marching orders

mained secure. The loss of Gen. Smyth was about three hundred, and that of the enemy who made the attack somewhat larger.

During the night the 5th corps was brought into connection, on the left of the 2d corps, with the left of the 5th, covered by the cavalry of Gen. Gregg. The 6th and 9th corps were also so disposed as to render assistance to the 5th and 2d. In the morning the position of the troops was strengthened by constant work until noon. At this time Gen. Crawford's division of the 5th corps was sent toward Dabney's mills, in order to reach the Boydton plank road. The country through which the route lay was covered with woods, swamps, and ravines, cutting it up in all directions. At the same time the enemy, believing the Federal force had recrossed Hatcher's Run and abandoned the advance, had sent out Gen. Pegram with his division. About two miles above the Vaughan road his skirmishers met those of Gen. Crawford, and after a sharp contest were forced back toward his original position. The division of Gen. Evans came to the assistance of Pegram, and the advance of Gen. Crawford was checked. The division of Gen. Ayres was now sent to support Gen. Crawford, and a brigade of Griffin's to support Gen. Gregg, who was on the left, and had been engaged for some time with Lee's cavalry, which pressed his rear heavily. During a lull which happened, his force threw up breastworks. But toward evening they were attacked with great force by the enemy, and his pickets driven with his force into the works. The battle increased, and many of his officers were wounded. While this was taking place on the left of the Vaughan road, the infantry had again become furiously engaged on the right of the road by repeated attacks of the enemy along the line. Finally Gen. Gregg was driven out of his breastworks, and his line forced back to Hatcher's Run, where he soon found that a similar misfortune had happened to the infantry. It was not until the intrenched lines on the Vaughan road and Hatcher's Run, thrown up on the previous day, were reached, that the routed troops could be rallied. The enemy dashed forward with great elation, but were met by such a sharp fire from the intrenchments as caused them to fall back rapidly to the woods. Night put an end to the conflict. The following is a report by Gen. Lee of the operations of the day:

HEADQUARTERS ARMY NORTHERN VIRGINIA, Feb. 6, 1863.
General S. Cooper:

The enemy moved in strong force yesterday to Hatcher's Run. Part of his infantry, with Gregg's cavalry, crossed and proceeded on the Vaughan road, the infantry to Cattail Creek, the cavalry to Dinwiddie Court House, where the advance encountered a portion of our cavalry and retired.

In the afternoon parts of Hill's and Gordon's troops demonstrated against the enemy on the left of Hatcher's Run, near Armstrong's Mill. Finding him intrenched, they withdrew after dark. During the night the force that had advanced beyond the creek returned to it, and were reported to be recrossing.

This morning Pegram's division moved down to the right bank of the creek to reconnoitre, when it was vigorously attacked. The battle was obstinately contested several hours, but Gen. Pegram being killed while bravely encouraging his men, and Col. Hoffman wounded, some confusion occurred, and the division was pressed back to its original position. Evans's division, ordered by Gen. Gordon to support Pegram's, charged the enemy and forced him back but was in turn compelled to retire. Malone's division arriving, the enemy was driven rapidly to his defences on Hatcher's Run.

The Union loss during the day was estimated at 1,500 to 2,000 men. The loss of the enemy was estimated as exceeding 1,000 men, including Gen. J. Pegram and Col. Hoffman, as killed.

During the night the works were strengthened, and early in the morning of the 7th the enemy made a demonstration on the skirmish lines of the cavalry and infantry on the right and left of the Vaughan road, but were repulsed. At noon the division of Gen. Crawford was sent out to make a reconnoissance, supported on the left by the division of Gen. Wheaton. The pickets of the enemy were encountered after an advance of about half a mile, and driven back to their works higher up the run between Armstrong's and Burgess's mills, and about two miles beyond the latter. A sharp fire of musketry ensued; but as Gen. Crawford was not prepared to force the lines, he drew his men back again to Hatcher's Run. The fighting by this column was kept up until night. During the day, the cannonading between the lines had been constant. The next day, the 8th, was devoted to throwing up intrenchments, and strong defensive works soon indicated the points at which the permanent lines were to be located. The enemy made no attempts to force the new positions, but appeared satisfied to give up the lower part of the run if no attempt was made by the Union forces on the Boydton plank road. The result of the entire movement had been to gain an advanced position on the enemy's right, which was held firmly, by completing the lines to Hatcher's Run, and extending the City Point railroad thither. Affairs now continued quiet for some time. Artillery duels were frequent along the lines before Petersburg, but no important movement was made. Large numbers of deserters from the enemy were constantly coming into the lines of Gen. Grant, often exceeding seventy a day for many days successively, and increasing to two hundred.

In the Shenandoah valley, small expeditions by one or the other party served to prevent a quiet state of affairs. Further west, the enemy captured Beverly on Jan. 11th. This was done by Gen. Rosser, who crossed the mountains, and early on the morning of Jan. 11th entered the place, making prisoners of four hundred of the garrison, consisting of seven hundred men, and dispersing the rest. They were asleep in their winter quarters, with no pickets out further than three hundred yards from their camp. A large amount of commissary and quartermasters' stores, with a great number of horses, were also taken. Again, on

the 21st of February, a body of the enemy's cavalry, under Lieut. McNeil, dashed into Cumberland before daylight, surprised and captured the pickets, and carried off Maj.-Gens. Kelly and Crook. They were quietly seized in their beds with their staff officers, and taken to Richmond, and subsequently exchanged.

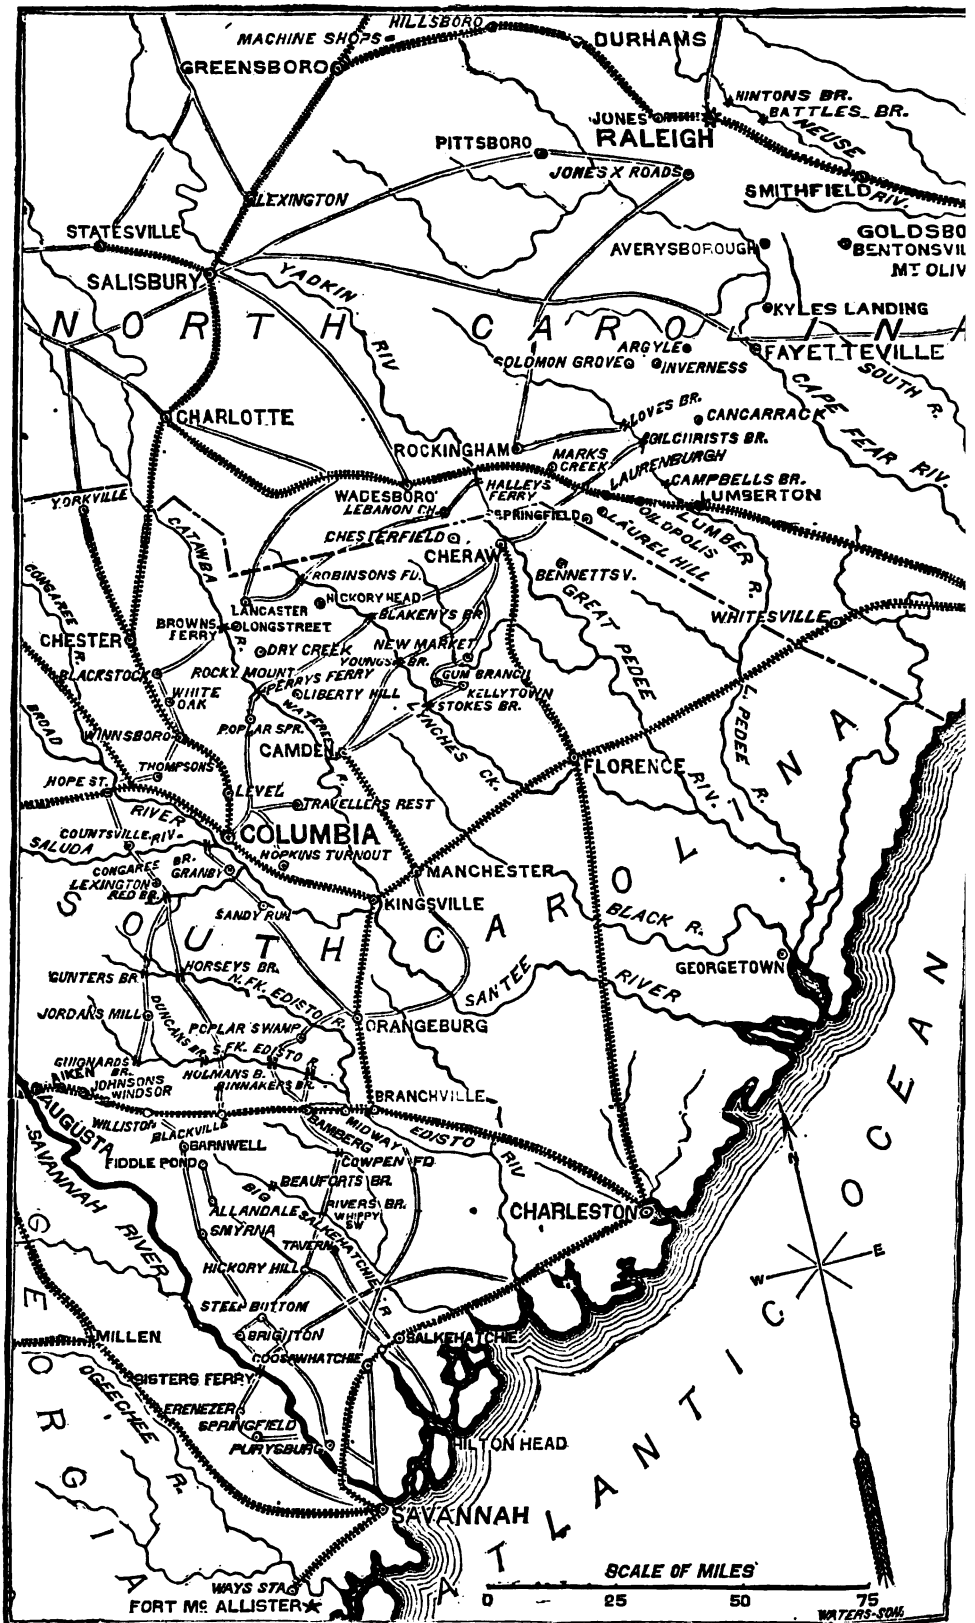

The success which attended the march of Gen. Sherman through Georgia, both in disheartening the Southern people and in destroying the communications between different parts of the Confederacy, determined the nature of the approaching campaign. The field of decisive operations was now reduced to three States, and if South and North Carolina were overrun it would not only cut off the resources of Gen. Lee's army at Richmond, but also result in concentrating an overwhelming force against him. Both combatants therefore prepared to put forth their final efforts. At Richmond, Gen. Lee was appointed as General-in-Chief; Gen. Johnston was ordered to the command in South Carolina; Gen. Hood was supplanted by Gen. Taylor in Alabama and Mississippi; Gen. Breckinridge was brought into the Cabinet as Secretary of War, which had already undergone a change by the displacement of Mr. Memminger as Secretary of the Treasury, and the appointment of Mr. Trenholm of South Carolina. On the Federal side Gen. Schofield, with a strong force, was placed in command in North Carolina, to prepare the way for the approach of Gen. Sherman, and Gen. Gillmore relieved Gen. Foster in the Department of South Carolina.

Immediately after taking possession of Savannah, Gen. Sherman began his preparations for a march through the Carolinas to Richmond; meanwhile Gen. Hardee with his command occupied Charleston. The first movement of Gen. Sherman was to send a part of Gen. Logan's 15th corps and Gen. Blair's 17th corps, both belonging to Gen. Howard's wing of his army, by transports to Beaufort, near Hilton Head. The important bridge where the railroad from Savannah to Charleston crossed the Pocotaligo, was the object of this movement. This bridge, 49 miles from Savannah and 55 miles from Charleston, being with the trestle work in the swamp a mile in length, was so necessary to the communication between the two cities, that frequent attempts had been made by the Union commanders of the department to destroy it. The force of the enemy had always proved strong enough to defeat these efforts. On Jan. 13th the advance from Beaufort began. The division of Gen. Hatch had taken a position near the bridge, with their guns turned on the railroad, when the 17th corps crossing the ferry at Port Royal on a pontoon bridge moved rapidly but cautiously to the railroad. The pickets of the enemy were driven away without difficulty. On the 15th an advance was made, the 17th corps being on the left, and Gen. Hatch on the right, and the railroad gained a little south of the bridge.

The skirmishers pushed forward, encountering those of the enemy, who were supported by light artillery, and quickly drove them off, thus gaining the bridge. A brigade of the 17th followed, and carried it and the earth works at the further end. The enemy seeing they would lose possession of the bridge, attempted to burn it, but were defeated in their efforts by the rapid movements of the troops. The Federal loss was about fifty. The force of the enemy consisted of a detachment from Gen. Hardee's command, under Gen. McLaws. They were driven out, and the 17th corps occupied the railroad from Coosawatchie to the Tallahatchie. A depot of supplies was established near the mouth of the creek, with easy water communication back to Hilton Head.

At the same time the left wing, under Maj.-Gen. Slocum, and the cavalry, under Maj.-Gen. Kilpatrick, were ordered to rendezvous near Robertsville and Coosawatchie, with a depot of supplies at Pureysburg on Sister's ferry on the Savannah River. Gen. Slocum caused a good pontoon bridge to be constructed opposite Savannah, and the "Union causeway" leading through the low rice fields opposite the city was repaired and "corduroyed." But before the time appointed for him to march, the heavy rains of January had swelled the river, broken the pontoon bridge, and overflowed the whole bottom, so that the causeway was four feet under water, and Gen. Slocum was compelled to look higher up for a passage over the river. He moved up to Sister's ferry, but even there the river with its overflowed bottoms was nearly three miles wide. He did not succeed in getting his whole wing across until during the first week in February.

Meanwhile the division of Gen. Grover of the 19th corps had been sent by Gen. Grant to garrison Savannah, and on Jan. 18th Gen. Sherman transferred the forts and city of Savannah to Gen. Foster, still commanding the Department of the South, and instructed him to follow on the coast the movements of the army under Sherman inland, by occupying Charleston and such other points as would be of any military value. The plan of Gen. Sherman was to strike direct for Goldsboro' in North Carolina, and open communication with the sea by the Newbern Railroad. For this purpose he ordered Col. W. W. Wright, Superintendent of Military Railroads, to proceed in advance to Newbern and to be prepared to extend the railroad out from that city to Goldsboro by March 15th. At the same time Gen. Sherman ordered his chief quartermaster and commissary, Gens. Easton and Beckwith, to complete the supplies at Sister's ferry and Pocotaligo, and follow the movement coastwise, and be prepared to open communication with him from Morehead City about the same time. Having completed his preparations, Gen. Sherman issued the order to march on January 19th. He left Savannah on the 22d

and proceeded to Beaufort, and on the 24th reached Pocotaligo, where the 17th corps under Gen. Blair was encamped. The 15th corps at this time was somewhat scattered: the divisions of Gens. Wood and Hazen were at Beaufort; that of Gen. J. E. Smith was marching from Savannah by the coast-road, and that of Gen. Corse was still at Savannah, cut off by the storms and freshet in the river. The enemy supposed the object of Gen. Sherman was to reach Charleston, and had adopted the Salkehatchie River as his line of defence. On the 25th a demonstration was made against the Combahee ferry and railroad bridge across the Salkehatchie, for the purpose of occupying the enemy. The heavy rains had swollen the river so that water stood in the swamps for a breadth of more than a mile at a depth of from one to twenty feet. By making apparent preparations to cross the river, he was able, with a comparatively small force, to keep a considerably body of the enemy in front disposed to contest the advance on Charleston, although not having the remotest intention to move on that city. On the 27th Gen. Hatch's division evacuated its position on the Tullaftiney and Coosahatchie Rivers, and moved to Pocotaligo to keep up the feints already begun, and until the right wing should move higher up and cross the Salkehatchie about River's or Broxton's bridge.

By the 29th the roads back of Savannah had become sufficiently free of the flood to permit Gen. Slocum to put his wing in motion; and as he approached Sister's ferry the gunboat Pontiac was sent up by Admiral Dahlgren to cover the crossing. Meanwhile the division of the 15th corps had reached Pocotaligo, and the right wing had loaded its wagons and was ready to start. Gen. Howard was thereupon ordered to move the 17th corps along the the Salkehatchie as high up as River's bridge, and the 15th corps by Hickory Hill, Loper's cross-roads, Anglesey post office, and Beaufort bridge, leaving Gen. Hatch's division at Pocotaligo feigning to cross at the Salkehatchie bridge and ferry until the movement turned the enemy's position and forced him to fall back on the Edisto.

The march began on the 1st of February. All the roads northward had been held by the Confederate cavalry under General Wheeler, who had, with details of negro laborers, felled trees, burned bridges, and made obstructions to impede this march. The pioneer battalions, however, were so well organized that these obstructions were quickly removed. The felled trees were cleared away and bridges rebuilt by the heads of columns before the rear could close up. On February 2d the 15th corps reached Loper's cross-roads, and the 17th was at River's bridge. At this time Gen. Slocum was struggling with the floods of the Savannah at Sister's ferry. Two divisions of the 20th corps, under Gen. Williams, were on the east bank, and the cavalry of Gen. Kilpatrick had

been able to cross over on the pontoon bridge. Gen. Sherman ordered Gen. Williams to march to Lawtonsville and Allandale, Gen. Kilpatrick to Blackville, by way of Barnwell, and Gen. Slocum to hurry the crossing at Sister's ferry as much as possible, and overtake the right wing on the South Carolina Railroad. At the same time Gen. Howard, with the right wing, was ordered to cross the Salkehatchie and push rapidly for the same railroad at or near Midway. The line of the Salkehatchie was held by the enemy in force, having intrenchments for infantry and artillery at River's and Beaufort bridges. The former position was carried on February 3d by Gens. Mower's and Smith's divisions of the 17th corps. The troops crossed the swamp, which was nearly three miles wide, and in which the water was from the knee to the shoulder in depth. The weather was severely cold, and the generals on foot led their commands and made a lodgment below the bridge, and turned on the brigade of the enemy which guarded it, and drove them in confusion toward Branchville. In this affair one officer and seventeen men were killed, and seventy wounded, who were sent to Pocotaligo. The 15th corps had been ordered to carry the Beaufort bridge, but this was evacuated by the enemy as soon as the crossing was effected at River's bridge. The position was strong both in its natural works and the line of works which defended the passage of the river. Gen. Sherman had now gained the peninsula formed by the Salkehatchie and Edisto Rivers, and threatened alike Augusta, Branchville, and Charleston. At Augusta Gen. D. H. Hill was in command with a considerable force, and Branchville was reinforced and works thrown up to render it more secure. The country in which the army was now moving was rich in forage and supplies. Turkeys, geese, ducks, chickens, nicely-cured hams, potatoes, honey, and an abundance of other luxuries, were obtained by the soldiers, and plenty of corn and fodder for the animals. The houses generally were deserted, although here and there women and children were found. Wide-spreading columns of smoke rose wherever the army went. The following correspondence relative to the destruction of dwellings took place on the dates therein named:

GRAHAM, S. C., February 7, 1865.

GENERAL: I have the honor to propose that if the troops of your army be required to discontinue burning the houses of our citizens I will discontinue burning cotton.

As an earnest of the good faith in which my proposition is tendered, I leave at this place about three hundred bales of cotton unburned, worth in New York over a quarter million, and in our currency one and a half millions. I trust my having commenced will cause you to use your influence to insure the acceptance of the proposition by your whole army.

I trust that you will not deem it improper for me to ask that you will require the troops under your command to discontinue the wanton destruction of property not necessary for their sustenance.

Respectfully, General, your obedient servant,
J. WHEELER, Maj.-Gen. C. S. A.
Maj.-Gen. O. O. HOWARD, U. S. Army, Com'ding, &c.

ANSWERED BY GENERAL SHERMAN.

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, February 8, 1863.

GENERAL: Yours, addressed to General Howard, is received by me. I hope you will burn all cotton, and save us the trouble. We don't want it; and it has proven a curse to our country. All you don't burn I will.

As to private houses occupied by peaceful families my orders are not to molest or disturb them, and I think my orders are obeyed. Vacant houses, being of no use to anybody, I care little about, as the owners have thought them of no use to themselves. I don't want them destroyed, but do not take much care to preserve them.

I am, with respect, yours truly,
W. T. SHERMAN, Maj.-Gen. Commanding.
Maj.-Gen. J. WHEELER, Commanding Cavalry Corps
Confederate Army.

Upon the breaking of the line of the Salkehatchie the enemy retreated at once behind the Edisto at Branchville, and the whole army pushed at once to the South Carolina Railroad at Midway, Bamberg, and Graham's station. The troops immediately set to work to destroy the road, which had been of great importance to the enemy, both as a means of communication and for forwarding supplies from Augusta and northern Georgia to Richmond. From the 7th to the 10th of February the work was thoroughly done by the 17th corps, from the Edisto up to Bamberg, and from Bamberg up to Blackville by the 15th corps. As the 17th corps threatened Branchville, the enemy burned the railroad bridge and Walker's bridge below across the Edisto. Meanwhile Gen. Kilpatrick had brought his cavalry rapidly by Barnwell to Blackville, and turned toward Aiken, for the purpose of threatening Augusta without being drawn into any serious battle. Blackville is eighteen miles west of Midway, and forty-seven miles east of Augusta; Aiken is seventeen miles east of Augusta. In his progress he had serious skirmishes with Wheeler's cavalry, first at Blackville and afterwards at Williston and Aiken. On February 8th Gen. Williams, with two divisions of the 20th corps, reached the railroad at Graham's station, and Gen. Slocum reached Blackville on the 10th. This wing continued the destruction of the railroad from Blackville up to Windsor. By February 11th Gen. Sherman's force was along the railroad from Midway to Johnson's station. The effect was to divide the enemy's forces, which still remained at Branchville and Charleston on the one hand, and Aiken and Augusta on the other.

The movement on Orangeburg now commenced. The railroad from Augusta running nearly east to Branchville, there intersects with the railroad from Columbia to Branchville, running nearly south, and thence southeast to Charleston. Gen. Sherman at this time was operating west of Branchville on the railroad from that place to Augusta. He now strikes north to Orangeburg, the first important station on the road from Branchville to Columbia, and distant from Branchville seventeen miles. The next important station north is Kingville, where

the road from Wilmington to Charleston intersects the Columbia and Charleston road, the latter portion of which is common to both. Orangeburg had a population of about three thousand, and was prettily situated on the north bank of the Edisto. From its position upon the ridge of high lands on which the railroad runs, it was really of more importance than Branchville, which the enemy had carefully fortified.

The 17th corps crossed the south fork of the Edisto at Binnaker's bridge, and moved directly for Orangeburg, while the 15th corps crossed at Holmon's bridge, and moved to Poplar Springs to act as a support. The left wing, which was still at work on the railroad, was ordered to cross the South Edisto at New and Guignard's bridges, and move to the Orangeburg and Edgefield road, and there await the result of the attack on Orangeburg. On the 12th the corps was before the north fork of the Edisto, and at an early hour engaged in skirmishing with the enemy at different points. A force was found entrenched in front of the Orangeburg bridge, but was swept away at a dash, and driven across the bridge, which was partially burned. Behind the bridge was a battery in position, covered by a cotton and earth parapet with extensive wings. While the division of Gen. Giles A. Smith was held close up to the Edisto, the other two were moved by Gen. Blair to a point about two miles below, where Gen. Force's division crossed by a pontoon bridge, and Gen. Mowers was held to act as a support. As soon as Force's division made their appearance coming up from the swamp, the enemy began to give ground, and Gen. Smith's division succeeded in gaining the bridge, and crossed over and occupied the enemy's position. The bridge was soon repaired, and by the middle of the afternoon the whole corps was in Orangeburg, and had begun to destroy the railroad. This work was done effectually by the corps to Lewisville, a distance of twelve miles. Gen. Blair was then ordered to push the enemy across the Congaree, and force him to burn the bridge. This was accomplished on the 14th. The Congaree River is formed by the Broad and Saluda Rivers, which unite at Columbia. After a southeast course of about fifty miles, it unites with the Wateree to form the Santee. Steamboats ascend to Columbia.

Gen. Sherman now directed his march straight for Columbia, distant fifty-one miles from Orangeburg. The advance of the 17th corps was along the State road, while the 15th corps crossed the north branch of the Edisto from Poplar Springs at Schilling's bridge, and took a country road which came into the State road at Zeigler's. The 20th corps moved north on a line west of the 15th, diverging toward Columbia; the 14th corps advanced in a line further west, and the cavalry on their left flank. On the 15th, the 15th corps discovered the enemy in a strong position at Little Congaree bridge, across Congaree Creek, with

a work on the south side to cover their retreat across the bridge, and a well-constructed fort on the north side commanding the bridge with artillery. The ground in front was level and clear, but rendered very unfavorable by a fresh deposit of mud from a recent overflow. Gen. Woods, in command of the leading division, succeeded in turning the flank of the work south of the bridge by sending Stone's brigade through a cypress swamp on the left; and by following up the enemy, who immediately began to retreat, he was able to get possession of the bridge and the fort on the north side. The bridge had been somewhat injured by fire, and had to be repaired before the passage of the artillery. It was night, therefore, before the head of the column reached the bridge across Congaree River in front of Columbia. During the night the enemy shelled the camps from a battery on the east side of the Congaree above Granby. Early on the next morning, Feb. 16th, the head of the column reached the bank of the Congaree opposite Columbia, but too late to save the bridge over the river at that point, which had been set on fire by the enemy. Meanwhile the inhabitants of Columbia could be seen moving in great excitement about the streets, and occasionally small bodies of cavalry but no masses of troops. A single gun was fired a few times by the order of Gen. Sherman, at the railroad depot, to scatter the people who were seen carrying away sacks of corn and flour which his army needed. No manifestation of surrender was exhibited from the city.

Within an hour after the arrival of the head of Gen. Howard's column at the river opposite Columbia, the head of the column of the left wing under Gen. Slocum also appeared. Gen. Howard, instead of crossing in front of Columbia, moved three miles up to Saluda Factory, and crossed on the 16th, skirmishing with cavalry, and on the night of the same day made a bridge across Broad River, three miles above Columbia, by which he crossed over Stone's brigade of Wood's division of the 15th corps. Under cover of this brigade a pontoon bridge was laid on the morning of the 17th. Meanwhile Gen. Slocum moved up to cross the Saluda at Zion's Church, and thence to take the roads leading direct to Winnsboro. His object was also to break up the railroads and bridges about Alston.

Gen. Sherman thus describes the entrance to Columbia: "I was in person at the pontoon bridge (on the 17th), and at 11 A. M. learned that the Mayor of Columbia had come out in a carriage, and made a formal surrender of the city to Col. Stone, 25th Iowa infantry, commanding 8d brigade, 1st division, 15th corps. About the same time a small party of the 17th corps had crossed the Congaree in a skiff, and entered Columbia from a point immediately west. In anticipation of the occupation of the city, I had made written orders to Gen. Howard touching the conduct of the troops. These were to destroy absolutely all arsenals and pub-

lic property not needed for our own use, as well as all railroads, depots, and machinery useful in war to an enemy, but to spare all dwellings, colleges, schools, asylums, and harmless private property. I was the first to cross the pontoon bridge, and in company with Gen. Howard rode into the city. The day was clear, but a perfect tempest of wind was raging. The brigade of Col. Stone was already in the city, and was properly posted. Citizens and soldiers were on the streets, and general good order prevailed. Gen. Wade Hampton, who commanded the Confederate rear guard of cavalry, had, in anticipation of our capture of Columbia, ordered that all cotton, public and private, should be moved into the streets and fired, to prevent our making use of it. Bales were piled everywhere, the rope and bagging out, and tufts of cotton were blown about in the wind, lodged in the trees and against the houses, so as to resemble a snow-storm. Some of these piles of cotton were burning, especially one in the very heart of the city, near the Court House, but the fire was partially subdued by the labors of our soldiers. During the day the 15th corps passed through Columbia and out on the Camden road. The 17th did not enter the town at all; and, as I have before stated, the left wing and the cavalry did not come within two miles of the town.

"Before one single public building had been fired by order, the smouldering fires set by Hampton's order were rekindled by the wind, and communicated to the buildings around. About dark they began to spread, and got beyond the control of the brigade on duty within the city. The whole of Wood's division was brought in, but it was found impossible to check the flames, which, by midnight, had become unmanageable, and raged until about 4 A. M., when, the wind subsiding, they were got under control. I was up nearly all night, and saw Generals Howard, Logan, Woods, and others, laboring to save houses, and protect families thus suddenly deprived of shelter and of bedding and wearing apparel. I disclaim on the part of my army any agency in this fire, but, on the contrary, claim that we saved what of Columbia remains unconsumed. And, without hesitation, I charge Gen. Wade Hampton with having burned his own city of Columbia, not with a malicious intent, or as the manifestation of a silly 'Roman stoicism,' but from folly and want of sense in filling it with lint cotton and tinder. Our officers and men on duty worked well to extinguish the flames; but others not on duty, including the officers who had long been imprisoned there, rescued by us, may have assisted in spreading the fire after it had once begun, and may have indulged in concealed joy to see the ruin of the capital of South Carolina. During the 18th and 19th the arsenal, railroad depots, machine shops, foundries, and other buildings were properly destroyed by detailed working parties, and the railroad track torn up and destroyed to Kingsville and the Wateree

bridge, and up in the direction of Winnsboro."

The following will show what troops first entered Columbia:

HEADQUARTERS FOURTH DIVISION,
SEVENTEENTH ARMY CORPS,
Near COLUMBIA, S. C., Feb. 17, 1865.

Brig.-Gen. Wm. W. Belknap, Commanding 3d Brigade:

SIR,—Allow me to congratulate you, and through you, Lieut.-Col. J. C. Kennedy, 13th Iowa Veteran volunteers, and the men under his command, for first entering the city of Columbia, on the morning of Friday, February 17th, and being the first to plant his colors on the capitol of South Carolina. While the army was laying pontoon bridges across the Saluda and Broad Rivers, three miles above the city, Lieut.-Col. Kennedy, under your direction, fitted up an old worn-out flat boat, capable of carrying about twenty men, and accompanied by Lieuts. H. C. McArthur and Wm. H. Goodell, of your staff, crossed the river in front of the city, and boldly advanced through its streets, sending back the boat with another procured on the opposite shore, for more troops, and on their arrival, with seventy-five men in all, drove a portion of Wheeler's cavalry from the town, and at eleven and a half o'clock A. M. planted his two stands of colors, one upon the old and the other upon the new capitol.

The swift current of the Congaree River and its rocky channel rendered his crossing both difficult and dangerous, and the presence of the enemy, but in what force unknown, rendered the undertaking still more hazardous. Lieut.-Col. Kennedy and his regiment are entitled to great credit for its successful accomplishment.

I have the honor to be, very respectfully,

Your obedient servant,

(Signed) GILES A. SMITH,
Brevet Major-General Commanding.

The consequences of the movements of Gen. Sherman thus far were a division of the forces of the enemy and the evacuation of Charleston. Gen. Hardee was in Charleston with about 14,000 men, expecting the approach of Gen. Sherman on his appearance in the neighborhood of Branchville. At Augusta, which was equally threatened, was Gens. D. H. Hill and G. W. Smith, who were so certain of the approach of Gen. Sherman that the public property was almost entirely removed from the city. A considerable cavalry force was at different points in South Carolina under Hampton, Wheeler, McLaws, and others. Gen. Beauregard, who had been in command at Charleston, was near the North Carolina line collecting forces and ready to take the command of troops from Hood's army with those under Hill. Gen. Lee, it is supposed, also sent some men into North Carolina. Gen. Sherman marched at once to Columbia, knowing that when once there Augusta could be easily taken. But if Augusta had been first captured, a concentration of the enemy might have been made at Columbia, which would have rendered its capture more difficult. Augusta was also of less importance after its railroad communication had been cut off. In the neighborhood of Charleston some skirmishing had taken place at intervals without any important results.

After Gen. Sherman destroyed the railroad in the neighborhood of Branchville, only one line remained open from Charleston. This was

the road running north to Florence and Charaw. It was the only line of retreat for Gen. Hardee, and as Gen. Sherman moved north it was necessary for the latter to secure it at once, as it was threatened. On Feb. 10th, Gen. Schemmelfennig, with a body of troops of Gen. Gillmore's command, laid a bridge across the creek separating Folly and Cole Islands from James Island, and effected a lodgment on the latter, about three miles southwest of Charleston. Skirmishers advanced and met the enemy about a mile distant on the Stono River. A gunboat and mortar schooner, and the iron-clads Augusta and Savannah, were now moved up the Stono, and, covering the flank of Gen. Schemmelfennig's troops, shelled the enemy. About 4½ P. M., Gen. Hartwell moved his whole brigade forward and carried the rifle-pits for the first time. The enemy retreated rapidly to his main works, leaving his dead and wounded, and losing about twenty prisoners. The Union loss was between seventy and eighty. Cooperating movements were made at the same time by the column under Gen. Hatch, which crossed the Combahee with slight loss and marched toward the South Edisto. No serious resistance was made to the advance in that region, which was accessible to the gunboats and defended only by small batteries on the river banks. The movement of Gen. Schemmelfennig being only a feint, his troops were withdrawn to Cole Island. A column under Gen. Potter, however, moved to Bull's Bay, as if designed to cut the northern railroad. On the night of the 17th the last of Gen. Hardee's troops left Charleston. The subsequent occupation of the city is thus described by official documents:

CHARLESTON, S. C., February 18,
via New York, Feb. 21, 1865.

Major-General Halleck, Chief of Staff:

GENERAL:—The city of Charleston and all its defences came into our possession this morning, with about two hundred pieces of good artillery and a supply of fine ammunition. The enemy commenced evacuating all the works last night, and Mayor Mabeth surrendered the city to the troops of Gen. Schemmelfennig at 9 o'clock this morning, at which time it was occupied by our forces. Our advance on the Edisto from Bull's Bay hastened the retreat.

The cotton warehouses, arsenals, quartermaster's stores, railroad bridges, and two iron-clads were burned by the enemy. Some vessels in the ship-yard were also burned. Nearly all the inhabitants remaining behind belong to the poorer class.

Very respectfully,

Q. A. GILLMORE, General Commanding.

HEADQUARTERS DEPARTMENT OF THE SOUTH,
CHARLESTON, S. C., Feb. 26, 1865.

Lieut.-Gen. U. S. Grant, and Maj.-Gen. W. H. Halleck, Chief of Staff, Washington:

An inspection of the Rebel defences of Charleston show that we have taken over four hundred and fifty pieces of ordnance, being more than double what I first reported. The lot includes 8 and 10-inch columbiads, a great many 32 and 42-pounder rifles, some 7-inch Brooks rifles, and many pieces of foreign make. We also captured eight locomotives and a great number of passenger and platform cars, all in good condition. Deserters report that the last of Hardee's army was to have crossed the Santer River

yesterday, bound for Charlotte, N. C., and that it was feared that Sherman had already intercepted their march. It is reported, on similar authority, that the last of Hood's army, 12,000 strong, passed through Augusta last Sunday, the 19th, on the way to Beauregard. Georgetown has been evacuated by the enemy, and is now in our possession. Deserters are coming in constantly. We have over 400 already.

Q. A. GILLMORE,
Major-General Commanding.

The following is the report of Col. Bennett, who was the first to enter the city:

HEADQUARTERS UNITED STATES FORCES, }
CHARLESTON, S. C., February 24, 1863.
Captain J. W. Dickinson, Acting Asst. Adjt.-General.

CAPTAIN: I have the honor to submit the following report of the evacuation and occupation of Charleston. On the morning of February the 18th I received information that led me to believe the defences and lines guarding the city of Charleston had been deserted by the enemy. I immediately proceeded to Cummings Point, from whence I sent a small boat in the direction of Fort Moultrie, which boat, when forty yards east from Fort Sumter, was met by a boat from Sullivan's Island, containing a full corps of band musicians abandoned by the enemy. These confirmed my belief of an evacuation. I had no troops that could be available under two hours, as, except in a few pontoon boats, there were no means whatever of landing troops near the enemy's works or into the city. I directed Major Hennessy to proceed to Fort Sumter and there replace our flag. The flag was replaced over the southeast angle of Fort Sumter at nine (9) o'clock A. M. I now pushed for the city, stopping at Fort Ripley and Castle Pinckney, from which works Rebel flags were hauled down and the American flag substituted. The guns in these works were in good order. There was mounted in Fort Ripley one Quaker gun bearing southeast. I landed at Mill's wharf, Charleston, at ten (10) o'clock A. M., where I learned that a part of the enemy's troops yet remained in the city, while mounted patrols were out in every direction applying the torch and driving the inhabitants before them.

I at once addressed to the Mayor of the city the following communication:

HEADQUARTERS UNITED STATES FORCES, }
CHARLESTON, February 18, 1863.

Mayor Charles Macbeth, Charleston:

MAJOR: In the name of the United States Government I demand surrender of the city of which you are the executive officer. Until further orders all citizens will remain within their houses.

I have the honor to be, Mayor, very respectfully, your obedient servant,
(Signed) A. G. BENNETT,
Lieut.-Col. commanding U. S. Forces, Charleston.

My whole force consisted of five (5) officers and the armed crews of two (2) small boats, comprising in all twenty-two (22) men. Both officers and men volunteered to advance from the wharf into the city; but no reinforcements being in sight, I did not deem it expedient to move on.

Public buildings, stores, warehouses, private dwellings, shipping, etc., were burning and being fired by armed Rebels, but with the force at my disposal it was impossible to save the cotton and other property. While awaiting the arrival of my troops at Mill's wharf, a number of explosions took place. The Rebel commissary depot was blown up, and with it is estimated that not less than two hundred (200) human beings—most of whom were women and children—were blown to atoms. These people were engaged in procuring food for themselves and their families by permission from the Rebel military authorities. The Rebel ram Charleston was blown up while lying at her anchorage opposite Mt. Pleasant Ferry wharf, in the Cooper River. Observing a small boat sailing toward the bay under a flag of truce, I put off to it, and received from a member of the common council

a letter addressed to the General commanding United States forces at Morris Island or to the officer in command of the fleet. The following is a copy of the letter:

CHARLESTON, S. C., February 18, 1863.
To the General Commanding the Army of the United States at Morris Island:

SIR: The military authorities of the Confederate States have evacuated the city. I have remained to enforce law and preserve order until you take such steps as you may think best.

Very respectfully, your obedient servant,
CHARLES MACBETH, Mayor.

The deputation sent to convey the above letter represented to me that the city was in the hands of either the Rebel soldiery or the mob. They entreated of me in the name of humanity to interpose my military authority and save the city from utter destruction. To this letter I replied in the following terms:

HEADQUARTERS UNITED STATES FORCES, CHARLESTON }
HARBOR, NEAR ATLANTIC WHARF, Feb. 18, 1863. }
Mayor Charles Macbeth:

I have the honor to acknowledge the receipt of your communication of this date. I have in reply thereto to state that the troops under my command will render every possible assistance to your well-disposed citizens in extinguishing the fires now burning.

I have the honor to be, Mayor, very respectfully, your obedient servant,
A. G. BENNETT,
Lieut.-Col. commanding U. S. Forces, Charleston.

Two (2) companies of the 53d Pennsylvania regiment and about thirty (30) men of the 3d Rhode Island volunteer heavy artillery having landed, I proceeded with them to the citadel. I here established my headquarters, and sent small parties in all directions with instructions to impress negroes wherever found, and to make them work the fire apparatus, until all fires were extinguished. I also sent a strong guard to the United States Arsenal, which was saved. As the troops arrived they were sent out to points in the city where were located railroad depots or any large buildings containing property, such as cotton, rice, tobacco, etc. It being apparent to me that I could not effectually save all that remained, I concentrated my guards wherever was stored the largest quantities.

I cannot at this time submit any account of, or estimate any value to, the property that has fallen into our possession. The most valuable items consist in cotton and rice. The cotton has not yet been secured. The rice is being given to the poor of the city to supply their immediate necessities.

Every officer and soldier exerted himself to a most willing performance of every allotted duty, yet I do not deem it invidious for me to make special mention of Lieutenant John Hackett, Co. M, 3d Rhode Island artillery, who volunteered to go alone to Fort Moultrie and there raise the flag. As also to speak of Major John A. Hennessy, Captain Samuel Cuskaden, and Lieutenant P. M. Burr, all of the 52d regiment Pennsylvania volunteers; and Lieutenant James F. Haviland, Acting Assistant Inspector-General of my staff, who accompanied me to the city; all of whose services were most highly valuable to me. Captain H. H. Jenks, 52d Pennsylvania volunteers, Acting Assistant Adjutant-General, also rendered important services. Although he remained at Morris Island, he was very efficient in facilitating the embarkation of my troops from there.

The flags from Fort Moultrie, Castle Pinckney, and Fort Ripley, and seventeen (17) signal pennants found in the city, were secured by the troops under my command.

I have the honor to be, Captain,
Very respectfully, your obedient servant,
(Signed) A. G. BENNETT,
Lieutenant-Colonel 21st regiment U. S. C. T.
A copy of the report of the evacuation and occupation of Charleston. JAMES F. HAVILAND,
First Lieutenant 127th Reg't N. Y. V., A. A. I. G.

Gen. Hardee, with about 12,000 men, moved

north, aiming to reach Charlotte in North Carolina. At the same time Georgetown, a seaport north of Charleston, was evacuated, and occupied by a naval force sent by Admiral Dahlgren. The force of Gen. Hood's army which had been sent eastward, having passed Augusta, was moving toward Charlotte, where Gen. Beauregard was in command. As the danger became more critical, the enemy sent Gen. Johnston to take the command, and he was again in a position to confront Gen. Sherman.

Meanwhile Gen. Sherman continued his march. The left wing and cavalry crossed the Saluda and Broad Rivers, and broke up the railroad about Alston and as high as the bridge across Broad River on the road to Spartansburg. Meanwhile the main body moved directly to Winnsboro, which Gen. Slocum reached on the 21st. Here the railroad was destroyed up to Blackstake's station, a distance of fifteen miles. The railroad runs from Columbia to Charlotte, N. C., one hundred and nine miles, thence to Greensboro, and branches to Lynchburg, Va., and Raleigh, N. C. The distance from Columbia to Winnsboro is thirty-nine miles. Gen. Slocum next turned to Rocky Mount, on the Catawba River, in a northeast direction. The 20th corps reached Rocky Mount on the 22d, and laid a pontoon bridge over the Catawba, and crossed on the 23d. The cavalry under Gen. Kilpatrick followed during the night ensuing, and moved up to Lancaster with instructions to keep up the feint of a general march on Charlotte, N. C., to which place Gen. Beauregard and the cavalry of the enemy had retreated from Columbia. The real aim of Gen. Sherman was to reach Cheraw and Goldsboro, N. C., where he could communicate with the naval forces. As has been already stated, a portion of Hood's army, consisting of Cheatham's corps, was aiming to make a junction with Gen. Beauregard at Charlotte, having been cut off by the rapid movement of Sherman on Columbia and Winnsboro. For three days, from the 23d to the 26th, the rains were heavy and the rivers became quite swollen, and the roads almost impassable. The 20th corps reached Hanging Rock on the 26th, and waited there for the 14th corps to get across the Catawba. The river had so swollen that the pontoon bridge broke, and was with difficulty restored by Gen. Davis.

Meanwhile the right wing had broken up the railroad to Winnsboro, and turned from thence to Peay's Ferry, where it crossed the Catawba before the heavy rain commenced. The 17th corps moved straight on Cheraw by the way of Young's bridge; and the 15th corps by Tiller's and Kelly's bridges. From the latter corps detachments were sent to Camden, to burn the bridge over the Wateree and the railroad depot, stores, &c. This was successfully done.

Several of the foragers, who, as a body, generally kept in advance of the troops, having been very cruelly treated by the enemy, Gen. Sherman wrote the following letter to Gen. W. Hampton:

HEADQUARTERS MILITARY DIV'N OF THE MISSISSIPPI,
IN THE FIELD, Feb. 24, 1863.

Lieut.-Gen Wade Hampton, Commanding Cavalry Forces, C. S. A.

GENERAL: It is officially reported to me that on foraging parties are murdered after capture, and labelled "Death to all foragers." One instance of lieutenant and seven men, near Chesterfield, and another of twenty, "near a ravine eighty rods from the main road," about three miles from Feasterville. Have ordered a similar number of prisoners in our hands to be disposed of in like manner.

I hold about one thousand prisoners captured in various ways, and can stand it as long as you; but hardly think these murders are committed with your knowledge, and would suggest that you give notice to the people at large, that every life taken by them simply results in the death of one of your confederates.

Of course you cannot question my right to forage on the country; it is a war right as old as history. The manner of exercising it varies with circumstances, and if the civil authorities will supply my requisitions, I will forbid all foraging. But I find no civil authorities who can respond to calls for forage or provisions, and therefore must collect directly of the people. I have no doubt this is the occasion of much misbehavior on the part of our men; but I cannot permit an enemy to judge or punish with wholesale murder.

Personally I regret the bitter feelings engendered by this war; but they were to be expected, and I simply allege that those who struck the first blow and made war inevitable, ought not, in fairness, to reproach us for the natural consequences. I merely assert our war right to forage, and my resolve to protect my foragers to the extent of life for life.

I am, with respect, your obedient servant,
W. T. SHERMAN, Maj.-Gen. U. S. A.

To which Gen. Hampton replied as follows:

HEADQUARTERS IN THE FIELD, Feb. 27, 1863.
Major-Gen. W. T. Sherman, U. S. Army.

GENERAL: Your communication of the 24th instant reached me to-day. In it you state that it has been officially reported that your foraging parties were "murdered" after capture, and you go on to say that you had "ordered a similar number of prisoners in your hands to be disposed of in like manner." That is to say, you have ordered a number of Confederate soldiers to be "murdered."

You characterize your order in proper terms, for the public voice, even in your own country, where it seldom dares to express itself in vindication of truth, honor, or justice, will surely agree with you in pronouncing you guilty of murder, if your order is carried out.

Before dismissing this portion of your letter, I beg to assure you for every soldier of mine "murdered" by you I shall have executed at once two of yours, giving, in all cases, preference to any officers who may be in my hands.

In reference to the statement you make regarding the death of your foragers, I have only to say that I know nothing of it; that no orders given by me authorized the killing of prisoners after capture, and that I do not believe that my men killed any of yours, except under circumstances in which it was perfectly legitimate and proper they should kill them.

It is a part of the system of the thieves whom you designate as your foragers, to fire the dwellings of those citizens whom they have robbed.

To check this inhuman system, which is justly execrated by every civilized nation, I have directed my men to shoot down all of your men who are caught burning houses. This order shall remain in force as long as you disgrace the profession of arms by allowing your men to destroy private dwellings.

You say that I cannot, of course, question your right to forage on the country. "It is a right as old

as history." I do not, sir, question this right. But there is a right older even than this, and one more inalienable—the right that every man has to defend his home and to protect those who are dependent upon him; and from my heart I wish that every old man and boy in my country who can fire a gun, would shoot down, as he would a wild beast, the men who are desolating their land, burning their houses, and insulting their women.

You are particular in defining and claiming "war rights." May I ask if you enumerate among them the right to fire upon a defenceless city without notice; to burn that city to the ground after it had been surrendered by the authorities, who claimed, though in vain, that protection which is always accorded in civilized warfare to non-combatants; to fire the dwelling houses of citizens, after robbing them, and to perpetrate even darker crimes than these—crimes too black to be mentioned?

You have permitted, if you have not ordered, the commission of these offences against humanity and the rules of war. You fired into the city of Columbia without a word of warning. After its surrender by the Mayor, who demanded protection to private property, you laid the whole city in ashes, leaving amid its ruins thousands of old men and helpless women and children, who are likely to perish of starvation and exposure. Your line of march can be traced by the lurid light of burning houses, and in more than one household there is an agony far more bitter than that of death.

The Indian scalped his victim regardless of sex or age, but with all his barbarity he always respected the persons of his female captives. Your soldiers, more savage than the Indian, insult those whose natural protectors are absent.

In conclusion, I have only to request, that whenever you have any of my men "disposed of," or "murdered," for the terms appear to be synonymous with you, you will let me hear of it, in order that I may know what action to take in the matter. In the mean time I shall hold fifty-six of your men as hostages for those whom you have ordered to be executed. I am, yours, &c.,

WADE HAMPTON, Lieut.-Gen.

A small force of mounted men, under Capt. Duncan, was sent by Gen. Sherman to break up the railroad between Charleston and Florence, but were met by a division of cavalry under Gen. Butler, and after a sharp skirmish on Mount Elon, they were compelled to return without success.

Cheraw, to which Gen. Sherman was aiming, is a town on the right bank of the Great Pedee River, at the head of steam navigation. It had been a place of importance as a depot for cotton, and had about one thousand inhabitants. It is the termination of the northern railroad from Charleston through Florence, being distant from the latter forty miles, and from the former one hundred and forty-two miles.

On March 2d the advanced division of the 20th corps entered Chesterfield, a little northwest of Cheraw, encountering on the way the cavalry of the enemy under Gen. Butler, with whom skirmishing was kept up. On the next day, about noon, the 17th corps entered Cheraw. The force of the enemy in the place retreated across the Pedee, and burned the bridge. A considerable quantity of ammunition was captured in the town, and a number of guns which had been brought from Charleston on the evacuation of that city. These were de-

stroyed, and also the trestles and bridges of the railroad as far down as Darlington, ten miles. An expedition of mounted infantry was sent to Florence, but it encountered both cavalry and infantry, and returned after doing no other damage than breaking up in part the road between the two places.

After a brief delay the march was resumed for Fayetteville, in North Carolina. The right wing crossed the Pedee at Cheraw, and the left wing at Sneadsboro. Fayetteville is the capital of Cumberland County, and was a flourishing town before the war, having a population exceeding seven thousand. It is on the left bank of Cape Fear River, at the head of navigation, and sixty miles south of Raleigh, the capital of the State, and one hundred miles northwest of Wilmington. It contained an arsenal, distilleries of turpentine, and cotton and flour mills. The 14th corps moved by Love's bridge, for the purpose of entering Fayetteville in advance, but the weather and road continuing bad it reached that place on March 11th, together with the 17th corps. They approached skirmishing with Gen. Wade Hampton's cavalry, which covered the rear of Gen. Hardee's army, as it retreated. It crossed the Cape Fear River and burned the bridge. The cavalry during the march had kept well on the left and exposed flank; but on the night of March 9th his three brigades were divided to picket the railroad. This was discovered by Gen. Hampton, who, early in the morning, dashed in and gained possession of the camp of Col. Spencer's brigade, and the house in which Gen. Kilpatrick and Col. Spencer had their quarters. The surprise was complete, but Gen. Kilpatrick quickly succeeded in rallying his men, on foot, in a swamp near at hand, and by a prompt attack, well followed up, he regained his artillery, horses, camp, and every thing except some prisoners. The enemy retired, leaving their dead behind.

The army remained at Fayetteville during three days, until March 15th. The United States arsenal, and a vast amount of machinery, which had formerly belonged to the arsenal at Harper's Ferry, were destroyed. Every building was knocked down and burned, and every piece of machinery broken up by the 1st Michigan engineers. The position of Gen. Sherman at this time is thus described by himself: "Up to this period I had perfectly succeeded in interposing my superior army between the scattered parts of my enemy. But I was then aware that the fragments that had left Columbia under Beauregard had been reinforced by Cheatham's corps from the West, and the garrison of Augusta, and that ample time had been given to move them to my front and flank about Raleigh. Hardee had also succeeded in getting across Cape Fear River ahead of me, and could therefore complete the junction with the other armies of Johnston and Hoke in North Carolina; and the whole, under the command of the skilful and experienced Joe

Johnston, made up an army superior to me in cavalry, and formidable enough in artillery and infantry to justify me in extreme caution in making the last step necessary to complete the march I had undertaken. Previous to reaching Fayetteville I had despatched to Wilmington from Laurel Hill Church two of our best scouts with intelligence of our position and my general plans. Both of these messengers reached Wilmington, and on the morning of the 12th of March, the army tug Davidson, Capt. Ainsworth, reached Fayetteville from Wilmington, bringing me full intelligence of events from the outer world. On the same day, this tug carried back to Gen. Terry, at Wilmington, and Gen. Schofield at Newbern, my despatches to the effect that on Wednesday, the 15th, we would move for Goldsboro, feigning on Raleigh, and ordering them to march straight for Goldsboro, which I expected to reach about the 20th. The same day, the gunboat Eolus, Capt. Young, United States navy, also reached Fayetteville, and through her I continued to have communication with Wilmington until the day of our actual departure. While the work of destruction was going on at Fayetteville, two pontoon bridges were laid across Cape Fear River, one opposite the town, the other three miles below."

While Gen. Sherman had been advancing to Fayetteville, some movements had taken place at Wilmington, N. C., intended to prepare the way for coöperation with him. It was on Jan. 15th that Gen. Schofield, with the 23d corps, left Gen. Thomas, as has been stated, for the Atlantic coast. The troops moved with their artillery and horses, but without wagons, by steam transports, to Cincinnati, Ohio, and thence by railroad to Washington, D. C., and Alexandria, Va. Although it was midwinter and the weather unusually severe, the movement was effected without delay, accident, or suffering on the part of the troops. In February an order was issued by the Secretary of War creating the department of North Carolina, and assigning Gen. Schofield to the command. The ultimate object of his operations was to occupy Goldsboro, N. C., and to open railroad communication between that point and the sea-coast, and further to accumulate supplies for Gen. Sherman's army and to join it, in its approach, at or near Goldsboro. Wilmington was made the first point to capture, as it would afford a valuable auxiliary base to Morehead City in the event of the junction being made at Goldsboro; and also as it would be of great value to Gen. Sherman in case the movement of the main army of the enemy or other circumstances should render advisable a concentration of Sherman's army at some point further south than Goldsboro.

With the 8d division of the 23d corps, under Major-Gen. J. D. Cox, Gen. Schofield reached the mouth of Cape Fear River on Feb. 9th, and landed near Fort Fisher. The other troops were to follow. Major-Gen. Terry, with about eight thousand men, then held a line across the peninsula, about two miles above the fort, and

occupied Smithville and Fort Caswell on the south side of the river, while the naval squadron under Rear-Admiral Porter, occupied positions in Cape Fear River, and off the coast covering the flanks of Gen. Terry's line. On the west bank, Fort Anderson was occupied by the enemy with a collateral line running to a large swamp about three-fourths of a mile distant, and a line opposite Fort Anderson, running across the peninsula from Cape Fear River to Masonboro' Sound. This position was impregnable against a direct attack, and could be turned only by crossing the sound above his left, or passing around the swamp which covered his right. The first movement of Gen. Schofield consisted in pushing forward Gen. Terry's line on Feb. 11th, supported by Gen. Cox's division, which drove in the enemy's pickets, and intrenched in a new position close enough to the enemy's line to compel him to hold it in force. Efforts were then made to turn his left by the aid of a fleet of boats to cross the sound, but the weather prevented. Finally Gen. Schofield determined to attempt to turn the enemy's right. Gen. Cox's and Gen. Ames' divisions were crossed over to Smithville and joined by Col. Moore's brigade of Gen. Couch's division, which had just debarked. They advanced along the main Wilmington road until they encountered the enemy's position at Fort Anderson and the adjacent works. Here two brigades were intrenched to occupy the enemy, while Gen. Cox with the other two brigades and Gen. Ames' division moved around the swamp covering the enemy's right, in order to strike the Wilmington road in the rear of Fort Anderson. The distance to be travelled was about fifteen miles. The enemy, by means of their cavalry, discovering the movement of Gen. Cox, hastily abandoned their works on both sides of the river during the night of Feb. 19th, fell back behind Town Creek on the west, and to a similar position covered with swamps on the east. Thus the main defences of the Cape Fear River and of Wilmington were captured, with ten pieces of heavy ordnance and a large amount of ammunition.

On the next day Gen. Cox pursued the enemy to Town Creek, behind which he was found intrenched. The only bridge over had been destroyed. Gen. Terry, on the east bank, also encountered the enemy in superior force, and Gen. Ames' division was recrossed and joined him during the night. On the 20th Gen. Cox crossed Town Creek, and gaining the flank and rear of the enemy attacked and routed them, capturing two guns and three hundred and seventy-five prisoners, besides the killed and wounded. During the night he rebuilt the bridge, crossed his artillery, and advanced toward Wilmington without opposition. Meanwhile, Gen. Terry being unable to advance, so occupied the attention of the entire force of Gen. Hoke that he was unable to reinforce those defeated by Gen. Cox. On Feb. 21st Gen. Cox

secured a portion of the enemy's bridge across Brunswick River, and passed a portion of his troops to Eagle Island, and threatened to cross the Cape Fear River above Wilmington. The enemy immediately set fire to his steamers, cotton, and military and naval stores, and abandoned the city. Early the next morning, Feb. 22d, Gen. Cox entered without opposition. The force in front of Gen. Terry fell back, and were pursued by him across Northeast River.

The Federal losses in these operations were about two hundred officers and men killed and wounded. That of the enemy was estimated at one thousand killed, wounded, and taken prisoners. Fifteen heavy and fifteen light guns were captured, with a large amount of ammunition.

As Gen. Schofield had no rolling stock at Wilmington, and was nearly destitute of wagons, he was compelled to operate from Newbern for the capture of Goldsboro. He had already sent to that place about 5,000 men, and ordered Gen. J. N. Palmer to move with as little delay as possible upon Kinston, in order to cover the workmen repairing the railroad. Gen. Ruger's division of the 23d corps was sent to reinforce Gen. Palmer, by way of Morehead City. As Gen. Palmer had not moved on the 25th, Gen. Cox was ordered to take the command and push forward at once. At the same time the division of Gen. Couch, which had just arrived at Wilmington, was prepared as rapidly as possible, together with the division of Gen. Cox, then under Brig.-Gen. Reilly, to join the column moving from Newbern by a land march from Wilmington. On March 6th the two divisions were ready to move for Kinston, and proceeded by way of Onslow and Richlands. On the 8th Gen. Cox had advanced to Wise's Forks, about one and a half miles below Southwest Creek, behind which the force of the enemy, consisting of Gen. Hoke's division and a small body of reserves, had retired. Meanwhile Gen. Cox sent two regiments, under Col. Upham of the 15th Connecticut, to secure the crossing of the creek on the Dover road. But the enemy having been reinforced by a portion of the old Army of Tennessee, recrossed the creek above the Dover road, and came down in the rear of Col. Upham's position, and surprised and captured nearly his entire command, about seven hundred men. They then advanced and endeavored to penetrate between Gen. Carter's and Gen. Palmer's divisions, occupying the Dover road and the railroad respectively, but were checked by Gen. Ruger's division, which was just arriving on the field. Only light skirmishing took place, from which the loss was small. As the enemy was equally as strong as Gen. Cox, and receiving reinforcements all the time, Gen. Cox intrenched his force to await the arrival of Gen. Couch. On the 9th the enemy pressed his lines strongly without making an assault; and on the 10th, having received further reinforcements, and perhaps heard of the approach of Gen. Couch's

column, they made a heavy attack upon the left and centre of Gen. Cox, but were decisively repulsed with a heavy loss. They retired in confusion, leaving their dead and wounded and a large number of arms and intrenching tools. During the night they fell back across the Neuse and burned the bridge. The loss of Gen. Cox was about 800 in killed and wounded; that of the enemy was estimated at 1,500 in killed, wounded, and prisoners. During the night the column of Gen. Couch arrived. Gen. Schofield was delayed in crossing the Neuse until the 14th, for want of pontoons, when it was effected without opposition. Meanwhile the enemy had abandoned Kinston and moved rapidly toward Smithfield, to join the force under Gen. Johnston, to resist the advance of Gen. Sherman from Fayetteville. After occupying Kinston and repairing the bridge over the Neuse and the railroad track, Gen. Schofield moved on the 20th toward Goldsboro, which he entered on the evening of the 21st with slight opposition from the enemy.

Meanwhile Gen. Terry, with a portion of the command which had remained at Wilmington, moved from that point on March 15th, reaching Faison's depot on the 20th, and advanced to Cox's bridge, securing the crossing of the Neuse on the 22d.

The columns of Gen. Sherman commenced their march from Fayetteville on Wednesday, March 15th. His plan was, that Gen. Kilpatrick should move up the plank road to and beyond Averysboro, a village on the Cape Fear River, about forty miles south of Raleigh. Four divisions of the left wing, with as few wagons as possible, were to follow him; the rest of the train, under the escort of the two remaining divisions of the wing, were to take a shorter and more direct road to Goldsboro. In like manner Gen. Howard was to send his trains well to the right, under a good escort, toward Faison's depot and Goldsboro, and to hold four divisions light and ready to go to the aid of the left wing if it should be attacked while in motion. The weather continued bad, and the roads were almost impassable, requiring repairs at almost every foot to admit the passage of the wagons and artillery.

Gen. Kilpatrick advanced, followed by Gen. Slocum, who moved up the river or plank road on the 15th to Kyle's landing. About three miles beyond, at Taylor's Hole Creek, Gen. Kilpatrick encountered the rear-guard of the enemy, with which he skirmished heavily. At his request Gen. Slocum sent forward a brigade of infantry to hold a line of barricades. On the next morning the column advanced in the same order, and found the enemy in an intrenched position, with artillery, infantry, and cavalry. They were in front of the point where the road branched off toward Goldsboro through Bentonville. It appeared that Gen. Hardee, in retreating from Fayetteville, had halted in the narrow and swampy neck between the Cape Fear and South Rivers, in

order to check the progress of Gen. Sherman, that time might be gained for the concentration of Gen. Johnston's forces in the rear at Raleigh, Smithfield, or Goldsboro. The force of Gen. Hardee was estimated at 20,000 men. Gen. Sherman found it to be necessary to dislodge him, both to gain possession of the road to Goldsboro and to keep up as long as possible the feint of an advance on Raleigh. The position of the enemy was a difficult one to carry, by reason of the nature of the ground, which was so soft that horses would sink everywhere, and even men could hardly make their way over the common pine barren.

Gen. Williams, with the 20th corps, was ahead, and Gen. Ward's division in the advance. This was deployed, and the skirmish line developed the position of a brigade of heavy artillery armed as infantry, posted across the road behind a light parapet, with a battery enfilading a clear field over which lay the way of approach. A brigade under Gen. Corse was sent by Gen. Williams to the left to turn this line. By a quick charge it broke the enemy's brigade, which retreated rapidly back to a second line better made and more strongly held. On the retreat the enemy were made to suffer by Winniger's battery of artillery, which had been put in position by Major Reynolds, chief of artillery. On the advance of Gen. Ward's division over the ground, three guns and 217 prisoners were captured. Of the latter 68 were wounded. Of the enemy's dead, 108 were buried by the troops. As the second line was developed, the division of Gen. Jackson was deployed forward on the right of Gen. Ward, and two divisions of Gen. Jefferson C. Davis' 14th corps on the left, well toward the Cape Fear River. At the same time Gen. Kilpatrick, who was acting in concert, was ordered to mass his cavalry on the extreme right, and in concert with the right of Gen. Jackson, to feel forward for the Goldsboro road. He succeeded in getting a brigade on the road, but it was attacked so furiously by a division of the enemy under Gen. McLaws, that it fell back to the flank of the infantry. Late in the afternoon the entire line advanced and drove the enemy within his intrenchments, and pressed him so hard that during the night, which was stormy, he retreated. In the morning he was followed by the division of Gen. Ward through and beyond Averysboro, when it became apparent that Gen. Hardee had retreated toward Smithfield instead of Raleigh. The Union loss was 12 officers and 65 men killed and 477 wounded. The loss of the enemy is unknown.

The division of Gen. Ward remained to keep up a show of pursuit, and the rest of Gen. Slocum's column turned to the right and built the bridge across the South River and took the road to Goldsboro. At the same time Gen. Kilpatrick crossed the river to the north in the direction of Elevation, and moved eastward, watching the left flank. The right wing of

Gen. Howard was still working its way over the heavy roads toward Bentonville and Goldsboro. The cavalry of the enemy crossed in front of Gen. Sherman, to join their infantry at Smithfield, burning the bridges across Mill Creek. Smithfield is 22 miles northwest of Goldsboro, on the railroad leading from the latter place to Raleigh, and on the left bank of the Cape Fear River, 27 miles from Raleigh. Goldsboro is at the junction of the railroad from Raleigh to Newbern and that from Richmond to Wilmington.

On the night of the 18th Gen. Slocum's column encamped on the Goldsboro road, about five miles from Bentonville and twenty-seven miles from Goldsboro. The column of Gen. Howard was two miles south, and both columns had pickets three miles forward, at the junction of the roads leading to Goldsboro. The next movement is thus described by Gen. Sherman:—"All the signs induced me to believe that the enemy would make no further opposition to our progress, and would not attempt to strike us in flank while in motion. I therefore directed Gen. Howard to move his right wing by the new Goldsboro road, which goes by way of Falling Creek Church. I also left Slocum and joined Howard's column, with a view to open communication with Gen. Schofield, coming up from Newbern, and Gen. Terry from Wilmington. I found Gen. Howard's column well strung out, owing to the very bad roads, and did not overtake him in person until he had reached Falling Creek Church, with one regiment forward to the cross-roads near Cox's bridge across the Neuse. I had gone from Gen. Slocum about six miles when I heard artillery in his direction, but was soon made easy by one of his staff officers overtaking me, explaining that his leading division (Carlin's) had encountered a division of rebel cavalry (Dibrell's), which he was driving easily. But soon other staff officers came up reporting that he had developed near Bentonville the whole of the rebel army under Gen. Johnston himself. I sent him orders to call up the two divisions guarding his wagon trains, and Hazen's division of the 15th corps, still back near Lee's store, to fight defensively until I could draw up Blair's corps, then near Mount Olive station, and with the three remaining divisions of the 15th corps come up on Gen. Johnston's left rear from the direction of Cox's bridge. In the mean time, while on the road, I received couriers from both Gens. Schofield and Terry. The former reported himself in possession of Kinston, delayed somewhat by want of provisions, but able to march so as to make Goldsboro on the 21st, and Gen. Terry was at or near Faison's depot. Orders were at once despatched to Gen. Schofield to push for Goldsboro, and to make dispositions to cross Little River in the direction of Smithfield as far as Millard; to Gen. Terry to move to Cox's bridge, lay a pontoon bridge, and establish a crossing; and to Gen. Blair to make a night march to Falling Creek

Church; and at daylight, the right wing, Gen. Howard, less the necessary wagon guards, was put in rapid motion on Bentonville.

It appears that on the advance of the head of Gen. Slocum's column from his camp on the night of the 18th, it first encountered Dibbrell's cavalry, but soon found its progress hindered by infantry and cavalry. The enemy attacked his advance and gained a temporary advantage capturing three guns of Gen. Carlin's division, and driving the two advanced brigades back on the main body. Gen. Slocum at once deployed the two divisions of the 14th corps of Gen. Davis, and brought up on their left the two divisions of the 20th corps of Gen. Williams. These were placed on the defensive, and a line of barricades prepared. Gen. Kilpatrick also massed his cavalry on the left. In this position six assaults were made on the left wing by Gen. Johnston, with the combined forces of Gens. Hoke, Hardee, and Cheatham. During the night ensuing, Gen. Slocum got up his wagon train with its guard of two divisions, and Gen. Hazen's division of the 15th corps, which enabled him to make his position impregnable. Gen. Johnston had moved by night from Smithfield, with as little incumbrance as possible, for the purpose of overwhelming the left wing before it could be relieved. The right wing, in its advance to the aid of Gen. Slocum, found the cavalry of the enemy watching its approach without being able to offer any serious resistance until the head of the column encountered a considerable body behind a barricade, at the forks of the road near Bentonville, about three miles east of the battle field of the previous day. The cavalry were quickly dislodged, and the intersection of the roads secured. As the 15th corps advanced, Gen. Logan found that the enemy had thrown back their left flank, and constructed a line of parapet connecting with that toward Gen. Slocum, in the form of a bastion, with its salient on the main road to Goldsboro; thus interposing between Gen. Slocum with the left wing on the west, and Gen. Howard with the right wing on the east, while the flanks rested on Mill Creek and covered the road to Smithfield. Gen. Howard proceeding cautiously soon made strong connection with Gen. Slocum on the left, and at 4 P. M. of the 20th a complete and strong line of battle confronted the enemy in his intrenched position, which put Gen. Johnston on the defensive, with Mill Creek and a single bridge in his rear. Gen. Sherman having nothing to gain by a battle, now pressed the enemy steadily with skirmishers alone, using artillery on the wooded space held by him, and feeling the flanks of his position, which were covered by swamps. On the next day, the 21st, a steady rain prevailed, during which Gen. Mower with his division, on the extreme right, had worked well to the right around the enemy's flank, and nearly reached the bridge across Mill Creek, which was the only line of retreat open to Gen. Johnston. Fearing the enemy might turn upon

Gen. Mower with all his reserves, to overwhelm him, and perhaps yield his parapets for the purpose, Gen. Sherman ordered a general attack by his skirmish line, from left to right. Meanwhile Gen. Mower was able to regain his connection by moving to his left rear. During the night ensuing the enemy retreated toward Smithfield, leaving his pickets to fall into Gen. Sherman's hands, with many dead unburied and wounded in his field hospitals. At day-break pursuit was made two miles beyond Mill Creek. The loss of the left wing about Bentonville was reported at 9 officers and 145 men killed, 51 officers and 816 men wounded, and 8 officers and 223 men missing; total, 1,247. Of the enemy, 167 dead were buried, and 338 made prisoners by the left wing. The loss of the right wing was 2 officers and 35 men killed, 12 officers and 289 men wounded, and 1 officer and 60 men missing; total, 899. Of the enemy, 100 dead were buried and 1,287 made prisoners by this wing. The total loss of Gen. Sherman, exclusive of the cavalry, was 1,646.

The result of this affair gave to Gen. Sherman full possession of Goldsboro, with the two railroads to Wilmington and Beaufort, on the coast. The 22d was passed in burying the dead and removing the wounded at Bentonville, and on the next day all the troops moved to the camps about Goldsboro, there to rest and receive supplies of food and clothing.

During this march Gen. Sherman's army passed over an average breadth of forty miles of country, from Savannah to Goldsboro, and consumed all the forage, cattle, hogs, sheep, poultry, cured meats, corn meal, &c. It was stripped so bare as to make it necessary for the enemy to send provisions from other quarters to feed the inhabitants. It caused the abandonment by the enemy of the whole sea-coast from Savannah to Newbern, with the forts, dockyards, gunboats, &c. The real object of the march, says Gen. Sherman, "was to place this army in a position easy of supply, whence it could take an appropriate part in the spring and summer campaign of 1865."

While General Sherman had been marching through South and North Carolina, General Grant was completing his preparations for the final conflict with General Lee. He considered it to be of the utmost importance before a general movement of Meade's forces, that all communication with Richmond, north of the James River, should be cut off. The enemy had withdrawn the bulk of their force from the Shenandoah valley to strengthen themselves in the South, and General Grant desiring to reinforce Sherman, especially with cavalry, determined to make a move from the Shenandoah, which might accomplish the first, if not both these objects. He therefore sent the following despatch to General Sheridan:

CITY POINT, VA., February 20, 1865—1 P. M.

GENERAL: As soon as it is possible to travel, I think you will have no difficulty about reaching Lynchburg with a cavalry force alone. From there you could

destroy the railroad and canal in every direction, so as to be of no further use to the rebellion. Sufficient cavalry should be left behind to look after Mosby's gang. From Lynchburg, if information you might get there would justify it, you could strike south, heading the streams in Virginia to the westward of Danville, and push on and join General Sherman. This additional raid with one now about starting from East Tennessee under Stoneman, numbering four or five thousand cavalry, one from Vicksburg, numbering seven or eight thousand cavalry, one from Eastport, Mississippi, ten thousand cavalry, Canby from Mobile Bay, with about thirty-eight thousand mixed troops; these three latter pushing for Tuscaloosa, Selma, and Montgomery, and Sherman with a large army eating out the vitals of South Carolina, is all that will be wanted to leave nothing for the rebellion to stand upon. I would advise you to overcome great obstacles to accomplish this. Charleston was evacuated on Tuesday last.

U. S. GRANT, Lieutenant-General.

Major-General P. H. SHERIDAN.

On the 25th he wrote again as follows:

CITY POINT, VA., February 25, 1865.

GENERAL: Sherman's movements will depend on the amount of opposition he meets with from the enemy. If strongly opposed, he may possibly have to fall back to Georgetown, S. C., and fit out for a new start. I think, however, all danger for the necessity of going to that point has passed. I believe he has passed Charlotte. He may take Fayetteville on his way to Goldsboro. If you reach Lynchburg, you will have to be guided in your after movements by the information you obtain. Before you could possibly reach Sherman, I think you would find him moving from Goldsboro toward Raleigh, or engaging the enemy strongly posted at one or the other of these places, with railroad communications opened from his army to Wilmington or Newbern.

U. S. GRANT, Lieutenant-General.

Major-General P. H. SHERIDAN.

On the 27th, Gen. Sheridan left his camp at Winchester. The command consisted of the 1st and 3d Divisions of Cavalry of the Army of the Shenandoah, under the immediate command of Brevet Major-General Wesley Merritt, Brevet Major-General George A. Custer, commanding the 8d Division, and Brigadier-General T. C. Devin the 1st. The force was 9,987 officers and men. The column passed through Kernstown, Middletown, Strasburg, and Woodstock, crossing the streams on the way without opposition. On the next day, the 28th, the march was made without opposition from Woodstock, through Edinburg, to Hawkinsburgh. The north fork of the Shenandoah was crossed on a pontoon bridge, between Mount Jackson and New Market. In the crossing nine men of Gen. Custer's division were drowned. On the next day Gen. Sheridan passed through Harrisonburgh, Mount Crawford, Mount Sidney, and crossed Middle River, nine miles from Staunton, and camped four miles from that place, having advanced eighty-three miles in three days. The only skirmishing thus far took place at a point near the North River and Mount Crawford, between the brigade under Caphart and some cavalry of Gen. Rosser's division.

Gen. Early, who had occupied Staunton, was unable to retain possession of the town. During the night of March 1st, while the troops were encamped outside of Staunton, Gen. Devin's brigade of Merritt's division,

moved to Staunton, drove the enemy's picket through the town, and occupied it without opposition. Gen. Devin's then turned to the left marching easterly on the road toward Rockfish Gap, and destroyed the trestle bridge of the Virginia Central Railroad at Christina's Creek. On the 2d it rained heavily, but the column moved through Staunton toward Waynesboro thirteen miles distant. At Fishersville, eight miles from Staunton, Gen. Custer's division being in advance, met the enemy's videttes and drove them back five miles to Waynesboro. Here he made a reconnaissance and discovered the enemy in position on some ridges along South River, with five guns. Placing the brigade of Gen. Pennington on the right, and Wells' on the left, with that of Caphart acting as a reserve, he advanced with the two forward regiments deployed as skirmishers and firing briskly. Immediately after firing a volley the entire line of the enemy broke, when the troops rushed upon them and captured 87 officers, 1,165 men, 13 flags, 5 cannon, over 100 horses and mules, and nearly 100 wagons and ambulances. Gen. Early lost his baggage but escaped to Charlottesville. Pursuit was made, and Caphart's brigade crossing South River moved to Greenwood station, where it destroyed the depot, a train containing six pieces of artillery, and some commissary and ordnance supplies. Gen. Custer now waited for Gen. Merritt to come up, and both forces pushed on through Rockfish Gap to Charlottesville, eighteen miles. The prisoners were sent back to Winchester under a guard. At Charlottesville Gen. Sheridan remained two days. He says: "This time was consumed in bringing over from Waynesboro our ammunition and pontoon trains. The weather was horrible beyond description, and the rain incessant. The two divisions were during this time occupied in destroying the two large iron bridges, one over the Rivanna River, the other over Morse's Creek, near Charlottesville, and the railroad for eight miles in the direction of Lynchburg."

On March 6th Gen. Devin's advanced with his division to Scottsville, whence light parties were sent through the country, destroying all merchandise, mills, factories, bridges, &c. The division then proceeded along the James River Canal to Duguidsville, fifteen miles from Lynchburg, destroying every lock, and in many places the bank of the canal. The bridges at Duguidsville and Hardwicke had been burned by the enemy, and the pontoons were useless on account of the high water. At the same time the 3d division started from Charlottesville and proceeded down the Lynchburg Railroad to Amherst Court House, destroying every bridge, and in many places miles of the road. The bridges were numerous, and some of them five hundred feet in length. Abundant supplies were found in all places. The canal had been, says Gen. Sheridan, "the great feeder of Richmond." At Rockfish River the bank of the canal was cut, and at New Canton, where a

dam is across the James, the guard lock was destroyed and the James River let into the canal, carrying away its banks and washing out its bottom. The dam was also partially destroyed. Among the captures were twelve canal boats laden with supplies, ammunition, rations, medical stores, &c. Gen. Custer was next sent to Ashland, and Gen. Devin to destroy the bridges over the South Anna. At noon on March 10th, the advance of Gen. Sheridan arrived on the banks of the Pamunkey, a few miles from Whitehouse, and soon crossed the river. On the 26th he reached City Point, and took a position in Gen. Gregg's old cavalry camp on the left and rear of the army.

The line occupied by Gen. Grant's army at this time extended a distance of about thirty miles. The extreme right was at Fort Harrison at Chafin's farm, north of the James River, where were also the outposts of the cavalry under Gen. Kautz. Thence it crossed the James in front of Bermuda Hundred and the Appomattox, and extended around Petersburg as far southwest as the bank of Hatcher's Run. This line was strongly intrenched everywhere, although the greater part of the army were on the left. The Army of the James, under Gen. Ord, was north of the James, forming the right wing, and the Army of the Potomac was south of the Appomattox, and formed really the left wing. From the Appomattox to Hatcher's Run there was a strong series of connected intrenchments. The first regular work on the line was Fort McGilvery; the next Fort Steadman; the next three-eighths of a mile further on, was Fort Haskell; the next Fort Morton, &c. Between the forts were mortar batteries, as follows: No. 8 near Fort McGilvery, No. 9 between that and Fort Steadman, No. 10 on the right of the latter fort and near it, and Nos. 11 and 12 on its left. Fort Steadman and the adjoining batteries were on an eminence known as Hare's Hill.

For some days previous to the arrival of Gen. Sheridan with his command, there had been indications of a change on the part of the enemy, such as might result in a dash on some part Gen. Grant's lines. About daylight, on March 25th, Gen. Gordon's old division and Bushrod Johnson's division of Lee's army were massed for a charge upon Fort Steadman, which covered about an acre of ground and had nine guns. At the same time the rest of Gen. Lee's army was arranged for an attack further down toward the left. At dawn Gordon's troops rushed forward to the attack. The space between the lines was about one hundred and fifty yards wide. They at once cleared their own abatis, charged across the interval, and up the ascent to Fort Steadman, and working through the abatis, carried the fort almost in an instant. The surprise was complete. In the fort was the 14th New York heavy artillery, and the line was guarded by Gen. McLaughlin's brigade of the 1st division of the 9th corps. The enemy immediately turned the guns of the fort against the rest of the line, and caused the abandonment of batteries 10 and

11 on the left, and battery 9 on the right. Upon these they dashed at once, and opened fire upon the troops as they escaped. Fort Haskell, however, soon gave them a check. The 3d division of the corps under Gen. Hartranft was quickly on the ground, and the batteries from all sides were speedily massed upon Fort Steadman. A terrible fire burst from the artillery, to which the enemy replied with the captured guns. Under this fire the division of Gen. Hartranft pressed up to retake the captured fort. The enemy at first resisted obstinately, and checked his progress with a loss of nearly two hundred killed and wounded. But the constant fire of the artillery and the pressure of Hartranft soon caused the enemy to fall back into the fort and then beyond it, down the hill, leaving all the captured guns in the endeavor to regain their own lines. A portion, however, were unable to escape, and about 1,758 were made prisoners, causing a total loss to the enemy of more than 2,000 men. The Union loss was nearly 1,000, in killed, wounded, and missing. No more firing took place at this point during the day. It was resumed at night when an attempt was made to repair the abatis. The affair was over before other Union troops arrived to give assistance. Later in the day a general forward demonstration was made along the line on the left, and a part of the enemy's skirmish lines captured with about 2,000 prisoners. Of this movement Gen. Grant reported thus:

"Our captures by the 2d corps were 365; by the 6th corps, 469, and by the 9th corps 1,049. The 2d and 6th corps pushed forward and captured the enemy's strong intrenchments, and turned them against him and still hold them. In trying to retake these the battle was continued until eight o'clock at night, the enemy losing very heavily. Humphreys estimates the loss of the enemy in his front at three times his own, and Gen. Wright, in his front, as double that of ours."

The following is Gen. Meade's congratulatory order to the army:

HEADQUARTERS ARMY OF THE POTOMAC, March 26, 1863.

General Orders No. 13.

The Major-General Commanding announces to the Army the success of the operations of yesterday.

The enemy, with a temerity for which he has paid dearly, massed his forces, and succeeded, through the reprehensible want of vigilance of the 3d brigade 1st division, 9th corps, in breaking through our lines, capturing Fort Steadman, and batteries 9, 10, and 11.

The prompt measures taken by Maj.-General Parke, the firm bearing of the troops of the 9th corps in adjacent portions of the line held by the enemy, and the conspicuous gallantry of the 3d division of this corps, for the first time under fire, together with the energy and skill displayed by Brigadier-General Hartranft, its leader, quickly repaired this disaster; and the enemy were driven from Fort Steadman and our lines, with heavy losses in killed and wounded, leaving in our hands eight battle-flags and over 1,900 prisoners.

The enemy being driven from the front of the 9th corps, the offensive was assumed by the 6th and 2d corps; the enemy by night was driven from his intrenched picket line, and all his efforts to recover the same, which were particularly determined and

persistent on the 2d corps front, were resisted and repulsed with heavy losses, leaving with the 6th corps over 400 prisoners, and with the 2d corps two battle-flags and over 800 prisoners.

The troops of the 6th corps, reported by Major-General Wright as engaged in these operations, were Getty's division, Koifer's brigade of Seymour's division, and Hamblin's and Edward's brigade of Wheaton's division.

Of the 2d corps, Major-General Humphreys mentions Miles' and Mott's divisions, and Smythe's brigade of Hays' division, supported by Griffin's division, 6th corps.

The result of the day was the thorough defeat of the enemy's plans, the capture of his strongly intrenched picket-line under the artillery fire of his main works, and the capture of ten battle-flags and about 2,800 prisoners—a result on which the Major-General Commanding heartily congratulates the army.

Two lessons can be learned from these operations: One, that no fortified line, however strong, will protect an army from an intrepid and audacious enemy, unless vigilantly guarded; the other, that no disaster or misfortune is irreparable, where energy and bravery are displayed in the determination to recover what is lost, and to promptly assume the offensive.

The Major-General Commanding trusts these lessons will not be lost on this army.

In conclusion, the Major-General Commanding desires to return his thanks to those commands of the army not specially mentioned in this order, for the promptness displayed by all, in their movements to different parts of the lines, under the exigencies of the hour. In connection with this subject, the promptitude of Major-General Warren and of Brevet Major-General Hunt, Chief of Artillery, in the early part of the operations, during the accidental absence of the Major-General Commanding, deserve commendation and thanks.

GEORGE G. MEADE,

Major-General Commanding.

Indications were now more and more apparent of the weakness of Gen. Lee's forces, and the fall of Petersburg and Richmond. Gen. Grant immediately prepared for new movements of the highest importance, and considered that this attack of Lee was made to cover his designed retreat from Richmond.

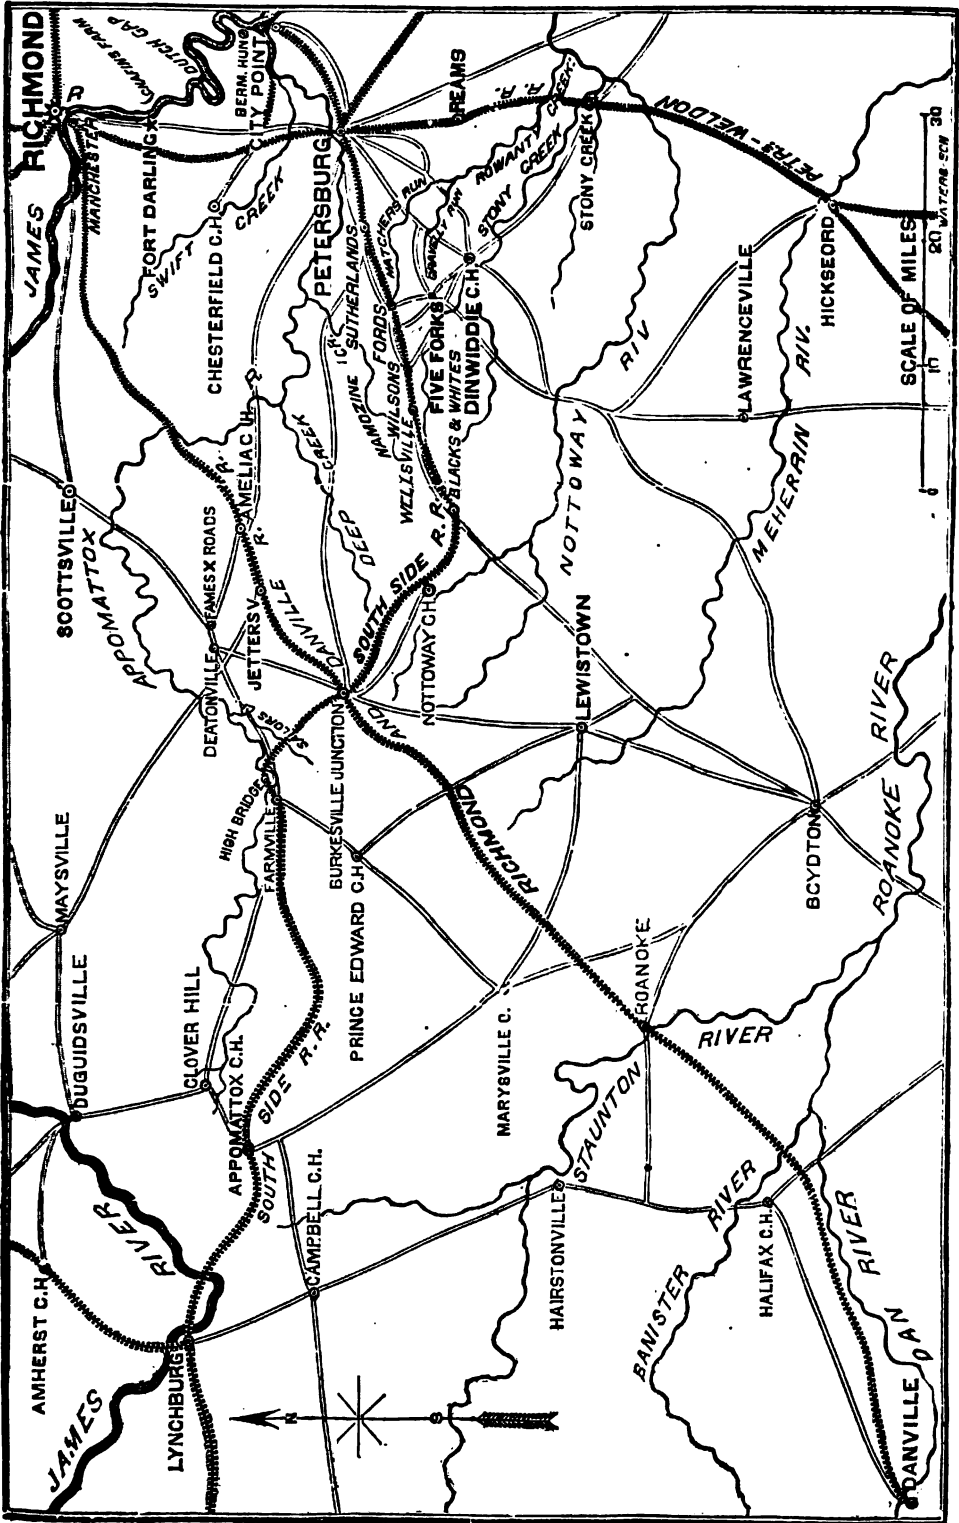

On the 26th some sharp skirmishing broke out between the pickets of the 1st division of the 9th corps and their opponents, and the batteries joined in. It soon quieted down. On the 27th an attack was made by the enemy on Gen. Getty's division of the 6th corps by a small force of the enemy, which was repulsed after a sharp skirmish. On the same day orders were sent to the various field hospitals to remove the sick and wounded to City Point, and to keep the hospitals in readiness for any emergency that might arise. At 12 o'clock at night the whole army was put under marching orders, and the next day, the 28th, was passed in preparations for the movement. The plan was that the cavalry, under Sheridan, should advance to the left, as had been done so often before, followed by the 5th corps under Gen. Warren, and the 2d corps under Gen. Humphreys, while the other corps held the lines around Petersburg. For this purpose, on the 27th troops were selected from the 24th under Gen. Gibbon, and 25th under Gen. Birney, corps which belonged to the Army of the James, under Gen. Ord, and during the night marched across the

river, leaving the remainder of the corps to garrison the position north of the James. At noon on the 28th, this force reached the headquarters of Gen. Meade, and early on the morning of the 29th marched into the lines as they were evacuated by the 2d corps.

About 6 A. M. of Wednesday the 29th, the cavalry began to move down the Jerusalem plank-road to Reams' station on the Weldon Railroad, in two columns, of which Gen. Crook commanded the right and Gen. Merritt the left. The bridge over Rowanty Creek was gone, and the creek not fordable. After a delay of four hours a bridge was built, and the advance under Crook crossed, and moved direct to Dinwiddie. The bad roads caused much delay. The town was occupied, and communication opened with Gen. Warren's corps on the right. It rained a little during the night, and very hard all of Thursday, the 30th. The roads became so bad as to block up the trains, and a part of the cavalry force was employed in guarding them. The rest moved up to the Boydton road.

Previous to the advance of the infantry, the left of the 6th corps extended to Hatcher's Run. The 2d corps extended down the run from the left of the 6th, at nearly a right angle, until reaching the crossing of the Vaughan road. The 5th corps was practically in reserve, and extended back at a right angle from the left of the 2d, in rear of the 6th. Early on the morning of the 29th the 2d corps moved along the Vaughan road, and was soon thrown into position along that road from Hatcher's Run to Gravelly Run, which unite at Monk's Neck to form Rowanty Creek. Works were thrown up to cover the corps from attack, but the enemy made no opposition. The 5th corps moved at the same time, and crossed Hatcher's Run. The route was along the road to Dinwiddie, until reaching the Quaker road, when the column turned abruptly to the right. About nine o'clock a connection was formed between the right of the 5th corps and the left of the 2d. The line of the former extended across the Quaker road, and within two or three miles of Dinwiddie. Some opposition had been made to the crossing of the 5th corps at Gravelly Run by a cavalry vidette, which was driven off after a short skirmish. Expecting an attack from the enemy, preparations were soon made by the troops, and about 8½ P. M. a division, under Gen. B. Johnson, attacked and drove in the skirmishers, and assailed with great force Gen. Griffin's division. Some batteries being in position opened upon the enemy, who had no artillery, and a sharp but short conflict ensued. Finding the force against him becoming too strong Johnson withdrew to his original position. The loss to the 5th corps was about five hundred, and that of the enemy was estimated at not far from the same number.

During the night, between 9 and 12 o'clock, a cannonade took place on the right of the

line, in front of Petersburg. The loss was small on each side.

On the next day, Thursday, the 80th, Turner's division of the 24th corps was moved down the Vaughan road and across Hatcher's Run. It then turned to the right and advanced to make connection with the right of the 2d corps. A brigade of Gen. Foster's division then moved out and connected with the right of Turner, thus making the line complete. Field works were thrown up, and some skirmishing with the enemy took place. The two divisions of the 25th corps held a place between the right of the 24th and the left of the 6th. The 9th corps remained on the right of the 6th.

Early on the same day Gen. Sheridan connected his right with the left of Gen. Warren near the Boydton plank-road. The enemy had a strong line of intrenchments already erected to cover a position known as Five Forks. The force of Gen. Merritt was sent in that direction for the purpose of turning the right of the enemy, and the advance brigade, under Gen. Devin, soon encountered their cavalry, and drove them back to their works. Their infantry in turn drove back the advance. Their line of intrenchments covered the White Oak road, which runs from the Boydton road to the Southside Railroad. From the White Oak road toward Hatcher's Run the enemy were in strong force. All attempts to turn his right by cavalry were baffled.

Meanwhile some changes were made in the position of the different corps. The 5th at night occupied a position about a mile north of the junction of the Quaker and Boydton roads. During the day it had advanced westward about three-fourths of a mile, and lay fronting northward, with the pickets of Gens. Ayres's division within five hundred yards of the White Oak road, but at a spot between two and three miles west of its intersection with the Boydton road. The divisions of Gens. Crawford and Griffin were on the right successively. On the right of the 5th corps was the 2d, which now had its right near Hatcher's Run. Gen. Sheridan remained at Dinwiddie and covered the left. The movements of the day had been accomplished with skirmishing and some artillery firing, making the losses of the Union troops about two hundred.

The object now was to get possession of the enemy's position, known as Five Forks, by carrying which their right flank would be turned. At this point five roads meet in the woods, three of which run back to the Southside Railroad. The White Oak road was here strongly fortified with logs and earth, with its approaches blocked by fallen trees. Sharpshooters were also stationed to resist any advance.

Early on Friday morning, the 31st, Gen. Warren massed the division of Griffin in the rear of those of Gens. Ayres and Crawford, for an advance upon the White Oak road,

which commences at the Boydton road and runs westward, crossing the Quaker road and the Claiborne, which latter extends northwestly to the Southside Railroad. About 8 o'clock the advance commenced toward the Dabney House, Ayres's division leading and supported by the other two. After moving about a half mile beyond the plank-road the enemy's skirmishers opened fire, at the same time falling back upon their main works, a mile and a half below the White Oak road. A severe fire was now opened upon the advance under Gen. Ayres, which broke and fell to the rear, followed by a vigorous charge upon them by the enemy. The attack of the enemy was so impetuous, and they were so well handled, that they swept the field, notwithstanding the obstinate resistance. Each division met the same fate until the whole 5th corps was driven back to the Boydton road, when Miles' division of the 2d corps came to their aid and checked the enemy. They now attempted to cut off Sheridan's cavalry, which were greatly exposed by the failure of the 5th corps to advance. The 2d division was on Stony Creek, southwest of Dinwiddie, consisting of three brigades—Smith's, Davies', and Gregg's—and holding the left of Sheridan's line. The brigade of Gen. Fitzhugh was next, and facing southeast, and next was Stagg's brigade, on Gravelly Run, six miles from Dinwiddie. About two miles from the latter place was Gibbs' brigade. Early in the afternoon the enemy attacked the left in force, but it held its ground. Davies' brigade, on the right of the extreme left, was next attacked, and, being flanked, was driven back with severe loss. The enemy next attacked the left centre, and forced it back, when the commands were faced into new positions, and reinforcements hurried up. At 5 p. m. the greater part of both divisions had been repulsed and driven back several miles to the Boydton road, and Gibbs' brigade had fallen back about a mile from Dinwiddie. The troops of Gen. Merritt were now reformed, and held a firm position on the right. The enemy, reinforced by the infantry which had driven the 5th corps, renewed the attack, but the artillery being in position, and a large force of cavalry having been rallied by Gen. Sheridan, the desperate charges of the enemy were successfully resisted, and they drew off to the woods. Meantime the 5th corps had been rallied, and advanced and regained the whole ground which had been lost. The division of Gen. Griffin captured the earthwork from which the enemy had issued, and advanced and took a position on the White Oak road, east of Five Forks. At the same time the 1st and 8d divisions of the 2d corps, next on the right, advanced, and a hot engagement with the enemy ensued. The latter resisted stubbornly, but at length withdrew, and the whole corps advanced three-fourths of a mile, capturing about one hundred and fifty prisoners. The two divisions of the 24th corps were on

the right of the 2d, and were thrown forward so as to coöperate with the general advance. The enemy had thus foiled the plans of the day; but owing to the strong force and the skilful handling of the numerous batteries in the field works he had been checked in turn, and forced to retire. At night the Federal right had advanced a few hundred yards from its position in the morning, and the left reached to the White Oak road, four or five miles from Five Forks, which was to the westward, and three miles from the intersection of the White Oak road with the Boydton road. The White Oak road from the extreme spot occupied, was held about one mile eastward. From that point the line ran in an irregular and semi-circular form to the 2d corps. The Union loss of the day was between 2,500 and 3,000; that of the enemy was less. Many prisoners were taken on both sides.

On the next day, Saturday, April 1st, the contest for the possession of Richmond was virtually decided. During the night Gen. Grant had placed the 5th corps, Gen. Warren, under the command of Gen. Sheridan. All night the troops had been busy throwing up works, corduroying roads, and bringing up trains. At 4 A. M. the enemy made an attack on Foster's division of the 24th corps. It had been expected, but they came so suddenly that the troops broke to the rear, and left them to raise their flag on the parapet. The troops were soon aroused and drove back the enemy. About fifty prisoners were captured on each side. This was followed by the roar of musketry and a cannonade all along the centre and right of the line. This soon quieted down. The command of Gen. Sheridan was now about 20,000 men, consisting of nearly four divisions of cavalry and three of infantry, and double the force which the enemy were able to concentrate against him. At the same time the army threatened the whole length of the extended line from Dinwiddie to Petersburg. The plan of operations by Gen. Sheridan appears to have been to break through the enemy's line in such a manner as to enclose Five Forks and its garrison, and to capture them. At daybreak the cavalry advanced under Gens. Custar and Devin, slowly driving the enemy toward the left of his works on the White Oak road. These divisions were dismounted, and fought with carbines, while the brigades of Gens. Gregg and Mackenzie remained in the middle, so as to flank the enemy quickly. Thus the troops worked steadily up on all sides to the intrenchments of the enemy, who fell slowly back to their main position, delivering a most destructive fire. Thus Gen. Sheridan got a force well on the enemy's flank and rear, while the rest of the troops pressed slowly upon the front of his works. An attack was now to be made by the whole force, and about 3 P. M. the 5th corps was ordered forward to support the cavalry. It marched from its position, and was halted obliquely to the White

Oak road. It was then swung round on its left wing as a pivot by advancing the centre and right. This brought it on one flank of the enemy, while the cavalry pressed the other. The enemy were pressed back slowly, and becoming aware of their dangerous position, a most deadly contest ensued for two hours. Being strongly intrenched, and having a battery in position, they raked the troops of Sheridan with a terrific fire. Several times his men, appalled by the slaughter, staggered back from the intrenchments; but by turns he urged, cheered, and drove them until the enemy were nearly surrounded on all sides and exhausted. With his ranks reduced and wearied, and seeing it to be useless to try longer to check the desperate onsets, the enemy rushed to the rear through the only outlet left for him. Sheridan, with overwhelming forces, pressed upon him, and a further bloody contest ensued. At 7½ P. M. the battle was over. The cavalry divisions of Gens. Custar and Mackenzie pursued and picked up many stragglers and fugitives. About four thousand prisoners were captured, several cannon, an ambulance and baggage train, several thousand muskets, and many flags. Sheridan's loss was estimated at not far from three thousand, while that of the enemy was as large, besides the prisoners. During the day the 2d corps had been making a general advance, engaged constantly with the enemy, and extending so as to connect with the 5th, and be ready to support them near the White Oak road. The 6th and 9th corps had not been engaged; but in order to coöperate in a manner with Sheridan, a general cannonade was opened along the front at 10 P. M. Enlivened by the news of Sheridan's success, the troops made it one of the hottest during the siege of Petersburg. During the day Gen. Warren was removed from the command of the 5th corps, and Gen. Griffin took his place.

At 4 A. M. on the next day, Sunday, April 2d, an assault all along the line by the 2d, 6th, 9th, 24th, and 25th corps commenced. The divisions of Gens. Turner and Foster, of the 24th corps, were brought up on both sides of Hatcher's Run in support of the 6th corps, and charged with it. The enemy opened a destructive fire while the troops were massing, and continued with such severity as often to check the advance. The 6th corps carried the two forts in its front, and the 3d division, under Gen. Seymour, after a severe fight, broke through to the Southside Railroad, and commenced to tear it up. The 24th corps, between the 6th and 2d, had been equally successful. The right division of the 2d corps and the two divisions of the 24th, captured one thousand prisoners and many guns, and carried the works up to the railroad. The 9th corps advanced simultaneously with the 6th, and after the severest fighting on the field, captured Fort Mahone, which covered the Jerusalem plank road. But the position was too important to be lost, and the enemy charged in turn

to retake it, and were nearly successful, when, by the approach of the 6th corps on the left, he was once more driven back. The following telegraphic despatches relate the progress of the day:

CITY POINT, VA., April 2—2 P. M.

Hon. Edwin M. Stanton, Secretary of War:

At 10:45 A. M. Gen. Grant telegraphs as follows:

"Every thing has been carried from the left of the 9th corps. The 6th corps alone captured more than three thousand prisoners. The 2d and 24th corps captured forts, guns, and prisoners from the enemy, but I cannot tell the numbers.

"We are now closing around the works of the line immediately enveloping Petersburg. All looks remarkably well. I have not yet heard from Sheridan. His headquarters have been moved up to Banks' House, near the Boynton road, about three miles southwest of Petersburg."

A. LINCOLN.

SECOND DESPATCH.

CITY POINT, VA., April 2—3:30 P. M.

Hon. Edwin M. Stanton, Secretary of War:

At 4:30 P. M. to-day Gen. Grant telegraphed as follows:

"We are now up, and have a continuous line of troops, and in a few hours will be entrenched from the Appomattox, below Petersburg, to the river above. The whole captures since the army started out will not amount to less than twelve thousand men, and probably fifty pieces of artillery. I do not know the number of men and guns accurately, however.

"A portion of Foster's division, 24th corps, made a most gallant charge this afternoon, and captured a very important fort from the enemy, with its entire garrison.

"All seems well with us, and every thing is quiet just now."

A. LINCOLN.

During the afternoon of the same day Gen. Lee, finding his army no longer able to maintain its position, gave orders for the evacuation of Richmond and Petersburg. This was accomplished during the night. This evacuation was early discovered by the troops before those cities. As they advanced to take possession of Petersburg, the Mayor of the city appeared with the following communication:

To Lieut.-Gen. Grant, commanding the armies of the United States, or the Major-General commanding United States forces in front of Petersburg.

GENERAL: The city of Petersburg having been evacuated by the Confederate troops, we, a committee authorized by the Common Council, do hereby surrender the city to the United States forces, with a request for the protection of the persons and property of its inhabitants.

We are, respectfully, your obedient servants,

W. W. TOWNES, Mayor.

D'ARCY PAUL,

CHARLES F. COLLIER.

Seldom was a city occupied by a besieging army with less disorder or damage to private property. A writer who was present says: "The citizens did not show themselves during the fore part of the day, but after discovering that our soldiers were orderly and well-behaved, with no disposition to disturb any one, they began to make their appearance at the doors and windows of their residences, and later in the day even entering familiarly into conversation, many of them expressing their joy quietly that the Confeds had gone, and hoping that the war would soon be over. For more than a month

past rebel troops have been receiving less rations than ever before, only just enough being brought in to last from day to day. The citizens say they have suffered much, but it is well to take such stories with a good deal of allowance. The rebels managed to get away all their artillery, excepting one or two old Columbiads and a few heavy mortars, which they could not transport readily. The city presents a very cleanly and respectable appearance, and there are many residences here that would do no discredit to Fifth avenue, New York. Many of the houses in the lower part of the city have been badly injured by the shot and shell thrown from our batteries last summer, and since that time most of the houses located there have been vacant."

The occupation of Richmond is thus described:

WAR DEPARTMENT, WASHINGTON,
Wednesday, April 5—10:20 P. M. }

To Major-General Dix:

The following details respecting the capture of Richmond and its occupation by the Union forces, have been telegraphed to this department from that city.

EDWIN M. STANTON,
Secretary of War.

General Weitzel learned, at 8 o'clock on the morning of Monday, that Richmond was being evacuated, and at daylight moved forward, first taking care to give his men breakfast, in the expectation that they might have to fight. He met no opposition, and on entering the city was greeted with hearty welcome from the mass of the people. The Mayor went out to meet him and to surrender the city, but missed him on the road. Gen. Weitzel found much suffering and poverty among the population. The rich as well as the poor are destitute of food. He is about to issue supplies to all who take the oath. The inhabitants now number about twenty thousand, half of them of African descent.

It is not true that Jeff. Davis sold his furniture before leaving. It is all in his house, where I am now writing. He left at 7 P. M. by the Danville Railroad. All the members of Congress escaped. Hunter has gone home. Gov. Smith went with the army. Judge Campbell remains here.

Gen. Weitzel took here one thousand prisoners, besides the wounded. These number five thousand, in nine hospitals. He captured cannon to the number of at least five hundred pieces. Five thousand muskets have been found in one lot. Thirty locomotives and three hundred cars are found here. The Petersburg railroad bridge is totally destroyed; that of the Danville road partially, so that connection with Petersburg is not easily made. All the rebel vessels are destroyed except an unfinished ram, which has her machinery in her perfect. The Tredegar Works are unharmed, and the machinery was taken to-day under Gen. Weitzel's orders. Libby Prison and Castle Thunder have also escaped the fire, and are filled with rebel prisoners of war. Most of the editors have fled, especially John Mitchell. The *Waig* appeared yesterday as a Union paper, with the name of the former proprietor at the head. The theatre opens here to-night. Gen. Weitzel describes the reception of the President yesterday as enthusiastic in the extreme.

The fire in the city commenced in the Shocoe warehouse, filled with tobacco, as well as the large granary establishment on Carey Street near Twenty-third Street. It was very destructive, consuming quite one-third of the city; and in addition to destroying the War Department,

the General Post-office, the Treasury building, several churches, and many stores, likewise destroyed the offices of the Richmond Enquirer, Dispatch, and Examiner; the Virginia Bank, the Farmers' Bank, and the Bank of Richmond.

On arriving in the city Gen. Weitzel, through his Adjutant-General, Major D. D. Wheeler, issued the following order:

HEADQUARTERS DEPARTMENT ARMY OF THE JAMES, }
RICHMOND, VA., April 3, 1865.

Major-Gen. Godfrey Weitzel, commanding detachment of the Army of the James, announces the occupation of the city of Richmond by the armies of the United States, under command of Lieut.-Gen. Grant. The people of Richmond are assured that we come to restore to them the blessings of peace, prosperity, and freedom, under the flag of the Union.

The citizens of Richmond are requested to remain for the present quietly within their houses, and to avoid all public assemblages or meetings in the public streets. An efficient provost-guard will immediately reestablish order and tranquillity within the city.

Martial law is, for the present, proclaimed.

Brig.-Gen. George F. Shipley, U. S. volunteers, is hereby appointed Military Governor of Richmond.

Lieut.-Col. Frederick L. Manning, Provost Marshal General, Army of the James, will act as Provost Marshal of Richmond. Commanders of detachments doing guard duty in the city will report to him for instructions. By command of Major-Gen. Weitzel,
 D. D. WHEELER, Ass't Adj.-Gen.

Brig.-Gen. G. F. Shepley having been announced as Military Governor of Richmond, issued the following order:

HEADQUARTERS MILITARY GOVERNOR OF RICHMOND, }
RICHMOND, VA., April 3, 1865.

1. The armies of the rebellion having abandoned their effort to enslave the people of Virginia, have endeavored to destroy by fire the capital, which they could not longer occupy by their arms. Lieut.-Col. Manning, Provost Marshal General of the Army of the James and Provost Marshal of Richmond, will immediately send a sufficient detachment of the provost guard to arrest, if possible, the progress of the flames. The fire department of the city of Richmond, and all the citizens interested in the preservation of their beautiful city, will immediately report to him for duty, and render every possible assistance in staying the progress of the conflagration. The first duty of the armies of the Union will be to save the city doomed to destruction by the armies of the rebellion.

2. No person will leave the city of Richmond without a pass from the office of the Provost Marshal.

3. Any citizen, soldier, or any person whatever, who shall hereafter plunder, destroy, or remove any public or private property, of any description whatever, will be arrested and summarily punished.

4. The soldiers of the command will abstain from any offensive or insulting words or gestures toward the citizens.

5. No treasonable or offensive expressions insulting to the flag, the cause, or the armies of the Union, will hereafter be allowed.

6. For an exposition of their rights, duties, and privileges, the citizens of Richmond are respectfully referred to the proclamations of the President of the United States in relation to the existing rebellion.

7. All persons having in their possession or under their control any property whatever of the so-called Confederate States, or of any officer thereof, or the records or archives of any public officer whatever, will immediately report the same to Col. Manning, Provost Marshal.

In conclusion, the citizens of Richmond are assured that, with the restoration of the flag of the Union, they may expect the restoration of that peace, pres-

perity, and happiness which they enjoyed under the Union of which that flag is the glorious symbol.

G. F. SHEPLEY, Brig.-Gen. U. S. Volunteers,
 and Military Governor of Richmond.

General Order No. 2.

HEADQUARTERS MILITARY GOVERNOR OF RICHMOND, }
RICHMOND, VA., April 3, 1865.

No officer or soldier will enter or search any private dwelling, or remove any property therefrom, without a written order from the headquarters of the Commanding General, the Military Governor, or the Provost Marshal General.

Any officer or soldier, with or without such order, entering any private dwelling, will give his name, rank, and regiment.

Any officer or soldier entering a private dwelling without such authority, or failing to give his name, rank, or regiment, or reporting the same incorrectly, will be liable to immediate and summary punishment.

GEO. F. SHEPLEY,
 Brig.-Gen. U. S. Volunteers, and Military Governor of Richmond.

The following details were written by a correspondent at the time of the occupation: "The works in front of Richmond, which were wholly evacuated previous to our occupancy of the city to-day under Gen. Weitzel, consist of three strong lines, wholly enveloping it. The outer ones are continuous lines, the inner one consisting of a series of strong redoubts and bastion forts. All these works mount upwards of three hundred heavy guns, all of which we have taken, and would, when properly garrisoned, form an almost impregnable series of defences. As I rode along these lines they seemed, with the exception of the outer one, to have been most indifferently garrisoned; and but for the facility with which they could be reinforced at any time by bringing troops up the Petersburg road and crossing them on pontoons, the lines could have been carried by assault.

"The route which I pursued on entering the capital was that by the Osborn and Richmond pike, which leads in a nearly north and south direction, and quite parallel to the James River. After passing our picket line, the first work encountered was Fort Field, forming a part of the exterior line of defence. This work, which is a very strong one in itself, is surrounded by three lines of abatis and one of torpedoes. The torpedoes were carefully removed by the advanced guard of Weitzel. These lines of torpedoes were marked out by small flags for safety to the rebels, which flags they neglected to remove in their hasty flight. The camps were left entire—tents standing and furniture within. After passing this line we came upon the second line, which was equally as strong as the first, excepting as to abatis and torpedoes. The third line is just outside the edge of the town, is situated on high ground, and is well adapted to satisfy the conditions of defence. Each of the detached works forming this line sweep a portion of the line in front of it by its fire, and rendering that front line untenable when reached. These works, like the others, mount heavy guns, many of which were navy guns, probably captured at Norfolk in the early part of the war. Communication between these works and those on the

other side of the river was maintained by four bridges, some of which were pontoon and some pile, in addition to the three railroad bridges at and in Richmond.

"The evacuation of the works and city was not generally understood by the troops and people till Sunday afternoon. The necessity of the movement was rendered imperative by Gen. Grant's successes on the left. At half-past three o'clock yesterday afternoon, Jeff. Davis, while in church, received a despatch from Gen. Lee, that immediate preparations must be made to evacuate Richmond and its defences at once, as he was wholly unable to make further headway against Grant's onset on the left. He added that his (Lee's) design was to endeavor to make Danville, and there fortify for a last grand stand.

"Davis left this city last night at eight o'clock by rail for Danville, his family having been sent out five days ago. On the train he had horses and carriages embarked, in case the road was interrupted, in order to easily make his way by these means. Governor Smith did not evacuate the Gubernatorial mansion until one o'clock this morning, when he fled, leaving Mrs. Smith behind, and all the furniture in his house, which he had heretofore threatened to burn. The residence of the Governor is now the headquarters of General Charles Devens, commanding a division in the 24th corps, now here. Mrs. General R. E. Lee, wife of the General-in-Chief, is also in the city."

The operations of Gen. Sheridan on the 2d, consisted in efforts to push the advantages thus far gained by him. On the 3d his object was to intercept the retreat of the enemy. The advance of the cavalry consisted of Custar's division. At Namozine Creek the rear guard of the enemy was found strongly intrenched behind earthworks covering the crossing. The bridge had been destroyed and trees felled across the road leading down to it. A section of artillery was opened in front, while the cavalry forded the stream and flanked the enemy's position. After a short skirmish the enemy retreated, leaving their path strewn with wagons, ambulances, dead and wounded horses and mules, caissons, boxes of ammunition, mess utensils, arms, accoutrements, blankets, &c. The enemy were overtaken beyond Namozine Church, and prisoners, horses, and arms were captured in abundance. A harassing pursuit was now kept up for twenty miles, during which about 350 prisoners, four cannon, two flags, and several ammunition wagons were captured. Night put a stop to its progress. Early on the next morning, Tuesday, April 4th, the pursuit was resumed, with Mackenzie's division in front and Custar's in the rear. The enemy were overtaken in the afternoon, and found posted with infantry and artillery in works about two miles from Bethany. Skirmishing began at once, and continued until dark, when the troops encamped, waiting for the rest of the column. Soon after 11 p. m. the cavalry were aroused and marched all night,

reaching Jettersville about 6 o'clock in the morning, and there found the 5th corps, well intrenched across the railroad from Richmond to Danville. The 5th corps had started in pursuit, soon after the cavalry, on the 3d, under Sheridan's command. They arrived in sight of the Appomattox about 2 p. m. Thence it turned to the left without crossing the river, and moved along the Namozine road behind the cavalry, marching through Amelia County and crossing both Deep and Namozine Creeks. The distance made was sixteen miles, which ended in blocking the trains in the miry roads. Few people were to be seen, except those who had been slaves, many of whom followed the column. The march on the next day, Tuesday the 4th, was twenty miles, and brought the corps to Jettersville, where it was massed across the railroad in an open field. In the rear of the 5th corps followed the 2d, and in the rear of the 2d was the 6th. These two corps were under Gen. Meade on the river or Namozine road, but did not start until the 4th. After a long march the 2d reached Jettersville at 2 p. m. on the next day after the 5th.

When the cavalry reached Jettersville on the morning of the 6th, it was understood that Gen. Lee in his retreat from Richmond had got as far as Amelia Court House, while the Union troops were beginning to assemble at Jettersville. This place is on the railroad, about halfway between Burkesville and Amelia Court House, and fifty-four miles southwest of Richmond. Amelia Court House is on the same railroad, about forty-seven miles from Richmond. The cavalry division of Gen. Custar was immediately posted on the left of the 5th corps, and the 1st and Mackenzie's division still further to the left.

At the same time Gen. Davies' brigade of Gen. Crooks' division was sent toward Burkesville, to seize that station and ascertain the state of affairs in that direction. At Burkesville is the junction of the Richmond and Danville Railroad with the Southside Railroad from Petersburg, and fifty-two miles west of the latter place. Gen. Davies came upon the cavalry of the enemy at Fame's cross-roads, and attacking them, captured a large number of prisoners, 5 new Armstrong guns and caissons, and about 200 wagons, mostly empty, and 7 or 8 battle-flags. An infantry force then came to the support of the cavalry, and Gen. Davies was forced to retire with his prisoners, after burning the wagons. At 3 p. m. Gen. Sheridan learning this news, and finding the condition of the enemy, sent the following despatch to Gen. Grant:

JETTERSVILLE, April 5—3 p. m.

To Lieut.-Gen. U. S. Grant:

GENERAL:—I send you the enclosed letter, which will give you an idea of the condition of the enemy and their whereabouts. I sent Gen. Davies' brigade this morning around on my left flank. He captured at Fame's cross-roads five pieces of artillery, about two hundred wagons, and eight or nine battle flags, and a number of prisoners. The 2d army corps is

now coming up. I wish you were here yourself. I feel confident of capturing the Army of Northern Virginia if we exert ourselves. I see no escape for Gen. Lee. I will send all my cavalry out on our left flank, except McKenzie, who is new on the right.

(Signed) P. H. SHERIDAN, Major-General.

LETTER.

AMELIA COURT HOUSE, April 5, 1865.

DEAR BRAMMIA:—Our army is ruined, I fear. We are all safe as yet. Theodore left us sick. John Taylor is well; saw him yesterday. We are in line of battle this evening. Gen. Robert Lee is in the field near us. My trust is still in the justice of our cause. Gen. Hill is killed. I saw Murray a few moments since. Bernary Perry, he said, was taken prisoner, but may get out. I send this by a negro I see passing up the railroad to Michlenburg. Love to all.

Your devoted son,

W. B. TAYLOR, Colonel.

Sheridan now proceeded to put his cavalry out on the left flank, and the slight skirmishing which took place indicated the contest of the next day.

Meanwhile the other corps of the army were approaching. On April 4th, Gen. Ord's column of the Army of the James, comprising two divisions of the 24th corps and one of the 25th corps, marched down the Cox's road from Sutherland's station, 10 miles west of Petersburg, on the Southside Railroad. Having separated from the main column, it moved on the direct road to Burkesville. Gen. Grant was with this force. After advancing along the railroad 15 miles, it encamped at night near Wilson's station. On the next day, the 5th, it advanced along the railroad to Black and White's, which it reached at 2 P. M. Thence it pressed forward, over good roads, to Nottaway Court House, 9 miles from Burkesville. Here the despatch of Gen. Sheridan was received by Gen. Grant, about 6½ P. M., and the two divisions of the 24th corps were immediately pushed forward to Burkesville, which they reached at 11 P. M. The division of the 25th corps remained at Black and White's. Gen. Grant himself went to Jettersville.

Of the 9th corps, two divisions on the 4th marched from Petersburg to Ford's station on the Southside Railroad, about 20 miles. On the 5th they advanced along the railroad to Wellsville, 41 miles from Petersburg, having in charge most of the army trains. On the next day, the 6th, they pressed forward, and arrived within 10 miles of Burkesville.

On the night of the 5th, after the skirmishing of the cavalry with the enemy, the army lay in line of battle, facing substantially to the north. The cavalry division of Gen. Mackenzie was on the left, next the 2d corps of infantry, with the 5th and 6th still further to the right, and the cavalry division of Gen. Custar on the right flank. At daylight in the morning Gen. Meade moved the three corps along the railroad in the direction of Amelia Court House, but learning that the enemy were retreating toward Farmville, the nearest station west on the railroad to Lynchburg, he changed the direction of the 2d and 5th corps from a northerly to a north-westerly one, with the 2d corps in advance,

moving on Deatonville, and the 5th on its right. At the same time the 6th corps faced about and moved by the left flank, taking position on the left of the 2d. The cavalry were on the extreme left. The 6th corps in its movement struck the road running from Deatonville to Burke's station, a little south of the former place. It found the 2d corps engaged with the enemy at the front and right, and the cavalry on the left. Moving down the road toward Burke's station about a mile, it turned sharp to the right and proceeded across toward a nearly parallel road, on which the enemy was moving, and along which they had a line of intrenchments thrown up. Gen. Seymour's division of the corps carried the road held by the enemy about 4 P. M., and then turned to the right and advanced down the road against strong resistance. Gen. Wheaton's division was brought in on the left of Gen. Seymour's, and both swept down the road two miles. The enemy were there found reformed on the opposite bank of a deep and difficult creek, from which they were driven half a mile. At all points the enemy were driven during the day, and Lieut.-Gen. Ewell, Gen. Custis Lee, and three others, were captured, with a large number of men. The 5th army corps made a long march, but its position on the right prevented it from striking the enemy's column before it had passed. The Union loss was above 1,000. Five guns and many flags, caissons, and wagons were taken, besides prisoners. On the next day, the 7th, the 2d corps, with the 2d division of cavalry, found the enemy at Farmville, 16 miles west of Burkesville. A sharp contest ensued, causing a loss of several hundred men, among whom was Gen. Smyth. Other troops were brought up, but before the enemy could be reengaged he was on the retreat again.

At High Bridge over the Appomattox, Gen. Lee crossed to the north side of the river, and two regiments sent by Gen. Grant to hold the bridge were captured by the cavalry of the enemy, and the bridge burned. The retreat of the enemy was now directly toward Lynchburg. The pursuit was made with great vigor, and stragglers were picked up at every step, and property dropped or partially destroyed by the enemy. During the day Gen. Grant addressed a letter to Gen. Lee, demanding a surrender of his army. On the 8th the enemy made most strenuous efforts, by hard marching, to extricate themselves; but at night they encountered Gen. Sheridan at Appomattox Court House, between themselves and Lynchburg. A sharp contest ensued, in which many of them were taken prisoners and their retreat checked. The 24th and 5th corps were in support of the cavalry, and during the night a strong position was taken across the main road, south of the enemy, the Appomattox River being on the north, and cutting him off from retreat in that direction. Early on the next morning Gen. Sheridan commenced a vigorous attack, and a warm engagement en-

sued until 9 A. M., when a flag of truce appeared in front of his line, with the information that hostilities had been suspended, in order to arrange terms of surrender. At this time Gen. Hancock was advancing, having left Winchester on April 4th, with a strong column, and moved up the Shenandoah valley for Lynchburg. Gen. Stoneman had already reached Boone, in North Carolina, in his march from East Tennessee, and would have aided in the capture of Gen. Lee's army if it had not surrendered. Gen. Sherman was also rapidly moving on Gen. Johnston in North Carolina, and cut off all possibility of his ultimately rendering any assistance to Gen. Lee.

The letter of Gen. Grant, addressed to Gen. Lee on the 7th, as above mentioned, was as follows:

April 7.

General R. E. Lee, Commander Confederate States Armies:

GENERAL:—The result of the last week must convince you of the hopelessness of further resistance on the part of the Army of Northern Virginia in this struggle. I feel that it is so, and regard it as my duty to shift from myself the responsibility of any further effusion of blood, by asking of you the surrender of that portion of the C. S. army known as the Army of Northern Virginia.

Very respectfully, your obedient servant,
U. S. GRANT,

Lieut.-Gen. Commanding Armies of the U. States.

To this note Gen. Lee replied as follows:

April 7.

To Lieut.-Gen. U. S. Grant, Commanding Armies of the United States:

GENERAL:—I have received your note of this date. Though not entirely of the opinion you express of the hopelessness of further resistance on the part of the Army of Northern Virginia, I reciprocate your desire to avoid useless effusion of blood, and therefore, before considering your proposition, ask the terms you will offer, on condition of its surrender.

R. E. LEE, General.

The following correspondence then ensued:

April 8.

To Gen. R. E. Lee, Commanding Confederate States Army:

GENERAL:—Your note of last evening, in reply to mine of same date, asking the conditions on which I will accept the surrender of the Army of Northern Virginia, is just received. In reply, I would say, that peace being my first desire, there is but one condition that I insist upon, viz.:

That the men surrendered shall be disqualified for taking up arms against the Government of the United States until properly exchanged.

I will meet you, or designate officers to meet any officers you may name for the same purpose, at any point agreeable to you, for the purpose of arranging definitely the terms upon which the surrender of the Army of Northern Virginia will be received.

Very respectfully, your obedient servant,
U. S. GRANT,

Lieut.-Gen. Commanding Armies of the U. States.

April 8.

To Lieut.-Gen. Grant, Commanding Armies of the United States:

GENERAL:—I received at a late hour your note of today, in answer to mine of yesterday. I did not intend to propose the surrender of the Army of Northern Virginia, but to ask the terms of your proposition. To be frank, I do not think the emergency has arisen to call for the surrender. But as the restoration of

peace should be the sole object of all, I desire to know whether your proposals would tend to that end.

I cannot, therefore, meet you with a view to surrender the Army of Northern Virginia, but so far as your proposition may affect the Confederate States forces under my command, and lead to the restoration of peace, I should be pleased to meet you at 10 A. M. to-morrow, on the old stage-road to Richmond, between the picket lines of the two armies.

Very respectfully, your obedient servant,
R. E. LEE, General Confederate States Armies.

GEN. GRANT TO GEN. LEE.

April 9.

Gen. R. E. Lee, Commanding Confederate States Armies:

GENERAL:—Your note of yesterday is received. As I have no authority to treat on the subject of peace, the meeting proposed for 10 A. M. to-day, could lead to no good. I will state, however, General, that I am equally anxious for peace with yourself; and the whole North entertain the same feeling. The terms upon which peace can be had are well understood. By the South laying down their arms they will hasten that most desirable event, save thousands of human lives, and hundreds of millions of property not yet destroyed.

Sincerely hoping that all our difficulties may be settled without the loss of another life, I subscribe myself,

Very respectfully,

Your obedient servant,

U. S. GRANT, Lieut.-Gen. U. S. A.

GEN. LEE TO GEN. GRANT.

April 9, 1865.

GENERAL:—I received your note of this morning on the picket line, whither I had come to meet you and ascertain definitely what terms were embraced in your proposition of yesterday with reference to the surrender of this army.

I now request an interview in accordance with the offer contained in your letter of yesterday for that purpose.

Very respectfully,

Your obedient servant,

R. E. LEE, General.

To Lieut.-Gen. Grant, Commanding U. S. Armies.

GEN. GRANT TO GEN. LEE.

April 9.

Gen. R. E. Lee, Commanding Confederate States Armies:

Your note of this date is but this moment (11:50 A. M.) received. In consequence of my having passed from the Richmond and Lynchburg road to the Farmville and Lynchburg road, I am at this writing about four miles west of Walter's Church, and will push forward to the front for the purpose of meeting you.

Notice sent to me on this road where you wish the interview to take place will meet me.

Very respectfully, your obedient servant,
U. S. GRANT, Lieut.-Gen.

THE TERMS

APFOMATTOX COURT HOUSE, April 9.

Gen. R. E. Lee, Commanding Confederate States Armies:

In accordance with the substance of my letter to you of the 8th instant, I propose to receive the surrender of the Army of Northern Virginia on the following terms, to wit:

Rolls of all the officers and men to be made in duplicate, one copy to be given to an officer designated by me, the other to be retained by such officers as you may designate.

The officers to give their individual paroles not to take arms against the United States until properly exchanged, and each company or regimental commander sign a like parole for the men of their commands.

The arms, artillery, and public property to be packed and stacked, and turned over to the officers appointed by me to receive them. This will not embrace the side-arms of the officers, nor their private horses or baggage.

This done, each officer and man will be allowed to return to their homes, not to be disturbed by United States authority so long as they observe their parole and the laws in force where they may reside.

Very respectfully,

U. S. GRANT, Lieut.-Gen.

THE SURRENDER.

HEADQUARTERS ARMY OF NORTHERN VA., April 9, 1865.

Lieut.-Gen. U. S. Grant, Command'g U. S. Armies:

GENERAL:—I have received your letter of this date, containing the terms of surrender of the Army of Northern Virginia, as proposed by you; as they are substantially the same as those expressed in your letter of the 8th instant, they are accepted. I will proceed to designate the proper officers to carry the stipulations into effect.

Very respectfully, your obedient servant,

R. E. LEE, General.

At 3½ P. M. the terms of capitulation were signed, and the utmost gratification prevailed through the army. The following is the form of the personal parole given by all the officers of Gen. Lee's army:

We, the undersigned, prisoners of war, belonging to the army of Northern Virginia, having been this day surrendered by Gen. R. E. Lee, commanding said Army, to Lieut.-Gen. Grant, commanding the Armies of the United States, do hereby give our solemn parole of honor that we will not hereafter serve in the armies of the Confederate States, or in any military capacity whatever against the United States of America, or render aid to the enemies of the latter until properly exchanged in such manner as shall be mutually approved by the respective authorities.

Done at Appomattox Court-House, Va., this ninth day of April, 1865.

This parole was countersigned as follows:

The above officers (or officer) will not be disturbed by the United States authorities as long as they observe their parole, and the laws in force where they may reside.

GEORGE H. SHARP,

General Assistant Provost Marshal.

The obligation of officers for the subdivisions under their command was as follows:

I, the undersigned, commanding officer of ———, do, for the within named prisoners of war, belonging to the Army of Northern Virginia, who have been this day surrendered by Gen. Robert E. Lee, Confederate States Army, commanding said army, to Lieut.-Gen. Grant, commanding Armies of the United States, hereby give my solemn parole of honor that the within named shall not hereafter serve in the armies of the Confederate States, or in military or any capacity whatever, against the United States of America, or render aid to the enemies of the latter, until properly exchanged in such manner as shall be mutually approved by the respective authorities.

Done at Appomattox Court-House, Va., this ninth day of April, 1865.

The within named will not be disturbed by the United States authorities so long as they observe their parole and the laws in force where they may reside.

The surrender of Gen. Lee's army was followed by the voluntary surrender of all the troops in Northeastern Virginia, including those in the Shenandoah valley.

On the next day, the 10th, Gen. Lee issued the following farewell address to his army:

General Order No. 9.

HEADQUARTERS ARMY OF NORTHERN VA., April 10, 1865.

After four years of arduous service, marked by unsurpassed courage and fortitude, the Army of

Northern Virginia has been compelled to yield to overwhelming numbers and resources. I need not tell the survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them, but holding that valor and devotion could accomplish nothing that could compensate for the loss that would attend the continuation of the contest, I have determined to avoid the useless sacrifice of those whose past vigor has endeared them to their countrymen.

By the terms of agreement officers and men can return to their homes and remain there until exchanged. You will take with you the satisfaction that proceeds from the consciousness of duty faithfully performed, and I earnestly pray that a merciful God will extend you His blessing and protection. With an increasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration of myself, I bid you an affectionate farewell.

(Signed)

R. E. LEE, General.

The official statement of the number of men surrendered as belonging to the Army of Northern Virginia, under the command of Gen. Lee, is 27,805. It was estimated that the force of Gen. Lee, on the evacuation of Richmond, consisted of not far from 50,000 men. Large numbers, anticipating the course of events, abandoned the army and returned home; to these should be added the loss by killed, wounded, and prisoners taken during the retreat. The surrender embraced a large number who could not be regarded as forming a part of the efficient force of his army; thus reducing his total effective force considerably below the number surrendered. The number of muskets surrendered was reported as scarcely exceeding 10,000, and about thirty pieces of artillery. The total captures of artillery during the battles and pursuit amounted to one hundred and seventy guns. There were about three hundred and fifty wagons surrendered. The War Department at Washington issued the following order on receiving the news of the surrender:

WAR DEPARTMENT, WASHINGTON, D. C.,

April 9—10 o'clock, P. M.

Ordered: That a salute of two hundred guns be fired at the headquarters of every army and department, and at every post and arsenal in the United States, and at the Military Academy at West Point, on the day of the receipt of this order, in commemoration of the surrender of Gen. R. E. Lee and the Army of Northern Virginia to Lieut.-Gen. Grant and the army under his command; report of the receipt and execution of this order to be made to the Adjutant-General, Washington.

EDWIN M. STANTON, Secretary of War.

This surrender was regarded by the country as an actual end of the war. The suddenness of the close of the stupendous military operations of the previous four years, cannot be better illustrated than by comparing General Order No. 9 of Gen. Lee above, which is a farewell to his troops, with the following General Order No. 2, issued just two months previous:

HEADQUARTERS ARMIES CONFEDERATE STATES,

Tuesday, February 11, 1865.

GENERAL ORDER NO. 2.—In entering upon the campaign about to open, the General-in-Chief feels assured that the soldiers who have so long and so nobly borne the hardships and dangers of war, require no

exhortation to respond to the calls of honor and duty. With the liberty transmitted by their forefathers, they have inherited the spirit to defend it. The choice between war and abject submission is before them. To such a proposal brave men with arms in their hands can have but one answer. They cannot barter manhood for peace, nor right of self-government for life or property. But justice to them requires sterner admonition to those who have abandoned their comrades in the hour of peril. * * *

On January 31st Gen. Thomas was directed to send a cavalry expedition under Gen. Stoneman from East Tennessee to penetrate South Carolina well down toward Columbia, to destroy the railroads and military resources of the country, and return, if possible, to East Tennessee by way of Salisbury, N. C., and release the Federal prisoners there. Gen. Stoneman, however, was so late in getting started, that the order was recalled, especially as the army of Gen. Sherman had passed out of South Carolina. Gen. Stoneman was then ordered to make a raid toward Lynchburg and destroy the railroad as far as possible.

His cavalry column, already mentioned as at Boone Court-House in North Carolina, at the time of the surrender of Gen. Lee, had left Knoxville, in East Tennessee, on March 10th. It struck the Central Railroad from Virginia to Tennessee at Wytheville and Christiansburg, in Virginia. Between these places thirty-three bridges were burned and twenty-five miles of the railroad destroyed. Thence it marched for Greensboro, in North Carolina, and on the 12th arrived at Grant's Creek, three miles from Salisbury. The enemy's line of defence for the town was on this creek, and defended by artillery and infantry. It was soon forced with the capture of 14 guns and 1,104 prisoners. The town was occupied at 10 A. M., where the column remained for two days. During that time it destroyed four large cotton factories and 7,000 bales of cotton; four large magazines, containing 10,000 stand of small arms and accoutrements; 1,000,000 rounds of small-arm ammunition, 1,600 rounds of fixed artillery ammunition, and 7,000 pounds of powder; 85,000 bushels of corn, 50,000 bushels of wheat, 160,000 pounds of cured bacon; 100,000 suits of gray uniforms and clothing, 250,000 army blankets, 20,000 pounds of harness-leather, 10,000 pounds of saltpetre, also a very large amount of sugar, salt, rice, and other stores, and medical supplies valued by the rebel medical directors at \$100,000 in gold. In addition to the arsenals at Salisbury, establishments were fitted up, and filled with machinery sent from Raleigh and Richmond, all of which were destroyed.

Fifteen miles of railroad track and the bridges toward Charlotte were also destroyed. Thence Gen. Stoneman moved for the south side of the Catawba River and destroyed the railroad to the bridge, which was fatal to the armies of Lee and Johnston, who depended on that road for supplies and as their ultimate line of retreat.

Meanwhile the army of Gen. Sherman had

been rested and recruited at Goldsboro, North Carolina. The men were all reclad, the wagons reloaded, and a fair amount of forage accumulated preparatory for a march to destroy or capture the army of Gen. Johnston. On April 6th Gen. Johnston's army was in and about Smithfield, and was estimated at 85,000 infantry and artillery, and from 6,000 to 10,000 cavalry. At daybreak on the 10th, Gen. Sherman's army was in motion. Gen. Slocum took the two direct roads for Smithfield; Gen. Howard made a circuit to the right, feigning to move up the Weldon road in order to disconcert the enemy's cavalry, while Gens. Terry and Kilpatrick moved on the west side of the Neuse River to reach the rear of the enemy between Smithfield and Raleigh. Gen. Schofield followed Gen. Slocum in support. The enemy's cavalry were met within six miles of Goldsboro by all the columns protected by the usual rail barricades. At 10 A. M. on the 11th, the 14th corps entered Smithfield, and the 20th was close at hand. Gen. Johnston had retreated rapidly across the Neuse River, and having the aid of the railroad to lighten his trains, could retreat faster than the pursuit could be made. The bridge over the Neuse had been burned and the roads had become heavy by rain. At this time the news of Gen. Lee's surrender was received, and Gen. Sherman immediately dropped his trains and marched rapidly in pursuit, reaching Raleigh at 7½ A. M. on the 13th, in a heavy rain. On the next day the cavalry pushed on to Durham station, the 15th corps followed as far as Morrisville station, and the 17th to John's station. By the 15th, although the rains were incessant and the roads almost impracticable, Gen. Slocum had the 14th corps near Martha's Vineyard, with a pontoon bridge laid across Cape Fear River at Avon's Ferry, the 20th corps, Gen. Mower commanding, being in support; Gen. Howard had the 15th and 17th corps stretched out on the roads toward Pittsboro, while Gen. Kilpatrick held Durham station and Capital Hill University. Gen. Johnston had retreated rapidly on the roads from Hillsboro to Greensboro, at which latter place he was. In this state of affairs Gen. Sherman received the following letter from Gen. Johnston:

HEADQUARTERS IN THE FIELD, April 14, 1865.

Major-General W. T. Sherman, Commanding United States Forces.

GENERAL: The results of the recent campaigns in Virginia have changed the relative military condition of the belligerents. I am therefore induced to address you in this form the inquiry whether, in order to stop the further effusion of blood and devastation of property, you are willing to make a temporary suspension of active operations, and to communicate to Lieut.-Gen. Grant, commanding the Armies of the United States, the request that he will take like action in regard to other armies, the object being to permit the civil authorities to enter into the needful arrangements to terminate the existing war.

I have the honor to be, very respectfully, your obedient servant,

J. E. JOHNSTON, General.

To this Gen. Sherman replied as follows:

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, N. C., April 14, 1865.

Gen. J. E. Johnston, Commanding Confederate Army:

GENERAL: I have this moment received your communication of this date. I am fully empowered to arrange with you any terms for the suspension of further hostilities as between the armies commanded by you and those commanded by myself, and will be willing to confer with you to that end. I will limit the advance of my main column to-morrow to Morrisville, and the cavalry to the University, and expect that you will also maintain the present position of your forces until each has notice of a failure to agree.

That a basis of action may be had, I undertake to abide by the same terms and conditions as were made by Gen. Grant and Lee at Appomattox Court House, of the 9th instant, relative to our two armies, and, furthermore, to obtain from Gen. Grant an order to suspend the movements of any troops from the direction of Virginia. Gen. Stoneman is under my command, and my order will suspend any devastation or destruction contemplated by him. I will add that I really desire to save the people of North Carolina the damages they would sustain by the march of this army through the central or western parts of the State.

I am, with respect, your obedient servant,
W. T. SHERMAN, Major-General.

At the same time Gen. Sherman addressed to the Secretary of War and Gen. Grant the following letter:

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, N. C., April 15, 1865.

Gen. U. S. Grant and Secretary of War:

I send copies of correspondence with Gen. Johnston to you, which I think will be followed by terms of capitulation. I will grant the same terms Gen. Grant gave Gen. Lee, and be careful not to complicate any points of civil policy. If any cavalry has retreated toward me, caution them to be prepared to find our work done. It is now raining in torrents, and I shall await Gen. Johnston's reply here, and will prepare to meet him in person at Chapel Hill.

I have invited Gov. Vance to return to Raleigh, with the civil officers of his State. I have met ex-Governor Graham, Messrs. Badger, Moore, Halden, and others, all of whom agree that the war is over, and that the States of the South must resume their allegiance, subject to the Constitution and Laws of Congress, and must submit to the National arms. The great fact was admitted and the details are of easy arrangement.

W. T. SHERMAN, Major-General.

On the 16th the following despatch was sent to Gen. Kilpatrick, at Durham station, and delivered by him to Gen. Sherman:

Major-General J. Kilpatrick, U. S. A.

GENERAL: The General Commanding directs me to arrange for a meeting between himself and Maj.-Gen. Sherman. In accordance with these instructions, I beg to inquire when and where this meeting can most conveniently be had. I suggest ten (10) o'clock, A. M., to-morrow as the hour, and a point on the Hillsboro road, equidistant from the picket of your command and my own, as the place for the proposed meeting.

I am, respectfully, yours,

NED WADE HAMPTON, Lieutenant-General.

The interview which followed with Gen. Johnston, five miles from Durham station, is thus reported by Gen. Sherman: "I agreed to meet Gen. Johnston in person at a point intermediate between our pickets on the 17th at noon, provided the position of the troops remained *statu quo*. I was both willing and anxious to consume a few days, as it would

enable Col. Wright to finish our railroad to Raleigh. Two bridges had to be built and twelve miles of new roads made. We had no iron except by taking up the branch from Goldsboro to Weldon. Instead of losing by time I gained in every way, for every hour of delay possible was required to reconstruct the railroad to our rear and improve the condition of our wagon road to the front, so desirable in case the negotiations failed, and we be forced to make the race of near two hundred miles to head off or catch Johnston, then retreating toward Charlotte. At noon of the day appointed I met Gen. Johnston for the first time in my life, although we had been exchanging shots continually since May, 1863. Our interview was frank and soldier-like, and he gave me to understand that further war on the part of the Confederate troops was folly; that the 'cause' was lost, and that every life sacrificed after the surrender of Lee's army was the highest possible crime. He admitted the terms conceded to Gen. Lee were magnanimous and all he could ask; but he did want some general concessions that would enable him to allay the natural fears and anxieties of his followers, and enable him to maintain his control over them until they could be got back to the neighborhood of their homes, thereby saving the State of North Carolina the devastation inevitably to result from turning his men loose and unprovided on the spot, and our pursuit across the State. He also wanted to embrace in the same general proposition the fate of all the Confederate armies that remained in existence. I never made any concessions as to his own army or assumed to deal finally and authoritatively in regard to any other, but it did seem to me that there was presented a chance for peace that might be deemed valuable to the Government of the United States, and was at least worthy the few days that would be consumed in conference, and to push an enemy whose commander had so frankly and honestly confessed his inability to cope with me, were cowardly and unworthy the brave men I led. Inasmuch as Gen. Johnston did not feel authorized to exercise power over the armies in Texas, we adjourned to the next day at noon.

"I returned to Raleigh, and conferred freely with all my general officers, every one of whom urged me to conclude terms that might accomplish so complete and desirable an end. All dreaded the necessary laborious march after a fugitive and dissolving army back toward Georgia, over the very country where we had toiled so long. There was but one opinion expressed, and, if contrary ones were entertained, they were withheld, or indulged in only by that class who shun the fight and the march, but are loudest, bravest, and fiercest when danger is past.

"I again met Gen. Johnston on the 18th, and we resumed the conversation. He satisfied me then of his power to disband the rebel armies in Alabama, Mississippi, Louisiana, and Texas,

as well as those in his immediate command, viz.: North Carolina, Georgia, and Florida. The points on which he expressed especial solicitude were lest their States were to be dismembered and denied representations in Congress, or any separate political existence whatever; and the absolute disarming his men would leave the South powerless and exposed to depredations by wicked bands of assassins and robbers. The President's (Lincoln) Message of 1864; his Amnesty Proclamation; General Grant's terms to General Lee, substantially extending the benefit of that Proclamation to all officers above the rank of colonel; the invitation to the Virginia Legislature to reassemble in Richmond, by Gen. Weitzel, with the supposed approval of Mr. Lincoln and Gen. Grant, then on the spot; a firm belief that I had been fighting to reestablish the Constitution of the United States; and last, but not least, the general and universal desire to close a war any longer without organized resistance, were the leading facts that induced me to pen the 'memorandum' of April 18, signed by myself and Gen. Johnston. It was designed to be, and so expressed on its face, as a mere 'basis' for reference to the President of the United States and constitutional Commander-in-Chief, to enable him, if he chose, at one blow to dissipate the power of the Confederacy which had threatened the national safety for years. It admitted of modification, alteration, and change. It had no appearance of an ultimatum, and by no false reasoning can it be construed into an usurpation of power on my part."

Some complaint had appeared in the public press that the terms offered to Gen. Lee were too lenient. At the same time the assassination of President Lincoln took place, and public indignation was greatly aroused. In the midst of the excitement the memorandum of terms between Gen. Sherman and Gen. Johnston was received by the Government. It was as follows:

Memorandum or basis of agreement made this 18th day of April, A. D. 1865, near Durham's Station, and in the State of North Carolina, by and between Gen. Joseph E. Johnston, commanding the Confederate Army, and Maj.-Gen. W. T. Sherman, commanding the Army of the United States in North Carolina, both present:

1.—The contending armies now in the field to maintain their status quo until notice is given by the commanding-general of either one to its opponent, and reasonable time, say forty-eight hours, allowed.

2.—The Confederate Armies now in existence to be disbanded and conducted to the several State capitals, there to deposit their arms and public property in the State arsenal, and each officer and man to execute and file an agreement to cease from acts of war and abide the action of both State and Federal authorities. The number of arms and munitions of war to be reported to the Chief of Ordnance at Washington City, subject to future action of the Congress of the United States, and in the mean time to be used solely to maintain peace and order within the borders of the States respectively.

3.—The recognition by the executive of the United States of the several State Governments on their officers and Legislatures taking the oath prescribed by the Constitution of the United States, and where conflicting State Governments have resulted from the

war, the legitimacy of all shall be submitted to the Supreme Court of the United States.

4.—The reestablishment of all Federal Courts in the several States, with powers as defined by the Constitution and laws of Congress.

5.—The people and inhabitants of all States to be guaranteed, so far as the Executive can, their political rights and franchise, as well as their rights of person and property, as defined by the Constitution of the United States and of States respectively.

6.—The executive authority of the Government of the United States not to disturb any of the people by reason of the late war so long as they live in peace and quiet, abstain from acts of armed hostility, and obey laws in existence at any place of their residence.

7.—In general terms, war to cease, a general amnesty, so far the executive power of the United States can command, or on condition of disbandment of the Confederate Armies, and the distribution of arms and resumption of peaceful pursuits by officers and men, as hitherto composing the said armies, not being fully empowered by our respective principals to fulfil these terms, we individually and officially pledge ourselves to promptly obtain necessary authority and to carry out the above programme.

W. T. SHERMAN, Major-General,
Commanding the Army of the United States in North Carolina.

J. E. JOHNSTON, General,
Commanding Confederate States Army in North Carolina.

This was at once made public, accompanied with the following statement from the Secretary of War, Mr. Stanton:

This proceeding of General Sherman was unapproved for the following among other reasons:

1.—It was an exercise of authority not vested in General Sherman, and on its face shows that both he and Johnston knew that he (Sherman) had no authority to enter into such arrangement.

2.—It was a practical acknowledgment of the Rebel government.

3.—It undertook to reestablish the Rebel State governments that had been overthrown at the sacrifice of many thousand loyal lives and an immense treasure, and placed arms and munitions of war in the hands of the Rebels at their respective capitals, which might be used as soon as the armies of the United States were disbanded, and used to conquer and subdue the loyal States.

4.—By the restoration of the Rebel authority in their respective States, they would be enabled to reestablish slavery.

5.—It might furnish a ground of responsibility by the Federal Government to pay the Rebel debt, and certainly subjects loyal citizens of the Rebel States to the debt consummated by the Rebels in the name of the State.

6.—It puts in dispute the existence of loyal State governments, and the new State of Western Virginia, which had been recognized by every department of the United States Government.

7.—It practically abolished the confiscation laws, and relieved Rebels of every degree who had slaughtered our people, from all pains and penalties for their crimes.

8.—It gave terms that had been deliberately, repeatedly, and solemnly rejected by President Lincoln, and better terms than the Rebels had ever asked in their most prosperous condition.

9.—It formed no basis of true and lasting peace, but relieved Rebels from the pressure of our victories, and left them in condition to renew their effort to overthrow the United States Government, and subdue the loyal States, whenever their strength was recruited and an opportunity should offer.

At the same time the Secretary of War issued the following instructions to Gen. Grant:

WAR DEPARTMENT, WASHINGTON, April 21, 1865.

GENERAL: The memorandum or basis agreed upon between Gen. Sherman and Gen. Johnston, having been submitted to the President, they are disapproved. You will give notice of the disapproval to General Sherman, and direct him to resume hostilities at the earliest moment.

The instructions given to you by the late President, Abraham Lincoln, on the 3d of March, by my telegraph of that date addressed to you, express substantially the views of President Andrew Johnson, and will be observed by Gen. Sherman. A copy is herewith appended.

The President desires that you proceed immediately to the headquarters of Gen. Sherman and direct operations against the enemy.

Yours truly,

EDWIN M. STANTON, Secretary of War.
To Lieut.-Gen. GRANT.

COPY OF PRESIDENT LINCOLN'S INSTRUCTIONS.

WAR DEPARTMENT, WASHINGTON, March 3, 1865.

To Lieut.-Gen. GRANT:

The President directs me to say to you that he wishes you to have no conference with Gen. Lee, unless it be for the capitulation of Gen. Lee's army, or on some minor and purely military matter. He wishes me to say that you are not to decide, discuss, or confer upon any political question. Such questions the President holds in his own hands, and will submit them to no military conferences or conventions. Meantime you are to press to your utmost your military advantages.

EDWIN M. STANTON, Secretary of War.

Perhaps it may not be out of place to insert here the reasons briefly given by Gen. Sherman in his report, for his proceedings. They are as follows:

Immediately on my return to Raleigh I despatched one of my staff, Major Hitchcock, to Washington, enjoining him to be most prudent and careful to avoid the spies and informers that would be sure to infect him by the way, and to say nothing to anybody until the President could make known to me his feelings and wishes in the matter.

The news of President Lincoln's assassination, on the 14th of April (wrongly reported to me by telegraph as having occurred on the 11th), reached me on the 17th, and was announced to my command on the same day, in Field Orders No. 56. I was duly informed of its horrible atrocity and probable effects on the country. But when the property and interests of millions still living were involved, I saw no good reason why to change my course, but thought rather to manifest real respect for his memory by following after his death that policy, which, if living, I felt certain he would have approved, or at least not rejected with disdain.

Up to that hour I had never received one word of instruction, advice, or counsel as to the plan or policy of the Government, looking to a restoration of peace on the part of the Rebel States of the South. Whenever asked for an opinion on the points involved, I had always avoided the subject. My letter to the Mayor of Atlanta has been published to the world, and I was not rebuked by the War Department for it. My letter to Mr. — of Savannah, was shown by me to Mr. Stanton, before its publication, and all that my memory retains of his answer is that he said, like my letters generally, it was sufficiently emphatic, and would not be misunderstood. Both these letters asserted my belief that according to Mr. Lincoln's Proclamation and Message, when the people of the South had laid down their arms and submitted to the lawful powers of the United States, *ipso facto*, the war was over as to them; and furthermore, that if any State in rebellion would conform to the Constitution of the United States, cease war, elect Senators and Representatives to Congress, if admitted (of which

each House of Congress alone is the judge), that State becomes instantaneously much in the Union as New York or Ohio. Nor was I rebuked for these expressions, though it was universally known and commented on at the time. And again Mr. Stanton in person at Savannah, speaking of the terrific expense of the war and difficulty of realizing the money for the daily wants of Government, impressed me most forcibly with the necessity of bringing the war to a close as soon as possible for financial reasons.

On the morning of April 24th Gen. Grant arrived at Gen. Sherman's headquarters, and the latter was informed that the memorandum was disapproved, without reasons assigned, and he was ordered to give the forty-eight hours notice, and resume hostilities at the close of that time. Gen. Sherman immediately despatched the following note to Gen. Johnston:

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, April 24, 1865.

Gen. Johnston, Commanding Confederate Armies:

I have replies from Washington to my communications of April 18. I am instructed to limit my operations to your immediate command, and not to attempt civil negotiations. I therefore demand the surrender of your army, on the same terms as were given to Gen. Lee, at Appomattox, of April 9, purely and simply.

W. T. SHERMAN, Maj.-Gen.

Gen. Grant, although properly in command, left all the further measures to be executed by Gen. Sherman, and the presence of the former was even unknown to Gen. Johnston, who replied as follows:

[Telegram.]

HEADQUARTERS ARMY OF THE TENNESSEE,
IN THE FIELD, April 25, 1865.

Major-Gen. Sherman, U. S. A.

Your despatch of yesterday received. I propose a modification of the terms you offered; such terms for the army as you wrote on the 18th; they also modified according to change of circumstances, and a further armistice to arrange details and meeting for that purpose.

JOS. E. JOHNSTON, General.

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, April 25, 1865.

Gen. Johnston: I will meet you at the same place as before, to-morrow, at 12 o'clock noon.

W. T. SHERMAN, Major-General.

[Telegram.]

Major-Gen. W. T. Sherman, Commanding U. S. Forces:

GENERAL: I have had the honor to receive your despatch of yesterday, summoning this army to surrender on the terms accepted by Gen. Lee at Appomattox Court House. I propose, instead of such surrender, terms based on those drawn up by you on the 18th for disbanding this army, and a further armistice and a conference to arrange these terms.

The disbanding of Gen. Lee's army has afflicted this country with numerous bands having no means of subsistence but robbery—a knowledge of which would, I am sure, induce you to agree to other conditions. Most respectfully, your obedient servant,

J. E. JOHNSTON, General.

[Telegram.]

GREENSBORO, April 26, 1865—2 A. M.

Major-Gen. Sherman through Gen. Butler:

I will meet you at the time and place you designate. Is armistice with *status quo* renewed?

J. E. JOHNSTON, General.

Terms of a Military Convention entered into this twenty-sixth (26th) day of April, 1865, at Bennett's House, near Durham Station, North Carolina, between General Joseph E. Johnston, commanding the Confederate Army, and Major-General W. T. Sherman, commanding the United States Army in North Carolina.

All acts of war on the part of the troops under Gen.

Johnston's command to cease from this date. All arms and public property to be deposited at Greensboro, and delivered to an ordnance officer of the United States Army. Rolls of all the officers and men to be made in duplicate, one copy to be retained by the commander of the troops, and the other to be given to an officer to be designated by Gen. Sherman. Each officer and man to give his individual obligation in writing not to take up arms against the Government of the United States until properly released from this obligation. The side-arms of officers and their private horses and baggage to be retained by them.

This being done, all the officers and men will be permitted to return to their homes, not to be disturbed by the United States authorities so long as they observe their obligation and the laws in force where they may reside.

W. T. SHERMAN, Major-General,
Commanding U. S. Forces in North Carolina.
J. E. JOHNSTON, General,
Commanding C. S. Forces in North Carolina.
Approved:—U. S. GRANT, Lieut.-General.
RALPH, N. C., April 26, 1865.

On the next day Gen. Sherman issued the following order:

Special Field Orders No. 65.

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, N. C., April 27, 1865.

The General Commanding announces a further suspension of hostilities and a final agreement with Gen. Johnston, which terminates the war as to the armies under his command and the country east of the Chattahoochee.

Copies of the terms of the convention will be furnished Major-Gens. Schofield, Gillmore, and Wilson, who are specially charged with its execution in the Department of North Carolina, Department of the South, and at Macon and Western Georgia.

Capt. Myers, Ordnance Department U. S. Army, is hereby designated to receive the arms, etc., at Greensboro. Any commanding officer of a post may receive the arms of any detachment, and see that they are properly stored and accounted for.

Gen. Schofield will procure at once the necessary blanks, and supply the other Army Commanders, that uniformity may prevail, and great care must be taken that all the terms and stipulations on our part be fulfilled with the most scrupulous fidelity, while those imposed on our hitherto enemies be received in a spirit becoming a brave and generous army.

Army commanders may at once loan to the inhabitants such of the captured mules, horses, wagons, and vehicles as can be spared from immediate use, and the Commanding Generals of Armies may issue provisions, animals, or any public supplies that can be spared to relieve present wants, and to encourage the inhabitants to renew their peaceful pursuits, and to restore the relations of friendship among our fellow-citizens and countrymen.

Foraging will forthwith cease, and when necessity or long marches compel the taking of forage, provisions, or any kind of private property, compensation will be made on the spot; or, when the disbursing officers are not provided with funds, vouchers will be given in proper form, payable at the nearest military depot.

By order of Major-Gen. W. T. SHERMAN,
L. M. DATTON, Ass't Adjutant-General.

Special Field Orders No. 66.

HEADQUARTERS MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, RALEIGH, N. C., April 27, 1865.

Hostilities having ceased, the following changes and dispositions of troops in the field will be made with as little delay as practicable:

1. The 10th and 23d corps will remain in the Department of North Carolina, and Major-Gen. J. M. Schofield will transfer back to Major-Gen. Gillmore,

commanding the Department of the South, the two brigades formerly belonging to the division of Brevet Major-Gen. Grover, at Savannah. The 2d division cavalry corps, Brevet Major-Gen. J. Kilpatrick commanding, is hereby transferred to the Department of North Carolina, and Gen. Kilpatrick will report in person to Major-Gen. Schofield for orders.

2. The cavalry command of Maj.-Gen. George Stoneman will return to East Tennessee, and that of Brevet Major-Gen. J. H. Wilson will be conducted back to the Tennessee River, in the neighborhood of Decatur, Alabama.

3. Major-Gen. Howard will conduct the Army of the Tennessee to Richmond, Virginia, following roads substantially by Lewisburg, Warrenton, Lawrenceville, and Petersburg, or to the right of that line. Major-Gen. Slocum will conduct the Army of Georgia to Richmond by roads to the left of the one indicated for Gen. Howard, viz., by Oxford, Boydtown, and Nottoway Court House. These armies will turn in at this point the contents of their ordnance trains and use the wagons for extra forage and provisions. These columns will be conducted slowly and in the best of order, and will aim to be at Richmond ready to resume the march by the middle of May.

4. The Chief Quartermaster and Commissary of the Military Division, Gens. Easton and Beckwith, after making the proper dispositions of their departments here, will proceed to Richmond and make suitable preparations to receive those columns and to provide them for the further journey.

By order of Major-Gen. W. T. SHERMAN,
L. M. DATTON, Ass't Adjutant-General.

On the same day Gen. Johnston issued the following notice of surrender to his troops:

General Orders No. 18.

HEADQUARTERS ARMY OF THE TENNESSEE,
April 27, 1865.

By the terms of a military convention made on the 26th instant, by Major-Gen. W. T. Sherman, United States Army, and Gen. J. E. Johnston, Confederate States Army, the officers and men of this army are to bind themselves not to take up arms against the United States until properly relieved from the obligation, and shall receive guarantees from the United States officers against molestation by the United States authorities, so long as they observe that obligation and the laws in force where they reside. For these objects duplicate muster-rolls will be made, and after the distribution of the necessary papers the troops will march under their officers to their respective States, and there be disbanded—all retaining personal property. The object of this convention is pacification to the extent of the authority of the commanders who made it. Events in Virginia, which broke every hope of success by war, imposed on its general the duty of sparing the blood of this gallant army, and saving our country from further devastation, and our people from ruin.

J. E. JOHNSTON, General.

On the 2d of May he issued the following farewell to his army:

General Orders No. 22.

HEADQUARTERS ARMY OF THE TENNESSEE,
NEAR GREENSBORO, May 2, 1865.

COMRADES: In terminating our official relations, I expect you to observe the terms of the pacification agreed upon, and to discharge the obligations of good and peaceful citizens to the powers as well as you have performed the duties of soldiers in the field. By such a course you will secure comfort and restore tranquility to your country. You will return to your homes with the admiration of our people, won by the courage and noble devotion you have displayed in this long war. I shall always remember with pride the loyal support you have given me. I part from you with regret, and bid you farewell with feelings

of cordial friendship, and with earnest wishes that you may prosper. J. E. JOHNSTON, General.
J. E. KENNARD, Colonel, etc.

The number of men surrendered and paroled was not far from 31,000; 108 pieces of artillery were parked, with limbers, caissons, etc., complete. About 15,000 small arms were surrendered, and but little ammunition. A large number of men strayed away with guns, horses, mules, and wagons. A body of the cavalry, under Gen. Hampton, went south in the direction in which it was supposed Mr. Davis was moving. They subsequently disappeared, and their officers were classed among those paroled.

The column of Gen. Wilson, which has been already mentioned, was organized at Gen. Thomas's headquarters, in Nashville, for a cavalry expedition into Alabama. It was finely equipped in every respect, with plenty of good men, mostly veterans, horses, ammunition, supplies, pontoons, and wagons. The final rendezvous was Gravelly Springs, above Eastport, on the Tennessee River, and Selma, Montgomery, and Mobile. It numbered more than 15,000 men, consisting of the 1st division under Gen. McCook, the 2d under Gen. Long, the 4th under Gen. Upton, and the 5th under Gen. Hatch. The latter, however, was retained in reserve at Eastport. The movement commenced from Chickasaw on the 22d of March. Some of the enemy, consisting of Gen. Roddy's cavalry, were soon met, and driven back with constant skirmishing thirty miles to Plantersville. Here they made a stand on April 1st, until their flank was threatened, when they retired. The loss of each side in killed and wounded, thus far, was estimated at less than a hundred; three guns and two hundred prisoners were captured by Gen. Wilson. Pursuit was now made by the divisions of Gens. Upton and Long to Selma. There the enemy was found on April 2d, in line of battle outside of their works. Gen. Long having arrived first, formed and dismounted his men in the night, while the 4th division came up on the left. In the morning the skirmish line was advanced, and a brisk charge made. In a short time the enemy were driven from the field, and the intrenchments captured. Selma was immediately occupied. The killed and wounded of the Union forces was about two hundred, and that of the enemy supposed to be less. One hundred guns, one hundred and fifty officers, two thousand men, with many horses, mules, and supplies, were captured. The arsenal, with large stores of powder, percussion caps, shells, all the Confederate magazines, works, and buildings, four large furnaces, including the Red Mountain and Central iron works and machine shop, some dwellings, and vast stores of cotton were destroyed. On the 4th, Cahawba, a little southwest of Selma, was surrendered, and about seventy Federal prisoners were recovered. From Selma Gen. Wilson moved eastward, capturing Montgomery, West Point, Griffin, Lagrange, Colum-

bus, and Macon. The following despatches from Macon relate his further proceedings:

HEADQUARTERS ARMY OF TENNESSEE,
April 21, 1865—9:30 A. M.

To Major-Gen. W. T. Sherman, through headquarters of Gen. Beauregard:

My advance received the surrender of this city with its garrison this evening. Gen. Cobb had previously sent me, under flag of truce, a copy of the telegram from Gen. Beauregard, declaring the existence of an armistice between all the troops under your command and those of Gen. Johnston. Without questioning the authority of this despatch, or its application to my command, I could not communicate orders in time to prevent the capture. I shall therefore hold the garrison, including Major-Gens. Cobb and G. W. Smith, and Brig.-Gen. McCall, prisoners of war.

Please send me orders. I shall remain here a reasonable length of time to hear from you.

J. H. WILSON, Brevet Maj.-Gen. U. S. A.

HEADQUARTERS CAVALRY CORPS, MILITARY DIVISION
MISSISSIPPI, MACON, GA., April 21, 1865.

Major-Gen. W. T. Sherman, through Gen. Johnston:

Your despatch of yesterday is just received. I shall at once proceed to carry out your instructions. If proper arrangements can be made to have sugar, coffee, and clothing sent from Savannah to Augusta, they can be brought hither by the way of Atlanta by railroad, or they can be sent by boat directly to this place from Darien. I shall be able to get forage, bread, and meat from Southeastern Georgia. The railroad from Atlanta to Dalton or Cleveland cannot be repaired in three months. I have arranged to send an officer at once, via Eufaula, to Gen. Canby, with a copy of your despatch. Gen. Cobb will also notify Gen. Taylor of the armistice. I have about three thousand prisoners of war, including Gens. Cobb, Smith, McCall, Mercer, and Robertson. Can you arrange with Gen. Johnston for their immediate release? Please answer at once. I shall start a staff officer to you to-morrow.

J. H. WILSON, Brevet Major-Gen. Comm'g.

Gen. Sherman, after the surrender of Gen. Johnston, went to Hilton Head, and caused supplies to be forwarded at once to Gen. Wilson. On May 1st Gen. Upton's division was sent to Augusta, and Gen. McCook's to Tallahassee, to receive the surrender of the garrisons and take charge of the public property, and execute the paroles required by the terms of surrender.

At the same time that Gen. Wilson was advancing against Selma and Montgomery, a movement was in progress for the capture of Mobile. This city was occupied by about fifteen thousand troops under Gen. Richard Taylor. The defences of the city had been most carefully constructed, and were under the command of Gen. Maury. In the harbor the enemy had several vessels, some of which were iron-clads; in addition to which its defences were regarded as almost impregnable. The Federal forces consisted of the 18th army corps under Gen. Granger, and the 16th under Gen. A. J. Smith, Gen. Canby being in chief command. Attached to these was a division of cavalry and a division of colored troops. With this force a strong fleet was in coöperation.

Mobile is situated on the west bank of the Mobile River, immediately above its entrance into the bay, and thirty miles north of the Gulf of Mexico. The site of the town is a level

sandy plain, sufficiently elevated for drainage. The enemy had supposed that the attack would be made on the west, and on this side the city was most strongly fortified, but to no purpose in the final attack. The 16th corps, Gen. A. J. Smith, was landed on Dauphin Island, opposite Mobile Point, and reached Fort Gaines on March 12th. All the cavalry under Gen. Grierson, crossing Pontchartrain, reached Mobile Point, and on the 18th, every thing being in readiness, the march commenced. A brigade of the 3d division of the 16th corps, about two thousand strong, left Dauphin's Island to effect a landing on Cedar Point, above Fort Powell, and to clear the way for the rest of the corps. On the previous day a brigade of the 2d division of the 13th corps was landed on Mobile Point, to proceed as the advance of the corps on the mainland on the east side of the bay. At the same time Gen. Steele, in command of a division of colored troops at Pensacola and Barrancas, commenced a march across to Blakely on the Tensaw River, about twelve miles north of east of Mobile. On the 18th, the whole 13th corps under Gen. Granger followed the advance brigade, marching by land along the shore of Bon Secour Bay, which forms the southeasterly corner of Mobile Bay, near its mouth, and just north of Mobile Point, on which is Fort Morgan. Fish River, running south on the east side of Mobile Bay, empties into Bon Secour Bay, and the rendezvous of the army was fixed about eight miles from its mouth. On the 19th the 16th corps, under Gen. Smith, were taken in transports and moved across Mobile Bay, and disembarked at the rendezvous up the river by the night of the 21st. On the 22d and 23d the 13th corps, under Gen. Granger, which had been delayed in its march by the bad roads, began to arrive. Slight skirmishing occurred with the enemy along the route. The advance toward Spanish Fort at the head of Mobile Bay, on the east side, was made on the 25th. The 13th corps was on the left, direct for the fort, and the 16th corps on the right moving toward Blakeley. Constant skirmishing was kept up by the enemy, and the road was found to be thickly planted with torpedoes. On the 27th both corps marched into position, to invest Spanish Fort, and the enemy fell back toward Blakeley. At the same time the fleet got under way, and proceeded up the bay to Howard's Landing, below the fort. The Metacomet, Stockdale, Milwaukee, Cincinnati, Albatross, Winnebago, Genesee, and Osage, were ordered in toward the shore, and opened a cannonade, which the enemy did not return. The communication between the city and the fort was cut off by the fleet, with the loss of the Milwaukee and Osage blown up by torpedoes. The land forces brought up the artillery, and the appearance of a regular siege was presented. The fleet of the enemy at a distance also occasionally opened fire on the troops. On April 3d the investment was complete, and a fire was opened upon it both by land and water, which resulted

in silencing the guns of the enemy by midnight. An hour afterwards the fort was surrendered with its dependencies. The number of men made prisoners was five hundred and thirty-eight and twenty-five officers. Gen. Canby reported that the major part of the garrison escaped by water. There was found in the fort five mortars and twenty-five guns.

Meanwhile Gen. Steele left Pensacola March 19th, and marched through Pollard toward Mobile. On the 25th he encountered the 6th Alabama cavalry at Mitchell's Creek, and a sharp contest ensued, in which the enemy were routed. Thence he continued his march toward Blakeley, and came in on the right of Gen. Canby.

After the surrender of Spanish Fort, the gunboat Octorara opened fire on Forts Tracy and Huger, near the mouth of the Tensaw River, but both works were abandoned by the enemy after spiking eight heavy guns. Blakeley was now invested by the gunboats in front, which had advanced up the river after the surrender of the forts and the removal of torpedoes, and by the troops on the land side. The works were carried by assault on April 9th, and two thousand four hundred prisoners and twenty guns taken. On the next day, the 10th, the enemy commenced evacuating Mobile, which was completed on the 11th by their retreat with their fleet up the Alabama River. On the next day it was surrendered to Gen. Canby and Rear-Admiral Thatcher, and occupied by the corps of Gen. Granger. Gen. Canby reported that he found in Mobile and its defences over one hundred and fifty guns, a very large amount of ammunition, and supplies of all kinds, and about one thousand prisoners. The Federal loss had been two thousand five hundred men, and that of the fleet fifty men.

On April 19th an officer of Gen. Taylor's staff arrived at Gen. Canby's headquarters with a flag of truce to make terms for the surrender of the troops east of the Mississippi. On May 4th surrender was executed. The delegation upon the Union side consisted of Gens. Canby, Osterhaus, Andrews; Col. Christenson; Capts. Barrett and Perkins; and, by invitation of Gen. Canby, Admiral Thatcher. At Citronelle, Alabama, where the conference was held, were found Gen. Taylor and staff, Commander Farland, and Lieut. Commander Myers, of the Confederate navy, and a large concourse of other officers. After considerable discussion and consultation, ending at 7:30 P. M., the following conditions were agreed to and signed as the terms of surrender:

Memorandum of the conditions of the surrender of the forces, munitions of war, etc., in the department of Alabama, Mississippi, and East Louisiana, commanded by Lieut.-Gen. Richard Taylor, Confederate States army, to Major-Gen. Edward R. S. Canby, United States army, entered into on the 4th day of May, 1865, at Citronelle, Alabama:

1. The officers and men to be paroled until duly exchanged or otherwise released from the obligations of their parole by the authority of the Government of

the United States. Duplicate rolls of all officers and men surrendered to be made, one copy of which will be delivered to an officer appointed by Major-General Canby, and the other appointed by Lieut.-Gen. Taylor, officers giving their individual paroles, and commanders of regiments, battalions, companies, or detachments signing a like parole for the men of their respective commands.

2. Artillery, small arms, ammunition, and other property of the Confederate Government, to be turned over to the officers appointed for that purpose on the part of the Government of the United States. Duplicate inventories of the property surrendered to be prepared, one copy to be retained by the officer delivering, and the other by the officer receiving it, for the information of their respective commands.

3. The officers and men paroled under this agreement will be allowed to return to their homes, with the assurance that they will not be disturbed by the authorities of the United States as long as they continue to observe the conditions of their paroles and the laws in force where they reside, except that persons resident of Northern States will not be allowed to return without permission.

4. The surrender of property will not include the side-arms, or private horses, or baggage of officers.

5. All horses which are in good faith the private property of enlisted men will not be taken from them; the men will be permitted to take such with them to their homes to be used for private purposes only.

6. The time and place of surrender will be fixed by the respective commanders, and will be carried out by commissioners appointed by them.

7. The terms and conditions of the surrender to apply to the officers and men belonging to the armies lately commanded by Gens. Lee and Johnston, now in this department.

8. Transportation and subsistence to be furnished at public cost for the officers and men after surrender to the nearest practicable point of their homes.

R. TAYLOR, Lieut.-General.
E. R. S. CANBY, Maj.-General.

On the same day and at the same time and place, Commodore Farrand surrendered to Rear-Admiral Thatcher all the naval forces of the enemy then blockaded on the Tombigbee River, on the same terms as were granted by Gen. Canby to Gen. Taylor. The squadron was delivered up at Nanna Hubba Bluff on May 9th. The following vessels were surrendered: Jeff. Davis, Robert Watson, Magnolia, Marengo, St. Charles, Commodore Farrand, General Beauregard, Duke, Sumter, St. Nicholas, Reindeer, Admiral.

Among the officers surrendered were Commodore Ebenezer Farrand, of Florida; Commodore L. Rousseau, of Louisiana; Capt. Patrick W. Murphy, of North Carolina; Commander C. ap. R. Jones, of Virginia; Lieut. Julien Myers, of Georgia; Lieut. James D. Johnston, of Kentucky; Lieut. Chas. W. Hays, of Alabama; Lieut. Charles P. McGary, of North Carolina; Lieut. Robert T. Chapman, of Alabama; Lieut. F. B. Renshaw, of Florida; Lieut. E. Lloyd Winder, of Maryland; Lieut. John R. Eggleston, of Mississippi; Lieut. C. C. Simons, of Virginia; Lieut. John W. Bennett, of Maryland; Lieut. Thomas L. Harrison, of Virginia; Lieut. Joseph Fry, of Florida; Lieut. W. P. A. Campbell, of Tennessee; Lieut. Julian M. Spencer, of Maryland; Lieut. James McBaker, Lieut. Edgar L. Lambert, and 110 others.

The detached forces of the enemy in various places east of the Mississippi were severally surrendered upon the same terms as embraced in those of the commanding officers, and by the middle of the month of May hostilities had ceased everywhere except west of the Mississippi River.

On learning the news of Gen. Lee's surrender, Gen. Kirby Smith, in command of the enemy's forces in Texas, issued the following order:

HEADQUARTERS TRANS-MISSISSIPPI DEPARTMENT, }
SHERREPORT, LA., April 21, 1865.

Soldiers of the Trans-Mississippi Army:

The crisis of our revolution is at hand. Great disasters have overtaken us. The Army of Northern Virginia and our Commander-in-Chief are prisoners of war. With you rests the hopes of our nation, and upon your action depends the fate of our people. I appeal to you in the name of the cause you have so heroically maintained—in the name of your fireides and families, so dear to you—in the name of your bleeding country, whose future is in your hands. Show that you are worthy of your position in history. Prove to the world that your hearts have not failed in the hour of disaster, and that at the last moment you will sustain the holy cause which has been so gloriously battled for by your brethren east of the Mississippi.

You possess the means of long resisting invasion. You have hopes of succor from abroad. Protract the struggle, and you will surely receive the aid of nations who already deeply sympathize with you.

Stand by your colors—maintain your discipline. The great resources of this department, its vast extent, the numbers, the discipline, and the efficiency of the army, will secure to our country terms that a proud people can with honor accept, and may, under the Providence of God, be the means of checking the triumph of our enemy and securing the final success of our cause.

E. KIRBY SMITH, General.

At the same time public meetings were held in Texas, and resolutions to maintain the contest were adopted. The Federal Government immediately despatched a large force to New Orleans, under the command of Gen. Sheridan, preparatory to a campaign in Texas. Meanwhile, Col. Barret fought the last battle of the war. He had conducted a body of troops, on May 11th, from 800 to 500 strong, from Brazos to seize a camp of the enemy about fifteen miles above, on the Brownsville road, at Palmetto Ranch. His object was to secure horses and cattle. The camp of the enemy was captured and burned. But being delayed to secure horses, he was overtaken by a body of cavalry under Gen. Slaughter, with three pieces of artillery. A retreat was made with the enemy in pursuit, and a loss of about seventy-five men ensued, who were chiefly made prisoners. The following is Gen. Slaughter's report of the affair:

HEADQUARTERS WESTERN SUB-DISTRICT, TEXAS, }
IN THE FIELD, May 13, 1865.

Captain L. G. Aldrich, Assistant Adjutant-General: We attacked the enemy—about eight hundred strong—this evening at 8 o'clock, and drove him in confusion eight miles, killing and wounding about thirty and capturing eighty prisoners, with many arms and accoutrements. Owing to the scattered condition of the men, a halt was ordered. Captain Carrington's command coming up, he was again attacked and driven within one mile of Brazos, when

darkness put an end to the pursuit. Had not our artillery horses broken down, we would, doubtless, have captured the whole command.

I cannot speak too highly of the sagacity of Colonel Ford and the gallantry of his command. Our loss was four or five severely wounded. We did not have three hundred in the fight, large numbers not having arrived.

J. E. SLAUGHTER, Brigadier-General Com.
Official: L. G. ALDRICH, Ass't Adjutant-General.

But the surrenders of Gens. Johnston and Taylor decided the course of events in the Trans-Mississippi Department. On the 23d of May, Brig.-Gen. Brent and several staff officers reached Baton Rouge, Louisiana, to consult with Gen. Canby on the terms of the surrender of Gen. Kirby Smith's army. The terms were arranged, and the surrender made on the 26th. They were as follows:

Terms of a military convention, entered into this 26th day of May, 1865, at New Orleans, La., between Gen. E. Kirby Smith, Confederate States army, commanding the Department of Trans-Mississippi, and Major-General E. R. S. Canby, United States army, commanding army and division of West Mississippi, for the surrender of the troops and public property of the military and naval authorities of the Trans-Mississippi Department:

1. All acts of war and resistance against the United States, on the part of the troops under Gen. Smith, shall cease from this date.

2. The officers and men to be paroled until duly exchanged, or otherwise released from the obligation of their parole by the authority of the Government of the United States. Duplicate rolls of all officers and men paroled to be retained by such officers as may be designated by the parties hereto—officers giving their individual paroles, and commanders of regiments, battalions, companies, and detachments signing a like parole for the men of their respective commands.

3. Artillery, small arms, ammunition, and other property of the Confederate States, including gunboats and transports, to be turned over to the officers appointed to receive the same on the part of the Government of the United States; duplicate inventories of the property to be surrendered to be prepared, one copy to be returned by the officer delivering, and the other by the officer receiving it, for the information of their respective commanders.

4. The officers and men paroled under this agreement will be allowed to return to their homes, with the assurance that they will not be disturbed by the authorities of the United States as long as they continue to observe the conditions of their parole and the laws in force where they reside; except that persons resident in the Northern States, and not excepted in the amnesty proclamation of the President, may return to their homes on taking the oath of allegiance to the United States.

5. The surrender of property will not include the side-arms, or private horses, or baggage of officers.

6. All horses which are, in good faith, the private property of enlisted men, will not be taken from them; the men will be permitted to take such with them to their homes, to be used for private purposes only.

7. The time, mode, and place of paroling and surrender of property will be fixed by the respective commanders, and it will be carried out by commissioners appointed by them.

8. The terms and conditions of this convention to extend to all officers and men of the army and navy of the Confederate States, or any of them, being in or belonging to the Trans-Mississippi Department.

9. Transportation and subsistence to be furnished at public cost for the officers and men (after being

paroled) to the nearest practicable point to their homes.

S. B. BUCKNER,
Lieutenant-General and Chief of Staff,
for General E. KIRBY SMITH.
P. JOS. OSTERHAUS,
Major-General Volunteers and Chief-of-Staff,
for Major-General E. R. S. CANBY,
Commanding Military Division West. Mississippi
J. N. GALLAGHER, Assistant Adjutant-General.

Additional terms were made later in the day for the rendezvous of the paroled troops in the trans-Mississippi Department near their homes and also for the surrender of the Confederate navy under Capt. Carter.

The surrender of these armies left the military occupation of the rebellious States by the Federal forces unresisted and complete. The plan now adopted by the Government was, to retain in each State a sufficient military force to preserve peace, and to put down any opposition which might arise, and to disband the remainder of its armies, and to restore to civil rights all citizens who should take the oath prescribed in the amnesty proclamation of President Lincoln, which may be found on a subsequent page. The effect of this was to oblige the person taking it to sustain the Federal Government and all its past acts relative to the emancipation of slaves.

The Army of the Potomac and the army under Gen. Sherman, with the exception of a comparatively small force retained in Virginia and North Carolina, were marched to the neighborhood of Washington, for a grand review and final dispersion. The review took place on the 22d and 23d of May. The mustering out of service was then commenced, and completed in the manner stated below. Gen. Sherman took leave of his troops by issuing the following order:

Special Orders No. 67.

HEADQUARTERS MIDDLE DIVISION OF THE MISSISSIPPI,
IN THE FIELD, WASHINGTON, D. C. May 30, 1865.
The General Commanding announces to the Armies of the Tennessee and Georgia that the time has come for us to part. Our work is done, and armed enemies no longer defy us. Some of you will be retained in service until further orders. And now that we are about to separate, to mingle with the civil world, it becomes a pleasing duty to recall to mind the situation of national affairs when, but a little more than a year ago, we were gathered about the twining cliffs of Lookout Mountain, and all the future was wrapped in doubt and uncertainty. Three armies had come together from distant fields, with separate histories, yet bound by one common cause—the union of our country and the perpetuation of the Government of our inheritance. There is no need to recall to your memories Tunnel Hill, with its Rocky Face Mountain, and Buzzard Boost Gap, with the ugly forts of Dalton behind. We were in earnest, and paused not for danger and difficulty, but dashed through Snake Creek Gap, and fell on Resaca, then on to the Etowah, to Dallas, Kennesaw; and the heats of summer found us on the banks of the Chattahoochee, far from home and dependent on a single road for supplies. Again we were not to be held back by any obstacle, and crossed over and fought four heavy battles for the possession of the citadel of Atlanta. That was the crisis of our history. A doubt still clouded our future; but we solved the problem, and destroyed Atlanta, struck boldly across the State of Georgia, secured all the main arteries of life to our enemy, and Christmas found us at Savannah. Waiting there only long

enough to fill our wagons, we again began a march, which for peril, labor, and results, will compare with any ever made by an organized army. The floods of the Savannah, the swamps of the Combahee and Edisto, the high hills and rocks of the Santee, the flat quagmires of the Pedee and Cape Fear Rivers, were all passed in midwinter, with its floods and rains, in the face of an accumulating enemy; and after the battles of Averysboro and Bentonville we once more came out of the wilderness to meet our friends at Goldsboro. Even then we paused only long enough to get new clothing, to reload our wagons, and again pushed on to Raleigh, and beyond, until we met our enemy, suing for peace instead of war, and offering to submit to the injured laws of his and our country. As long as that enemy was defiant, nor mountains, nor rivers, nor swamps, nor hunger, nor cold, had checked us; but when he who had fought us hard and persistently offered submission, your General thought it wrong to pursue him further, and negotiations followed which resulted, as you all know, in his surrender. How far the operations of the army have contributed to the overthrow of the Confederacy, of the peace which now dawns on us, must be judged by others, not by us. But that you have done all that men could do has been admitted by those in authority; and we have a right to join in the universal joy that fills our land because the war is over, and our Government stands vindicated before the world by the joint action of the volunteer armies of the United States.

To such as remain in the military service your General need only remind you that successes in the past are due to hard work and discipline, and that the same work and discipline are equally important in the future. To such as go home, he will only say, that our favored country is so grand, so extensive, so diversified in climate, soil, and productions, that every man may surely find a home and occupation suited to his tastes; and none should yield to the natural impotence sure to result from our past life of excitement and adventure. You will be invited to seek new adventure abroad; but do not yield to the temptation, for it will lead only to death and disappointment.

Your General now bids you all farewell, with the full belief that, as in war you have been good soldiers, so in peace you will make good citizens; and if, unfortunately, new war should arise in our country, Sherman's Army will be the first to buckle on the old armor and come forth to defend and maintain the Government of our inheritance and choice.

By order of Major-General W. T. SHERMAN.
L. M. DAYTON, Assistant Adjutant-General.

At a later date Lieut.-Gen. Grant issued the following address to all the armies:

General Orders No. 108.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE, }
WASHINGTON, D. C., June 2, 1865.

Soldiers of the Armies of the United States:

By your patriotic devotion to your country in the hour of danger and alarm, your magnificent fighting, bravery, and endurance, you have maintained the supremacy of the Union and the Constitution, overthrown all armed opposition to the enforcement of the laws and of the proclamations forever abolishing slavery—the cause and pretext of the rebellion—and opened the way to the rightful authorities to restore order and inaugurate peace on a permanent and enduring basis on every foot of American soil. Your marches, sieges, and battles, in distance, duration, resolution, and brilliancy of results, dim the lustre of the world's past military achievements, and will be the patriot's precedent in defence of liberty and right in all time to come. In obedience to your country's call you left your homes and families and volunteered in its defence. Victory has crowned your valor, and secured the purpose of your patriotic hearts; and with the gratitude of your countrymen

and the highest honors a great and free nation can accord, you will soon be permitted to return to your homes and families, conscious of having discharged the highest duty of American citizens. To achieve these glorious triumphs and secure to yourselves, your fellow-countrymen, and posterity the blessings of free institutions, tens of thousands of your gallant comrades have fallen and sealed the priceless legacy with their lives. The graves of these a grateful nation bedews with tears, honors their memories, and will ever cherish and support their stricken families.

U. S. GRANT, Lieutenant-General.

On May 5th an order was issued by Gen. Halleck, in command of the James River, declaring that all persons found in arms after May 26, against the authority of the United States in Virginia or North Carolina, would be treated as robbers and outlaws. A similar order was subsequently issued by the War Department, to be enforced in all States east of the Mississippi River. This caused the disbandment of all guerrilla organizations:

On April 29th the President issued the following proclamation:

EXECUTIVE CHAMBER, WASHINGTON, April 29, 1865.

Being desirous to relieve all loyal citizens and well-disposed persons residing in the insurrectionary States from unnecessary commercial restrictions, and to encourage them to return to peaceful pursuits, it is hereby ordered:

1. That all restrictions upon internal, domestic, and coastwise commercial intercourse be discontinued in such part of the States of Tennessee, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, and so much of Louisiana as lies east of the Mississippi River, as shall be embraced within the lines of the national military occupation, excepting only such restrictions as are imposed by the acts of Congress, and regulations in pursuance thereof prescribed by the Secretary of the Treasury, and approved by the President, and excepting also from the effect of this order the following articles, contraband of war, to wit: Arms, ammunition, and all articles from which ammunition is manufactured; gray uniforms and cloth, locomotives, cars, railroad iron and machinery for operating railroads, telegraph wires, insulators, and instruments for operating telegraph lines.

2. All existing military and naval orders in any manner restricting internal, domestic, and coastwise commercial intercourse and trade with or in the localities above named, be and the same are hereby revoked, and that no military or naval officer in any manner interrupt or interfere with the same, or with any boats or other vessels engaged therein under proper authority pursuant to the regulations of the Secretary of the Treasury. ANDREW JOHNSON.

In relation to prisoners of war those who had been delivered on parole to Federal officers were declared exchanged, and those confined in the Southern States were released. The following orders were issued by the War Department respecting Confederate prisoners:

WAR DEPARTMENT, WASHINGTON, May 7, 1865.

Ordered—That all prisoners of war, except officers above the rank of colonel, who, before the capture of Richmond, signified their desire to take the oath of allegiance to the United States and their unwillingness to be exchanged, be forthwith released on their taking said oath, and transportation furnished them to their respective homes.

In respect to all other prisoners of war, further orders will be issued.

The Commissary-General of Prisoners will issue the necessary regulations for preserving the requisite

record of prisoners of war to be released under this order, the record to set forth the name of the prisoner, his place of residence, the organization to which he belonged, the time and place of capture, &c. The oaths of allegiance will be administered by commanding officers of the prisons, camps, and forts, who will send by telegraph daily reports of prisoners released to the Commissary-General of Prisoners. These reports will be consolidated for each day, and transmitted to the Secretary of War.

By order of the **SECRETARY OF WAR.**
James A. Hardie, Brevet Brig.-Gen., Inspector-Gen.
U. S. Army.

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
WASHINGTON, June 6, 1865.

The prisoners of war at the several depots in the North will be discharged, under the following regulations and restrictions:

1. All enlisted men of the rebel army, and petty officers and seamen of the rebel navy, will be discharged upon taking the oath of allegiance.

2. Officers of the rebel army not above the grade of captain, and of the rebel navy not above the grade of lieutenant, except such as have graduated at the United States Military or Naval Academy, and such as held a commission in either the United States army or navy at the beginning of the rebellion, may be discharged upon taking the oath of allegiance.

3. When the discharges hereby ordered are completed, regulations will be issued in respect to the discharge of officers having higher rank than captains in the army or lieutenants in the navy.

4. The several commanders of prison stations will discharge each day as much of the prisoners hereby authorized to be discharged as proper rolls can be prepared for, beginning with those who have been longest in prison and from the most remote points of the country, and certified rolls will be forwarded daily to the Commissary-General of Prisoners of those discharged. The oath of allegiance only will be administered. But notice will be given that all who desire will be permitted to take the oath of amnesty after their release, in accordance with the regulations of the Department of State respecting the amnesty.

5. The Quartermaster's Department will furnish transportation to all released prisoners to the nearest accessible point to their homes, by rail or by steamboat.

By order of the President of the United States.

E. D. TOWNSEND, Asst Adjutant-General.

Subsequently a commission was organized at Washington to investigate the treatment of Federal prisoners at Andersonville, and for the trial of the officer in command. Its proceedings will be found on subsequent pages.

The charitable organizations which had been called into existence by the war, now found the necessity for their services removed. In the brief but bloody campaigns of March and April, 1865, the Sanitary Commission continued its humane and noble work. The sick and wounded were cared for, their friends informed of their situation, their pensions, bounties, and back pay collected, and when the armies were disbanded the Soldiers' Homes were thrown open all along their various routes to welcome them, and agents of the Commission met them at railroad stations and steamboat landings to invite them to the homes and lodges, and protect them as far as possible from fraud. The Commission also greatly increased its claim agencies, which, without fee or reward, collected the arrearages and pay due to the soldiers, and established at its central office

in Washington, with branches in all the principal cities, a bureau of information and employment, to secure to all soldiers desiring employment such situations as they were capable of filling. The receipts of the Commission were large during the spring months, but its disbursements were still larger. On the 1st of June, 1865, a second Sanitary Fair was opened at Chicago, Ill., for the purpose of raising funds for the maintenance of the claim agencies and other organizations of the Commission, which it was deemed desirable to continue in operation. About \$325,000 above all expenses was received from this fair. On the 1st of July, 1865, the Aid Societies, auxiliary to the Commission, ceased their coöperative work, though many of them became auxiliary to the Commission as claim agencies. It was officially announced on the 26th of April, 1865, that the contributions to the Commission from California to that date amounted to \$1,199,675.51; those of Nevada to \$99,512.46; Oregon, \$75,597.56; and Washington Territory, \$20,753.93—making a total from the Pacific slope of \$1,895,539.45. The Metropolitan Fair in New York yielded \$1,184,146.72, and the Central Fair in Philadelphia, \$1,085,398.96. The final campaign of the war demanded new efforts from the Christian Commission, and its agents labored with new zeal and energy. No official statement of its receipts during these months was made, but they are understood to have approached half a million of dollars, which was expended for the promotion of the physical, intellectual, and religious welfare of the soldiers and sailors. As the war closed the Commission disbanded and discontinued its work.

The Union Commission found, as it expected, a sphere of wider usefulness in the closing scenes of the war, and in the suffering which followed among the poorer classes of whites in the Southern States, and was actively engaged in endeavoring to improve their condition. It subsequently coöperated with the Freedmen's Bureau, the Western Sanitary Commission, and other similar institutions, in their useful labors.

A reduction of the naval force was made at the same time when the armies were disbanded. Volunteer officers resigned, men were discharged, and all vessels not needed for future service were sold. The steamer Webb, which had been used as a ram by the enemy on the Red River throughout the war, ran the blockade on that river, and passed down the Mississippi about April 24th, making an attempt to escape to the West Indies. Being pursued after passing New Orleans, and discovering the steamer Richmond coming up the river, her commander, Edward G. Reed, ran her ashore, and setting her on fire, escaped, with nearly all the crew, to the swamps. The vessel was consumed. All the other vessels in the Confederate service were surrendered, as has been stated, except the Shenandoah, which was in Australia at the close of the war. She continued her operations, and caused great destruction

among the whale-ships on the northwest coast of America. Subsequently her commander, learning the state of affairs, proceeded to England, and surrendered his vessel to the British Government.

Mr. Davis, who had acted as President of the insurrectionary States, on the evacuation of Richmond hurried to Danville, Va., and immediately issued the following proclamation:

DANVILLE, VA., April 5, 1865.

The General-in-Chief found it necessary to make such movements of his troops as to uncover the capital. It would be unwise to conceal the moral and material injury to our cause resulting from the occupation of our capital by the enemy. It is equally unwise and unworthy of us to allow our energies to falter and our efforts to become relaxed under adversities, however calamitous they may be.

For many months the largest and finest army of the Confederacy, under command of a leader whose presence inspires equal confidence in the troops and the people, has been greatly trammelled by the necessity of keeping constant watch over the approaches to the capital, and has thus been forced to forego more than one opportunity for promising enterprise. It is for us, my countrymen, to show by our bearing under reverses, how wretched has been the self-deception of those who have believed us less able to endure misfortunes with fortitude than to encounter dangers with courage.

We have now entered upon a new phase of the struggle. Relieved from the necessity of guarding particular points, our army will be free to move from point to point to strike the enemy in detail far from his base. Let us but will it and we are free.

Animated by that confidence in spirit and fortitude which never yet failed me, I announce to you, fellow-countrymen, that it is my purpose to maintain your cause with my whole heart and soul; that I will never consent to abandon to the enemy one foot of the soil of any one of the States of the Confederacy. That Virginia—noble State—whose ancient renown has been eclipsed by her still more glorious recent history; whose bosom has been bared to receive the main shock of this war; whose sons and daughters have exhibited heroism so sublime as to render her illustrious in all time to come—that Virginia, with the help of the people and by the blessing of Providence, shall be held and defended, and no peace ever be made with the infamous invaders of her territory.

If by the stress of numbers we should ever be compelled to a temporary withdrawal from her limits, or those of any other border State, again and again will we return, until the baffled and exhausted enemy shall abandon in despair his endless and impossible task of making slaves of a people resolved to be free.

Let us, then, not despond, my countrymen; but, relying on God, meet the foe with fresh defiance and with unconquered and unconquerable hearts.

JEFFERSON DAVIS.

Subsequently, on understanding the true state of affairs, he proceeded further south with his family, designing to escape from the country by some port on the seacoast, but was captured at Irwinsville, Wilkinson County, Ga., on May 10th, with his family, his Postmaster-General Reagan, his Private Secretary, Harrison, and others, with a train of five wagons and three ambulances. The captors were Lieut.-Col. Pritchard, of the 4th Michigan cavalry, and a body of his men. They belonged to the corps of Gen. Wilson. Davis was removed to Fort-

ress Monroe, and retained as a prisoner in close confinement.

On paroling the Southern armies the number of men who presented themselves was small. A general consolidation of the remnants of regiments and battalions had been made some months previous, and the new regiments contained about one-third the original number. The rolls of Gen. Hardee's corps presented the following results: Ten regiments consolidated numbered only 237 men; three regiments, 210; twenty regiments, 627; eleven regiments, 819; five regiments, 456, representing 10,000 men on the original rolls; one regiment, 201; eight regiments, 424, representing 10,000 Texas troops; one regiment, 40 left out of 1,200; reserve artillery, ten batteries, 560; seven regiments, 419; eighteen regiments, 719.

Single regiments consolidated, and not represented above, showed the following numbers on their rolls: 21, 82, 16, 46, 124, 22, 50, 31, 185, 24, 41, 65, 180, 35, 50, 11, 42, 40, 100. Eight companies consolidated amounted to 38 men; five companies, 66; ten companies, 82; eleven companies, 59; ten companies, 65; fifteen companies, 64; ten companies, in one case, 81; in another, 69.

The number of men surrendered in the different armies amounted to 174,223, as follows:

Army of Northern Virginia, commanded by Gen. Lee,	27,908
Army of Tennessee, and others, commanded by Gen. Joseph E. Johnston.....	81,948
Army of Gen. Jeff. Thompson in Missouri.....	1,973
Miscellaneous paroles in the Department of Virginia,	9,072
Paroled at Cumberland, Md., and other stations.....	9,877
Paroled by Gen. McCook in Alabama and Florida.....	6,429
Army of the Department of Alabama, under Lieut.-Gen. Taylor.....	42,293
Army of the Trans-Mississippi Department, under Gen. E. K. Smith.....	17,856
Paroled in the Department of Washington.....	8,890
Paroled in Virginia, Tennessee, Georgia, Alabama, Louisiana, and Texas.....	18,922
Surrendered at Nashville and Chattanooga, Tenn.....	5,029

In addition to those surrendered at the close of the war, there were in the Federal custody, between January 1st and 20th of October of the same year, 98,802 prisoners of war. Of these 1,958 enlisted in the Federal service. After the cessation of hostilities 63,442 were released, and 33,127 were delivered in exchange.

It appears by the official reports of March 1st, 1865, that the aggregate Federal military force of all arms, officers and men, was 965,591, to wit:

Available force present for duty.....	602,598
On detached service in the different military departments.....	182,538
In field hospitals or unfit for duty.....	85,028
In general hospitals or on sick leave at home.....	142,419
Absent on furlough or as prisoners of war.....	81,665
Absent without leave.....	19,958
Grand aggregate.....	965,591

This force was augmented on the 1st of May, 1865, by enlistments, to the number 1,000,516 of all arms, officers and men. The aggregate available force present for duty on the 1st of March was distributed in the different commands as follows:

Army of the Potomac.....	108,373
Headquarters military division of the Mississippi....	17
Department of the Cumberland.....	62,626
Department of the Tennessee.....	45,649
Left wing Army of Georgia.....	31,644
Cavalry Corps military division of the Mississippi....	37,410
Headquarters military division of west Mississippi....	24
Reserve brigades mil'y division of west Mississippi...	18,743
Department of the Gulf.....	25,625
Department of Arkansas.....	24,509
Department of the Mississippi.....	24,151
Sixteenth Army Corps.....	14,395
Headquarters military division of the Missouri.....	13
Department of the Missouri.....	18,557
Department of the Northwest.....	4,781
Headquarters middle military division.....	841
Cavalry forces middle military division.....	12,980
Nineteenth Army Corps.....	6,613
Middle Department.....	2,089
Department of Washington.....	24,056
Department of West Virginia.....	15,517
Department of Pennsylvania.....	890
Department of the East.....	7,463
Department of Virginia.....	45,986
Department of North Carolina.....	34,945
Department of the South.....	11,510
Department of Kentucky.....	10,655
Northern Department.....	11,229
Department of the Pacific.....	7,024
Department of New Mexico.....	2,501
Grand total.....	602,593

Four days after the surrender of Gen. Lee's army a public notice was given by the War Department that orders would speedily be issued to stop all drafting and recruiting; to curtail purchases of arms, ammunition, quartermaster and commissary supplies, and reduce the expenses of the military establishment; to reduce the number of general and staff officers to the actual necessities of the service; and to remove all military restrictions upon trade and commerce, so far as might be consistent with the public safety.

On the 28th of April, 1865, it was ordered that returns be made of the volunteer forces in the field, with a view to their immediate reduction, and regulations were prepared and promulgated for their muster out and discharge. In executing this work rendezvous were established in the field, as well as in most of the States. At the field rendezvous all surplus property was taken possession of by the staff officers of the respective supply departments, and the muster-out rolls and other discharge papers prepared under the direction of corps commissaries of musters and their assistants. Corps and department commanders were instructed to see that the work was pushed with energy, using for that end the division and brigade commanders, with their respective staff officers, to superintend it. As soon as a regiment or other organization had its muster-out papers prepared, it was placed *en route* to its State for payment and final discharge. At the State rendezvous was located the chief mustering officer of the State, or one or more of his assistants, with paymasters, quartermasters, commissaries of subsistence, and ordnance officers, whose duties were the payment and final discharge of the troops; their care whilst awaiting the same; the reception of the public property turned in by them, and their transportation to their homes after discharge.

By the foregoing arrangements the entire

force of commissaries and assistant commissaries of musters for troops in the field were made available for the work, in connection with the chief and other State mustering officers. The most experienced mustering officers and those most familiar with the regimental records were secured; the records from which the mustering-out data was to be obtained were readily accessible, and the loss of records whilst the regiments were *en route* from the field to their States, was avoided. Regimental officers were held to a rigid accountability in preparing the records, and the interests of the enlisted men thus protected. Order and discipline was maintained whilst troops were *en route* to the States and after arrival therein. Troops were comfortably cared for up to the moment they were paid off and ready to start for their homes. Dissatisfaction among them was obviated and causes for complaint removed, and all public property easily secured and readily accounted for.

The arrangements for the care of discharged troops being completed, orders to muster out and discharge the forces from service were issued as follows:

April 29.—All recruits, drafted men, substitutes, and volunteers remaining at the several State depots.

May 4.—All patients in hospitals, except veteran volunteers and veterans of the First Army Corps (Hancock's).

May 8.—All troops of the cavalry arm whose terms of service would expire prior to October 1.

May 9.—All officers and enlisted men whose terms would expire prior to May 31, inclusive.

May 17.—All organizations of white troops in the Army of the Potomac whose terms of service would expire prior to September 30, inclusive.

May 18.—All organizations of white troops in Maj.-Gen. Sherman's command, whose term of service would expire prior to September 30, inclusive.

May 29.—All light artillery in the Army of the Potomac, Ninth Army Corps, Army of Georgia, and Army of the Tennessee.

May 29.—All organizations of white troops whose terms of service would expire prior to September 30, inclusive, in armies and departments, except Departments of the East, New Mexico, Pacific, and Northern.

June 2.—All surplus light artillery; that only absolutely required by the necessities of the service in the respective armies and departments to be retained.

June 5.—All dismounted cavalry, all infantry in the Northern Department and Department of the East, and all cavalry in the Department of the East.

June 16.—All troops in the Department of the Pacific whose terms of service would expire prior to October 1.

June 17.—All enlisted men of the Veteran Reserve Corps who would have been entitled

to their discharge had they remained with their regiments.

June 28.—18,000 veterans (infantry) of the Army of the Potomac; 15,000 of the Army of the Tennessee (then consisting of the remaining regiments of the Army of Georgia and Army of the Tennessee); and 7,000 of the Middle Military Division.

June 30.—All surplus troops, except in the Department of the Gulf, Army of the Tennessee, Provisional Corps Army of the Potomac, and First Army Corps. Strength of commands, for all arms, to be reduced to the minimum necessary to meet the requirements of the service.

July 1.—All remaining veteran regiments of the Army of the Tennessee and Provisional Corps Army of the Potomac (that corps was the remnant of the Army of the Potomac).

July 6.—The remainder of the Army of the Tennessee.

July 7.—The remainder of the Provisional Corps Army of the Potomac.

July 21.—All cavalry in the Department of Virginia except two regiments, all in the Department of North Carolina except one regiment, and all in the Middle Department except one regiment.

August 1.—All white troops, infantry, cavalry, and artillery, in the Department of Texas, which, in the judgment of Maj.-Gen. Sheridan, could be dispensed with.

August 3.—The same order was extended to the Department of Louisiana.

August 14.—Additional infantry and heavy artillery (white) in military departments, as follows: Virginia, 5,000; North Carolina, 8,000; Washington, 8,000; Mississippi, 2,000; Kentucky, 5,000; Middle, 6,000.

August 21.—3,000 additional white troops in the Department of Arkansas.

September 8.—All surplus troops in the Department of Washington, so as to reduce that command to 6,000 officers and men of all arms.

September 8.—All organizations of colored troops which were enlisted in the Northern States.

October 9.—All the remaining forces (white) of the cavalry arm east of the Mississippi.

October 9.—All troops on the Pacific coast, as many as possible immediately; the remainder on the arrival of the last battalion of the 14th United States Infantry.

October 10.—All troops in New Mexico; one regiment immediately, the remainder on the arrival of certain regular troops.

In addition to the foregoing, and from time to time, as the services of the troops could be dispensed with, sixty-eight regiments, seven companies, and six battalions, were ordered mustered out.

The rapidity with which the work was executed will be apparent from the fact that to August 7, 640,806 troops had been mustered out; August 22, 719,388; September 14, 741,-

107; October 15, 783,205; November 15, 800,968.

The command of Maj.-Gen. Sherman (Army of the Tennessee and Army of Georgia), and the Army of the Potomac, were first to complete their musters-out entirely. Regiments commenced leaving Gen. Sherman's command, then numbering, present and absent, 116,183 officers and men, from the rendezvous near Washington, on the 29th of May, and on the 1st of August the last one of the regiments mustered out left Louisville, Ky., to which point the command (after the musters-out therefrom were partly completed) was transferred, and the armies composing it merged into one, called the Army of the Tennessee. The work of mustering out the troops was not continuous, it having been interrupted and delayed by the transfer of the two armies from Washington to Louisville, and their subsequent consolidation.

Regiments commenced leaving the Army of the Potomac (when numbering, including Ninth Corps, 162,851 officers and men, present and absent), from rendezvous near Washington, on the 29th of May, and about six weeks thereafter (July 19) the last regiment started for home. During the interval the work, like that from Gen. Sherman's command, was not continuous, it being interrupted and delayed by the movement of the Sixth Corps from Danville, Va., to Washington, and the consolidation, by orders of June 28th, of the remaining portion of the army into a provisional corps, numbering, present and absent, 22,699 officers and men.

Thus, for the two commands in question, and between the 29th of May and the 1st of August (two months), 279,084 officers and men, present and absent, were mustered out and placed *en route* to their homes. Including other armies and departments, the number was increased by August 7 (two months and seven days) to 640,806 officers and men.

From the foregoing it will be seen that the mass of the forces discharged were mustered out by September 14, or within two and a half months from the time the movements of troops homeward commenced. The average per month during that time was 296,442.

The soldiers of the Southern armies rapidly disappeared by returning to their homes. In all cases of prisoners of war the Federal Government furnished, gratuitously, transportation.

The military organization then adopted by the Government consisted of five grand divisions, which were subdivided into nineteen departments, as follows:

1. The Department of the East, Maj.-Gen. Joseph Hooker to command, to embrace the New England States, New York, and New Jersey. Headquarters at New York city.

2. The Middle Department, Maj.-General W. S. Hancock to command, to embrace the States of West Virginia, Maryland (excepting the counties of Montgomery, that part of Anne

Arundel lying south of the Annapolis and Elk Ridge Railroad, and excluding the city of Annapolis, Prince George's, Calvert, Charles, and St. Mary's, the county of Loudon, and the Shenandoah valley as far south as and including Rockingham County, in Virginia, the States of Delaware and Pennsylvania. Headquarters at Baltimore.

3. The Department of Washington, Maj.-Gen. C. C. Augur to command, to embrace the District of Columbia, the counties of Montgomery, that part of Anne Arundel lying south of the Annapolis and Elk Ridge Railroad, and including the city of Annapolis. Prince George's, Calvert, Charles, and St. Mary's, in Maryland, and Alexandria and Fairfax Counties in Virginia. Headquarters at Washington.

4. The Department of the Ohio, Maj.-Gen. E. O. C. Ord to command, to embrace the States of Ohio, Indiana, Illinois, Wisconsin, and Michigan. Headquarters at Detroit.

5. The Department of the Tennessee, Maj.-Gen. George Stoneman to command, to embrace the State of Tennessee. Headquarters at Knoxville.

6. The Department of Kentucky, Maj.-Gen. John M. Palmer to command, to embrace the State of Kentucky, and Jeffersonville and New Albany, in Indiana. Headquarters at Louisville.

7. The Department of the Missouri, Maj.-Gen. John Pope to command, to embrace the States of Minnesota, Iowa, Missouri, and Kansas, and the Territories of Colorado, Utah, Nebraska, Dakota, New Mexico, and Montana. Headquarters at St. Louis.

8. The Department of Virginia, Maj.-Gen. Alfred H. Terry to command, to embrace the State of Virginia, excepting Alexandria, Fairfax, and Loudon Counties, and the Shenandoah valley as far south as and including Rockingham County. Headquarters at Richmond.

9. The Department of North Carolina, Maj.-Gen. J. M. Schofield to command, to embrace the State of North Carolina. Headquarters at Raleigh.

10. The Department of South Carolina, Maj.-Gen. Daniel E. Sickles to command, to embrace the State of South Carolina. Headquarters at Charleston.

11. The Department of Georgia, Maj.-Gen. James B. Steedman to command, to embrace the State of Georgia. Headquarters at Augusta.

12. The Department of Florida, Maj.-Gen. John G. Foster to command, to embrace the State of Florida. Headquarters at Tallahassee.

13. The Department of Mississippi, Maj.-Gen. Thomas J. Wood to command, to embrace the State of Mississippi. Headquarters at Vicksburg.

14. The Department of Alabama, Maj.-Gen. C. R. Wood to command, to embrace the State of Alabama. Headquarters at Mobile.

15. The Department of Louisiana, Maj.-Gen.

E. R. S. Canby to command, to embrace the State of Louisiana. Headquarters at New Orleans.

16. The Department of Texas, Maj.-Gen. H. G. Wright to command, to embrace the State of Texas. Headquarters at Galveston.

17. The Department of Arkansas, Maj.-Gen. J. J. Reynolds to command, to embrace the State of Arkansas and the Indian Territory. Headquarters at Little Rock.

18. The Department of the Columbia, Brig.-Gen. F. Steele to command, to embrace the State of Oregon, and Territories of Washington and Idaho. Headquarters at Fort Vancouver.

19. The Department of California, Maj.-Gen. Irvin McDowell to command, to embrace the States of California and Nevada, and Territories of New Mexico and Arizona. Headquarters at San Francisco.

1. The military division of the Atlantic, Maj.-Gen. George G. Meade to command, to embrace the Department of the East, Middle Department, Department of Virginia, Department of North Carolina and Department of South Carolina. Headquarters at Philadelphia.

2. The military division of the Mississippi, Maj.-Gen. W. T. Sherman to command, to embrace the Department of the Ohio, Department of the Missouri, and Department of Arkansas. Headquarters at St. Louis.

3. The military division of the Gulf, Maj.-Gen. P. H. Sheridan to command, to embrace the Department of Louisiana, Department of Texas, and Department of Florida. Headquarters at New Orleans.

4. The military division of the Tennessee, Maj.-Gen. G. H. Thomas to command, to embrace the Department of the Tennessee, Department of Kentucky, Department of Georgia, Department of Mississippi, and Department of Alabama. Headquarters at Nashville.

5. The military division of the Pacific, Maj.-Gen. H. W. Halleck to command, to embrace the Department of the Columbia and the Department of California. Headquarters at San Francisco.

Some Indian hostilities existed on the plains and adjacent to the overland routes to the Pacific coast. This was a source of great annoyance and required the employment of many troops, and added considerably to the expenses of the military department. During the year several Indian councils were held, and large military expeditions were sent against the hostile tribes and bands.

On the following pages will be found a statement or list of battles and skirmishes of the war, in which the loss in killed, wounded, and prisoners was estimated to be not less than one hundred. Those skirmishes of quite small or trifling losses have not been included. The estimates were those most carefully given after the action occurred, except in more important battles, where the result on the Federal side is official.

Capture of Davis.	May 10.							90	
Surrender of Sam Jones in Florida.	May 10.							8,000	40
Surrender of Kirby Smith.	May 26.							20,000	150

* Beside 59,878 prisoners paroled.

As has been already said, the preceding statements are chiefly designed to show, in a tabular form, the more important engagements, with the date on which they occurred. The losses, when considered either comparatively or as that of either side, in such a vast number of actions, no one would at present assume accurately to state. An evidence of the difficulty in obtaining results of this kind is shown in a recent number of "Harper's Magazine," in which the accomplished editor thus estimates the losses of the seven days' battles before Richmond:

Of the Confederate commanders, Jackson, D. H. Hill, Longstreet, A. P. Hill, Holmes, and Pendleton, give their exact losses. The losses of Magruder and

Huger can be made up very closely from the reports of their brigade commanders. Barksdale says that "one-third of his brigade fell upon the field: it numbered about 2,400, which would make the loss 800." Cobb puts his loss in killed and wounded at "nearly 500." McLaws, 97 killed, 456 wounded. D. R. Jones, 103 killed, 708 wounded. Ransom, 69 killed, 354 wounded. Mahone, 63 killed, 216 wounded. Armistead, two regiments, estimated 320 killed and wounded. Wright, 55 killed, 243 wounded. In all, 8,984; of whom 656 were killed, and 8,328 wounded. Of the cavalry and reserve artillery we find mention of about 20 killed and 104 wounded. The missing in A. P. Hill's division are not given; the number was evidently small, probably about 100. In Magruder's command we find about 400 missing in about two-thirds of the brigades; we set down the whole at 600. From the foregoing data we have compiled the following table of killed, wounded, and missing:

ARMY OPERATIONS.

85

UNION.					CONFEDERATE.				
	Killed.	Wounded.	Missing.	Total.		Killed.	Wounded.	Missing.	Total.
McCall.....	258	1,240	1,581	3,074	Jackson.....	876	1,892	14	2,982

Engineers and Cavalry.....	19	63	118	199	Artillery and Cavalry.....	20	104		194
Total.....	1,583	7,709	5,958	15,249	Total.....	8,151	15,255	999	19,405

The following is a list of the officers of the War Department at the close of the year 1864; of the General Officers of the Regular Army in service subsequent to July, 1861; and of the Major and Brigadier-Generals of the Volunteer Army in service on January 1, 1865, showing also where and how such general officers were employed at that date. It should be stated that, since the close of the war, many of the brigadier-generals have been promoted.

DEPARTMENT OFFICERS.

Officers not thus * designated are graduates of the Military Academy.

EDWIN M. STANTON, of Pennsylvania, *Secretary of War.*
 PETER H. WATSON, 1st Assistant Secretary of War. JOHN POTTS, *Chief Clerk.*
 CHARLES A. DANA, 2d Assistant Secretary of War.
 HENRY W. HALLOCK, *Chief of Staff.*

Thomas A. Smyth	Army of Potomac.	Commanding 8d brigade 2d division 2d army corps.
Ferdinand Van Derveer	Hamilton, Ohio	Under orders to department of Cumberland.
Thomas C. Devin	In the field, Va.	Com'dg 2d brigade 1st cavalry division middle military division.
Alfred Gibbs	In the field, Va.	On duty in 1st cavalry division middle military division.
R. B. McKenzie	Army of Potomac.	Commanding 2d brigade 1st division 6th army corps.
R. B. Hays	In the field, Va.	Com'dg 1st brigade 1st inf. div., department of West Virginia.
James E. Slack	Memphis, Tenn.	Com'dg 2d brig. 2d div. reserve corps, mil. div. of W. Mississippi.
Thomas J. Lucas	Indianapolis, Ind.	On recruiting service.
E. J. Davis	Morganza, La.	Commanding cavalry brigade, department of Gulf.
Joseph Bailey	New Orleans, La.	Commanding cavalry division, department of Gulf.
George L. Ecal	In the field, Va.	Commanding 1st brigade 1st division 19th army corps.
Henry G. Thomas	In the field, Va.	Commanding 8d brigade 1st division 25th army corps.
Cyrus Hamlin	New Orleans, La.	Commanding 8d div. U. S. colored troops, department of Gulf.

RECAPITULATION.

HOW EMPLOYED.	Major Generals.	Brig. Generals.	Aggregate.
On command	45	200	245
Before Committee on Conduct of the War	1	1	2
Awaiting orders	8	12	20
Commissioner for exchange and Commissary General of prisoners	1	1	2
Members of courts-martial, military commissions, &c.	7	20	27
On duty, on account of sickness or wounds	1	14	15
On special duty	2	12	14
On leave of absence	1	2	2
Under trial	8	8

ASIA. The most important event in the history of Asia, during the year 1865, is the steady progress of the Russians in Central Asia, which resulted in the annexation of a large territory. By a circular letter to its Foreign Ministers, of December 3, 1864, the Russian Government explained to the foreign Governments the reasons for this extension of the frontiers of the empire. In February the newly conquered territory, together with a part of the former possessions in Central Asia, were erected into the new Russian province of Turkistan. In May the Khan of Khokand was defeated by the Russians and killed, and in June the important town of Taskkent was occupied by them. (See RUSSIA.)

In China, the Taepings, although not so formidable since the death of their chief leader as before, continued to harass the Imperial troops, and were, at the close of 1865, not completely subdued. The insurrection of the Mohammedan rebels in northwestern China, which had first broken out in 1862, as well as that of the Nien-fei ("northern rebels"), assumed larger dimensions, and at one time even the capital of the empire, Peking, was threatened.

The relations of China as well as of Japan to the powers of Europe and America, did not undergo any considerable change. Japan evidently adjusts itself to intercourse with foreigners, and prepares to secure many of the advantages of foreign civilization. At the close of the year the Mikado gave his consent to the opening of the two ports of Osacca and Hioga,

on January 1, 1866, to foreign trade. (See CHINA and JAPAN.)

The war of the British Government in India with Bhootan, continued until November, when it was concluded by a treaty of peace. Otherwise the peace of British India as well as that of the native countries and of the French possessions in Farther India, was not disturbed by any difficulties of importance. (See INDIA.)

A civil war in Afghanistan, headed by the brothers of the Ameer, ended in the defeat of the insurgents.

Among the signs of an advancing civilization throughout Asia is the steady increase of railroads, telegraphs, and steamboats. British India in this respect begins to rival the countries of Europe and America. In Asiatic Russia, the great enterprise of a telegraphic connection between America and Europe made uninterrupted progress toward completion. The Indo-European telegraph was finished in February, and messages passed from England to India in twenty-four hours. In Japan the first railroad was finished, to the great astonishment of the natives; and in Persia, the Shah granted the first concession for a railroad from Tiflis to Dzulfah. In China, the first steamer was built at Shanghai, and launched in October.

ASTRONOMICAL PHENOMENA AND PROGRESS. The compiler of a summary in the *Quarterly Journal of Science* remarks upon the extent to which Astronomy has ceased to be a science prosecuted by a distinct and exclusive set of methods. Thus, in addition to the aid for which it has long been dependent on optical principles and instruments, the science is now indebted for important contributions to the spectroscopy—to chemistry, which plays

* Acting Rear Admiral.

† Exprimanded and suspended for three years from May 1, 1864. Two years of his suspension was remitted by the President, December 27, 1864.

so large a part in the spectrum discoveries, besides determining the composition of meteorites, and leading to important deductions from both sources—to photography, as employed in delineating the solar and lunar surfaces, the positions of stars, &c.—and to electricity, which, besides its many incidental services, is coming into quite general use as a means of the automatic registering (at the moment) of transit observations. As the field of practical astronomy is thus continually enlarged and made to extend into those of its cognate sciences, it becomes more difficult—in fact, within the limits of an annual *résumé*, scarcely practicable—at once to present the progress of the science as a whole, and also to allow to each subordinate topic the distinct and full treatment that may be due to its individual importance. In addition to the points below considered, however, the reader will find others, astronomical proper, and related, included under the titles *Atmosphere*; *Mars*; *Observatories*, &c.

General View.—Among recently formed astronomical societies, is one in Germany, its location being at Heidelberg, and its existence dating from August, 1863. Though its more active membership will, of course, be found in the Germanic States, yet this society will include on its list savants of all countries. Its purpose appears to be to enter upon the fundamental questions of astronomical science, and to undertake those long and difficult problems which are usually too exacting for the time and facilities of the individual astronomer.

About the beginning of the year 1864, M. Leverrier, director of the Imperial Observatory at Paris, took the requisite steps for enlisting astronomers and the educated classes of the empire in the formation of a society, apparently to consist in a large and somewhat general membership, and designed for the cultivation of astronomical and meteorological—if not, generally, of physical—science. The association, the plan of which has been approved by the Emperor, is to be under the direction of M. Leverrier, and to have its central office in the Imperial Observatory. The moderate contributions required of the members are to be employed in developing the director's great meteorological enterprise, and in furnishing an outfit of implements to the observatories of the southern provinces. In April, 1865, the association had already expended some 2,500 livres in the general furtherance of scientific objects, besides assigning 1,000 francs to aid M. Cazin's inquiries into the dynamical theory of heat; 700 francs to aid those of M. Terquem, as to the vibrations of plates, rods, and cords; 500 francs for those of M. Gernez, on the rotatory power of quartz at high temperatures; and 500 also to MM. Gauguain and Diacon, to aid their researches in electricity and the spectrum analysis.

In the United States, the most important movement in the way of association for scientific ends has been the organization, in 1863, of

the recently constituted National Academy of Sciences. Of the field of operations of this Society, however, embracing, as it is intended to do, the mathematical and physical sciences generally, the subjects of astronomy will of course form but a part.

In the death of Captain James M. Gilliss, U. S. N., which occurred at Washington, February 9th, 1865, and in that of Professor George P. Bond, at Cambridge, on the 17th of the same month, astronomical science in the United States has suffered a very severe loss. Biographical notices will appear in the proper place in this volume.

The director of the Royal Observatory of Turin, and one of the most distinguished among astronomers and mathematicians of his time, Baron J. B. Plana, died at the city named, January 20th, 1864, in his eighty-third year. His greatest work was perhaps his "Theory of the Moon's Movements," 1832; but his labors were varied and extensive—the latest volume of Transactions of the Turin Academy containing no less than seven elaborate memoirs from his pen. Sir William Rowan Hamilton, late Astronomer Royal for Ireland, died on the 2d of September, 1865, at the age of sixty years.

The gold medal of the Royal Astronomical Society, London, was, in 1862, awarded to Mr. W. De la Rue, for his astronomical researches, and especially for his applications, in these, of photography; and in 1863, to Professor Argelander, for his survey of the northern heavens.

The gold medal of the Society was, in 1865, at the meeting of February 10th, awarded to Professor G. P. Bond, of the Harvard College Observatory. The President, Mr. W. De la Rue, accompanied his announcement of the award with a most flattering but well-deserved eulogy on the labors and achievements of Professor Bond in connection with astronomical science, instancing the evidences to be found in recently published volumes of the *Annals of the Astronomical Observatory of Harvard College*; his magnificent work on the great comet of 1858; the contributions made by him to the theory of planetary perturbations; his monographs on Saturn; the part he rendered in perfecting a plan for recording by the electric method the times of transit of stars across vertical lines on transparent mica, attached to the diaphragm of the spider-line micrometer; the photographing of the moon's surface, first successfully accomplished by him, with the aid of Messrs. Whipple & Black, of Boston; and an unfinished work upon the nebula of Orion. The distinguished astronomer, however, did not live to learn of the honors designed for him—his death having occurred February 17th, just one week after the date of the award.

At the public sitting of the French Academy, early in February, 1865, the Lalande medal, the highest astronomical prize in its gift, was awarded to Mr. Richard Carrington, of Redhill, for his observations upon and plates of the solar spots.

Measurements of Arcs of Parallel, and of Meridian.—Under the direction, during his lifetime, of F. G. W. Struve, and of Sir Henry James and others, the work of measuring the immense arc of the parallel running from Orsk, on the Ural River, to Valentia, on the western coast of Ireland, has now been for some years going forward. This arc embraces about 75° of longitude, thus forming more than one-fifth of an entire parallel. In carrying out these determinations of the true differences of longitudes, great aid is derived from the employment of the electric telegraph. Under the arrangements of Professor Argelander and M. Otto Struve for continuing this work, observations were made during the summer and fall of 1864, with a view to determine the exact differences of longitude of Greenwich with Bonn, with Nieuport, and with Haverford-West—these operations being directed by Colonel Forsch and Captain Zyliniski (of the Russian service), and Dr. Thiel (attached to the University of Bonn).

Another survey of an arc of parallel is also being carried on in India, this being commonly spoken of as the great Indian Arc, and the work as the Indian Trigonometrical Survey.

Dr. Otto Torrell reported, in the fall of 1863, the progress made during the summer of that year in the surveys preliminary to the measurement of an arc of the meridian at Spitzbergen. The proposed arc is $4\frac{1}{2}^\circ$ in length, extending from Ross Island, at the extreme north, to Hope Island, at the extreme south, of Spitzbergen. The surveys in 1863 extended over $1^\circ 50'$ of this distance, being chiefly directed to the selection of suitable stations, and of a favorable locality for the measurement of a base line: they were to be continued in the summer of 1864.

Parallax and Distance of the Sun, and of the Moon.—In the Memoirs of the Royal Astronomical Society, vol. 33, Mr. E. J. Stone has a paper on the "Determination of the Sun's Mean Equatorial Horizontal Parallax, from Declination Observations of Mars and Stars, made during the Opposition of 1862, at the Royal Observatory, Greenwich; the Royal Observatory, Cape of Good Hope; and the Government Observatory, Williamstown, Victoria." In this paper, presented May 13th, 1864, Mr. Stone's conclusion is, that the sun's mean horizontal parallax is, without doubt, already determined to the first decimal place, namely, as $8''.9$; while he thinks the value $8''.943$, has the greatest probability in its favor. Mr. Hansen, by calculations from lunar theory, has lately arrived at the value $8''.9159$; Dr. Winnecke, at that of $8''.964$.

Among the modes of estimating the sun's distance, however, independent of parallax, are those based on determinations of the velocity of light. Professor Phillips, in his address before the British Association, 1865, alludes to M. Foucault's wonderful achievement in determining the velocity of light in its movement

"through all the vast planetary space of millions and thousands of millions of miles, more exactly than had been inferred by astronomers from observations of the satellites of Jupiter," though the experimental proof requisite to this result had been condensed "into his own apartment," and "within a tract of thirty feet." M. Foucault's achievement is, indeed, a remarkable one, and his numerical result doubtless gives very closely, the velocity of light in the dense atmosphere at the earth's surface. A correspondent of the *Reader*, October 7th, 1865, calls attention, however, to the admitted fact that light, in passing through material media, moves faster as the medium is rarer; and he suggests the probability that the velocity of light in the inter-planetary spaces, where no material medium (at least of the ordinary sort) is supposed to exist, may be greater than it is in the denser portions of our atmosphere. He concludes that, taken alone, the result of M. Foucault's experiment cannot be considered a sufficient warrant for the deduction that the estimated distance of the earth must be materially reduced. Still, the tendency of late years to admit an increase in the value of the solar parallax coincides with the result of Foucault's experiment, in requiring a diminution in the previous estimates of the sun's distance; and it may be said that this is the conclusion to which, on a variety of grounds, the minds of astronomers are now tending.

Meantime, Mr. Breen has corrected Adams' constant of the lunar parallax, by $0''.38$, increasing it to $8422''.70$. The constant so increased is adopted in the *Nautical Almanac* for 1867. Its acceptance implies a diminution of the moon's mean distance from the earth equal to about 26 miles.

Preparation for Observing the Transit of Venus, 1882.—Whatever values for the solar parallax and the sun's distance may be finally arrived at, it has become admitted that, as deduced from observations on the two transits of Venus last occurring—those of the years 1761 and 1769—the former was too small, and the latter, accordingly, too great. Authorities state that the two transits of Venus across the sun's disc next to occur, will take place in the years 1874 and 1882; but, having met with no account of preparations for observing that of 1874, the writer infers that this transit is not expected to be one favorable for observation. The importance, then, which must at this time attach to the observation of the more favorable one, that of 1882, may be understood from what has been stated in the preceding section.

A proposal for a new expedition toward the North Pole having been, in the early part of 1865, discussed before the Royal Geographical Society, London, the Astronomer Royal addressed to its President, Sir R. I. Murchison, a letter in which he favors, instead, a South Polar expedition. This, he argues, while it might afford information on a point of vital importance to astronomy—the question whether the proper

stations can be found in the antarctic regions for observation of the transit—could doubtless be rendered at the same time not less profitable than an arctic exploration, by combining with this main purpose, those of observations in connection with geography, geology, hydrography, magnetism, meteorology, natural history, and other subjects for which the localities may be suitable.

Prof. Airy had previously discussed, in an elaborate paper, the circumstances of the coming transit, and especially in reference to the selection of stations for observation, his paper being published in the "Monthly Notices" (R. A. S.). In explanation, it may be stated, that the method of determining the sun's distance by means of the transit, depends on a comparison of the lengths of time occupied in the passage of the planet across the solar disc, as witnessed from different points on the earth's surface; and the result is more nearly correct in proportion as the differences in the apparent duration of the transit are made to approach nearer to the maximum of possible difference (this geometrical maximum being expressed by 2.00). The transit of 1882 will occur on the 6th of December; its duration will be *nearly six hours*, namely, from about 2 hours to about 8 hours, Greenwich mean solar time. Now, the instant and place (true perhaps to a second of time and arc) at which the planet will enter and leave the solar disc, are known; and, of course, also, exactly how the earth will be hanging in space at the time—how its axis will be situated in reference to the plane of the ecliptic, and to the line of the apparent path of the planet across the solar disc. Suppose a plane cutting the centre of the earth, and tangent to the sun's limb at the point of the planet's ingress upon the disc: then, of two sets of observers at points on the two sides of the earth remote from this plane, one set will (as its distance approaches a semi-diameter of the earth) see the ingress accelerated, while the other set will, in like proportion, see it retarded. Suppose another plane, cutting the centre of the earth and the point of the planet's egress from the disc: in like manner, observers on the two sides of the earth remote from this plane will respectively see the egress retarded and accelerated. The *desiderata*, then, are suitable stations for observing, at both or all of which the sun shall be visible at 2 hours and at 8 hours Greenwich mean time; while at one set of these, the ingress shall be accelerated and the egress retarded, and at the other the ingress shall be retarded, and the egress accelerated—thus securing the greatest practicable difference of apparent durations of the transit.

Prof. Airy finds that the latter of these two conditions is well answered by stations on the seaboard of the United States (those toward the Gulf of Mexico having the advantage of a higher sun at egress), and at Bermuda. At these places the duration of transit is shortest; along the Atlantic seaboard, the mean retardation of ingress is 0.95, the mean acceleration of

egress 0.83 nearly: total shortening, 1.78 (possible maximum, 2.00). At Bermuda, the parallactic values are, for ingress, 0.9, and for egress 0.9: total shortening, 1.80.

For the parts of the earth, however, at which the duration of transit will be longest, the choice of stations is more limited and the practical difficulties are greater. The station must be on the antarctic continent, and at some point at which the brief descent (in a practicable latitude) of the sun at that season below the horizon shall occur and terminate between the hours of 2 and 8 Greenwich mean time. As the sun will be low at best, it is further desirable that the hour angles of these two times shall be as nearly equal as possible. The requirements can only be satisfied by a location in about 65° S. lat. and about 105° E. long.; and therefore somewhere between Sabrina Land and Repulse Bay. The value for acceleration of ingress would here be 0.95, that for retardation of egress about 0.66: total lengthening, 1.61. Combining this with observations at Bermuda, the whole difference of durations would be 3.41 (geometrical maximum, 4.00). Supposing the latitude 65° S., and the sun's south polar distance 67° 27', the sun's altitude at each observation would be 4° 6'; which, if the sky were not liable to banks of haze near the horizon, and the weather should prove favorable, would suffice. A point on the antarctic continent nearly opposite that now considered, would show the sun at both ingress and egress; but the total lengthening would be only about 0.6, against 1.61 near Sabrina Land.

In accordance with these conclusions, Mr. Airy, in the letter before referred to, urges an early exploration of the region between this coast and Repulse Bay; and he then continues:

"The points to be ascertained are—(1) whether the coast is accessible on December 6th; (2) whether a latitude of 65° can be reached; (3) whether the sun can usually be seen well on December 6th at three hours on each side of the lower meridian. * * * Should the answer to the first or third of these questions be negative, then it would be proper to examine other portions of the South Continent, say in longitude not very different from 5^h [75°] West, but with no particular restriction, except that of gaining the highest possible South latitude. And the only point for inquiry would be, how well the sun can usually be seen on December 6th, at 2^h and 8^h Greenwich mean solar time."

Asteroids.—Mr. Pogson, of Madras, announced the discovery, May 3d, 1864, of a supposed new asteroid, and to which he assigned the name and number, Sappho (80). T. Oppolzer, in a letter to Mr. Airy, asserted, from comparison of the elements of the two, the identity of this planet with M. D'Arrest's, known as Freya (76). Mr. Pogson, in a later note, admitted this identity, remarking that the name Sappho is thus at liberty for future use. Astronomers seem not yet to have changed the

numbering of the subsequent discoveries to correspond with this conclusion. Evidently, however, not to speak of this asteroid (80), all the numbers now assigned must be considered as subject to alteration, so long as there remains a doubt in regard to (75) and (77); unless, indeed, these numbers shall be indefinitely left blank.

M. Tempel, of Marseilles, discovered, September 30th, 1864, a new planet having the brightness of a star of the 10th [one account says of the 11-12th] magnitude, and to which he assigned the name and number, Terpsichore (81). Dr. Luther, of Bilk, November 27th, 1864, detected another asteroid, Alcmena (82). At Naples, April 26th, 1865, M. de Gasparis discovered a new planet, which, in commemoration of Dante and of the sixth centennial return in this year of his natal day, he designated Beatrix, the number being considered (83). August 26th, 1865, Dr. Luther added yet another to the list of known minor planets: to this, which is of a brightness corresponding to the tenth magnitude, he has assigned the designation of Clio (84).

Thus, the list of new-found asteroids for 1864, and to August, 1865, must for the present stand as follows:

1864.	(80)	[Sappho?]by Mr. Pogson.
"	(81)	Terpsichoreby M. Tempel.
"	(82)	Alcmenaby Dr. Luther.
1865.	(83)	Beatrixby M. de Gasparis.
"	(84)	Clioby Dr. Luther.

Humboldt had called attention to some remarkable differences between the planets lying without and those within the "asteroid planet," or asteroid zone. The superior planets are large, are of comparatively low density, rotate in somewhere near 10 hours, are much flattened at their poles, and are admitted to have 21 satellites; while the inferior planets are smaller, are more dense, rotate in periods of near 24 hours, are less flattened, and are as yet known to have but one moon—our own satellite. Prof. Pierce has shown how a true planetary ring of cosmical matter could be sustained for a long period just within the orbit of Jupiter. Now, Mr. D. Trowbridge (*Amer. Jour. of Science*, 1864-'65) concludes that an influence of the same kind would sustain rings successively farther and farther in, to the Mercurial ring; so that each of them in succession would be longer, than were the superior planets severally, in aggregating into a planetary body. And this circumstance, he thinks, suffices to explain the differences of the inferior from the superior planets, above indicated.

Again, dividing 360° by 80, the number of the planetoids known early in 1864, we obtain for each an average space of $4\frac{1}{2}^\circ$ only of the circle; so that already we have approximately a ring of these bodies. But it is not to be supposed that the end of these discoveries is reached; and it is probable that much the larger proportion of their entire number are objects too small for detection by our best telescopes. The most rational theory of meteoric

stones is that they are small asteroids. Some of the thousands of these bodies, moving in eccentric orbits, and subject to extraordinary perturbations, may become satellites to some of the large planets, and finally fall into them as aëroliths. It is curious that the orbits of some of the known asteroids intersect. The mean depth in space, measured on a radius from the sun, of the whole zone of the asteroids, lies, so far as yet determined, between the limits of the orbit of Feronia, 2.145 (times the earth's mean distance from the sun), and Maximiliana, 3.452 (times the earth's mean distance)—a breadth, therefore, of 1.807 (times the mean radius of the earth's orbit).

M. H. Faye, whose view is also that of a connection of the asteroids with meteoric bodies, calls attention to the confirmatory circumstance that the successive discoveries of asteroids have proceeded steadily to bodies of less and less size: while those found in the beginning of the century rank among stars of the 7-8th magnitude, some of the more recently found do not exceed the 12-13th magnitude. He is led to infer also that other rings of asteroidal bodies can exist in other regions of the solar system—a supposition already familiar to physicists.

Jupiter.—Upon this planet, spots of definite shape and place are traceable in the dark spaces between the bright belts; and Prof. Phillips implies, from the analogy of the former appearances with some which characterize the surface of Mars, that upon Jupiter, as has been inferred in the case of Mars, these permanent spots may indicate features—say outlines of land and water—on the planet's surface. The *belts*, on the contrary, change in extent, outline, and number, being constant only in their direction—that parallel to the planet's rotation—and in the color, which is that of cloud reddened by morning or evening sunshine, and not equally so in every part. (*See MARS.*)

Saturn.—Mr. Proctor, in his work entitled "Saturn and its System," maintains in regard to the rings the hypothesis first advanced by Cassini, to the effect that the perfect ring form is an appearance only, and is due to the flight of "disconnected satellites so small and so closely packed that, at the immense distances to which Saturn is removed, they seem to form a continuous mass." It may at the least be said, that the most recent views in cosmical philosophy rather support than contradict this theory.

Satellites.—Mr. Lassell, temporarily residing at Malta, sent thence in 1864, to the Royal Astronomical Society, letters giving a *résumé* of his observations at that place. He finds but *four* satellites for the planet Uranus, and but *one* for Neptune; though he suggests that another and very distant satellite of the latter planet may also exist.

One of Mr. Lassell's communications is accompanied with a table, calculated by Mr. Marth, giving the long-desired ephemeris of the five inner satellites of Saturn. Of these satellites, Tethys appears to be, by its brightness and the

position of its orbit, the most suitable for observation.

The Planetary System; Questions relating to its Origin, and its probable Stability.—In an article entitled "The Density, Rotation, and Relative Age of the Planets" (*Amer. Jour. of Science*, 2d series, vol. xxxvii.—date of May, 1864), Prof. G. Hinrichs, of the Iowa State University, examines the doctrine of the "Stability of the Solar System." This doctrine he characterizes as a hypothesis merely. Admitting the existence of an ethereal medium filling space, he proceeds to examine the places and characteristics of the planetary bodies; and is led to the conclusion that a displacement of their orbits, such as would be the effect of the resistance of the supposed medium, has occurred and will continue to go on, the tendency being to the ultimate extinction of the system. He remarks that "the absence of positive signs of resistance in the observed motion of the planets, does not prove its non-existence; for if the earth approaches the sun by 10 feet every year, this resistance could not be said to be nothing—yet, assuming Kepler's third law as applying to the same planet in different distances, we easily find that the year would be shortened only *one second in a thousand years*, by this resistance!"

The author endeavors to show that, as in the geological examination of terrestrial strata, so we can determine the relative ages of the *celestial strata*—the planets and their moons—infering this, it would appear, from the comparative amounts of deviation or dislocation exhibited in their present actual orbits, from a certain regular or mathematical order (such as that expressed in the law of Bode or Titius), which it is assumed should characterize their intervals. He argues that the actual distances of the planets successively from the sun, show a higher age for the exterior over the interior planets, in about the ratio of three to one; that, as marks of increasing age, it will be found that the nearest satellites have approached their primaries; that the entire system of orbits becomes gradually closer; and that the regularity and symmetry of distances disappears more and more. Among the author's conclusions are, that the satellites of Jupiter, not less than the primary planets, exemplify the law that relative age increases with distance from the central body; that in an increasing irregularity, as should be true, the lunar world of Saturn shows as older than that of Jupiter, and that of Uranus as still older; that the views of the planetary ages arrived at are in harmony with the nebular hypothesis, and are further confirmed by a consideration of the densities of the planets; while the hypothesis just named finds support also in the law of their rotation. Finally, he supposes that the lost transitory force of the planetary bodies may be converted into magnetism.

In the 39th volume of the Journal last quoted (dates of January and May, 1865), Prof. Hin-

richs has an article entitled "Introduction to the Mathematical Principles of the Nebular Theory, or Planetology." In this he discusses at length, and, as in the former, from both physical and mathematical considerations, the grand hypothesis—the original conception of which is credited alike to Kant and Laplace—which affirms the origin of the solar system in a diffused or nebulous matter primarily filling its space, this matter having from the first or becoming affected with a movement of rotation, and its subsequent behavior being such as must result through the agency of various attractions and of heat. In the course of this discussion, the author claims to have established what is substantially a new law of the planetary and lunar distances—while he also admits its similarity to the law of Titius, and speaks of it as comprehending and correcting the latter—namely: that "the intervals between the abandonment of the different orbs of the same system are equal;" or, in other words, that the planetary distances correspond to equal intervals of time. He finds in the investigation now considered a general confirmation of the views of the preceding paper, and supposes that, of four successive cosmical days or ages (the characters of which he traces), the *fourth* corresponds with the present. With some other physicists, he anticipates a period when all the planetary bodies of our system will have fallen into the sun; and when the aggregated mass will remain as a mere "cosmic fossil," but in itself as susceptible of instructive investigation as is some fossil shell in the hands of the geologist of our time!

In the 38th volume of the same Journal (July, 1864), Prof. D. Kirkwood, of the Indiana State University, has a paper "On Certain Harmonies of the Solar System," in which he treats of the rotations of the planets, their distances, &c., and the mean distances of the periodic comets. He argues that, granting an ether, having the properties of a material fluid, it must undergo condensation about the sun and other large bodies; and that, either from its existing in the primitive solar spheroid, or—rejecting the nebular theory—from the gradually extending influence of the solar and planetary motions, the ether itself must have acquired a movement of rotation about the sun in the same direction with that of the planets. Even admitting, then, the supposed ether—though there are physicists who doubt both its existence and the necessity for any such medium—still, its resistance to bodies moving in orbits of small eccentricity and in the direction of the sun's rotation, must be considered an infinitesimal quantity. Another and more brief paper by the same writer, on the planetary distances, appears in the Journal quoted, for January, 1865.

Mr. D. Trowbridge, in the course of a long article upon the "Nebular Hypothesis" (*Amer. Jour. of Science*, November, 1864, and January, 1865), coincides in the conclusion of Prof.

Kirkwood, to the effect that, if an ethereal medium exists, it should have acquired a rotatory movement in the general direction of that of the planets.

Mr. Trowbridge also deduces, from the principle that the *invariable plane* of the solar system must be the invariable plane of the primitive solar spheroid, the conclusion that the first planetary ring abandoned must have been situated nearly in this plane, and hence, that the outermost planet of the solar system should move in an orbit whose inclination to the ecliptic is nearly the same as that of the principal plane of the solar system. Now, by an extremely exact determination, M. Lespiault finds the inclination of the invariable plane to be $1^{\circ} 41'$, while the inclination of the orbit of Neptune—the outermost planet yet known—is $1^{\circ} 46' 59''$,—a correspondence within $6'$ of a degree, and one that, when we reflect on the necessarily disturbing effect through immense ages of the planetary perturbations, is quite as near as could be anticipated.

Comets.—The most recent enumeration met with of the comets of 1863, reverses the order of those previously given as IV and V of that year, that seen by M. Tempel, November 4th, being now reckoned as Comet IV, and that of M. B  cker as Comet V, of the year in question. The same account credits the discovery of Comet VI of 1863 to M. Respighi—time, December 28th.

The comet at first designated I, of 1864, was discovered by M. Tempel, July 5th; its appearance was that of a diffused nebulosity, $3\text{--}4'$ in diameter: perihelion, September 7.05, *Marseilles* mean time; movement retrograde. August 5th, this comet was seen at Charleston, S. C., by Acting-Master Tillinghast of the iron-clad *Catskill*, it being then visible to the naked eye. Comet II—light very faint; July 29d, by Donati, at Florence: its perihelion, October 11.088, *Berlin* mean time; motion retrograde. Comet III—also very faint; September 9th, by Donati. According to its calculated elements, this comet passed its perihelion before those heretofore known as I and II of the same year. Comet IV—December 11th, by M. B  cker, at Nauen, near *Berlin*. Comet V—December 30th, by M. Bruhns, at *Leipzig*: perihelion, December 27.77; motion retrograde. All these comets may be said to have been telescopic.

Comet I, 1865, was of large size, visible in the Southern hemisphere, in the months of January and February. As seen at *Rio Janeiro*, January 24th, the tail was 26° in length. M. Moesta computed its elements, and, February 20th, observed a second tail, very faint, branching out to the north from the principal one. Perihelion, January 14.3367.

Celestial Atlas.—M. Ch. Dien, of France, has lately published a celestial atlas, in 20 maps, the projection employed corresponding to the development of a sphere of 65 centimetres in diameter. This atlas contains more

than 100,000 stars and nebulae, and is believed to surpass in accuracy of detail all its predecessors.

Survey of the Southern Celestial Hemisphere.—An arrangement has been entered into by which the directors of three Southern observatories, Mr. Pogson at *Madras*, Mr. Ellery at *Melbourne*, and Sir T. Maclear at the *Cape*, divide this work among them; the boundaries adopted for five successive zones of the celestial hemisphere being, *the equator*, 20° , 40° , 60° , 80° —the last zone of course stretching to the pole. The previous catalogues of Taylor, Weisse, and Oeltzen, of stars in southern latitudes—the two last named embracing from the equator to 31° S.,—are, by allowing for the precession, to be reduced to the epoch 1875.

Sirius.—Much interest is at present felt in observations upon this star, especially in view of the question whether Mr. Clark's supposed "companion" star (1862) is really such—whether *Sirius* is indeed one of a multiple group, or again, whether the telescope has actually detected one or more planets attendant on this brilliant orb. Mr. T. H. Safford, of *Cambridge Observatory*, 1863, infers from the apparent participation of the less brilliant star in the proper motion of *Sirius* itself, that the former must be physically connected with the latter; and while concluding that in this companion star, probably, the body disturbing the movements of *Sirius* has been actually found, he urges the continuance for several years of observations and measurements with a view to determine these questions.

M. Otto Struve, in a communication, May 13, 1864, states the result of his observations thus far, on the changes of distance and angle of position of the small star in reference to the large one, to be to the effect that the juxtaposition of the two stars is more probably accidental; though he does not regard this view as being yet finally established.

Meanwhile, M. Goldschmidt has recently asserted that, with an object-glass of little more than four inches aperture, he has detected not only Mr. Clark's companion star but five additional stars which he judges to possess a like relation to *Sirius*. Secchi, at *Rome*, later detected along with the former also several contiguous luminous points; but he raises the question whether these may not be illusions—such as, possibly, might arise from something in the action of the instrument itself on the light. The question of the possibility of detecting planetary systems about some of the fixed stars, first raised by Sir J. Herschel many years ago, is one of intense interest; but no conclusion in the case can as yet be drawn from the observations above mentioned.

Parallax of Minute Stars.—The supposition that the most conspicuous fixed stars were also the nearest, or, in other words, that in intrinsic magnitude and brightness the stellar bodies are nearly alike, and their apparent differences of magnitude really the effect of differences of dis-

tance—a supposition for some time questioned by certain physical explorers—appears to be in fair way of receiving an answer in the negative. M. Krüger, it appears, has been employing the excellent heliometer of Bonn upon two stars, one of the 8.9th, and the other of the 9th magnitude, in which Argelander had pointed out a large amount of proper motion—not less, in the latter case, than $1''.2$ annually. Thirty-six comparisons of the former with two other suitably placed stars, yielded a parallax of $0''.260$ —probable error, $0''.020$; and forty-five comparisons of the latter in like manner, a parallax of $0''.247$ —probable error, $0''.021$. These results, if confirmed by future measures, bring those inconspicuous objects actually nearer to us than Polaris, Arcturus, or even Sirius; and a fact of this sort must suggest very remarkable speculations as to the probable structure of the universe.

Reference may here be made to Mr. J. Wharton's article (*Amer. Jour. of Science*, September, 1865), entitled, "Speculations upon a possible Method of determining the Distance of certain variably colored Stars," this method depending on an assumed relation of successive colors of the same star to changes in its place, from a perigee to an apogee.

Herschel's Catalogue of Nebulae and Clusters of Stars.—In the year 1864 was published, as the first part of the 154th volume of the "Philosophical Transactions of the Royal Society," a catalogue of nebulae and clusters of stars, by Sir J. F. W. Herschel. This catalogue embraces not less than 5,079 objects, arranged in tabular form, with the right ascension and north polar distance for January 0, 1860, and the annual precession in right ascension and north polar distance for 1880, besides ample references and a general description. Of all those objects much the larger number bear the initials of the Herschels, father and son, having been discovered, computed, and catalogued by one or the other of these distinguished astronomers. This publication is opportune, in view of the circumstance that if the University of Melbourne, Australia, secures a reflector of the highest power, one of its principal uses will be the examination and exact delineation of the numerous and wonderful objects of this class presented in the southern hemisphere. The present work includes all the now known clusters and nebulae, north and south, so arranged that the observer can at once turn his instrument directly on each, and can tell if he encounters any new object of either class.

Nebulae.—The subject of variability of nebulae received notice in the volumes of this CYCLOPÆDIA for 1862-'63; and certain new questions which the singular phenomena presented by some of these bodies had raised in the minds of astronomers, were there indicated. The results now to be chronicled are of a more definite and (in some respects) also of a more remarkable character.

Mr. F. Abbott presented to the Royal Astronomical Society, November 13, 1868, a

paper in relation to the variable star, γ Argus, and the surrounding nebula, the latter of which has been declared the largest and finest in the southern hemisphere. As the earliest instance of ascertained variation in the appearance of a nebula, he cites the fact of the change detected by Sir William Herschel, 1783–1811, in that surrounding θ Orionis, which Huyghens had delineated about the year 1656. Recently, besides M. D'Arrest, many other astronomers, including Bond, Struve, Bouillard, and Pogson, have attested the fact of such changes.

Sir J. Herschel having, when at the Cape in 1838, carefully examined γ Argus with an 18-inch reflector, found in its aspect at the time no sign of a resolution into stellar masses; but he suggests that in extensive nebulae subordinate centres of attraction may become established, and that the whole mass may in time become transformed into a number of discrete bodies, assuming ultimately the condition of a cluster of stars. Mr. Abbott, comparing the Cape description with the appearances detected in present observations (1863)—and especially in view of the fact that the latter are seen by aid of a power no higher than that of a 5-foot achromatic—concludes that the condition which Herschel had suggested as possible is, in the nebula under consideration, already in part carried out. The delineation of 1838 shows within the outlines of this nebula a vacant space somewhat in form of a dumb-bell, being compressed at the middle, but at the ends surrounded by the nebular expansion; while in the most dense part of the latter was then situated the star, γ Argus. The later observations above referred to show the open space in "the form of a crooked billet, wide in the centre and open at both ends, with γ Argus situated within the open space," and here surrounded with what appeared as stars, numerous and brilliant, some of them blue, and others ruddy in color. The apparent change of place of the star being manifestly not a real change in right ascension, the dense portion of the nebula, toward the east, must itself have receded, leaving the star without its border, while the ends of the vacant space also became open. Further, while in 1838 the star γ appeared of the first magnitude, it showed in 1863 only the sixth.

In a later paper of Mr. Abbott, before the same Society, he speaks of the "changes that are constantly taking place in the surrounding nebula of γ Argus," and he states that every new observation he makes convinces him the more that the whole nebula is breaking up into stars [Mr. Huggins, see below, might say, the appearance of stars]. The form of the open space is now different again from what it was in 1863; and the stars surrounding that known as γ present decided colors—blue, green, and red, the two former predominating—so that the telescope now shows " γ standing out sharp and clear amidst a large field full of richly-colored gems, with only a very small patch of nebulous matter."

The resolution some years since of certain nebulae, by means of telescopes of high power, into what appeared to be congeries of stars, gave rise for a time to the anticipation that all nebulae might in fact be so resolvable. Indeed, the opinion came to be expressed by some that nebulae were but immensely distant systems of suns, to which our own stellar system, with its supposed rim in the galaxy, was comparable. Now, however, it appears that the conclusions to which the telescope unaided was leading, are to be corrected by the revelations of the spectroscope: the *mathematics* of the rays, that were leading the scientific judgment astray, are to be checked by the disclosures of (what we may call) their *chemistry*. (See SPECTRUM OBSERVATIONS.) True, a resolution of some nebulae, even into actual stars, would not have proved all nebulae to possess the like constitution; and so, now, the proof by the spectroscope, in one or more instances of resolution, that the apparent stars so obtained are not real stars, does not at once establish the conclusion that no nebulae whatever are in reality star-clusters.

Messrs. Huggins and Miller having recently (1864) examined with the spectroscope the light of several nebulae, including one or more which some astronomers regarded as having been shown to be star-clusters, found that their light did not give the continuous spectrum indicative of an origin in incandescent solid or liquid matter, but a gas spectrum only, and in most cases consisting of three bright lines or bands, the principal part of the space of an ordinary spectrum being dark; while, in some instances, the third line could not be seen, and in one at least, that of the "dumb-bell" nebula in Vulpecula, only the brightest of the three lines—agreeing in position with the brightest line of *nitrogen*—was detected. It thus became desirable, as a conclusive test, to analyze the light of some nebula which was supposed to have been with certainty resolved into stars. A highly suitable instance offered itself in the great nebula of the "sword-handle" of Orion, the brighter portions of which, near the trapezium, were held, by Lord Rosse, Prof. Bond, Herschel, and others, to be distinctly separated under a powerful telescope into stars. Analyzing, now, the light from the brightest part of this nebula, near the trapezium, Mr. Huggins found it to present only the three bright lines before met with, indicating a gaseous constitution of the supposed clustering stars of this portion. On the other hand, each of the four bright stars forming the trapezium gave a continuous spectrum; while none of these gave dark absorption lines in the positions corresponding to the bright lines of the nebular spectrum, and in three of the four cases the spectrum was brighter at the position of those lines than were the nebular lines by themselves. Finally, by successive observations of its different portions, it was found that the whole of this great nebula, so far as it lies within the power of an 8-inch achromatic, emits

light identical in character, the light from one part differing from that from another in intensity only.

The real constitution, then, of this nebula, alike in its supposedly "resolved" and in its irresolvable portions, must be the same. Hence, again, the separation of part of a nebula into what appear to be stars, does not of itself prove that the bright points so obtained are *true stars*. On the contrary, these star-like points must now be regarded as being, at least in some nebulae, themselves merely gaseous bodies—denser aggregations, it would appear, of the gaseous matter of which such nebulae are at large composed; and the question has been raised whether it may not be by the continual motion of these denser masses that the apparent permanence of the general form of nebulae is maintained.

Admitting, now, the validity of the inferences just indicated, it is no longer necessary to suppose the nebulae in reference to which such conclusions hold, to be situated at so enormous distances from our system as had of late come to be believed. Some of the nebulae may be much nearer to us than has been imagined; and with this supposition the fact of changes in form in some of them (above alluded to) is not at variance, if indeed the latter does not lend to the former direct confirmation. It now becomes desirable, accordingly, to examine as to whether a *proper motion* may not be detected in some of these bodies.

In another point of view, if the nebulous expansions in the heavens be, in any cases, the visible material of stellar systems, forming or to be formed, their spectrum would in such cases be expected to give a variety of lines and groups, showing the existence of a variety of chemical elements. The three bright lines obtained by Mr. Huggins in analyzing the light of nebulae, and which have been supposed to indicate *nitrogen*, *hydrogen*, and a third substance at present unknown, could by possibility be characteristic of matter in its most primary forms. At least, a progressive formation of some sort is suggested by the presence in some nebulae of more condensed portions, and even of a nucleus; and nebulae which give a continuous spectrum, and yet show little indication of resolvability, such as the great nebula in Andromeda, may still be gaseous, and may by loss of heat or by other forces have become crowded with portions of matter in a more condensed and opaque condition.

Astronomical Works and Memoirs.—In addition to those works and papers already mentioned in this article, and in others in this volume appertaining to astronomical subjects, may here be named the following: *A Treatise on Astronomy*, by Prof. Elias Loomis, of Yale College, 338 pp., 8vo, New York, 1865; *Astronomical and Meteorological Observations made at the U. S. Naval Observatory during the Year 1862*, by Capt. J. M. Gilliss, U. S. N., Superintendent, 700 pp., 4to, Washington, 1863;

Thoughts on the Influence of Ether in the Solar System: Its Relations to the Zodiacal Light, Comets, the Seasons, and Periodical Shooting Stars, by Alexander Wilcocks, M. D., published in the Transactions of the American Philosophical Society, vol. xiii., Part I., having been read before the Society named, May 20, 1864; a report *On the Right Ascension of the Pole Star as Determined from Observation*, by Mr. T. H. Safford, Assistant at the Observatory of Harvard College; and, as among papers having an astronomical bearing and read at the meetings of the National Academy of Sciences—in January, 1864—one by Prof. B. A. Gould, on the *Reduction of the Observations of Fixed Stars, made by J. J. Lepaute D'Agelet, 1788-'85, to the Equinox of 1800*; one by Prof. B. Pierce, on the *Saturnian System*; and one by Prof. S. Alexander, on *Observations of the Planet Venus near the Times of her Inferior Conjunction, September 28, 1863, and subsequently*; and also—in January, 1865—one by Prof. Pierce, on the *Tables of the Moon*.

ATMOSPHERE. It is no longer a new thought that the advance of scientific knowledge shows continually more and more how the subject-matters of the various sciences connect intimately one with another, and how the investigation of physical problems of apparently the most unlike character so often leads their explorers to a common ground and compels them to appeal to the same class of facts. Thus, the connection of auroras with magnetic phenomena of the earth's surface has come to be well established; and it is stated that observations of M. Quetelet indicate a connection also between the former and the so-called shooting stars. But further, both the phenomena of meteors and of auroras are now likely to be appealed to for the decision of such questions as those of the actual extent of an atmosphere above the earth, the constitution of its uppermost or remotest portions, and the possible existence of a diffused nebular or cosinical matter in space, beyond the limits of all the planetary atmospheres.

Auroras.—For some opinions respecting the height of auroras, &c., with an incidental notice of a pulsating or flaming aurora, see this subject in the volume for 1862. A few facts only under the specific head given, will here receive mention. An aurora of great brilliancy—notwithstanding the strong light of the moon, then nearly full—was witnessed at New Haven, on the night of August 24-3d, 1865 (*American Jour. of Science*, September). At 1^h 45^m A. M., on the 3d, the auroral lights formed a very extensive sheet; and in this, from about 18° above the horizon, the streamers showed the waving or "flaming" character—successive flashes of light quickly following each other, with interrupted courses, up toward the corona, and their angular velocity being judged to be about 90° a second. The streamers had a lateral motion in the direction the reverse of that which is most usual; namely, from west to east. The observer

whose account we quote had many years previously witnessed a bright aurora at a very early morning hour, and had observed that the upper segments of the streamers presently became of a vivid rosy hue, which extended down to about the same altitude in all. He suspected this to be the effect of sunlight striking the tops of the streamers at a height of several hundred miles above the earth's surface. Now, the aurora of August 3d, as seen at an early morning hour near and above the constellation Orion, presented the like phenomenon. The streamers here situated, which at 3^h 30^m were of a yellowish white, became at 3^h 40^m of a more intense yellow at the top, with a speedy progress downward; and this was shortly followed, in succession and in like manner, by a more glistening yellow, and then a clear dilute red or rosy color. The observations at the time, though not very accurate, would indicate about 50 miles as the height of the group now referred to. The writer further suggests that the abrupt edge or termination below, noticed in so many auroras, may perhaps indicate the "definite upper boundary of the atmosphere proper," at the transition from this lower to some secondary atmosphere, or to ethereal space.

In an article entitled "The determination of the height of Auroral Arches, from observations at one place" (*Amer. Jour. of Science*, May, 1865), Prof. H. A. Newton concludes that observed facts relative to auroras, and especially the constancy of the general form of the arch at different times and places, and its cutting the horizon at points less than 180° from each other, support the hypothesis of Hansteen, that the auroral arch is a real ring, which in its normal form is parallel to the earth's surface, and is symmetrically placed about the magnetic pole. He also concludes that different observers do not see different arches at the same time, but that the curve of the arch has a definite place in the atmosphere. He gives a table of the altitudes and amplitudes in degrees, the height in miles, &c., of twenty-eight auroras, mostly observed by Herrick and Bradley, and at New Haven; the heights range from 33 to 290 miles; average, 134 miles. The results are to be regarded as only approximately correct; but the method of observations at a single place is recommended as both an auxiliary and a check to those obtained by other methods.

Question of the Height of the Atmosphere.—Some years since, the writer of this notice insisted very earnestly and before many auditors upon the fact, evident enough in itself perhaps, that, not less than the fishes, man is the inhabitant of an ocean; the most marked differences being that the latter has an aerial instead of a watery ocean to move and live in, and is by his constitution naturally confined to existing at the bottom of his ocean, instead of rising and moving at elevations within it. And it is a pleasure now to observe, in the new and singular assiduity with which all atmospheric prob-

lems have come to be prosecuted, both in our own and in other countries, and in the important information, not only meteorological but physiological also, which is being acquired, that the inculcation of principles such as those above referred to has not been thrown away. To man, as inevitably a denizen of this so-much forgotten ocean which we call *the air*, and as by the laws of nature drawing the very conditions and energies of his life from *its* conditions and *its* activities about him and upon him, every thing calculated to throw light on the constitution, the limits, the perturbations, the materials, actions, and influences of this atmosphere, must necessarily be of the highest importance and interest.

The quite definite and constant ratio of diminution of density of our atmosphere with increase of elevation above the sea-level, as observed in ascents of high mountains and in balloons, and a consideration of the opposing action of the elastic force of the air on one hand and of gravity on the other, had led to the conclusion which was for many years generally accepted, that our atmosphere must entirely terminate—and of course, however attenuated its density may have become, still with a definite fluid surface—at a height of from 45 to 50 miles above the sea. The rapid and also very regular diminution of density of the air with increase of elevation, is still attested through Mr. Glaisher's balloon ascents, to heights until his time unprecedented; and from such data, the conclusion that the atmosphere must altogether terminate at no very great distance above the earth would seem to be inevitable. When, therefore, Prof. Loomis places the lower limits of auroras at from 46 to 50 miles, and their upper limits at those of 495 to 534 miles, we are naturally disposed to question—if, as is generally supposed, the aurora requires a material medium of some kind for its manifestation—whether there may not be, in the apparent position and plane of such auroras, and in the possible appearance of different auroral fields to different observers at the same time, circumstances which mislead the judgment, and cause a phenomenon at no great distance from the earth to be optically, and by trigonometrical measurement also, referred to spaces much more remote.

But there are, on this head, a great number of independent facts which require attention. Meteors and meteoric stones in their various forms, it is known, quite suddenly acquire at some distance above the earth—an incandescent state: they begin, continue briefly, and then cease, to emit light, and perhaps also to throw off luminous fragments. And it is equally certain that this behavior can only be explained by one circumstance; namely, that the temporary incandescence and light exhibited by these bodies must be due to their plunging for the first, at some distance or other above the earth, into a material medium dense enough to heat them, by friction and retardation of move-

ment, to whiteness; so that they become totally consumed and dissipated in this medium, or through it reach and bury themselves in the earth. And here, observers differ as to the fact of the height at which meteors begin to grow luminous; though a large proportion of the observations, and especially of those more recently made, place this height above the long-admitted limits of our air. Thus, Mr. A. S. Herschel, 1864, concludes, from a comparison of observations, that the heights of shooting stars at Rome are sensibly the same as over places where they have been most observed in northern Europe—the limits respectively of first appearance and of disappearance being 73 miles and 52 miles above the sea, with a probable error of not more than 2 or 3 miles. The average velocity of shooting stars, calculated from the same observations, he makes about 85 (more accurately 84.4) miles per second. Prof. Phillips, in his address before the British Association, 1865, says:

"Other information bearing on the constitution of the atmosphere comes to us from the auroral beams and other meteoric lights known as shooting stars. For some of these objects not only appear at heights of 10, 50, and 100 or more miles above the earth, but at the height of 50 miles it is on record that shooting stars or fire-balls have left waving trains of light, whose changes of form were in seeming accordance to varying pressure in the elevated and attenuated atmosphere."

A table of altitudes of shooting stars, supposed to include nearly all the instances published, from September 11th, 1798, to November 18th, 1863, inclusive, and prepared by Prof. H. A. Newton, appears in the *Amer. Jour. of Science*, July, 1864. Taking the more trustworthy cases, the estimated heights, for first appearance, range from 4 up to 216 miles—a large proportion of those observed since 1856 being at elevations of between 40 and 90 miles; while the estimated heights at disappearance (a few instances of heights of the middle point of the path included) range from 3 to 166 miles—a large proportion of those since 1856 being at elevations between about 80 and 75 miles.

For the shooting stars observed at Washington, Philadelphia, and other places, on the night of November 18th–14th, 1863, Mr. Newton finds a mean altitude at first appearance of 96.2 miles; at extinction, of 60.8 miles. For those observed at New Haven, Hartford, and elsewhere, August 10th–11th, 1863, he finds the respective altitudes 69.9 and 56 miles, in this agreeing quite nearly with Mr. A. S. Herschel's computations, based in part on the same instances. Thus, the November meteors would seem to occupy a region fifteen or twenty miles higher than those of August; and it is suggested that the former may be the more inflammable. Prof. Newton doubts whether any meteors really appear at a height greater than 125 or 150 miles, supposing that heights beyond these are assigned only through errors of obser-

vation. (*Amer. Jour. of Science*, September, 1865.)

Secchi has calculated the heights of a large number of meteors observed, it appears, August 5th to 10th (inclusive), 1864. His base-line is that joining Rome and Civita Vecchia, a distance of 65 kilometres (the kilometre — 1093.64 yards, nearly), and the two stations being electrically connected. The following table gives the estimated heights of 56 of these meteors:

Height.	Number.
40 to 60 kilometres.....	6
60 " 80 "	7
80 " 100 "	10
100 " 120 "	17
120 " 140 "	8
140 " 160 "	5
160 " 180 "	2
180 " 200 "	1
200 " 220 "	2
220 and higher,	8
Total,	56

Thus, 27 of these meteors—nearly one-half—were observed at heights varying from 80 to 120 kilometres (about 49.7 to 74.55 miles). Of 93 meteors in all, for which calculations were made, the mean height at first appearance comes out in round numbers 100 kilometres (about 62.18 miles), the mean height of 69 of them being 101 kilom. Fourteen others, moving in the plane passing through the two observatories, made their appearance at a height of about 93 kilom. The greatest height observed was 260 kilom. (about 161.68 miles); and many were certainly above 200 kilom., with an error at most of 30. The height of the point of extinction was about 75 kilom. (46.635 miles, nearly). M. Faye, however, in stating that the phenomena of shooting stars, fire-balls, and meteoric stones have rectified our ideas of the extent of the terrestrial atmosphere, goes beyond all the authorities thus far quoted, and declares that, judging from the phenomena named, the gaseous envelope of our planet should stretch to a height of 240 or even 300 miles.

Now, that an atmosphere which has been shown by repeated and careful observations to be reduced at a height of about $2\frac{1}{2}$, or at most of $8\frac{1}{2}$ miles above the sea-level, to a density only half that which it has at such level, should nevertheless extend to heights of more than 200—nay, even so far as 100—miles above the earth's surface, appears quite impossible. And yet, either the determinations of the heights of meteors are radically at fault, or else some material medium, and more dense than any occupying the inter-planetary spaces at large, does encompass the earth to depths as great as those above indicated. Here are apparently contradictory facts, which science cannot as yet reconcile, but to all of which it must seek to afford the correct solution. What is this material medium existing at 100 or more miles above the earth, but certainly terminating at some height above that? If it be some extremely rare mineral or nebular vapor, such as (in somewhat different forms) Biot and De la Rive have, in explanation of auroral phenomena, imagined to

exist in the inter-planetary spaces, and if at 100 miles or more beyond the earth's surface this is so far dense as to heat previously dark meteoric bodies to whiteness by its resistance, why is this mineral vapor not still more condensed near the earth, and to such quantity as readily to be detected in the air by chemical examination?

Although not offered as answering these questions, it is at least interesting to note that Dr. Reichenbach, of Vienna, led by the phenomena of *aérolites* to the theory that space generally is filled with a cosmical dust, which he supposes may sometimes become agglomerated, and sometimes reach the earth as an impalpable powder, has collected dust from the top of a high mountain, where no tools had ever been used, and having analyzed this, states that he finds it to contain almost identically the same elements as those of which meteoric stones are composed, and among which he names *nitrogen, cobalt, iron, and phosphorus*. He thinks such an invisible rain may be [in part] the source of phosphorus in soils, and so [to all higher vegetation] as necessary as aqueous rain. (*Quart. Jour. of Science*, January, 1865.) It has been suggested that the dust found by Reichenbach was probably blown by winds to the places where it was met with. The peculiar composition of the dust, such as few soils or rocks, if any, would be likely to yield, is an objection to this supposition. If the elements contained in it are found oxidized or otherwise combined, may not the dust be regarded as so much of the *ashes* of consumed meteors? Mr. H. A. Newton has, in a paper read before the National Academy of Sciences, August, 1864, but of which an abstract would not here be in place, estimated the number of meteors—the telescopic included—which daily enter our atmosphere, as not less than four hundred millions! Be they more or fewer, their *ashes must*, to some extent, pervade portions of the atmosphere, and it would appear also, reach the earth. But if the elements above named were in part found unoxidized, then, is it not at least supposable that under the conditions attending the combustion of meteoric bodies, this process may be to some extent directly attended by one of *dissociation* [see *CHYMISTRY, Ann. Cyc.*, 1863 and '65]: so that, of the matter of consumed meteors, more or less might still reach the earth in the elementary condition? At all events, it is certainly probable that soils on the earth are slowly but continually fertilized by meteoric contribution from planetary space; but it may be regarded as already reduced to a certainty that from the same source the earth itself is continually gaining minute accessions in volume and weight.

In regard to the temperature of the atmosphere at different elevations, Mr. Glaisher's observations confirm the view of Leslie, while giving more definite results [see *BAROMETRICAL*], in showing a more rapid decrease of temperature with ascent near the earth than at greater altitudes. The balloon ascents thus far report-

ed, however, were chiefly concluded during the day, and Mr. Glaisher is said to be preparing for night ascents, hoping to ascertain the rate of decrease or increase of temperature at night. There is at least a probability that some time after the sun's influence has been withdrawn, there may occur for some little distance above the earth an increase of temperature. Enough is already known to show—and the facts are of much importance in astronomical observation—that the increment of refraction cannot be altogether uniform through the successive strata of air next the earth, and that there must be special differences also in this respect between the day and night. This last point is one which every astronomical observatory should have determined for it, with a view to an increased accuracy in the results of observations. But further, three winter ascents, made December 1st and 30th, 1864, and February 27th, 1865, gave results differing greatly from those obtained in summer, and showed that the laws of atmospheric temperature vary at different seasons.

The relations of the air to the chemical composition and physiological processes of plants are considered in a paper in the *Smithsonian Report* for 1864, entitled "Vegetation and the Atmosphere." It may here be added, that M. Méné finds the quantity of carbonic acid in the atmosphere variable, this being low in the months of December and January; increasing in February, March, April, and May; diminishing from June to August; and increasing again from September to November, the maximum of this period being in October. He states that more carbonic acid is always detected during the day than during night; that there is a slight increase about noon; and that there is always more after, than before rain. For some points connected with pressure of the atmosphere, see BAROMETER.

AUSTRIA. Francis Joseph I. is still the Emperor of Austria and King of Bohemia and Hungary.

According to the latest census, taken in 1857, Austria had a population of 35,018,988, and her area is 248,551 square miles. The expenditures in the budget of 1865 were estimated at 527,781,798 florins, and the receipts at 519,799,024. The public debt, on Dec. 31, 1864, amounted to 2,600,994,469 florins.*

The strength of the army, on the peace and on the war footing, was, in July, 1865, as follows:

	Peace Footing.	War Footing.
Infantry.....	201,925	459,730
Cavalry.....	39,188	41,908
Other troops.....	39,838	87,527
Total.....	280,951	589,165

The navy consisted, in May, 1865, of 59 steamers, with 648 guns and 10,900 horsepower (exclusive of two iron-clad frigates,

which were in the course of construction), and 51 sailing-vessels, with 848 guns.

The value of the imports during the year 1864 was 280,690,150 florins, that of the exports, 339,075,100. The merchant navy consisted of 9,491 vessels, altogether of 826,200 tons. The number of merchant vessels was thus divided among the different countries of the Austrian monarchy: Goritz, Trieste, Istria, 2,538; Venecia, 1,359; Croatia, 808; Military frontier, 158; Dalmatia, 5,183.

The Imperial Austrian Parliament ("Reichsrath") is composed of a House of Lords and a House of Representatives. The House of Lords consists of the great Princes of the Imperial Family, sixty-two hereditary chiefs of noble families, the archbishops and bishops of princely rank, and forty-seven members appointed for life. The House of Deputies is composed of three hundred and forty-three deputies, chosen by the eighteen provincial diets. Hungary, Venetia, Croatia, and several other diets in the eastern part of the empire, have never yet sent delegates to the parliament.

The session of the Reichsrath, which had been opened on Nov. 14, 1864, was closed by the Archduke Ludwig Victor, a brother of the Emperor, on July 27, 1865. The closing speech assured the two houses that the Emperor thoroughly recognized the patriotic zeal and the indefatigable activity displayed by them in the consideration of so many important subjects. It expressed gratification with the consent of the Reichsrath to the new commercial and customs treaty with the States of the Zollverein. It also announced the determination of the Government to accelerate the convocation of the legal representatives of the people in the eastern portion of the empire, which, in the opinion of the Government, involved the necessity of postponing the discussion of the budget of 1866. On April 29, the Lower House of the Reichsrath, on motion of Dr. Berger, unanimously voted an address to the American people, expressing their sympathy on account of the assassination of President Lincoln, and their good wishes for the cause of the United States. The Government also expressed to the American minister at Vienna, and to the United States Government, through the Austrian representative at Washington, its deep sympathy with the American people on account of the same event.

On June 27, the Prime Minister, Von Schmerling, and the majority of the Cabinet, tendered their resignation, and, on July 27, a new Cabinet was formed, under the presidency of Count Belcredi. The change of ministry involved an important change of policy, indicating a transition from the centralizing tendencies, of which Baron Von Schmerling had been the representative, to the principle of a federation between the sections of the empire, and, consequently, a conciliatory policy toward Hungary.

This change of policy was officially announced to the country by the Imperial Rescript of

* A florin is fifty cents in American money.

September 20, suspending the validity of the fundamental laws proclaimed by the Patent of Feb. 26, 1861. The Emperor guarantees again to the empire a constitutional form of government, whose strength and significance, he asserts, should be in the free participation of all the different peoples embraced within the limits of the empire. He declares his wish to come to an understanding with the different diets, provided the terms be not incompatible with the general integrity of the empire. The rescript, which marks an important era in the political history of Austria, is as follows:

RESCRIPT OF THE EMPEROR OF AUSTRIA.

TO MY PEOPLE: To maintain the power of the monarchy by a participation of all in the management of the highest questions of the State; to ensure the unity of the realm by respecting the manifoldness of its component parts, and the historical development of their several laws and rights, this was the leading idea expressed in my diploma of October 20, 1860, and which, in the welfare of my faithful subjects, will still continue to be my guide. In that diploma, the right of the different people to have a share and vote in the legislature and in the administration of the finances, sure pledges for furthering the interests both of the subject and of the different lands, was solemnly guaranteed and established irrevocably. The fundamental law for the legal representation of the empire, which was promulgated in my patent of February 26, 1861, laid down the form according to which this right was to be exercised, and in the 6th article of the said patent I announced that the pre-existing fundamental laws, as well as those then revised and those which I now publish, were, all taken together, and in their embodiment to be considered as forming the constitution of my empire. To vivify this dead form, to shape harmoniously the constitutional structure in in all its parts, was the task committed to the combined free action of all my people. I cannot but remember with warm acknowledgment the readiness with which, during a series of years, a large portion of the realm, following my behest, sent its deputed representatives to the capital of the empire, there to debate on and solve some important questions about the laws, the State, and its economy. Yet my intention, to which I still unchangeably keep, the intention of offering to the interests of the age the sure guaranty afforded by a constitutional form of government, whose strength and whose significance should lie in the free participation of all the different people in the work, has remained till now unfulfilled. A large portion of the empire, warm and patriotic as were the hearts that beat there, persisted in holding aloof from the common legislative action, endeavoring to confirm scruples about legality by acting separately, and thus finding differences of meaning in those fundamental laws which were intended in their collective form only to make up the sum of the constitution of the realm.

My duty as regent forbids me any longer to ignore a fact which hinders the realization of my intention, that of aiming to develop a free constitutional life, and which menaces also the rights of all the nations in their very foundations; but also for those lands which do not belong to the Hungarian crown, it is in the ground which at article 6 of the patent of February is designated as the constitution of the realm that the legislative rights common to all are vested, and there only. As long as the first condition for a vital embodiment of the fundamental laws, as well as a clearly discernible harmony of its parts is wanting, the great work contemplated, which would assuredly bring so many blessings, cannot become reality, the task, namely, of giving to the empire a durable constitutional form.

In order now to redeem my imperial word, in

order not to sacrifice the essence to the mere form, I have resolved to aim at coming to an understanding with the lawful representatives of my people in the eastern part of my empire, and to lay before the Hungarian and the Croatian Diet, for their acceptance, the diploma of October 20, 1860, and the fundamental laws relating to the representation of the empire, which were made known when the patent of February 26, 1861, was published. Considering, however, that it is judicially impossible to have one and the same definition a subject of debate in one part of the empire, while in other parts it is treated as an imperial law, binding for all, I find myself obliged to set aside the opinion of the law relating to the representation of the empire—at the same time positively declaring that, should the decisions of the representatives of these eastern kingdoms contain a modification of the aforesaid laws compatible with the continuance of the empire in its integrity and power, I reserve to myself the right, before pronouncing a resolution myself, to lay it before the legal representatives of the other kingdoms and countries, in order to learn and to appreciate their equally important decision. I can only regret that this unavoidable step brings with it a cessation of the constitutional labors of the lesser Reichsräth. However, the organic connection of all the principles of the law determining the united action of the Reichsräth, and the necessity for its being observed similarly by all, makes a disjoining of the law, and any thing like a mere partial maintenance of its efficiency quite impossible.

As long as the representative assembly of the empire has not met, it will be the business of my Government to take measures for those matters which cannot be deferred, and among those especially such are to be counted those which regard the financial and economic interests of the realm. Free and open, the path will, with a due observance of legitimate right, lead to mutual understanding, and what I confidently hope to find, a conciliatory spirit, too; one ready to make sacrifices, as soon as mature comprehension guides the judgment of my faithful people, to whom these imperial words are confidently addressed.

FRANCIS JOSEPH.

VIENNA, September 20, 1865.

The rescript was viewed in the German provinces as a violation of the Constitution of the empire, and therefore received with loud disapproval. Most of the other provinces, on the other hand, were jubilant. They regarded it as the beginning of a federative, instead of a centralizing policy. When the Provincial Diets met on November 23, it gave rise to animated debates. All the Diets of the German provinces adopted an address to the Emperor, requesting the reestablishment of the February Constitution. The Diets of Moravia, Bohemia, and other predominantly slavie provinces, voted an address of thanks to the Emperor for the rescript. The Emperor, on the presentation of one of the addresses in opposition, assured the deputation that he would make no further concessions to Hungary than were compatible with the interests of the whole monarchy. To the deputation of the Bohemians, he spoke of his coronation as King of Bohemia as an approaching event. The Diet of Croatia, though slavie, voted against sending an address of thanks.

The relations of the Austrian Empire to Hungary and the provinces dependent upon the Hungarian Crown, underwent, in the course of the year, important changes, for which see HUNGARY.

On January 23, the Minister of Police announced in the Lower House of the Reichsrath, that the release of all the Poles imprisoned in Austria on account of participation in the political disturbances of 1863 and 1864, had been decided upon by the Government. In February the majority of them, including the ex-dictator Langiewicz, were released. On April 18, the state of siege in Galicia was raised. An imperial decree of November 18, which was published by a proclamation of the Governor of Galicia, on November 20, ordered the release of all political prisoners arrested by the Galician authorities from the year 1863 to that time, and the dismissal of all pending trials. Another imperial decree, published December 10, extended the amnesty granted by the decree of the 18th November to those sentenced by the other Austrian judicial tribunals for complicity in the Polish insurrection.

The questions of German politics, and especially that of the duchies of Schleswig-Holstein and Lauenburg, continued during the year 1865 to be the subject of grave and often complicated negotiations with Prussia. The agreement between the two Powers, though sometimes threatened, was successfully maintained. Austria ceded her rights to the duchy of Lauenburg for a pecuniary consideration. As regards Schleswig-Holstein, a convention was concluded at Gastein by Herr Von Bismark and Count Blome, and signed at Salzburg by the Emperor of Austria and the King of Prussia.

The following are extracts from its provisions:

Art 1. The exercise of the rights conjointly acquired by the high contracting parties through the Vienna Treaty of Peace of 30th of October, 1864, will, without prejudice to the continuance of these rights of both Powers to the whole of both Duchies, be transferred, as regards the Duchy of Schleswig, to his Majesty the King of Prussia, and as regards the Duchy of Holstein, to his Majesty the Emperor of Austria.

Art 2. The high contracting Powers will propose in the Federal Diet the establishment of a German fleet, and to appoint for that purpose the harbor of Kiel as a Federal harbor. Until the execution of the Diet's resolutions referring thereto, the war vessels of both powers will use this port, and the command and police of the same will be exercised by Prussia. Prussia is authorized not only to construct the necessary fortifications for the defence of the entrance opposite Friederichsort, but also to erect marine establishments corresponding with the object of the mili-

tary port upon the Holstein shore of the bay. These fortifications and establishments are also placed under Prussian command, and the requisite Prussian naval troops and men for their garrison and guard may be quartered in Kiel and the neighborhood.

A supplementary convention to the above treaty was concluded between the two Powers relating to the garrison arrangements at Rendsburg.

On October 29th an Imperial decree appointed a new committee for the control of the public debt, consisting of the President (Prince Coloredo), the Vice-President (Councillor Taschek), and the following members: Field-Marshal Hess, Baron Rothschild, Baron Rues Refer, Herr Herbst, and Herr Winterstein. The committee is to be in direct communication with the Emperor. The decree states that this measure is adopted in consequence of the changes brought about by the September patent, and because it is the will of the Emperor that a committee, independent of the Ministry of Finance, should uninterruptedly watch over the management of the public debt until the time when a committee for this purpose can be selected by the representatives of the empire. Another Imperial decree, published on November 25th, authorized the Minister of Finance to contract a new loan, to be issued in 734,694 bonds of 500 francs or 200 florins, at the issuing price of 345 francs or 188 florins, bearing interest from the 1st of December, 1865. The bonds to bear an annual interest of 15 francs, or 10 florins, payable half-yearly, without any deduction. The repayment of the loan to be effected by the redemption of each bond at 500 francs or 200 florins, within thirty-seven years, by means of half-yearly lotteries. At every lottery an equal number of 9,928 bonds are to be drawn for the redemption; the first drawing to take place on the 1st June, 1866.

A new decree relative to the press was issued by the Minister of Justice on September 2d. The minister recommends to the Procurators-General the exercise of the law against really serious offences of the press, but a careful avoidance of all measures which might raise a suspicion that the prosecution was of a partisan character. Apart from all prejudiced opinions the Government, says the minister, will gratefully accept all well-founded criticism of their acts.

B

BADEN, a grand duchy of Germany. The reigning sovereign is Grand Duke Friederich I., born September 9, 1826; ascended the throne of Baden at the death of his father, April 24, 1852, under the title of Regent—his elder brother Ludwig suffering under mental disease. He assumed the title of Grand Duke by patent of September 5, 1856. The heir apparent is Prince Friederich Wilhelm, born July 9, 1857. The

Legislature consists of two Chambers. The Upper Chamber comprises the princes of the reigning family who are of age; the heads of ten noble families; the proprietors of hereditary landed estates, worth 800,000 florins; the Archbishop of Freiburg; the Superintendent General of the United Evangelical Church; two deputies of the Universities Heidelberg and Freiburg; and eight members, nominated by the Grand

Duke. The Second Chamber is composed of sixty-three Representatives—twenty-two for the towns and forty-one for the rural districts, who are elected for eight years, and must be called together at least once every two years. Every citizen not convicted of crime, nor receiving parish relief, has a vote.

The area of the Grand Duchy is 1,017 square miles; the population, according to the census of December 3, 1864, is 1,434,754, of whom 933,476 were Roman Catholics, 472,258 members of the United Evangelical Church, 2,554 Dissidents or Mennonites, 25,263 Jews. The receipts for the two years 1864 and 1865, were estimated at 23,786,527 florins; the expenditures at 22,044,363 florins. The public debt amounted, on January 1, 1865, to 28,160,836 florins; the railroad debt to 75,590,137 florins. The army, on the peace footing, is 7,905; on the war footing, 18,403.

BAPTISTS. The number of regular Baptists in the several States and Territories of the United States, is given in the *Baptist Almanac* for 1866, as follows:

Alabama.....	61,219	Minnesota.....	2,955
Arkansas*.....	11,841	Mississippi.....	41,610
California.....	1,935	Missouri.....	44,877
Connecticut.....	17,424	Nebraska.....	283
Delaware.....	452	New Hampshire.....	7,905
District of Columbia.....	1,180	New Jersey.....	18,746
Florida*.....	6,483	New York.....	39,074
Georgia*.....	84,567	North Carolina.....	60,532
Illinois.....	85,884	Ohio.....	32,539
Indiana.....	28,779	Oregon.....	1,372
Indian Territory.....	4,000	Pennsylvania.....	42,080
Iowa.....	12,535	Rhode Island.....	8,515
Kansas.....	1,281	South Carolina*.....	62,984
Kentucky*.....	81,533	Tennessee*.....	46,564
Louisiana*.....	10,264	Texas*.....	19,089
Maine.....	20,118	Vermont.....	7,969
Maryland.....	4,815	Virginia*.....	108,338
Massachusetts.....	35,858	Wisconsin.....	8,556
Michigan.....	18,949	New Mexico.....	49

From the States marked with a star (*) no later statistics than those of 1861 have been obtained. There were, besides, 3,244 members in the German and Dutch Baptist Churches of the United States; 600 in the Swedish, and 1,400 in the Welsh. In all, there were 592 associations; 12,702 churches; 7,867 ordained ministers, and 1,040,303 members. In Nova Scotia the Regular Baptists have 15,828 members; in New Brunswick, 8,821; in Canada, 14,756; in the West India Islands, 37,000. Total of Regular Baptists in North America, 1,116,708.

The other denominations of Baptists report the following membership:

Anti-Mission Baptists.....	50,000
Free-Will Baptists.....	56,738
Six Principles Baptists.....	8,000
Seventh-Day Baptists.....	6,796
Church of God (Winebrethrenians).....	23,800
Disciples (Campbellites).....	300,000
Tunkers.....	20,000

The anniversaries of the Baptist Societies in the northern States were held in St. Louis from May 18th to May 24th. The A. B. Missionary Union reported an income of \$153,195. It has under its patronage 20 missions, which number 469 churches and 35,000 members. The receipts of the A. B. Publication Society were

\$153,954; those of the A. B. Home Mission Society, \$122,519; those of the American and Foreign Bible Society, \$31,652. The A. B. Free Mission Society held its 22d anniversary on May 25th, at Radnor, Pa. This society has missions in Japan and Burmah, besides sustaining a number of missionaries among the freedmen of the Southern States. Most of the above societies at their anniversaries, adopted resolutions in favor of sending missionaries among the freedmen, of the abolition of slavery, and of negro suffrage. The American Baptist Publication Society, subsequently, resolved to raise a special fund of at least \$50,000, to appoint Sunday School colporteurs or missionaries to traverse the Southern States; to reorganize Sunday-schools among the whites, and starting them among the blacks.

Most of the Southern Baptist papers had been suspended during the war, but were revived after the restoration of peace. The Northern associations expressed generally, a readiness to cooperate with their Southern brethren in the fellowship of Christian labor; but they previously demanded from the latter a profession of loyalty to the Government, and they themselves deemed it necessary to repeat their former testimony against slavery. The Southern Associations that met during the year 1865, were unanimous in favor of continuing their former separate societies, and against fraternization with the Northern societies. They censured the American Baptist Home Mission Society for obtaining from the Federal Government authority to take possession of Southern church buildings, and appoint ministers to officiate in them without the consent, and against the protest of the owners and trustees of these church buildings; also, for proposing without consultation or cooperation with the churches, associations, conventions or organized boards of the Southern States, to appoint missionaries and ministers to preach and raise churches within the bounds of the Southern associations. Some of the Southern associations, like that of Virginia, consequently, advised the churches "to decline any cooperation or fellowship with any of the missionaries, ministers, or agents of the American Baptist Home Mission Society. As regards the negroes, all the Southern associations determined to make vigorous efforts to meet the increased responsibilities devolved upon Southern Christians, and to keep the negroes as far as possible "under the influence of their real friends."

The General Assembly of Kentucky, at its meeting at Covington, May 26, 1865, resolved to continue its relation as auxiliary to the Southern Baptist Convention. In Missouri, the majority of the Baptist ministers and churches decided upon the same policy, and also declined to take the oath prescribed by the new State constitution; but a minority organized a new State Convention in connection and sympathy with the northern associations.

A number of negro Baptist churches in the

Southern States separated from the Southern Associations, and either connected themselves with those of the North, or organized, with the cooperation of the Northern missionaries, independent associations. Thus there was a convention of colored Baptists in Richmond, August 11th, composed of representatives of at least seven counties; in all 12 churches, of 8,500 members, sending 40 delegates.

At a meeting of the Board of Managers of the American Baptist Missionary Union, held in New York on December 13th and 14th, it was resolved to assume the care and support of the Swedish mission; to enlarge the mission work in France and Germany, and to begin it in Italy.

A Baptist missionary in Hayti, who, for thirty-five years has been a resident on the island, reports that more than 300 natives had already been baptized and received into the little Baptist churches. There are seven churches organized on the Regular Baptists' principles, three of which have places of worship. These churches are each supplied with a teacher and a school, and an exhorter or licentiate from among themselves.

The total number of Baptist churches in England and Wales is about 2,400. Most of them are affiliated with the Baptist Union. The last annual report of the Secretary of the Union contains the following statistical statements on the Baptists in Great Britain:

"All the county and district associations in England but one, were now affiliated with the Union; and in all Great Britain and Ireland but four. Twenty churches had joined the Union during the year. The total number of churches now in connection with the Union, is 1,332; the number of Baptist churches in the kingdom being about 2,400. Returns had been obtained from 1,898 churches, and these showed a total of 198,295 members, or an excess of 23,063 over last year. This, however, was not the clear increase, as nearly 200 churches had sent a return for the first time. The associated churches reported a smaller increase of members than last year, the increase being 1,416, or an average of 1½ per church. As several of the largest Baptist churches in the kingdom sent in no report, it was believed that the actual increase of the denomination was much larger."

In Scotland, there are 97 Baptist churches and 35 ministers; membership 5,000. In Ireland there are 37 churches and 24 ministers; membership, 950.

In France, the Baptists number 6 churches, with 490 members, all former Catholics.

In Germany and Denmark, the number of churches, 1,374; of preaching stations, 1,083; of members, 11,275. Of these, 16 churches, with 12 stations and 1,678 members, are in Denmark. One church of 211 members is in Switzerland, and one with 383 members in Poland.

In Sweden there were on January 1, 1865, 9 associations, with 172 churches, 6,404 members,

2,098 children, and 203 teachers in Sunday Schools.

The Baptist denomination continues to make remarkable progress in the kingdom of Burmah. From the last annual statistical report, it appears that the total number baptized in 1864, was 941; present number of members, 14,102; pupils in schools, 2,555; churches, 252; ordained preachers, 43; unordained, 302. The theological school during the last term (13th) numbered 45 pupils. At a meeting, held on October 15, 1865, at Rangoon, another step toward an independent organization of the Burmah Baptists was taken by establishing "the Burmah Baptist Missionary Convention."

BANKS OF THE UNITED STATES. The following table presents a synopsis of the condition of the National Banks of the United States at the end of the last quarter of 1864, and each quarter of 1865:

LIABILITIES.	January 1, 1864. 64 Banks.	April 1, 1864. 67 Banks.	July 1, 1864. 128 Banks.	October 1, 1864.	January 1, 1865.

* October, 1865.

† Partly estimated.

The National Banking System of the United States.—The first act of Congress to establish a general banking system was passed February 25, 1863. Another was passed June 3, 1864, under which law there were in operation, on 1st January, 1866, 1,579 banks, with an aggregate capital of \$403,857,346, and an aggregate circulation of \$213,239,530. This act, now in force, provides that the aggregate circulation of the banks under the law shall not exceed \$300,000,000. 2. There is no limit as to the number of banks. 3. Places with a population of 6,000 or less may have banks with a capital not less than \$50,000; those with a population between 6,000 and 50,000 must have a capital not less than \$100,000. Those over 50,000 population must have a capital not less than \$200,000. 4. Each bank must deposit with the United States Treasury bonds to the extent of one-third at least of its capital (and not less than \$50,000 in any case) as security for creditors. 5. Each bank reports its condition quarterly to the Comptroller of the Currency.

Section 31 of the Bank Act provides that "Associations in the cities of St. Louis, Louisville, Chicago, Detroit, Milwaukee, New Orleans, Cincinnati, Cleveland, Pittsburg, Baltimore, Philadelphia, Boston, New York, Albany, Leavenworth, San Francisco, and Washington City (Charleston and Richmond), must keep on hand, in lawful money of the United States, an amount equal to twenty-five (25) per

cent. of their circulation and deposits; all others an amount equal to fifteen per cent. Three-fifths of this fifteen (15) per cent. may consist of balances due to the association from other associations (approved by the Comptroller) in the cities named (a failure for thirty days to maintain such a reserve fund may produce the appointment of a receiver by the Comptroller).

The following table exhibits the number of banks under the Act in each of the cities selected as a place of redemption, with the capital and circulation of each:

Capital and Circulation of the National Banks in the Cities selected as points of redemption.

NAME OF CITY.	No. of Banks.	Capital.	Circulation.

BAROMETER. Some points relative to uses of the barometer, especially for the measurement of heights and the foretelling of weather changes, will be found considered in the volume of this *CYCLOPEDIA* for 1862, under the titles **BAROMETER** and **METEOROLOGY**. The present notice will be confined chiefly to an account of certain results, practical and theoretical, obtained by use of the instrument, and also of certain recently constructed forms of it, in particular those of the self-registering class. The reader is referred also to the article **ATMOSPHERE**, in this volume.

It may here be briefly mentioned that, a paper having appeared in the 28th volume of the *Philosophical Magazine* (1864), from the pen of Mr. Charles Packe, asserting a discrepancy between the barometric pressures corresponding to the French and the English boiling-points, and attributing the larger part of this to a supposed difference in the scales themselves, arising through the difference of the standard temperatures—0° Centigrade, and 62° Fahrenheit—of the units of length adopted by the two nations, Mr. William Mathews replies, dissenting from those views, and, while admitting that the metrical scale is not always properly graduated, claims that where it is so, the readings of the French barometer-scale, if reduced by Guyot's Tables—in which millimetres at 0° C. are directly expressed in parts of the inch at 62° F.—must coincide exactly with those of the scale usual wherever the English inch is taken as the unit. Mr. J. E. Blackwell, England, patented, about the beginning of 1864, an improved aneroid barometer, the peculiar feature of which is that each instrument includes four or more chambers, instead of a single one as in the earlier forms; the connection of the springs within these chambers with the index is such that inaccuracies of action in any one of the chambers is compensated by the action of the others.

Correction for Temperature, in the Measurement of Heights.—In the journal above quoted, for August, 1865 (vol. xxx.), appears a paper which was read before the Royal Society in May of the same year, by Mr. Alexander J. Ellis, entitled, "On the corrections for Latitude and Temperature in Barometric Hypsometry, with an improved form of Laplace's formula," and in which the subjects named are very minutely and fully discussed.

In the part of this paper devoted to the subject of temperature, occurs the most concise expression the writer of this notice has met with, of the results in the given respect of Mr. Glaisher's observations. These, it is stated, indicate that, under a *clear* or nearly clear sky, there is a fall of about 5° F. for each of the first 4 inches of depression of the barometer; then of about 4°·2 per inch, from the 5th to the 13th inch; and about 4°·5 from the 14th to the 16th inch; while, under a *cloudy* sky, we may expect on an average a fall of very nearly 4° F. for each inch of depression of the barometer—

the 1st inch, however, and the 11th to the 16th, being accompanied with a slightly more rapid fall of temperature. Such may therefore be regarded as, in the given latitude and climate at least, and under the circumstances named, the normal alteration of temperature with height.

In view especially of the different rates of variation (with increasing height) of the barometer and thermometer, or, in other words, of the deviations of the temperatures from a strictly uniform law, the conclusion is arrived at that, in determining altitudes by the barometer, it is best to proceed by several partial heights, each not exceeding 3,000 feet, and also to take fresh observations whenever the temperature has been found to alter abnormally. Mr. Ellis urges that there should be two ascending parties, one for each variable station, and each of which should be able to signal to the other; while a stationary observer at the lowest station would serve as a check on the other two.

Barometric Observations in the Arctic Regions.—The 13th volume (1863) of the *Smithsonian Contributions to Knowledge* contains a paper of great length, entitled, "Meteorological Observations in the Arctic Seas," &c., these having been made by Sir F. L. McClintock, on board the yacht "Fox," in Baffin Bay and Prince Regent's Inlet, 1857-'58-'59; and their reduction and discussion having been accomplished at the expense of the Smithsonian Institution, by Mr. Charles A. Schott. The paper is in three parts, the first treating of temperatures, and the second of the phenomena of arctic winds and storms, including the barometrical curves for certain storms.

In the third part, are presented tables of 4-hourly readings of the aneroid barometer, those used in the discussion of the subject, extending from September 1st, 1857, to August 31st, 1859, and corresponding to latitudes varying from 60° to 75°·3, N., and longitudes of from 53°·7 to 94°·4, W.; and also of the marine mercurial barometer, September 20, 1857, to April 16, 1858, corresponding to latitudes of from 69°·4 to 75°·2, N., and longitudes of from 59°·1 to 69°·1, W. No separate record was kept of the aqueous vapor pressure, so that this could not be eliminated; but its amount being small, this is of less importance.

The results obtained by reduction of these two series of tables afford the means of comparing the two barometers, and of deducing a correction for the indications of the aneroid, in order to make these correspond with the readings of the mercurial, referred to 32° F. of temperature. Thus, a comparison of the mean readings of the two barometers, for the months of September, 1857, to April, 1858, inclusive, shows throughout a very nearly constant difference. The mean of the several monthly differences for the period indicated is .221 of an inch of mercury—the aneroid barometer reading being by so much too high; so that the correction required in the aneroid readings may be

conveniently taken as—.22 inch. Strictly, this difference is composed of two parts—1, the true index error for the aneroid; 2, the special difference of the two instruments in different latitudes, due to the facts that the mercurial barometer is independent of changes in the force of gravity, while the aneroid is sensible to the increase of gravity in going northward. Within the limits of 66° and 75°.3, N., this variation in the force of the earth's attraction amounts to 0.014 of an inch.

The diurnal variation of the barometer is discussed at length. This is slight, and is to be traced only by combination of a great number of observations; besides, it is often masked by irregular fluctuations of the atmospheric pressure. To determine the diurnal variation, the observations of two years are considered; for Baffin Bay, mean latitude of 72°.5, those of September, 1857, to August, 1858, inclusive; and for Port Kennedy, latitude of 72°, those of September, 1858, to August, 1859, inclusive; while the observations made at Van Rensselaer Harbor, latitude of 78°.6, in the years 1853-'54-'55, were introduced for the sake of comparison. The curves of diurnal variation for the two former have in common a maximum at about 7½ P. M., and a minimum at about 4½ A. M. The mean range of the diurnal fluctuations is—

In Baffin Bay,028 inches.
At Port Kennedy,048 "
At Van Rensselaer Harbor,010 "

Hence, between latitudes 72°.2 and 78°.6, N., the diurnal range diminishes by .028; and, at this rate, it would become insensible (less than .001) in about 81° N.

The computed annual range of variation, *i. e.*, the difference between the highest and the lowest monthly mean, is—

In Baffin Bay,	0.94 inches.
At Port Kennedy,	0.41 "
At Van Rensselaer Harbor,	0.31 "

The maximum effect of any one wind or calm does not exceed 0.04 inch. In Baffin Bay, the barometer is higher with the wind from N., N. E., and E., and lower with the wind from S. W., W., and N. W.; whereas, at Port Kennedy, where the wind is much subject to local influences [and the barometer also, the great amount of its daily range appears to show], nearly the opposite law holds true.

The Earth's Rotation, and the Sun's Distance.—Of a series of papers by Mr. Pliny Earle Chase, relative to aërobaric (air-pressure) phenomena, which, originally appearing within the past three years in the publications of the American Philosophical Society, have been republished in the *American Journal of Science*, and to some extent in other journals, and which, though in certain parts of a highly abstruse character, are nevertheless the vehicles of some important physical hypotheses, the first [of those, at least, with which the writer of this has met] bears the title, "On the Barometer, as an Indicator of the Earth's Rotation, and the Sun's Distance." In making extracts from these articles, as elsewhere, the language of the original will

be adopted so far as it appears most concisely, and for the general reader satisfactorily also, to convey the author's meaning.

That daily barometric tides exist, has been known for more than 150 years; their *cause* has been thus far in dispute. They are not to be explained by variations of temperature [alone]; since, 1, they are detected after eliminating all the *known* effects of temperature; 2, they occur in all climates and seasons; 3, they often show opposite effects, under average temperatures which are the same.

Now, the combined rotation (daily) and revolution (yearly) of the earth imparts to each particle of the air a velocity in the direction of the earth's orbit, which must vary with changes of latitude and hour of the day, and, at the equator, from about 65,000 miles per hour at noon to 67,000 at midnight. The ratio of the force of rotation at the equator to that of terrestrial gravity, as known by the amount of effect each is capable of producing in 24 hours, is $\frac{2\pi \times 3960}{24 \times 3600} = .00109$; and this ratio, representing the proportionate elevation or depression of the barometer above or below its mean height that should (by theory) be caused by the earth's rotation, corresponds very nearly with the actual disturbance at stations near the equator. From 0^h (noon) to 6^h, the air has a forward motion greater than that of the earth, so that it tends to fly away; its pressure is therefore diminished, and the mercury falls. From 6^h to 12^h, the earth's motion is greatest; it therefore presses against the lagging air, and the barometer rises. From 12^h to 18^h, the earth moves away from the air, and the barometer falls. From 18^h to 24^h, the increasing velocity of the air urges it against the earth, and the barometer rises.

The theory of the forces in operation would give a maximum height of the barometer at 9^h and 21^h, and a minimum and at 3^h and 15^h. Three years' hourly observations (1844-'45-'46) at St. Helena, however, show the actual maxima at 10^h and 22^h, and the minima at 4^h and 16^h; and this retardation, of *one hour* throughout, agrees with that due to the inertia of the mercury, as shown by comparison with indications of the water-barometer.

The author argues that the varying centrifugal force to which the earth is subjected by the ellipticity of its orbit, must likewise produce annual tides; while from a comparison of certain elements of the earth's daily and yearly revolutions he deduces a formula for the sun's distance. The following are his results, in part:

Year.	Daily range.	Annual range.	Ratio.	Approximate solar distance.
1844....	.0872 in.1630 in.	2.4558	187,070,000 min.
1845....	.0646 "1214 "	1.8798	80,800,000 "
1846....	.0870 "1214 "	1.8120	74,650,000 "
Mean.	.0668 "1290 "	1.9457	88,066,000 "
Grand mean.	.0668 "1824 "	1.9978	90,702,000 "

The effect of latitude on the aërobaric tides is indicated in the following table:

Station.	Latitude.	Mean height of barometer.	Mean range.	Ratio.
Equator.....	0°	30.709 in.	.062 in.	.002670

—*Proceedings of Amer. Philos. Society*, vol. ix., p. 283.

Question of a Resisting Ether.—From Mr. Chase's paper on "Barometric Indications of a Resisting Ether," space will allow us to extract only his conclusions upon this head, without entering upon the preparatory and incidental discussions. Proceeding still from the St. Helena observations, Mr. Chase finds two sets of differences: the first, *between the mean hourly barometric readings and the averages of the barometer heights at 0, 1, 2, and 3 hours from each high and low ærobaric tide*; the second, *between the former values and the hourly heights as calculated from theory*: the largest difference in the first set is at 20^h, the least at 1^h; in the second, the largest difference (greatest theoretical error) is at 21^h, and the least at 5^h and 15^h.

The author concludes that the results furnished in these two sets of differences show the operation of some cause from 1^h or 2^h to 15^h inclusive (say, 2 P. M. to 3 A. M.) tending to reduce the barometric pressure, while for the rest of the day the normal pressure is increased. That this cause is not to be found in differences of temperature, he thinks evident, because the observations are already corrected for *known* effects of temperature, and because the average height of the thermometer from 2^h to 15^h (61°.7) corresponds very closely with the average from 16^h to 1^h (61°.66). The greatest unexplained reduction of barometric pressure is at 9^h; the greatest increase, at 20^h or 21^h. All these facts appear to the author to admit of explanation on the hypothesis that the disturbances are caused by the resistance of an ether, this being supposed, as had been done by Fresnel, to be condensed by planetary attraction. —*Amer. Jour. of Science*, Sept. 1864.

Aerial Tides.—Led by the remarkable coincidence already shown between the theoretical effects of rotation and the results of barometrical observations, Mr. Chase has extended his researches, with a view of defining more precisely some effects of lunar action on the atmosphere: his results appear in a paper bearing the title above.

Sabine had shown that the moon produces a diurnal variation of the barometer, amounting to about .006 of an inch, and thus equivalent to nearly 1-10th of the average daily variation near the equator. This would indicate a tidal wave of rather more than *one foot* for each mile's depth of atmosphere, or from 8 to 6 feet near the summits of the principal mountain chains. Evidently, the rolling of such a wave over the broken surface of the earth may exert a very important influence on the atmospheric and

magnetic currents, the deposition of moisture, and other meteorological phenomena.

There would appear to be also a much larger, and hitherto unadmitted, weekly wave. M. Flaugergues, indeed, extending his researches through an entire lunar cycle (October 19th, 1803, to October 18th, 1827), was led to infer that, "in a synodical revolution of the moon, the barometer rises regularly from the second octant, when it is lowest, to the second quadrature, when it is highest, and then descends to the second octant;" and that this general law is modified by the moon's declination and its distance from the earth, the barometer being higher in the northern lunistice, and in apogee. The St. Helena observations give somewhat different results, and among other things show that there must be two principal maxima and minima in each month. The means of these hourly observations indicate the existence of waves which produce in the moon's first quarter a barometric effect of +.004 in.; in the 2d quarter, of —.016 in.; in the 3d, of +.018 in.; and in the 4th, of —.006 in. A difference between the diurnal and the lunar aerial tides is, that when the former are highest their pressure is greatest—the lunar action accumulating the air under the meridian so as more than to compensate for its "lift;" while in the general fluctuations and in the weekly tides, a high wave is shown by a low barometer, and *vice versa*. The continual blending of these heavy and light waves results in prolonged oscillations, shown by the alternate rise and fall of the barometer at intervals of two or three days.

Mr. Chase presents a table of barometric and thermometric means at the moon's changes, in which he has deduced the heights of the weekly aerial tides as, at full moon, —.0115 in.; at 3d quarter +.0065 in.; at new moon, +.0005 in.; and at first quarter, +.0044 in.; the daily tides of the same periods in order are, .0054 in., .0087 in., .0064 in., and .0047 in. The differences of the successive weekly tides give us the amount of barometric effect for each quarter; and the average effect is more than three times as great in the 2d and 3d quarters, as in the remaining half month. As in the ocean tides, there are two simultaneous waves on opposite sides of the earth; but these are not of equal magnitude, the barometer rising higher for the tide opposite, than for that beneath the moon's place.

Mr. Chase finds evidences of a combination of solar with lunar action, as in case of ocean tides, producing spring tides at the syzygies and neap tides at the quadratures. He generalizes the facts relative to the attraction (luni-solar) and the rotation waves, which have usually opposite values, as follows:

The luni-solar wave is *descending* from 0° to 90°, and from 180° to 270°; *ascending* from 90° to 180°, and from 270° to 360°.

The rotation-wave is *ascending* from 330° to 60°, and from 150° to 240°; and *descending* from 60° to 150°, and from 240° to 330°.

Combining the two actions, it is seen that from 60° to 90° , and from 240° to 270° , both waves are descending, while from 150° to 180° , and from 330° to 360° , both are ascending. Accordingly, besides the principal lunar maxima and minima at the syzygies and quadratures, there should be secondary maxima and minima also at 60° in advance of those points; and these inferences also the St. Helena observations confirm.

At extra-tropical stations, Mr. Chase would expect important modifications of the results now given. Finally, in thus determining the phenomena of aerial tides, he is led to believe that "the long-suspected obedience of the principal meteorological changes to fixed mathematical laws is at length demonstrated." *Proc. Amer. Philos. Soc.*, vol. ix., p. 895, as quoted in *Amer. Jour. of Science*.

The Principal Causes of Barometric Fluctuations.—From this paper, which is occupied with a summing-up and generalizing of the results of the several discussions thus far presented, our extracts must be brief. The author concludes that there are four important causes of barometric disturbance: 1, rotation, with its quarter-daily phases of alternate aid and opposition to the attraction and temperature currents, and of shifting the aerial particles to levels of greater or less density; 2, variations of temperature and vapor; 3, lunar attraction; 4, solar attraction. Among subordinate causes, he would reckon, 5, resistance of ether. The influences of rotation and attraction can be calculated. Through averaging a long series of hourly observations, the effects of lunar attraction may be so nearly eliminated as to show the approximate value of the other principal disturbances. The formula for the rotation tide is given in one of the preceding papers. Next in order of importance are the temperature and vapor tide, and the solar tide. It is scarcely possible to fix at present the precise amount of disturbance attributable to each of these latter; but the following considerations appear to lead to probable results.

The theoretical maxima of the rotation-tide, allowing an hour for inertia, occur at 4^h and 16^h ; the minima at 10^h and 22^h . Allowing a like interval, the solar attraction maxima should be found at 1^h and 13^h ; the minima, at 7^h and 19^h . Assuming the attraction tidal curve to be symmetrical, and the deviations from symmetry as due to differences of temperature and vapor, the author constructs an approximate daily barometric tidal table from the Girard College, and a like one from the St. Helena observations; in each of these are given the 24 hourly values of the rotation, the temperature-and-vapor, and the solar-and-residual tidal elements of the mean daily barometric curve.

Among the inferences drawn from these tabular results, are: That in the intertropical and middle latitudes the daily temperature tide is smaller than the rotation tide; that there is

but one high and one low temperature tide in twenty-four hours; that the temperature effect upon atmospheric pressure reaches its maximum in the evening, and its minimum in the morning; and that the daily temperature tide increases, while the rotation tide diminishes, as we approach the poles.—*Amer. Jour. of Science*, Nov., 1864.

A New Water-Barometer.—This instrument, constructed by Mr. Alfred Bird, of Birmingham, and which has been in perfect operation for six years, was exhibited before the British Association in 1865. From the detailed account of its construction and the mode of filling, later given (*Philos. Magaz.*, Nov., 1865), an outline only can here be presented.

The author lays down four things as requiring attention in the construction of a water-barometer: 1, that the water must be deprived of air; 2, that the air must not again enter the water; 3, that the water must go into the barometer tube to the exclusion of air; 4, that, while the atmospheric pressure must be allowed to act freely upon the water-column in the tube, no air must penetrate into the vacuum-chamber.

A half-inch white-metal tube was secured in an upright position within a stairway, including near its uppermost part, where the range of the fluctuations of the water-surface must occur, six feet in length of a one-inch glass tube, suitably jointed into the former by sockets at its ends; while alongside the glass tube a scale was fixed, graduated to inches and tenths of an inch. From the top of the scale, a vertical height of 422 inches ($35\frac{1}{4}$ feet) was measured downward, to a zero point. The metal tube above the glass, after passing coiled as a worm within an upright vessel, rises still higher, and being furnished near its top with a closing tap (say, *A*), it is bent over and terminates open. The lower metal tube, making a curve below the zero point, rises slightly again, and is then bent down so as to pass into the neck of a one-gallon glass bottle serving as a cistern, and so as to open near the bottom of the latter: at a point just without the neck of the cistern, the tube is furnished with a second tap (*B*). Into the lowest bend of the tube is inserted a small and short upright pipe, having in its course a third tap (*C*). On one of the upright guides between which the glass cistern can be raised or lowered by a set screw working from beneath, is marked the zero point (liquid-surface level for the cistern) of the instrument.

Four gallons of water having been carefully distilled, this is then in a clean can and beneath two quarts of olive oil, boiled for an hour, to expel the last remains of air; the can is thereupon sealed, and the contents allowed to cool. The can is then placed at the top of the barometer: a long gutta-percha tube, inserted at one end through the oil to near the bottom of the water in the can, is exhausted of air, so that it fills with water to its lower end; a fourth tap (*D*) near to this is then closed, and con-

tion of the tube made with the upright pipe. Now, opening all the taps, the water displaces the air both ways from the barometer tube, until it flows freely from the lower end of this: the tap *D* is then closed, and the end of the tube temporarily stopped; and the cistern, previously filled with olive oil, is brought up into place, so as to receive the end of the tube, the latter having been meanwhile again opened. The oil is then drawn off, until about three inches' depth of it remain to protect from air the water, which meantime flows in underneath it. Then closing *B*, the other three taps being now open, the water fills the upright tube until it runs from the upper end: *A* and *C* are then closed, and *B* opened; and the water descends by gravity until its height is such that it balances the pressure of the atmosphere on the liquid surface in the cistern. The level of the surface of oil in the cistern being brought to correspond with the height of the marked zero point, an observation of the height of the water-column can then be taken: when the mercurial barometer showed 30.4 inches, the temperature being 67°, the water-column had a height of 400 inches. The estimated cost of the instrument, exclusive of the gas-fitter's time, was about \$15.

In the *Philosophical Transactions* of the Royal Society, for 1832, is found a description by Mr. Daniell of a water-barometer, erected by him at the Society's rooms, Somerset House. He stated that, in this, "the water appears to be in perpetual motion, resembling the slow action of respiration." This Mr. Bird confirms: the oscillations occur about every four hours and twenty seconds; and as they ordinarily vary from but about $\frac{1}{16}$ to $\frac{1}{8}$ of an inch, they require to be watched with a magnifier. Mr. Bird finds that the most surprising oscillations take place during a thunder-storm accompanied with great falls of hail and heavy rain-drops. He gives a chart, with curves of the water-barometer and the mercurial, during one hour and five minutes of such a storm, July 20, 1859. Comparison of the two curves shows that the water-column responded both sooner, and also more fully, than the mercurial—the whole curve of the former running higher, its oscillations beginning earlier and standing higher respectively. After heavy thunder, and a heavy fall of rain and hail, as the sky commenced to brighten, the water rose very suddenly—in five minutes more than $\frac{1}{4}$ ths of an inch. The author thinks that, in accordance with Sir J. Herschel's theory, that the electric discharge is the *result* and not the cause of the sudden condensation of cloud into rain, the sudden increase of pressure of the air may be due to the speedy and great precipitation of vapor, leaving the air more dry and dense.

Barographs, or Self-Registering Barometers.

—The tendency of the past few years to automatic instruments for purposes of scientific observation, began quite early to be developed in connection with the barometer. The earliest

properly self-registering instrument of this class appears to have been that of Mr. Alexander Keith, of Scotland: the essential parts of this, in its second and more complete form, were, the siphon barometer, and a float on the surface of the mercury in its shorter limb, this carrying an upright wire and a pencil which traced, on a sheet ruled for a month's record and slowly moved by clock-work, a line corresponding to the varying heights of the mercury. Mr. Bryson, of Edinburgh, later substituted a minute knife-edge, which, at the end of every hour, a hammer forced into the prepared surface of a daily record sheet rolled upon a cylinder; by this means he avoided the inaccuracy due to friction of the pencil. Previous to 1858, the photographic registering of barometric variations was in operation at the Royal Observatory, Greenwich: in this, the light of a lamp being continually directed through the Torricellian vacuum of a standard barometer, the lower margin of the trace which it produces on a slowly advanced sheet of sensitive paper, forms the barometric diagram or curve. Previous to 1859, also, M. Harty, of Paris, applied electricity to the work of registering: he used the siphon, and the float with its wire and pencil; while at the end of every five minutes, the current, started by the movement of clock-work, caused a slight blow to be given to the tube, to bring the mercury to its true level, and a half minute later a second current caused a pressure to be applied to the pencil, so as to mark its position on the record sheet.

Hough's Typo-Barograph.—Professor G. W. Hough, Director of the Dudley Observatory, Albany, has recently invented a highly complete method of automatic registering, in an instrument termed by him in his descriptive pamphlet (from which this account is drawn), an "Automatic Registering and Printing Barometer," and later named the *Typo-Barograph*. He has aimed to furnish a process simpler than the photographic, and susceptible also of quite general application. "The problem to be solved," he says, "was to cause any meteorological instrument, by means of suitable mechanism, simply and effectually to record its own changes." To this end it was among other essentials necessary that the mechanism should be such as to repeat the changes within the instrument in all their forms—of motion uniform or variable, forward or reverse.

Beginning with the barometer, it was found by experiment that, by employing the float and making connection in the electric circuit outside the tube, a motion of less than $\frac{1}{1000}$ th of an inch could be readily shown. It was desirable that the registering apparatus should not only produce a linear diagram or curve of the varying atmospheric pressure, but, in order to secure exact results, that it should also furnish simultaneously a printed numerical record of the same. A Daniell's battery is employed, and the "make" circuit adopted, as saving consumption of the battery elements at

times when no action is required. In the apparatus, one pole of the battery is in connection by its wire, which passes through a brass cap, *c*, above, with the mass of the mercury in the shorter limb of a siphon barometer. From the other pole proceed two separate conducting wires, having in their course two electro-magnets, *m* and *m'*, and terminating in platinum points, *p* and *p'*: these points stand in quite or nearly the same vertical line beneath the ivory (insulating) block which supports them, and are directed toward each other. A thin metallic disc, *d*, is upheld and steadied by an arrangement of delicate wires, one of which, rising from the float, also penetrates through the latter and to a slight distance into the mercury beneath it: the disc, so supported, stands between the two platinum points, but not necessarily touching either of them. The size of the float is such that, the support rising from it being properly guided, the rise and fall of the former with the mercury occurs without friction or other appreciable resistance. When the disc, *d*, stands midway between the platinum points, so as to touch neither of them, the circuit is broken; when it comes in contact with either point, the circuit is completed through the corresponding wire.

The disc being midway between the platinum points, its surfaces are distant from them respectively a little less than the $\frac{1}{1000}$ th of an inch. The ivory block carrying these points is movable, being at the end of a horizontal arm that is raised or lowered by the turning of an upright screw, *S*. This screw—distance of threads $\frac{1}{10}$ th inch—is below inserted into a horizontal wheel, *W*, having 40 teeth: thus, a movement of this wheel to the extent of *one tooth* raises or lowers the screw, and so the platinum points, the $\frac{1}{1000}$ th of an inch. At the opposite sides of the wheel are fixed small wheels, *a* and *a'*, each having one tooth. By means of clock-weights these wheels are continually impelled in opposite directions; but their motion is prevented, so long as the mercury column is at rest, by the position of the armatures of the two electro-magnets standing close to them, each of these by means of a "detent" arrangement locking its respective wheel. It will be remembered, of course, that the fall of mercury in the shorter limb of the siphon barometer indicates an effective rise to twice the amount in the longer column, thus showing *increase* of pressure, of which the latter is the true measure; and *vice versa*.

Suppose now that, the mercury having been at rest, increasing atmospheric pressure begins to depress the column in the shorter limb of the siphon: the float *b* sinks, bringing the disc *d* against the lower platinum point *p'*, and closing the circuit through the electro-magnet *m*; the latter attracts its armature, and releases the wheel *a'*, which makes a revolution, carrying the wheel *W* backward one tooth, thus lowering the screw the $\frac{1}{1000}$ th of an inch, and the joint *p'* the same distance below the po-

sition at which contact with the disc occurred; and so long as the mercury and the float continue to go down, each $\frac{1}{1000}$ th of an inch repeats the process, the platinum point continually moving down in advance of the disc. Let, on the contrary, a diminishing atmospheric pressure allow rise of the mercury and float: the disc *d* is then elevated into contact with the upper platinum point *p*, thus closing the circuit through *m*, bringing down its armature, and unlocking the wheel *a*, by the revolution of which the large wheel is moved forward one tooth, and the screw, with the arm and the point *p*, is carried upward the $\frac{1}{1000}$ th of an inch; and this process also is repeated as often as the increasing pressure elevates the disc again into contact with the upper point *p*; or, the ascending and descending movements alternate, according to circumstances.

A movement of ascent and descent in the mechanism, corresponding to that of the mercury, has now been secured; each $\frac{1}{1000}$ th inch of this, however, as already indicated, denotes a change twice as great—the $\frac{1}{1000}$ th of an inch—in the effective height of the mercurial column, and so in the value of the atmospheric pressure. In order, now, to trace the curve corresponding to these varying pressures, the wheel *W*, at the same time that it moves the screw *S*, is by a train of wheel-work made to impart a proportionate movement to a second screw *S'*, an arm and pencil from the latter tracing the pressure curve on a sheet wound upon a cylinder made to revolve regularly by clock-work; the ratios of parts in the connection are such that the curve, as produced, is "magnified a little more than three times [3.077 times, it appears] the barometrical pressure."

For obtaining the printed numerical record of pressure, there is introduced each day into the mechanism a record sheet marked at the proper intervals with the hours from 0 (noon) to 24, or 0 again. The machine prints the *fractional parts* only of the inch in height, and to three places; and, at the end of each 24 hours, the observer notes upon the sheet the date and the *integer* inches in height of the column. Of three wheels which receive independent motions about the same vertical axis, each has set in its periphery types for the numbers 1, 2, &c., to 9, 0. These wheels give in order the *thousandths*, *hundredths*, and *tenths* of an inch—each of the first two, of course, revolving 10 times for once of the wheel next succeeding it; and the uppermost advancing one type ($\frac{1}{10}$ th circumference) for a movement of the screw *S* through $\frac{1}{1000}$ th of an inch. The combination of wheels is such as to "carry for ten" either forwards or backwards. At the end, in this instrument, of each hour, the proper types on the three wheels are brought into line with each other and with the proper hour mark on the record sheet; and at this moment, the same clock-work which governs the cylinder receiving the pressure-curve, and also carries forward the record sheet, causes a small hammer to strike a cushion stand-

ing at the back of the sheet, and thus, through an interposed strip of duplicating impression paper, secures the imprint of the types.

Mr. Hough acknowledges his indebtedness to Mr. Thomas Simons for suggestions in connection with the mechanism, of which also certain parts, as the screws, were constructed by Mr. Charles Fasoldt, of Albany. Many details respecting its construction, management, the proposed compensation for temperature, &c., are necessarily omitted. Printed readings of this barometer, while it was yet in a less perfect form than at present, and as obtained during six days of the close of April, 1865, deviated in no case more than .005 of an inch from the indications of a standard barometer (Fastré) during the same period. Of the value of a perfectly working instrument of this sort there can be no question; but it has already received practical confirmation also in the curves afforded by its working, and through comparison of these with weather states, storms, winds, &c. In a private letter, Mr. Hough states that he is enabled by the character of the curves to predict with great certainty gales of wind from 12 to 36 hours in advance; and that it is, in fact, rather by the character of the curve, in respect especially to *regularity*, and we may suppose *direction* also, than by the actual height of the mercury, that weather states are indicated. In his pamphlet, he shows how the essential parts of the automatic mechanism can be applied to the rain-gauge, to the thermometer, and to the anemometer, printing in this last the direction of the wind in degrees, and its force or velocity in pounds or miles.

For the description of a form of self-registering barometer, and of a proposed mode of compensating for temperature in the siphon barometer, by terminating the two limbs of the instrument in conical chambers, the reader is referred to an article entitled "Barometer," in the *American Journal of Science* for September, 1865.

BARTH, HEINRICH, a German traveller, explorer, geographer, and author, born at Hamburg, April 18, 1821, died at Berlin, November 25, 1865. He was a graduate of the University of Berlin, where he developed a decided taste for classical geography which led him upon the completion of his studies to travel through the countries bordering the Mediterranean. Having made a tour through Italy and Sicily, he embarked in 1845 at Marseilles, and from Gibraltar passed over to Tangier, Africa. Proceeding along the Algerian coast, he made excursions into the interior of Tunis, Tripoli, and across the sandy desert to Bengazi. On his journey thence to Cairo, he was attacked by a band of Arab robbers, whom he bravely resisted, but was severely wounded, and lost all his effects and papers. He continued his researches, at an expenditure of his private resources to the extent of \$14,000, and starting from Cairo travelled in Egypt, Sinai, Palestine, Asia Minor, the islands of the Ægean Sea, and Greece. These

travels occupied him for nearly three years, and in 1849 he published, at Berlin, an account of a portion of them in a work entitled *Wanderungen durch die Küstenländer des Mittelmeeres*. On the 8th of December of the same year, he again sailed from Marseilles, having been (with Dr. Overweg) appointed by the British Government scientific companion to Mr. James Richardson, then charged by the Foreign Office with a political and commercial mission to Central Africa. Starting from Tripoli on the 4th of February, 1850, Dr. Barth and his companions crossed the Great Desert amid much difficulty and danger. Losing himself at one time in that trackless waste, he remained twenty-eight hours without water, preserving his life by drinking his own blood. Both Mr. Richardson and Dr. Overweg succumbed to the climate; the former in March, 1851, and the latter in September of the following year. Dr. B., however, succeeded in saving the papers containing an account of the expedition, and forwarded them to England, where they were speedily published.

After the death of his companions, letters arrived from the British Government continuing Dr. Barth's commission, and accompanied with a supply of funds. Continuing his explorations, he reached Timbuctoo in September, 1853, where he was imprisoned nearly a year, and a rumor reached Europe that he had fallen a victim to the tribes in that region. In the mean time Dr. Edward Vogel, then an assistant of the British royal astronomer, Mr. Hind, volunteered to go to Dr. Barth's assistance with a company of sappers and miners. They were joined at Tripoli by Mr. Warrington, son of the British consul at that place, who died at Kuka soon after. After a painful interval it was announced to the world that Dr. Barth was living, and when he returned to Tripoli in September, 1855, his explorations had extended over twenty-four degrees of latitude and twenty of longitude, from Tripoli in the north to Andamawa in the south, and from Bagirmi in the east to Timbuctoo in the west, upward of 12,000 miles. Not long after his return, an account of his exploration was published by him in England, in five volumes 8vo, 1857-'58, under the title of "Travels and Discoveries in Northern and Central Africa," and was subsequently republished in this country in three 8vo volumes. His narrative is minute in its detail almost to tediousness, but it shows him to have been an accurate and careful observer. While it was in course of publication he resided in England, but not long afterwards returned to Germany, where he superintended the fitting out of other exploring expeditions to Central Africa, and visited Northern Africa once or twice in the interests of geographical science. Soon after the death of Von Ritter, he was appointed his successor in the Chair of Geography in the University of Berlin, and became also the editor of the "Erdkunde," to which, as well as to Petermann's "Mittheilungen," he had previously been a large contributor. He had, during the

past year, taken a deep interest in a new enterprise for the exploration of Central Africa, and, it is said, was preparing to accompany it at the time when he was seized with his last illness.

BAVARIA, a kingdom in Germany. The reigning sovereign is King Ludwig II., born August 25, 1845, succeeded to the throne on the death of his father, Maximilian II., March 10, 1864. The grandfather of the king, Ludwig I., born August 25, 1786, is still living. He abdicated the throne on March 21, 1848. The Constitution of Bavaria dates from May 25, 1818, and modifications were introduced in 1848-'49. The Legislature consists of two Houses. The Upper House (the "Reichsrath," or Councillors of the realm) comprises the princes of the royal family, the crown dignitaries, the two archbishops, the heads of certain noble families, one bishop, and one Protestant clergyman, appointed by the king; and an unlimited number of other members appointed by the crown. The Lower House, or Chamber of Deputies, consists of deputies of the towns, of the universities, of certain religious corporations, and of the rural districts. To be a voter, it is required to be twenty-five years of age, and to be rated at a minimum of ten florins.

The area of the kingdom is 28,485 square miles. The population was, in 1861, 4,689,837, and in 1864, 4,807,440. The number of Roman Catholics is estimated at about 3,360,000; that of Protestants (Lutheran, Reformed, and United Evangelical) at 1,360,000; that of Jews at 70,000. The capital of Munich had, in 1864, a population of 167,054. Next to it in population, are Nuremberg, with 70,492 inhabitants; Augsburg, 49,832; Wurzburg, 41,082. The budget of the kingdom is calculated for the lengthened term of six years, which counts as a financial period. The estimated receipts and expenditures for one year of this financial period are 46,720,597 florins. The public debt in September, 1864, was 337,833,467 florins. The army, on the peace footing, consisted, in 1865, of 67,012 men; on the war footing, it comprises 205,668 men. On the part the Bavarian Government took in the political questions of Germany, see GERMANY.

BELGIUM. The reigning sovereign is King Leopold II., born April 9, 1835, succeeded his father, Leopold I., in December, 1865. Heir apparent, Prince Leopold, born June 12, 1859. The Council of Ministers is composed as follows: Foreign Affairs, Ch. Rogier (1861); Justice V. Teusch (1827); Finances, H. J. W. Frère (1861); Public Works, J. E. Van der Stichelen; War, Lieut.-Gen. Baron Chazal (1859); Interior, A. Van der Peereboom (1861). Belgian Minister at Washington, Maurice Delfosse (1865); American Minister at Brussels, H. S. Sanford (1861). The area is 11,813 square miles; the population (Dec. 31, 1868), 4,893,021. Four cities have more than 100,000 inhabitants: Brussels, 184,932; Ghent, 122,900; Antwerp, 130,444; Liege, 101,710. In the budget for the year 1865, the receipts amounted to 159,012,790

thalers, and the expenditures to 154,375,271 thalers. Public debt, on May 1, 1865, 626,775,514 francs. It is paid off gradually by the annual surplus of income over expenditure, and the operations of the sinking fund, or "caisse d'amortissements." The Belgian army, according to the latest accounts, comprised 86,372 men, 7,099 horses, and 152 guns. The imports amounted, in 1863, to 616,843,269 francs, and the exports to 533,657,281 francs. The movements of shipping during 1863, were as follows: Arrivals, 8,893 vessels, with 712,378 tons (of which there were Belgian vessels, 597, with 62,525 tons); clearances, 8949 vessels, with 723,975 tons. The merchant navy, on December 31, 1863, consisted of 97 vessels, of 27,247 tons.

King Leopold I., the first King of Belgium, died December 14, 1865, and was succeeded by the present king, Leopold II. On December 17 the new King took the oath of the Constitution, before both houses of the legislature. Some curiosity has been manifested to know whether Leopold II. would express a cordial endorsement of the fundamental principles of the Belgian Constitution. He had been previously charged in English, French, and other papers, with leaning toward a political party, which incessantly denounced the Belgian Constitution as an apostasy from Christianity and the Catholic Church, because it guarantees religious liberty and freedom of the press, and other civil rights. This report was, however, emphatically contradicted by the inaugural address; the professions made by the new king of loyalty to the Constitution being strong and unequivocal. The following passages of the inaugural address are especially remarkable:

"If I neither promise Belgium a great reign, like that which founded its independence, nor a great king, like him whom we mourn, I at least promise the country a king Belgian in heart and soul, whose whole life belongs to it.

"The first King of the Belgians to whom Belgium has given birth, I have shared since childhood all the patriotic emotions of my country. With it I have joyfully followed that national development which fecundises in its bosom all the sources of strength and prosperity. Like it, I love the great institutions which at once guarantee order and liberty, and constitute the most solid basis of the throne. In my thoughts the future of Belgium has always been connected with my own, and I have always considered it with the confidence inspired by the right of a free, honest, and courageous nation, who desires independence, who has known how to achieve and show itself worthy of it, and will be able to preserve it.

"Gentlemen, during the last thirty-five years Belgium has witnessed the accomplishment of events that in a country of similar extent to ours have rarely been realized by a single generation. But the edifice whose foundations have been laid by the Congress can be raised, and will be raised, still higher. My sympathetic

concurrence is assured to all who shall devote to this work their intelligence and labor.

"It is by persisting in this course of activity and wise progress that Belgium will still more solidly establish her institutions at home, and will preserve that esteem abroad of which the powers guaranteeing her independence and other foreign States have never ceased to afford, and now again renew benevolent testimony."

On December 22, the Chamber of Representatives unanimously voted a bill fixing the Royal Civil List at 8,800,000 francs during the king's reign, and granting an extraordinary credit of 700,000 francs for restoring the interior of the royal residence.

The inauguration of Leopold II. and the favorable reception of his inaugural address at home and abroad, dispelled for the present the fears which many entertained for the integrity of the kingdom. The interview of Count Bismarck with the Emperor Louis Napoleon, and the language of the official papers of France and Prussia, had started the report that, on the death of Leopold I., a division of the country according to nationalities, either between France and Prussia, or between France and Holland, which, in this case, would indemnify Prussia, was contemplated.

The change of sovereigns passed over, however, without any notable manifestation in favor of annexation. The French Government, in its intercourse with the Belgian, employed language implying a determined repudiation of all intentions of annexation. Hardly any of the French papers hinted at the project, and only the organs of the Prussian aristocracy (in particular, the "Kreuzzeitung"), plainly intimated their desire for the overthrow of the liberal Belgian constitution, even, if necessary, by means of a partition of the country.

BELGIUM, LEOPOLD GEORGES CHRÉTIEN FRÉDÉRIC, King of, born in Coburg, December 16th, 1790, died at Brussels, December 9th, 1865. He was the youngest son of Duke Francis of Saxe-Coburg-Saalfeld, and uncle of Queen Victoria, whose mother, the Duchess of Kent, was his sister. He received a brilliant education, entered the military service of Russia, and in 1808 accompanied the Emperor Alexander I. to Erfurt, with the rank of general. In 1810 he relinquished his position in the army of the Czar and devoted himself to the interests of Saxe-Coburg. In 1813 he rejoined the Emperor Alexander and took an active part in the battles of that year. In 1814 he accompanied the allied sovereigns to England, and there made the acquaintance of Princess Charlotte Augusta, daughter of George III., whom he married May 2d, 1816, and who died in childbirth, November, 1817. On his marriage, Leopold was raised to the rank of a British field-marshal, and was created Duke of Kendal, with a pension of £50,000. After the death of the princess he resided at London, and most of the time at his palace of Claremont. In 1830 he declined the crown of Greece, but in the fol-

lowing year accepted that of Belgium. In 1832 he married the Princess Louise, daughter of Louis Philippe, by whom he had three children, Leopold Louis Philippe Marie Victor, Duke of Brabant, who succeeds his father as King Leopold II., born April 9, 1835; Philippe Eugène Ferdinand Marie Clément Baudoin Leopold Georges, Count of Flanders, born March, 1837; and Marie Charlotte Amélie Augusta Victoire Clémentine Leopoldine, born June 7, 1840, married July, 1857, to the Archduke Maximilian of Austria, now nominally Emperor of Mexico. In 1850 Leopold was again made a widower, and since that time has lived mostly in retirement at his country seat of Lacken, or upon his extensive domain of Ardenne, being opposed to the pomp and ostentation of court life. His habits being naturally prudent, he had amassed a very large fortune. He was by birth a Protestant, and remained so until his death, although his children were brought up Catholics. He was anxiously intent upon avoiding any complications with foreign Powers, and upon strengthening, by all possible means, the independence of his own kingdom, and in this was so successful that throughout his reign of more than thirty years Belgium enjoyed a profound peace. It was his daily task to hold the balance equally between the two parties which divided the nation, and this he accomplished with consummate ability. He had to deal with every difficulty which can perplex a king—war with a nation lately united to his own, the patronage of two foreign Powers, of which France was one, the discontent of Belgian patriots at the dismemberment of Luxemburg and Limburg, the jealousies of the Liberal and Catholic party, frequent changes of ministers, a financial and religious crisis. All these he surmounted, not by force of arms, but by honesty and devotion to public duty: while his conciliatory disposition and comprehensive statesmanship, as well as his family connections with most of the European dynasties, have enabled him on several occasions to act as mediator in times of political complication.

BOLIVIA, a republic in South America. Provisional President, in consequence of the revolution of December, 1864, General Mariano Melgarejo. The frontiers of the republic, especially the one which divides it from Chili, have not been fixed. The statements of the area of the republic are very different. According to a map, published in 1859 by the Bolivian Lieut.-Col. J. Ondarza, and later, corrections (in Dr. Petermann's *Geographische Mittheilungen*, 1865, number vii.), Bolivia comprises 39,638 geographical square miles, or about 832,000 English square miles. According to the same authority the population was, in 1858, as follows:

Departments.	Inhabitants.	Departments.	Inhabitants.
La Paz.....	475,322	Santa Cruz.....	153,164
Cochabamba.....	349,892	Tarja.....	83,900
Potosí.....	281,229	Veni.....	53,684
Chuquibamb.....	223,663	Atacama.....	8,575
Oruro.....	110,981	Indians.....	945,000
Total.....		1,967,832	

The regular army consists of 1,500 men; the fleet of 3 vessels armed with 24 cannon. The receipts amounted to about 1,976,000, and the expenditures to 1,739,000 piastres. The imports in 1853 were valued at 6,897,925 francs. The movement of shipping of the port of Cobija during the year 1853 (arrivals and clearances), amounted to 126 vessels, of 20,745 tons, of which 70 vessels, with 10,450 tons, were English. The merchant navy consists of 38 vessels of 7,000 tons.

On December 28th Gen. Melgarejo rose at Cochabamba against the Government of President Jose Maria de Acha. In February, 1865, the troops of President Acha were totally defeated at Ocaza, near Potosi, and almost the whole country recognized Gen. Melgarejo as Provisional President. On March 22d ex-President Belzu arrived at La Paz, the capital of the republic, and, during the absence of Melgarejo, caused himself to be proclaimed President. Melgarejo, however, soon took the city by storm, and Belzu was killed by one of his own soldiers. A new rising against the rule of Melgarejo began on May 25th, under the leadership of Castro Arquedas. At the date of the last advices from La Paz (November 16, 1865), this movement had not been suppressed. Gen. Melgarejo at that time was at La Paz, at the head of 2,500 men, and preparing to march against the revolutionists.

BOWMAN, ALEXANDER H., Lieutenant-Colonel Corps of Engineers, U. S. Army, was born at Wilkesbarre, Pa., May 16, 1803, and died there November 11, 1865. He was the son of Captain Samuel Bowman, an officer of distinction in the Massachusetts line during the Revolutionary War. He entered as a cadet into the U. S. Military Academy, July 1, 1821.

In June, 1825, he graduated *third* in his class, which numbered thirty-seven, and of which Maj.-Gen. Charles F. Smith, Professor A. D. Bache, Gen. Robert Anderson, and others alike distinguished, were members. Cadet Bowman was promoted second lieutenant in the Corps of Engineers, July 1, 1825, and after a few months service as an Assistant Professor of Ethics, at West Point, he was ordered (1826) to the Southern coast as an assistant engineer on the defences and improvements of the harbors in that quarter.

For twelve years he was employed at New Orleans, Mobile, Pensacola, and other points on the Gulf, on these duties. In 1834 he was ordered to superintend the construction of a military road from Memphis, Tenn., into Arkansas, and further charged with improving the navigation of the Cumberland and Tennessee Rivers, until 1838. He was promoted a first lieutenant of engineers, January 21, 1835, and captain of engineers, July 7, 1838. Immediately following the latter event, Captain Bowman was ordered to assume charge of the defences and improvement of the harbor of Charleston, South Carolina; and for nearly thirteen years he was thus employed, his oper-

ations extending to the harbors of Georgetown, South Carolina, Pensacola, Florida, and the improvement of the Savannah River.

In 1852, after a brief service at West Point, he was ordered to Washington as chief engineer, under the Treasury Department, for locating and constructing buildings designed for custom-houses, post-offices, marine hospitals, &c. For eight years he was thus employed, having been, meantime, promoted major of engineers, January 5, 1857.

Immediately preceding the outbreak of the war, on March 1, 1861, Major Bowman was appointed the Superintendent of the United States Military Academy, with the local rank of Colonel of Engineers, which position he continued to hold until July 8, 1864, receiving on March 8, 1863, his regular promotion as a lieutenant-colonel in the corps of engineers.

While in the performance of his duties as a member of a board of engineers to improve and preserve the New England sea-coast defences, and after forty years of uninterrupted service, he was conveyed from Boston to his home in Wilkesbarre, where he died as above stated, aged sixty-two.

BRAZIL. An empire in South America. The reigning emperor is Pedro II., born Dec. 2, 1825, ascended the throne in consequence of the abdication of his father, April 7, 1831; under guardianship assumed the reins of government on July 23, 1840. Heir apparent to the throne is Princess Isabel, born July 29, 1846, and married on Oct. 15, 1864, to Louis Philip, Count d'Eu, oldest son of the Duke de Nemours. The General Legislative Assembly consists of two houses, the Senate and the Congress. The Senators are chosen for life at electoral meetings, expressly convened, each of which has to nominate three candidates, leaving the choice between them to the sovereign or his ministers. The members of the House of Congress are chosen by indirect election for the term of four years. The property qualification of a Senator is 800 milreis, of a member of the House of Congress 400 milreis, and of an elector 200 milreis. All inscribed voters are bound to vote under a penalty. The annual session of the legislative assembly commences on May 8, and ordinarily extends over four months.

The ministry is divided into seven departments. A new ministry was formed on May 11, 1865, being composed of the following members: Interior, Marquis d'Olinda, President of the Council; Justice, Jose Thom. Nabuco de Arango; Exterior, Jose Antonio Saradra (appointed June, 1865); War, Angelo Moniz da Silva Ferraz; Finances, Jose Pedro Dias de Carvalho; Navy, Dr. Francisco de Paula da Silveira Lobo (appointed June 1865); Public Works, Commerce and Agriculture, Dr. Ant. Fr. de Paula e Souza.

American Minister at Rio de Janeiro, J. Watson Webb (accredited Oct. 21, 1861); Brazilian Minister at Washington, J. M. N. d'Azambuja.

The empire has an area of about 8,004,460 square miles, and a population (in 1856) of 7,677,800 inhabitants.

The budget for the year 1865-'66 estimates the expenditures at 58,875,183 milreis, and the receipts at 55,000,000 milreis; probable deficit, 3,875,183 milreis.

The regular army, in 1865, consisted of 85,673 men. The fleet was composed of 52 armed and 7 non-armed vessels. Two of the war-vessels are iron-clads, and three other iron-clads were in the course of construction.

The exports of the year 1862 amounted to 122,479,999 milreis (to the United States 15,253,118); the imports of the same year to 99,072,718 (from the United States 6,044,184). The movement of shipping of the year 1862-'63 was as follows:

FLAG.	ARRIVAL.		CLEARANCE.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
Brazilian.....	398	41,064	167	89,693
Foreign.....	2,647	902,595	2,580	4,054,513
Total.....	3,088	944,649	2,697	4,094,493
Coasting trade (under Brazilian flag).....	3,447	725,130	3,884	720,987

The beginning of the year 1865 found Brazil involved in a war with the Governments of Uruguay and Paraguay. The war with Uruguay soon ended (February, 1865) by the overthrow of the Government and the elevation of Gen. Flores, the chief of the revolutionist party of Uruguay, and the ally of Brazil, to the Presidency. (*See URUGUAY.*) That with Paraguay continued to the end of the year. (*See PARAGUAY.*)

The German emigration to Brazil has of late considerably decreased, but considerable attention was awakened, in 1865, by a scheme of immigration from the southern portion of the United States. The leaders of this movement represented the preliminary negotiations as an entire success, and the last advices from Brazil state that "the American emigrants, chiefly Southerners, represented by Col. Wood, have selected near Araraguara a site for a town, which lies between two small rivers, and can have railway connection with the capital." A vast tract of 8,000,000 acres of unoccupied Government land has also been selected, and it was the general expectation that soon a flow of emigration from the States composing the late Confederacy would set in.

BREMEN, a Free City in Germany. The legislative power is vested in a Senate of thirty members, and, the General Assembly of citizens, called *Bürgerconvent*. The Senate is presided over alternately by two *Burgomasters*, the one elected for six years, and the other for four years. The *Burgomasters* in 1865 were C. F. G. Mohr (1863-1867), President of the Senate for 1866, and J. D. Meier (1861-1865), President of the Senate for 1865. The territory of Bremen comprises an area of 112 square

miles. The population, according to the census of 1854, was 104,091. The public revenue for the year 1864 amounted to 1,695,405 thalers, and the expenditures to 1,750,739 thalers; deficit 55,334. Bremen sustains a battalion of infantry, numbering 760 men. The cavalry and artillery are furnished by Oldenburg. The merchant navy at the close of 1864, consisted of 298 vessels, including ten screw steamers. The foreign shipping engaged in the direct and indirect trade at the port in 1864, was as follows: Entered, 2,604 vessels, of 274,707 lasts. Cleared, 2,784 vessels, of 277,199 lasts. The imports in 1864, amounted to 67,113,930 thalers; the exports to 61,466,848 thalers.

BREMER, FREDERIKA, a Swedish novelist and author, well known and highly esteemed both in England and America, born on the banks of the Aura, near Abo, in Finland, in 1803, and died Dec. 31, 1865, at Arsta, near Stockholm, Sweden, of pneumonia. Her family, which was wealthy, removed into Sweden when she was about three years' old. She was carefully educated, receiving instruction from able teachers both in Sweden and Norway, and spending a year in Paris, and on her return to Sweden became a teacher in a female academy in Stockholm. It was while thus engaged that she commenced her literary career, though she had from childhood been fond of writing, and at eight years of age had already begun to write verses. "The Neighbors," her first work, was published in 1824, and was, before long, translated into German, French, Dutch, and Russian, and in 1842, into English, by Mary Howitt, who also translated her subsequent works. Meantime Miss Bremer had been rapidly publishing other works, all of which had been received with equal or greater favor with the first. Between 1824 and 1840 appeared, "The Home," "The Diary," "The H. Family," "The President's Daughter," "Nina," "Brothers and Sisters," "Life in Dalecarlia," and "The Midnight Sun." In 1835 her works appeared in Stockholm, in a collected form, under the title of "Tekneingar ur Hvardagslivet," and these, with subsequent volumes, were published in German, in Leipzig, in twenty volumes—1841-'53. Late in 1849 she sailed for the United States, where she was very cordially received, Miss Howitt's translations of her works having been largely circulated, and having obtained great popularity. She spent nearly two years in travelling through the United States, and everywhere was welcome. The visit of Miss Bremer to America was one of the grand events of her life, and has been duly recorded in her pleasant book, "Homes in the New World." No one who has ever read it—and but few Americans have failed to do so—can forget the genial good nature, homely tenderness, and beautiful pathos which pervade its pages, nor have failed to notice the almost absolute absence of acrimony or envy. The sunny nature of the little lady from the frosty northern climate of Lapland stands prominently forth in this volume; and it is not

less interesting to us from the fact that it is evidently a true index to the gentle character of its gentle author than from its strongly but kindly drawn portraits of our literary celebrities and the warm pictures of our American homes. Her reception here was so genial that she was, perhaps, betrayed into overlooking many of the rougher features of society in this country. Every American reader of "Homes in the New World" can point out where she has been too generous, but none can point out in her narrative a single stroke of the caricaturist. Miss Bremer also displayed, when in this country, a very clear appreciation of some of our then existing national difficulties; and some of her observations on the condition of the country show her in the light of a closely observing philosopher. Once, in describing South Carolina—her type of the whole South—she writes: "The splendor of her eye, the delicate crimson of her cheek, the pomp which surrounds her, cannot conceal the want of health and vigor, the worm which devours her vitals. This weak, luxurious beauty, is South Carolina." This internal weakness has since then been made apparent even to the beauty who would not see. Remarkings on slavery and freedom, she also utters a truth now being daily and hourly confirmed: "This, however, is clear, that there requires a preparation for freedom, and that this has been too long neglected." On her return she spent some time in England, and published in 1852, at Altona, some account of her visit, under the title of "England in 1851." After her return to Sweden, she continued to write her novels of home life, publishing "Hertha" in 1856, "Father and Daughter" in 1858. A tour of some length in the South of Europe was described in 1860, in "Two Years in Switzerland and Italy," and after a subsequent journey to the Holy Land, and return by way of Turkey and Greece, was followed in 1863 by books on those countries, which were her latest published works.

BRIDGES. (See ENGINEERING.)

BRITISH NORTH AMERICA (comprehending Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island).

His Excellency the Right Hon. Charles Stanley Viscount Monck, Governor-General of British North America, and Captain-General and Governor-in-Chief of the Provinces of Canada, Nova Scotia, New Brunswick, and the Island of Prince Edward, etc., etc., etc.

Denis Godley, Governor-General's Secretary; Lieut.-Col. Hon. Richard Monck, Coldstream Guards, Military Secretary; Captain Pemberton, 60th Rifles, aide-de-camp; Lieut.-Col. J. G. Irvine, Provincial aide-de-camp; Lieut.-Col. Duchesnay, Lieut.-Col. H. Bernard, and Lieut.-Col. F. W. Cumberland, Extra Provincial aides-de-camp.

The Canadian Cabinet.—Hon. Messrs. A. J. Ferguson Blair, President of the Council; Sir N. F. Belleau, Receiver-General and Premier; John A. Macdonald, Attorney-General for Upper Canada and Minister of

Militia; George E. Cartier, Attorney-General for Lower Canada; Alexander T. Galt, Minister of Finance; William McDougall, Provincial Secretary; Thomas D'Arcy McGee, Minister of Agriculture and Emigration; A. Campbell, Commissioner of Crown Lands; W. P. Howland, Postmaster-General; J. C. Chapais, Minister of Public Works; James Cockburn, Solicitor-General for Upper Canada; Hector E. Langevin, Solicitor-General for Lower Canada.

Nova Scotia.—His Excellency Lieutenant-General Sir William Fenwick Williams of Kars, Baronet K. C. B., Lieutenant-Governor.

New Brunswick.—His Excellency Hon. Arthur Hamilton Gordon, C. M. G., Lieutenant-Governor.

Newfoundland.—His Excellency A. Mulgrave, Esq., Governor, Commander-in-Chief, and Vice-Admiral.

Prince Edward Island.—His Excellency George Dundas, Esq., Lieutenant-Governor.

The Canadian Legislature assembled at Quebec on January 19, 1865. The Governor-General in his speech from the throne alluded to the raids on territory of the United States, and said: "In order to prevent the organization of any such enterprises within this Province, and also to enable me to discharge in an effective manner my duties toward a neighboring power on terms of friendship with her Majesty, I have seen fit to organize a system of detective Police on the frontier line of the United States, and with the same design I have called out for permanent duty a portion of the Volunteer Force of the Province."

Relative to the codification of the statutes of Lower Canada, he said: "The Commissioners appointed under the provisions of the second chapter of the Consolidated Statutes of Lower Canada to frame a Civil Code, and also a Code of Civil Procedure for Lower Canada, have completed the former part of their duty; the results of their labors shall be laid before you, and I am informed that the Code of Civil Procedure is in a very advanced state. The completion of the Codification of the Civil Law, in both French and English, cannot fail to be of great benefit to the inhabitants of Lower Canada, by enabling the people of all origins to read, in their own languages, the Civil Law under which they live, and which hitherto has only been accessible in a language which is not the mother tongue of a portion of the people whose civil rights are regulated by it."

To the Assembly he stated that the revenue had largely increased, and there had been a contemporaneous extension of the trade of the Province. To both Houses he presented a view of the state of the Confederation question. A conference had assembled and arrived at the conclusion "that a Federal union of the Provinces was feasible and desirable. A plan for the union was proposed (see *Public Documents*, ANNUAL CYCLOPEDIA, 1864), and had received the cordial approbation of the Imperial Government. A bill will be introduced into the Imperial Parliament to give it effect so soon as the Ministers shall be notified that the proposal has received the sanction of the Provincial Legislatures." His view of the measure was thus expressed: "With the public men of

British North America it now rests to decide whether the vast tract of country which they inhabit shall be consolidated into a State, combining within its area all the elements of national greatness, providing for the security of its component parts, and contributing to the strength and stability of the Empire; or whether the several Provinces of which it is constituted shall remain in their present fragmentary and isolated condition, comparatively powerless for mutual aid, and incapable of undertaking their proper share of Imperial responsibility."

In reply to this address the Commons expressed deep regret that outrages had been committed on the commerce and territory of the United States by persons who sought refuge in Canada; they were gratified that a system of detective police had been organized on the frontier line, and at the zeal and activity displayed by the volunteer force when called upon for active service, and promised that the estimates for this expenditure should receive prompt attention. Other subjects of a local nature were also noticed. This address of the Commons was adopted by a vote of 71 to 17.

On the 3d of February the then Premier, the late Sir E. P. Taché, moved in the Legislative Council, "That an humble address be presented to her Majesty, praying that she may be graciously pleased to cause a measure to be submitted to the Imperial Parliament for the purpose of uniting the Colonies of Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island, in one Government, with provisions based on the resolutions which were adopted at a conference of Delegates from the said colonies, held at the city of Quebec on the 10th of October, 1864" (*see ANNUAL CYCLOPEDIA*), and on the 6th of the same month, the Hon. John A. Macdonald, Attorney-General of Upper Canada, as leader in the Legislative Assembly, also moved a similar resolution in a speech of great length and eloquence. He dealt with the question as a whole, entering into its history; the state of feeling and the balance of parties in the British American Provinces prior to the Conference; the Conference itself, and the feeling of unanimity which prevailed in its deliberations; the difficulties which met them, arising from the difference of nationality, religion, and laws, in the several colonies which were represented; the mutual advantages of union both in an economical point of view in saving the vast expenses of maintaining separate Governments with all their attendant machinery, and as a means of organization and strength for defensive purposes, and also for binding the colonies in closer connection with the mother country, the Constitution of the General Government, and going minutely into all the provisions on this latter point. The importance of the Provinces when united he thus describes:

We find ourselves with a population approaching four millions of souls. Such a population in Europe would make a second, or, at least, a third-rate power.

And with a rapidly increasing population—for I am satisfied that under this union our population will increase in a still greater ratio than ever before—with increased credit—with a higher position in the eyes of Europe—with the increased security we can offer to immigrants, who would naturally prefer to seek a new home in what is known to them as a great country, than in any one little colony or another—with all this I am satisfied that, great as has been our increase in the last twenty-five years since the union between Upper and Lower Canada, our future progress, during the next quarter of a century, will be vastly greater. And when, by means of this rapid increase, we become a nation of eight or nine millions of inhabitants, our alliance will be worthy of being sought by the great nations of the earth. I am proud to believe that our desire for a permanent alliance will be reciprocated in England. I know that there is a party in England—but it is inconsiderable in numbers, though strong in intellect and power—which speaks of the desirability of getting rid of the colonies; but I believe such is not the feeling of the statesmen and the people of England. I believe it will never be the deliberately expressed determination of the Government of Great Britain. The colonies are now in a transition state. Gradually a different colonial system is being developed—and it will become, year by year, less a case of dependence on our part, and of overruling protection on the part of the mother country, and more a case of a healthy and cordial alliance. Instead of looking upon us as a merely dependent colony, England will have in us a friendly nation—a subordinate but still a powerful people—to stand by her in North America in peace or in war. The people of Australia will be such another subordinate nation. And England will have this advantage, if her colonies progress under the new colonial system, as I believe they will, that, though at war with all the rest of the world, she will be able to look to the subordinate nations in alliance with her, and owing allegiance to the same Sovereign, who will assist in enabling her again to meet the whole world in arms, as she has done before. And if, in the great Napoleonic war, with every port in Europe closed against her commerce, she was yet able to hold her own, how much more will that be the case when she has a colonial empire rapidly increasing in power, in wealth, in influence, and in position. It is true that we stand in danger, as we have stood in danger again and again in Canada, of being plunged into war and suffering all its dreadful consequences, as the result of causes over which we have no control, by reason of their connection. This, however, did not intimidate us. At the very mention of the prospect of a war some time ago, how were the feelings of the people aroused from one extremity of British America to the other, and preparations made for meeting its worst consequences. Although the people of this country are fully aware of the horrors of war—should a war arise, unfortunately, between the United States and England, and we all pray it never may—they are still ready to encounter all perils of that kind, for the sake of the connection with England. There is not one adverse voice, not one adverse opinion on that point.

The debate, which was conducted in an excellent spirit, proceeded in the Legislative Council until the 20th of February, when the motion was carried by a vote of forty-five to fifteen. In the Assembly the discussion was not brought to a close until the 14th of March, and would, no doubt, have continued to a much longer date, but for the decisive conduct of the administration in laying aside almost all other important legislation to the furtherance of this grand object. The address was carried by an overwhelming majority, ninety-one to thirty-three.

Parliament was prorogued almost immediately after this event. Amongst the items voted during the session was one of over \$1,000,000 for the permanent defences of the Province. The Governor-General dismissed the Legislature with a speech, in which he congratulated them upon having laid the foundation for a more intimate union of British North America.

In accordance with the intimation conveyed in the latter portion of the speech, shortly after the rising of Parliament, four members of the Canadian Government (Messrs. Macdonald, Carter, Galt, and Brown) were appointed as a delegation to proceed to England, to confer with the Imperial authorities on questions affecting the interests of Canada, and of British North America generally. The reception of these statesmen by the Mother Country was of the most gratifying and satisfactory character, and showed the strong desire of the Home Government to perpetuate the connection between the Colonies and Great Britain.

The proceedings of the Commissioners were reported to the Governor-General, to whom a despatch was also addressed by the Right Hon. Edward Cardwell, describing the Conferences of the Commissioners with the Imperial Government. This last document presents very clearly the views of the Home Government relative to British North America, as follows:

DOWNING STREET, 17th June, 1865.

MR LORD: I have the honor to inform your Lordship that several conferences have been held between the four Canadian Ministers who were deputed, and the Duke of Somerset, the Earl De Grey, Mr. Gladstone, and myself, on the part of her Majesty's Government.

On the first subject referred to in the Minute, that of the Confederation of the British North American Provinces, we repeated on the part of the Cabinet the assurances which had already been given of the determination of her Majesty's Government to use every proper means of influence to carry into effect without delay the proposed Confederation.

On the second point, we entered into a full consideration of the important subject of the defence of Canada, not with any apprehension on either side that the friendly relations now happily subsisting between this country and the United States are likely to be disturbed, but impressed with the conviction that the safety of the empire from possible attack ought to depend upon its own strength and the due application of its own resources. We reminded the Canadian Ministers that on the part of the Imperial Government we had obtained a vote of money for improving the fortifications of Quebec. We assured them that so soon as the vote had been obtained the necessary instructions had been sent out for the immediate execution of the works, which would be prosecuted with despatch; and we reminded them of the suggestion her Majesty's Government had made to them to proceed with the fortifications of Montreal.

The Canadian Ministers, in reply, expressed unreservedly the desire of Canada to devote her whole resources, both in men and money, for the maintenance of her connection with the Mother Country; and their full belief in the readiness of the Canadian Parliament to make known that determination in the most authentic manner. They said they had increased the expenditure for their Militia from 300,000 to 1,000,000 dollars, and would agree to train that force to the satisfaction of the Secretary of State for War, provided the cost did not exceed the last-men-

tioned sum annually, while the question of confederation is pending. They said they were unwilling to separate the question of the works of Montreal from the question of the works west of that place, and from the question of a naval armament on Lake Ontario. That the execution of the whole of these works would render it necessary for them to have recourse to a loan, which could only be raised with the guarantee of the Imperial Parliament. They were ready to propose to their Legislature on their return a measure for this purpose, provided that the guaranty of the Imperial Parliament were given now, and that they were authorized to communicate to the Parliament of Canada the assurance that, the occasion arising, England will have prepared an adequate naval force for Lake Ontario. They thought that if the guaranty were not obtained now it was probable that the Canadian Government and Parliament would think it desirable that the question of defensive works should await the decision of the Government and Legislature of the United Provinces.

On the part of her Majesty's Government we assented to the reasonableness of the proposal that if the Province undertook the primary liability for the works of defence mentioned in the letter of Lieutenant-Colonel Jervois, and showed a sufficient security, her Majesty's Government should apply to Parliament for a guaranty for the amount required; and we said that her Majesty's Government would furnish the armaments for the works. But we said that the desire and decision of the Provincial Legislature ought to be pronounced before any application was made to the Imperial Parliament. On the subject of a naval force for Lake Ontario, we said that, apart from any question of expediency, the convention subsisting between this country and the United States rendered it impossible for either nation to place more than the specified number of armed vessels on the lakes in time of peace. In case of war it would, as a matter of course, be the duty of any government in this country to apply its means of Naval Defence according to the judgment it might form upon the exigencies of each particular time, and the Canadian Ministers might be assured that her Majesty's Government would not permit itself to be found in such a position as to be unable to discharge its duty in this respect. This was the only assurance the Canadian Ministers could expect, or we could give.

Upon a review of the whole matter, the Canadian Ministers reverted to the proposal which has been mentioned above, that priority in point of time should be given to the Confederation of the Provinces. To this we, on the part of her Majesty's Government, assented. In conformity, however, with a wish strongly expressed by the Canadian Ministers, we further said that if, upon future consideration, the Canadian Government should desire to anticipate the Confederation and to propose that Canada should execute the works, they would doubtless communicate to Her Majesty's Government that decision; and we trusted that after what had passed in these conferences they would feel assured that any such communication would be received by us in the most friendly spirit.

On the third point, the Reciprocity Treaty, the Canadian Ministers represented the great importance to Canada of the renewal of that treaty, and requested that Sir F. Bruce might be put in communication with the Government of Lord Monck upon the subject. We replied that Sir F. Bruce had already received instructions to negotiate for a renewal of the treaty, and to act in concert with the Government of Canada.

On the fourth point, the subject of the Northwestern Territory, the Canadian Ministers desired that that territory should be made over to Canada, and undertook to negotiate with the Hudson's Bay Company for the termination of their rights, on condition that the indemnity, if any, should be paid by a loan to be raised by Canada under the Imperial guaranty.

With the sanction of the Cabinet, we assented to this proposal, undertaking that if the negotiation should be successful, we, on the part of the Crown, being satisfied that the amount of the indemnity was reasonable, and the security sufficient, would apply to the Imperial Parliament to sanction the arrangement and to guarantee the amount.

On the last point, it seemed sufficient that her Majesty's Government should accept the assurances given by the Canadian Ministers on the part of Canada, that that Province is ready to devote all her resources both in men and money to the maintenance of her connection with the Mother Country, and should assure them in return that the Imperial Government fully acknowledged the reciprocal obligation of defending every portion of the Empire with all the resources at its command.

The Canadian Ministers in conclusion said, that they hoped it would be understood that the present communications did not in any way affect or alter the correspondence which had already passed between the Imperial Government and the Governments of the British North American Provinces on the subject of the Intercolonial Railway. To this we entirely agreed.

The preceding despatch was also sent by the same Minister to the Lieutenant-Governor of New Brunswick, together with a letter, urging upon that Province the following considerations, as motives to its hearty coöperation in the system of Confederation:

You will, at the same time, express to the Legislature of New Brunswick the strong and deliberate opinion of her Majesty's Government, that it is an object much to be desired, that all the British North American Colonies should agree to unite in one Government. In the territorial extent of Canada, and in the maritime and commercial enterprise of the Lower Provinces, her Majesty's Government see the elements of power which only require to be combined in order to secure for the Province which shall possess them all, a place amongst the most considerable communities of the world. In the spirit of loyalty to the British Crown, of attachment to British connection, and of love for British Institutions, by which all the Provinces are animated alike, her Majesty's Government recognize the bond by which all may be combined under one Government. Such an union seems to her Majesty's Government to recommend itself to the Provinces on many grounds of moral and material advantage, as giving a well-founded prospect of improved administration and increased prosperity. But there is one consideration which her Majesty's Government feel it more especially their duty to press upon the Legislature of New Brunswick. Looking to the determination which this country has ever exhibited to regard the defence of the colonies as a matter of Imperial concern, the colonies must recognize a right and even acknowledge an obligation incumbent on the Home Government to urge with earnestness and just authority the measures which they consider to be most expedient on the part of the colonies with a view to their own defence. Nor can it be doubtful that the Provinces of British North America are incapable, when separated and divided from each other, of making those just and sufficient preparations for national defence, which would be easily undertaken by a Province uniting in itself all the population and all the resources of the whole.

I am aware that this project, so novel as well as so important, has not been at once accepted in New Brunswick with that cordiality which has marked its acceptance by the Legislature of Canada, but her Majesty's Government trust that after a full and careful examination of the subject in all its bearings, the Maritime Provinces will perceive the great advantages which in the opinion of her Majesty's Govern-

ment the proposed Union is calculated to confer upon them all.

I have, &c.,
(Signed) EDWARD CARDWELL.

No time was lost on the return of the delegation to Canada in assembling the Legislature, not only to submit the result of the mission, but also to take up a large amount of business pending from the preceding session.

A short time previous to this event the coalition was slightly convulsed by the death of the Premier, Sir E. P. Taché, and the claims put forth by both Conservatives and Reformers for the vacant office. Mr. Macdonald, the next in succession, and well qualified by his political attainments for the position, was named by his Excellency for the post, but his appointment was resisted by the Reformers, on the ground that it would involve a change from the original state of the Ministry when they entered it. To meet the difficulty, both parties at length agreed on Sir Narcisse F. Belleau, a respectable Liberal Conservative, and he accordingly was installed as Head of the Government. The second session, commencing on the 8th August, lasted for nearly two months. Explanations were given on all the questions negotiated by the delegation of the Home Government, including that on the Northwest Territory, but none of them were in a sufficiently forward state to be the subject of legislation. A number of other important measures, however, were brought up and passed.

In October a "Confederate Council of Trade," composed of one member from each Government of the Maritime Provinces and Canada, assembled at Quebec, to consider the present and future trade policy of the British American Colonies with foreign countries; and it is probable that arising out of this conference a very important commission was appointed toward the close of the year, with the approval and coöperation of the Imperial Government, composed of William McDougall, Provincial Secretary (as Chief), Thomas Ryan, M. L. C., J. W. Dunscomb, of Quebec, and A. M. Delisle, of Montreal, on behalf of Canada; Isaac Le Visconte, Financial Secretary, and — McDonald, on the part of Nova Scotia; A. J. Smith, on the part of New Brunswick, and J. C. Pope, on the part of Prince Edward's Island, to inquire into the practicability of opening trade relations with the West Indies, Cuba, Brazil, and perhaps Mexico. The movement is one of the greatest commercial importance to British North America, and has excited the liveliest feelings of interest both in England and in the dependencies and countries concerned. The gentlemen appointed on this responsible and momentous undertaking, are all men holding prominent positions in their respective Provinces.

The Commission sailed for England in November, and having there conferred with, and being accredited by the British Government to the several countries they may be required to visit, were to sail for the West Indies early in the ensuing year. Their duties are to collect

and compile information bearing upon the subject of trade with British North America; and they are empowered to negotiate commercial treaties, subject to the approval of the Imperial Government, from which they derive their authority. With regard to the feasibility of extending the trade relations between the West Indies and Canada, it may be said that for some years past a large and increasing trade has been growing up between the two countries; but the disproportion between the amount of the imports and exports has been hitherto too great to make it appear of much value to the general interests of the province.

It should also be mentioned that of the total quantity of merchandise imported into Canada from the British and Foreign West Indies, consisting of coffee, sugar, molasses, rum, segars, and other articles during the year 1863, more than a moiety was received through the United States. In the year 1863 the total value of the importations from the West Indies amounted to \$415,927; the value of the produce imported direct was \$180,881; through the maritime provinces, \$85,677; and *via* the United States, \$249,419. The trade with the British West Indies for the above year was as follows: Amount of imports, \$182,195; exports only, \$57,542. The Canadian trade with foreign countries other than the United States during the same period amounted in the aggregate to \$2,875,653. The value of the imports was \$2,034,651; against exports, \$841,002. It will be seen that, although the balance is at present considerably against the province, there yet exists the nucleus of a trade with foreign countries which there is every reason to believe is capable of being greatly extended by the judicious measures for that purpose adopted by the Canadian Administration. The exports from Canada to the West Indies consist at present almost exclusively of manufactured goods—such as leather, machinery, soap, starch, straw, wooden ware, and whiskey. The fisheries also supply an article of export to the same countries, and will no doubt in the course of a few years largely contribute to swell the annual returns of the growing trade. The most important staples of Canada, namely, agricultural products and the produce of the forest, have not as yet to any great extent been introduced into the West India islands, the trade in these articles having hitherto been nearly monopolized by the United States. The high prices, however, of all the exportable articles in this country, the effect of the late war, have suggested to the Canadians the possibility of their being able to compete successfully with their neighbors in the West India markets as well as in those of Brazil and Mexico. "Nearly all the exports from the United States to the above countries," the *Toronto Globe* informs us, "consist mainly of articles which can be furnished by these provinces." If this be the case, and in view of the fact that prices will probably for some years continue to rule almost as high as

at present in the United States, it is manifest that the Canadians could not have chosen a more favorable opportunity for vigorously prosecuting an attempt to extend their trade relations with the nearest foreign countries, and with some of which they at present carry on a considerable import trade. As above stated, Canada in the year 1863 exported to foreign countries other than the United States goods to the value of \$841,002; these consisted principally of cured fish and the produce of the forest. The value of the former article was \$494,428, and of the latter \$320,552. The value of the agricultural products exported to the same countries was only \$17,178, and that of the manufactures of Canada the insignificant amount of \$5,299. In negotiating commercial treaties with Cuba, Brazil, and probably Mexico, the Canadian Commissioners, doubtless, will have no difficulty in satisfying the Governments of those countries that, with reference to the two last articles above enumerated, the province is in a position to furnish the one in unlimited quantities, and certain descriptions of manufactures to the extent required, much cheaper than they can be procured from the United States, where the taxation is at the present time so exceedingly burthensome.

In addition to their patriotic attempt to enlarge their export trade with foreign countries, the Canadian Government are also about to take steps toward improving the communications between Lake Superior and the Northwest Territory, which is now virtually incorporated with the province. The Red River Settlement is supposed to contain a population of about 12,000 souls; the gold fields of the Saskatchewan are also attracting great numbers of enterprising people to that fine country, and it is impossible to exaggerate the importance to Canada of securing the trade of that vast and valuable region, which has hitherto gone to the United States instead of finding its natural and legitimate outlet through Canada. "The people of the Red River," says the only paper published in that country, "are becoming alive to the immense advantages of buying their goods in the comparatively untaxed markets of Canada, as compared with the heavily burthened mart of St. Paul's, from whence they are at present supplied."

At the close of 1864 the case of the St. Alban's raiders was still pending in the Canadian courts, upon a demand for their extradition by the United States. Judge Coursol, of Montreal, had been suspended for his judgment in favor of Young and his followers, and the Canadian Government evinced, by every means in their power, a desire to see justice done, not only to the prisoners themselves, but also to the Government and people whose territory had been violated. When brought before Mr. Justice Smith, he sustained the previous judgment by Mr. Coursol, and the prisoners were released from custody, but were again apprehended at the instance of the Canadian Government for a

breach of the neutrality laws. Being taken to Toronto for trial, at the preliminary examination before Mr. Recorder Duggan, it was discovered that no evidence could be adduced against any of the prisoners except Young, and that against him was of a very unreliable character. All the raiders were finally discharged, with the single exception of Young, who was at length admitted to bail, to make his appearance in the event of the charge preferred against him being brought into any of the Superior Courts. No steps, however, have since been taken in this direction. Thus peacefully terminated the connection between Canada and the Confederate refugees, which, at the commencement, gave rise to much ill-feeling between our people and the Canadians, and threatened to lead to serious complications between the two Governments. It is only fair to state, as a proof of the earnest desire of the Canadian authorities to maintain amicable relations with this country, that the \$50,000 booty carried off by the raiders from St. Alban's was refunded by them, and that an alien bill received the sanction of the Provincial Legislature, providing for the removal of such obnoxious sojourners from the province at any future time.

In connection with this it is only necessary to mention the case of Burley, the Lake Erie invader, who was extradited to the United States by a full bench of the Superior Court Judges of Upper Canada, but who subsequently escaped from his prison here, and passing over in disguise into Canada, made his way to the nearest open British seaport, and took passage to Scotland, where he is now residing.

The sudden death of President Lincoln by the hand of an assassin, called forth from the British American Colonies the warmest and most expressive sympathy. Meetings were held in all parts of the Provinces denouncing the act, and paying the highest testimonials of respect to his memory.

The volunteer militia force, sent to the frontier during the excitement which followed the issuing of General Dix's order, was recalled during the summer season, and not replaced. But in November, the Government thought proper, from information which it received as to a probable "Fenian invasion," to provide against such a possible annoyance, by calling out a small body of volunteers for active service. This force was put on duty at the most salient points on the frontier.

In the month of September a Camp of Military Instruction, composed of the passed cadets of the several military schools established by the Canadian Government, was opened at Laprairie, and placed under the command of experienced officers in her Majesty's service. This was an experiment to test the military efficiency and endurance of those who, in the event of hostilities, would be called on to command the Provincial militia. The result was most satisfactory, as the following extract from

the report of Colonel Wolseley, the commanding officer, will testify:

After a few days' experience I found that the theoretical knowledge of drill was much greater than I had expected it could have been; I thought it more advisable therefore to exercise them in the battalion, and subsequently in brigade movements, than to keep them long at the monotonous employment of squad and company drill. When the camp broke up I have no hesitation in saying that they compared most favorably with regular troops. They daily acquired increased steadiness under arms and precision of movement which careful training under military officers only can effect. Their conduct was beyond all praise; their cheerful obedience and the respect they paid their officers, evinced a desire to learn a soldier's duties in all the various grades of our profession, and the quickness with which they learned showed an aptitude for military pursuits that augurs well for the future prosperity of the militia of this country. The difficulties one always has to encounter in transforming the citizen into the soldier, in teaching him habits of order, precision, and smartness in bearing, were consequently easily overcome. It seemed to be the desire of all to identify themselves with the army whose uniform they wore, and in my opinion they were most successful in doing so.

By the "Canadian Volunteer and Militia List," it appears that the number of militia on the rolls in Canada is as follows: 1st Class, 128,827; 2d Class, 208,180; 3d Class, 88,190. Total 425,197.

In the month of October the seat of Government was removed from the city of Quebec to the new capital Ottawa, where for the last five years magnificent piles of buildings have been in course of erection for the accommodation of the Houses of Parliament and the several Departments. It is estimated that these buildings have cost the country more than half a million of pounds, and they are declared by many competent authorities to rival in grandeur and architectural beauty any others on the Continent.

With regard to the public debt, Mr. Galt, Minister of Finance, said: "The amount of public debt to be redeemed in 1865 was \$1,100,000, of which the greater part was the final payment of the Imperial loan. The interest on the charges on the public debt was \$3,890,000, including the sinking fund. The charges embraced under the head of Civil Government amounted to \$4,633,000. It was proposed to expend for militia during 1865 \$500,000. In regard to the public works, the buildings at Ottawa and the completion of the enlargement of the Welland Canal, were the chief. It was expected that the total outlay by the board of works would be \$600,000. The collection of revenue was put down at \$1,350,000. The aggregate of outlays, exclusive of the redemption of the public debt, was \$11,074,000, against the income of \$11,136,000, leaving a surplus of \$62,000. In a country, like Canada, increasing so rapidly, there must necessarily be a gradual increase in the cost of government. It was impossible to govern three millions for the same as two millions. The balances on 30th June last, were nearly \$3,444,000. The Legislature had clothed the Government with power to dispose of four millions

of debentures. But as that had not been exercised, the debentures were lodged with the Bank of Montreal for sums of money obtained from that institution."

With regard to Canal Tolls, the policy of the Government is to make the inland navigation as free from burdens as possible.

The views of the Colonial Government relative to the Reciprocity Treaty were expressed in the Legislature by Mr. Galt with much force, clearly showing that Canada is not so dependent on this treaty as is supposed; and that the political questions appertaining to it are quite distinct from the commercial. He said:

The trade in wheat and flour might be considered as transit trade. The price was regulated by the American market, and the American market did not consume these articles. The United States exported to the Maritime Provinces about as much as they imported from us. Being a transit trade, the Americans reaped the benefit of it; they had the advantage of transporting it, and of the commercial profits that arose from transacting it. The effect of preventing the continuance of that trade, would be that if we succeeded, as he trusted we should, in establishing proper commercial relations with our maritime brethren, the trade would be conducted directly with the Lower Provinces instead of, as now, with Boston and New York.

He also showed that the effects of the United States imposing a duty on lumber, would be to raise the price to their own consumers. They might raise the cost of the material used in their houses and ships at their own expense, but could only slightly affect the trade of Canada.

In referring to the frontier trade of Canada, Mr. Galt remarked:

Americans now grow corn cheaper and better than we, while we grow barley cheaper and better than they. To interfere with the exchange would be inconvenient to both parties. Nay, it would be injurious to both; but the principal effect would be to change the nature of the distillation carried on on either side of the frontier.

With regard to the important and growing interests of mineral products, he admitted the advantages of a near market, but at the same time observed that it was not the American market which gave value to the product of the mine. Admitting the importance of Reciprocity, he thus summarily said:

The exports to the United States, which might be said to be dependent on the Reciprocity Treaty—that was the balance of exports over imports—was, lumber about 5,000,000; coarse grains, 4,000,000; animals, 1,500,000. The trade in animals was much larger last year; but this was about the average. Thus a balance of about ten and a half millions of our export was more or less dependent on the treaty; that was about the amount they could affect by levying taxation on the production of this country. He would not repeat any of the arguments with respect to each article, but the peculiar position of that portion of the American market which was supplied from Canada was such, that he did not think they would find it to their interest to impose duties on our products; but if they did, they would not merely increase the cost of every one of those articles raised in their own country, but they will themselves have to pay the duty on the supplies they obtained from abroad, essential for their consumption. He might further say, in reference to this trade of \$10,000,000,

that though it was certainly very important, still if we were compelled by circumstances to look at the possibility of its being diverted, we should not look so much at the proportions it bore to the total exports or imports of the country, as to the proportion it bore to the whole product of the industry of the Province. We ought not to conclude that because 25 per cent. of our products were exported to the United States, 25 per cent. of the industry of the Province would be paralyzed. If they did not go there, the worst result would be the change would have to be made in a certain amount of the productive labor of the country. Labor rendered unremunerative in one direction, must be made productive in another.

An important view of the trade of the Maritime Provinces is thus presented:

That trade had not been so large as had been desired, or increased so rapidly as might have been expected, because, under the reciprocity treaty, they had obtained in the American markets the articles they might have obtained from us, which have been sent by us into the United States, and by the United States exported to the Maritime Provinces. The actual results, comparing several years, were that in 1860 goods were worth \$393,866, while in the fiscal year ending June, 1865, we imported \$511,570. Our exports have increased during the same time from \$723,586 to \$1,065,057, an increase of about 25 per cent. From the British West Indies, the increase in trade had been more considerable. Our imports were \$15,802 in 1860, and \$209,327 in 1865. So there had, indeed, been a renewal of the trade with the West Indies we had formerly enjoyed. The exports to the Maritime Provinces had risen from \$723,000 in 1860, to \$1,065,000 in 1865; and to the West Indies, they had risen from \$41,000 in 1860, to \$41,000 in 1865. But while that had been the case with our own West India Islands, our trade with the foreign West Indies was beginning to assume somewhat considerable dimensions. This was particularly the case as regarded Cuba; and he found that the total value of articles imported from foreign West Indies in 1864, was no less than \$1,480,000, of which there had come by way of the St. Lawrence, \$255,000; by way of the United States, \$660,000, and Nova Scotia, \$126,000. The general foreign trade of Canada amounted to so little three or four years ago, that it was scarcely worthy of notice. In 1860 the total import trade of Canada from foreign countries, except the United States, was only \$905,000; and in 1865, notwithstanding the depressing influence of the American war, it had risen to \$3,274,000, an increase of nearly four-fold in that short period. It now amounted to eight per cent. of our total exports, instead of only two and a half per cent. It was gratifying to the Government, and he was sure it must also be gratifying to the House and the country, to know that at a time when we were threatened with an interruption of trade with the United States, we had trade with other foreign countries independent of the British possessions, which was growing with the rapidity indicated by these returns; a trade that now amounted to about one-tenth of the whole industry of the country if trade with the United States were put an end to to-morrow. These observations respecting our trade with the United States, the reciprocity treaty, and our trade with foreign countries generally, acquired perhaps additional importance at this moment because we knew that under instructions from the Imperial Government, representatives of the different provincial governments would meet in this city during the month of September next. It was peculiarly happy, that at this moment such a meeting as this was to take place, because we had to consider two points in reference to our trade with the United States. We had to consider, first, what action should be taken in case the American Government undertook to enter into negotiations for

the renewal of the treaty; and we had to consider, in the second place, what action should be taken if it declined to negotiate at all. Now it must be clear, with reference to this trade of the Maritime Provinces with Canada, that it is most important that this meeting should be held, and that a common understanding should be arrived at by the representatives of the different governments. He did not apprehend that there would be the slightest difficulty in coming to an agreement upon either one point or the other. The Canadian Government did not desire to engross the negotiations that might take place respecting the treaty. If they stood alone, they would as much consider the interests of the Maritime Provinces as their own; but on this occasion, they would have those interests represented by gentlemen from the governments of those Provinces themselves, and they would have the advantage of obtaining from those gentlemen information on points relating to those interests, and by this means he did not doubt that they would be able to unite in placing before the representative of the Imperial government at Washington, the united views of all those colonies in reference to trade with the United States, and especially with reference to the fisheries of the Gulf of St. Lawrence and Nova Scotia, which formed such an important part of the trade; but if, unfortunately, we should be disappointed in our anticipations that the American Government will not enter into negotiations for the renewal of the treaty, then it would become more than necessary that an understanding should be had with the Maritime Provinces in reference to the future of our trade.

The internal trade of the Provinces during the year was very flourishing. The only drawback to this prosperous state of things was the threatened termination of the Reciprocity Treaty in March, 1866, and the uncertainty which existed as to whether the Canadian Government would be able to secure a renewal of it. A feeling exists in Canada that the action of the United States authorities in refusing to grant this, is prompted by a desire to move them from their allegiance. Whether this conjecture be well founded or not is uncertain; but if it be, it will probably fail of its object, and tend rather to bind the Canadian people more firmly than ever to the throne of Great Britain. The Detroit Convention, mentioned elsewhere, produced great practical good in Canada by its labors and deliberations. It served in a measure to clear away many old prejudices and antipathies, and to allay much bitter feeling that had been engendered during the war. It showed the great necessity for increased canal and railroad communication between the west and the seaboard.

In Nova Scotia no steps were taken on the question of Confederation, either in submitting it to the Legislature or to the people, although the former course was promised in a despatch from the Lieutenant-Governor to the Governor-General. The Government, on the contrary, has, for the present, abandoned the scheme, in favor of a Legislative Union of the Maritime Provinces, as appears by two resolutions adopted in May, as follows:

LEGISLATIVE COUNCIL.—1st. *Whereas*, under existing circumstances, an immediate Union of the British North American Provinces has become impracticable; and *whereas* a Legislative Union of the Maritime

Provinces is desirable, whether the larger union be accomplished or not;

Resolved, That in the opinion of this House, the negotiations for the Union of Nova Scotia, New Brunswick, and Prince Edward Island should be resumed in accordance with the resolution passed at the last Session of the Legislature.

HOUSE OF ASSEMBLY.—2d. *Resolved*, That in the opinion of this House the negotiations for the Union of Nova Scotia, New Brunswick, and Prince Edward Island should be resumed in accordance with the resolution passed at the last session of the Legislature.

In July a delegation, composed of the Premier, Dr. Tupper, and the Attorney-General, Mr. Henry, was appointed to proceed to England to confer with the Imperial Government on the subject of the Reciprocity Treaty and on other questions of interest to the Colony. The reply of the Imperial Government on the subject of confederation was thus reported by Mr. Cardwell:

"I have stated that her Majesty's Government can give no countenance to any proposals which would lead to delay the Confederation of all the Provinces, which they are so desirous to promote, and can only aid in the promotion of a closer union between Nova Scotia and New Brunswick, if that closer union be ancillary to, and form part of, the scheme for general union."

Toward the close of the year, Sir R. G. Macdonnell was transferred to the Governorship of Hong Kong, and Sir W. F. Williams, a distinguished native of the province, was appointed in his stead, to the satisfaction of his countrymen.

The Government of Mr. Tilley, in New Brunswick, pursued a more manly and straightforward policy than that of the sister Province. Early in the year the question was submitted to the electors, but through organized influences which could not be combated, a Legislature unfavorable to the scheme was returned. Mr. Tilley, with his Ministry, retired from office, and were succeeded by the triumphant party, who caused resolutions to be passed in the Legislature hostile to confederation, and every thing was done to place the Province in a position of antagonism to the scheme. A delegation, composed of Messrs. Smith and Allan, two members of the Government, were appointed to proceed to England, to represent the views of the majority on the question of Union, but failed to secure countenance or any sympathy from the imperial authorities. More recently, however, a better feeling has sprung up, and the result of an election in the county of York has been to return a gentleman strongly pledged in favor of Union, by an overwhelming majority. Mr. Anglin, the member of the Government most determinately opposed to confederation, has resigned his seat in the Council, and has been succeeded by one more willing to entertain the consideration of the question. It is therefore considered probable, that ere long, should an opportunity permit, New Brunswick would declare for Union. In a recent general election in Newfoundland, a majority has been returned pledged to support the Quebec scheme.

BROUGH, JOHN, Governor of Ohio, born in Marietta, Ohio, 1811, died at Cleveland, August 29, 1865. His early advantages for culture or promotion in life were limited. In 1823 he entered the printing office of the "Marietta Gazette" as an apprentice, but seeking educational advantages, in 1825 obtained a situation in the office of the "Athens Mirror," and took a place in one of the classes of Ohio University. In 1831 he became proprietor of a Democratic paper, published at Marietta, which was called "The Washington County Republican." Seeking a wider sphere, Mr. Brough sold the "Republican" in 1833, and in conjunction with his brother, Charles H., purchased the "Lancaster Eagle." Under the management of the Broughs the "Eagle" immediately gained influential rank among the Democratic journals of the State.

In 1835 John Brough was elected clerk of the Ohio Senate, which post he filled with ability until 1838, when he was called to represent the counties of Fairfield and Hocking in the Legislature. In 1839 he was chosen Auditor of the State of Ohio, by the General Assembly, and served in that capacity until 1845. He took charge of the finances of his State at a period of serious monetary depression—when extensive internal improvements were being prosecuted—when the resources of the State were not equal to its expenditures, and consequently when heavy loans were necessarily negotiated. He bent his energies to such a revi-

sion of the financial system of the State—such changes in its revenue laws and such enlargements of its basis of taxation, as render his six annual reports among the most valuable of the State documents.

In 1846, retiring from the office of Auditor, with an enviable reputation as a far-sighted public officer, Mr. Brough opened a law office in Cincinnati, and united with his brother, Charles H., in the management of the "Cincinnati Enquirer." He entered actively into politics, and was regarded as the ablest speaker which the Democratic party then had in Ohio. Thoroughly informed in public affairs, self-possessed, ingenious in argument, and shrewd in the evasion of knotty points, favored with a powerful voice and an engaging manner, Mr. Brough soon took high rank as a political orator.

In 1848 he retired from active political life and became President of the Madison and Indianapolis Railway, and in 1853 accepted the more responsible post of President of the Bellefontaine and Indianapolis road, which has become one of the great lines of the West. In 1861, having taken up his residence in Cleveland, he was urged to become a candidate of the Union party for Governor, but declined to allow his name to be brought before the convention. In 1863, having made a speech at Marietta, declaring slavery destroyed by the act of rebellion, and most earnestly appealing to all patriots of whatever previous political predilections to unite against the insurgents of the South in support of the Government, he was immediately put before the people as a candidate for Governor, and the majority which

elected him was the heaviest ever given in any State. In the discharge of his duties as chief magistrate of the State he was ever laborious, patriotic, far-sighted, clear in his convictions of duty, firm in their maintenance, and fearless in their execution.

BROWNELL, Right Rev. THOMAS CHURCH, D. D., LL.D., Bishop of Connecticut, and Senior and Presiding Bishop of the Protestant Episcopal Church in the United States, born at Westport, Bristol county, Massachusetts, October 19, 1779, died at Hartford, Connecticut, January 13, 1865. His early education was obtained at a public school at Taunton, in his native county, from whence he entered Rhode Island College, now Brown University, in 1800, and upon the removal of Dr. Maxcy, President of the College, to Union College in Schenectady, he accompanied him to that seat of learning, where he graduated in regular course and with the highest honors in 1804. The next year he was appointed tutor in Latin and Greek, in 1807 became professor of belles-lettres and moral philosophy, and in 1809 accepted the chair of chemistry and mineralogy. The following year was spent in travelling through England, Scotland, and Ireland, partly on foot, and in collecting materials and apparatus for the department under his charge. In 1813 he commenced the study of theology, and having changed his ecclesiastical relations from the Congregational to the Episcopal Church, was ordained to the first degree in the ministry by Bishop Hobart in 1816. He at once engaged in missionary labors in Schenectady and its vicinity, at the same time retaining his post in Union College. In 1818 he accepted the office of Assistant Minister in Trinity Church, New York, and in the course of the next year was elected Bishop of the diocese of Connecticut, and took up his residence in New Haven. Under his auspices Washington (now Trinity) College in Hartford was founded in 1824, from which time till 1831 he filled the office of president. Bishop Brownell belonged to the old orthodox party in the Church, his rejection of Calvinism having been one of the reasons that first attracted him toward it. He was not, however, a controversialist, and surrounded as the Church was in his diocese by powerful and hostile sects, his whole influence was thrown on the side of harmony and union within it. So successful was he in this, that although most of his clergy agreed with him in his theological opinions, those who belonged to the Evangelical party were on terms of the utmost cordiality with him, and ever found him ready to give them all the assistance in his power, in their parochial and other labors. The Tractarian movement was not looked upon with favor by Bishop

Brownell, and on many questions mixed up with it, particularly at the trial of Dr. Onderdonk, Bishop of New York, he separated from the High Churchmen, and acted with their opponents. In 1851, in consequence of increasing years and infirmities, Bishop Brownell required assistance in the care of his diocese, and his friend and former pupil, the Rev. John Williams, D. D., President of Trinity College, was elected and consecrated Coadjutor-Bishop, with the right of succession. The next year, by the death of Dr. Chase, Bishop of Illinois, he became presiding bishop of the Church. The duties connected with this position he had been enabled to discharge until within a few years. Bishop Brownell published in 1828 "The Family Prayer Book," a large octavo volume, containing a commentary on the liturgy, which was followed in 1839-'46 by a compilation in five volumes from the best practical and devotional writers, entitled, "Religion of the Heart and Life." He was also a frequent contributor to the current literature of the day, especially in the department of theology, publishing several important charges to the clergy and various sermons on special occasions. Bishop Brownell held a conspicuous place in the Church of which he was an able and devoted minister. He was distinguished for his soundness of judgment and his vigor of action. His episcopate extended over the large space of forty-five years, and was fruitful in the admirable results of wisdom, energy, and self-devotion.

BRUNSWICK, a duchy in Germany. The reigning sovereign is Duke William I., born April 25, 1806, who undertook provisionally the government of the duchy, in consequence of the insurrection of September 7, 1830, and subsequent flight of his brother, the reigning Duke Charles, October 12, 1830. He ascended the throne April 25, 1831. The present duke being the last representative of the ducal house and unmarried, the duchy is expected, in consequence of an old family treaty, to fall, at the death of the present duke, to Hanover. Prussia, however, asserts likewise a title upon Brunswick. The area is 1,525 square miles; the population, 1864, 292,708. The capital, Brunswick, had, in 1864, 45,450 inhabitants. In 1861, of the total population in that year (281,708), 276,922 were Lutherans; 998 Reformed; 2,633 Roman Catholics; 99 Dissidents; 1,061 Israelites. The legislative power is vested in one Chamber, consisting of forty-three members, and meeting every three years. The budget is voted for the period of three years, and amounted for the three years 1864-'66, to 5,108,000 thalers. Public debt, on September, 1863, 11,384,718 thalers. The army consists of 5,359, on the war footing; 2,720 on the peace footing.

C

CALIFORNIA, one of the Pacific States of the Union, extending from Lower California on the south to Oregon on the north, and from the Pacific on the west to Arizona and Nevada on the east. It is nearly ten degrees of latitude in length, extending from $32^{\circ} 20'$ to 42° , and about ten degrees of longitude in its extreme breadth, lying between the meridians of $87^{\circ} 18'$ and $47^{\circ} 23'$ W. from Washington. Its area is 158,687 square miles, 101,689,688 acres. Its present population is estimated at 500,000. Its capital is Sacramento City. It was admitted into the Union September 9, 1850. The number of organized counties in the State is 49.

In previous volumes of the *ANNUAL CYCLOPEDIA* there have been given statistics of the climate, soil, and productions of this State. Its climate in the south is semi-tropical, while in the north, or the mountainous districts of the interior, it belongs to the colder zone of the temperate regions. On the coast, however, the range of the thermometer is far less than on the Atlantic slope. It is, in the main, a very dry climate, though the wintry rains are often copious and destructive. In most sections, during the long, dry, and warm season, the soil becomes so hard that it cannot be broken up easily with the plough until the first rains have softened it. The soil, where it is tillable, is a deep rich loam, and almost everywhere needs only irrigation to make it abundantly productive. The principal farming crops are wheat, barley, hay, and the root crops. The wheat of California is of excellent quality, containing a larger quantity of gluten than that of any other portion of the globe. There is no distinction of spring and winter wheat in the State, the time of sowing being in December and January, after the November rains have moistened the earth. The counties in the immediate vicinity of San Francisco bay are those most largely engaged in the production of wheat. Barley is an important crop in California, yielding largely, and the volunteer crop, self sown, of the second year, is often almost an average crop. The common oats do not succeed well, on account of the dryness of the climate, but a wild variety grows abundantly and furnishes the hay crop of California, except in a few of the northern counties where timothy is grown. The grasses generally do not succeed well. Corn is not ordinarily a successful crop, and can be raised with profit only in the southernmost of the coast counties. In the valleys of the Sacramento and the San Joaquin the nights are too cool for its rapid or successful growth. In root crops California stands pre-eminent. Nowhere else do they attain such a size, or such excellent qualities. The country is admirably adapted for stock-raising, large portions of its territory being unfit for the plough, but nowhere surpassed for grazing. The

grasses, or rather the wild oats, and mast, furnish abundant pasturage for the winter months, and the stock-grower can dispense almost entirely with winter feeding. The forest trees of California are for the most part evergreens, and of great size and height. There is some cottonwood and oak along the streams, but the cedar, of several new species, the redwood, a tree of the cedar family, numerous species of pine, including the gigantic *Sequoia*, spruce, etc., are the principal trees of the forest.

Agriculturally, however, the State is best adapted to the growth of fruit of almost every variety. The apricot, quince, cherry, plum, pear, peach, apple, nectarine, prune, pineapple, pomegranate, gooseberry, the olive, aloe (agave), orange, lemon, and citron are also raised in great perfection. The strawberry, raspberry, and grape are among its most abundant creeping plants. In former volumes of the *ANNUAL CYCLOPEDIA*, and in the article *AGRICULTURE*, in the present volume, the extent of the grape culture in California is noticed. The rapidity of the increase of vineyards, and the great variety of their product (every European grape being grown in the open air successfully), seem to justify the belief confidently entertained by the citizens of the State, that ere many years California will be the vineyard of the world. The grape crop never fails here as it does in Europe, or in the East often, and its yield is fully twice that of any other country, while the rich and aromatic character of the soil gives to the grape a richer flavor than it attains elsewhere. Two hundred pounds of grapes, per vine, is about the average yield; and in particular instances, vines but five years old have yielded over 800 pounds. In 1864 there were 12,592,688 vines growing in California, and nearly four millions more were set in 1865. The California wines and brandy already enjoy a high and increasing reputation in the Eastern markets.

Fruits of almost all kinds are sold by the pound, and bring highly remunerative prices. At the close of 1865, apples were sold at four to eight cents per pound, pears from four to ten cents according to the variety, strawberries fifty cents per pound, Lawton blackberries twenty to twenty-five cents, apricots four to ten cents, figs eight to fifteen cents, peaches four to ten cents, limes thirty-seven and a half cents a dozen, oranges \$6 to \$7 per hundred, lemons \$6 to \$8 per hundred, pineapples, each fifty cents to \$1, bananas, the bunch or hand, \$2.50 to \$5, grapes, common, three to eight cents per pound, foreign varieties from ten to twenty-five cents per pound, plums eight to fifteen cents, prunes twelve to fifteen cents, watermelons twenty to thirty cents each.

During the past two years efforts have been

made, with considerable success, to cultivate tobacco, and to utilize the wet bottom lands which are, or can be annually overflowed, in the production of rice. In his message of December, 1865, Governor Low urges the importance of extending this crop. The climate of California has proved to be well adapted to the rearing of silkworms, and in San José and its vicinity the production of silk has become a business of considerable magnitude.

The development of agriculture in California is seriously impeded by two causes, viz.: the great number of large estates, held under Mexican grants, and which, while comprising much of the best land in the State, are of necessity but very imperfectly cultivated by their owners; and the great uncertainty of titles in lands, which leads to slovenly and wasteful tillage, where the tenure is not fully settled. Time will eventually partially remedy these evils, but they now exert a very unfavorable influence upon agricultural enterprise.

The State Board of Agriculture, a very efficient organization, is exerting itself for the promotion of agricultural interests. It has, the past year, been urging the necessity of irrigation in many parts of the State. The mining interest has received a marked impetus during the year 1865. In gold mining vast numbers of rich and productive quartz ledges have been opened, and placer digging has been almost entirely abandoned. The product of gold in 1864 was forty-two millions of dollars; in 1865 it exceeded fifty millions—not all, however, from California mines. There has been also a considerable enlargement of the quicksilver mines, and new mines have been opened. The quicksilver mines are almost uniformly profitable, and their yield is very uniform. Copper is also mined with great success at several points in the State, and the development of this metal in 1865 has received a decided impulse. The copper ore of the State is very rich, and occurs mainly at Copperopolis and other points near the coast, where it can rapidly be shipped. Like the South American ore, it is mostly sent to Europe for reduction. The existence of petroleum in the State had been suspected for some years, and the geological survey of the State had demonstrated the presence of oil-bearing strata of rock in several localities. In the summer and autumn of 1864 explorations were made, and asphaltum and some other oil products discovered in Santa Barbara and other counties along the coast. Companies were formed, and in 1865 oil was discovered, not only in these counties, but in Humboldt and Los Angeles Counties. That in the latter county, while possessing, according to chemical analysis, the highest qualities for illuminating and lubricating purposes, possessed the remarkable property of emitting a pleasant and fragrant odor instead of the pungent and disagreeable one usually in petroleum oils.

On the 23d of September, 1865, Mt. Hood, which had not previously, since the settlement

of California, been in a state of eruption, commenced giving signs of activity, and continued, for a month or more, to belch forth smoke and flame. On the 8th and 9th of October several shocks of an earthquake of considerable severity were felt along nearly the whole coast region, from Petaluma to Santa Cruz. It was most severely felt at San Francisco, where it injured buildings, etc., to the amount of more than \$250,000. The shocks were as follows: First, very heavy oscillating at fifteen minutes to one, P. M., Sunday, October 8th; second, five seconds later, much heavier undulations, and accompanied with a loud rumbling noise in the earth, and the music of falling walls, ringing of bells, barking of dogs, screams of fainting women, and the general stampede of frightened men and horses in every direction; third, a mere tremor at four, P. M.; fourth, do. do. at seven P. M.; fifth, a little heavier at ten, P. M.; sixth and last, up to this time—at thirty-five minutes past ten, A. M.—which, though compared with those of the previous day, was very light, was still heavy enough to send everybody into the streets, and create a terrific panic (fortunately unaccompanied by fatal results) in some of the public schools.

In education the State is making commendable progress. The statistics of its public school system for 1865 were: Number of children between the ages of four and eighteen, 95,067: of these 41,376 attended public schools; 12,478 attended private schools, and 20,441 did not attend school. The total amount received for school purposes in 1865 was \$876,406.69, an increase over the receipts of 1863 of \$286,350.92. There were in the State a total of 947 schools, taught by 1,155 teachers, but there were only 885 school houses, of which sixty-nine were rented. There were eight schools for colored children, with an attendance of 278. There are school funds in each county arising from the sale of the school sections, and the State has also a school fund derived from the sale of swamp and other lands, amounting in 1865 to \$696,020, and yielding an income of \$48,721.40. The State school tax is half a mill on the dollar, and there is also a county tax for schools, the minimum of which is \$3.00 per scholar. The normal school is in a flourishing condition, and has proved of great advantage in raising the standard of teaching in the State. There are numerous chartered colleges in the State, and some of the number, after a severe struggle from insufficiency of present resources, have attained to a respectable rank among the educational institutions of the country, and have able faculties and the necessary appliances for imparting a good collegiate education. Among these the College of California occupies the first position. Several of the Roman Catholic colleges of the State also give a very full course of instruction.

Of the correctional institutions of the State, the State Reform School had forty-seven children under training, and was meeting with a

commendable degree of success in their reformation. There was also an industrial school of the reformatory class at San Francisco, which receives aid from the State. The management of the State Prison, which for some years was discreditable to the State, had greatly improved. The prisoners no longer manifested the spirit of insubordination, which, in several instances previously, had developed itself in a mutiny, put down only at a fearful cost of life; but under the provision for diminishing their term of imprisonment as a reward for uniform good conduct and faithful labor, the greater portion were exerting themselves to earn this reduction of their term of service.

Politically, California is now Republican by a large majority. Its State officers, one of its Senators, and its Representatives in Congress are Republicans, and the other Senator elect, who takes the place of Mr. McDougal, in March, 1867, is also a Republican. Its Legislature elected in September, 1865, stands: Senate, thirty-three Republican members and seven Democrats; House, fifty-five Republican members and twenty-five Democrats. The amendment to the Constitution abolishing slavery was ratified by California on the 18th of December, 1865.

When the intelligence of the assassination of President Lincoln reached San Francisco, the belief that it had been induced by the influence and teaching of disloyal newspapers was very general, and the determination was at once formed by citizens of San Francisco to put them down by force. Their proceedings are thus reported: "About three P. M. of the day of the President's death, a party of one hundred and fifty well-dressed men started for the office of the 'Democratic Press' and formed a semicircle around it. The leaders then went up stairs and threw the type, stands, and all the material of the office into the street, where what was not already destroyed was broken up, amid the cheers of an immense throng. The police of the city, about fifty in number, drilled as an infantry corps, arrived upon the spot with loaded muskets and fixed bayonets, when the party retired, having completed their work. The office at the time of being destroyed was draped in mourning, and the American flag was suspended in front at half-mast. The next office visited was that of the 'News Letter,' published by Mr. Marriott, an Englishman, which was also destroyed, the police arriving too late to prevent it. The office of the 'Catholic Monitor,' a disunion paper, was partially sacked before the arrival of the police. A demonstration was made upon the office of the 'Echo du Pacifique,' which was only saved by great efforts, and the representations that its destruction would involve that of the 'Alta,' a loyal paper in the same building. The 'Echo' was a French paper and had been very abusive toward our Government. The office of the 'Occidental,' of similar political sympathies, was also completely

destroyed. At the office of the 'Echo du Pacifique' Gen. McDowell made a speech, in which he intimated that he should have suppressed these papers, and that the 'Echo' should not be issued again. The offices of the 'Franco American' and the 'Voz de Mejico' were also partly destroyed, the latter by mistake. The inflammable population were so furious that there seemed no bounds to their rage, and several regiments of infantry and cavalry and the batteries were ordered out. The troops patrolled the streets all night. Those who led the rioters are named in the papers, but no arrests have been made."

CANNON, WILLIAM, Governor of Delaware, born in Bridgeville, Del., 1809, died at Philadelphia, March 1, 1865. He adopted religious views in 1825, and upon connecting himself with the Methodist Church, became a class-leader and exhorter before he had reached his twentieth year, and continued to hold these offices until his death. It was not until the breaking out of the war that Governor Cannon rose to a commanding position before the country. He had, however, been for many years a faithful public servant. In the year 1845 he was elected to the State legislature, and was reelected in 1849. Subsequently he was treasurer of the State. In 1861 he was a member of the Peace Congress, and "went there the firm friend of the Crittenden compromise, and of an unbroken Union." In 1864 he was elected governor of the State, which position he held until his death. As chief executive officer of a border commonwealth, he will take rank with the late Governor Hicks. With the Legislature of the State arrayed against him, it seemed at times to depend on the Governor alone to prevent the outbreak of civil war within her borders. To his firmness it is in great measure owing, that Delaware passed through this fiery trial unscathed. When, on one occasion, the legislature forbade compliance with a law of Congress, the Governor promptly announced by proclamation, that he would pardon every United States officer convicted by a State court for the performance of his duty to the Union. The Governor's illness and death was the result of over-exertion in assisting to put out a fire in Bridgeville.

CATRON, Hon. JOHN, one of the Associate Justices of the Supreme Court of the United States, born in Wythe County, Va., 1778, died at Nashville, Tennessee, May 30, 1865. He was educated in the common schools of Virginia, and early developed a decided fondness for history, devouring with eagerness Fielding Smollett, Sterne, Goldsmith, Hume, and Gibbon. In 1812 he took up his residence in Tennessee, and entered upon the study of the law, devoting sixteen hours of the day for nearly four years to study. After serving his country in the New Orleans campaign under General Jackson, he became so popular in Tennessee that the Legislature elected him State Attorney. In 1818 he removed to Nashville, where he soon

attained a high rank in his profession; had much to do with chancery practice and actions of ejectment, and was particularly famous for enforcing the seven years' act of limitations in real actions. In December, 1824, he was chosen one of the Supreme Judges of the State. While on the bench he did his utmost to suppress the practice of duelling, and rigorously punished every offender, notwithstanding the fact that previous to his elevation he was himself a noted duellist. In 1836, through the operations of a new constitution adopted by the people of his State, Judge Catron was retired from the bench. In the following year he was appointed by President Jackson Associate Justice of the Supreme Court, which position he held until his death. Here he was particularly prominent for his familiarity with the laws applicable to cases involving conflicting titles to Western and Southern lands. His ability and integrity as a Judge were never doubted. He was regarded by the profession as fearless and incorruptible in the discharge of the exalted duties pertaining to his station. It was his rare and happy fortune to identify his fame with the judicial history of a State and a Nation. As a State Judge, his opinions are reported in Martin and Yerger, and the first eight volumes of "Yerger's Tennessee Reports," and he bore an important part in reducing to system and order the complicated land laws of that State, and establishing upon a just basis its criminal jurisprudence. As a National Judge, his opinions are reported in the later volumes of Peters, the twenty volumes of Howard, and the two volumes of Black's reports, and they form an enduring monument of his judicial attainments, patient and laborious research, untiring industry, and inflexible justice. He was justly proud of his elevated position, and spared no effort to adorn it. In his private residence in Washington he had collected a large law library, and set a noble example to the members of the Bar in the persevering zeal with which he consulted its volumes on all questions of national or personal interest existing in court.

In politics Judge Catron was a Democrat; but he did not belong to the States Rights school, who were in favor of dissolving the Union. He felt the profoundest solicitude for its preservation, and during the stormy session of Congress in 1860-'61, he exerted his influence with members of Congress and others, so far as he could properly do so, to prevent the civil war which has so recently terminated. In the midst of the terrible excitement which afterwards plunged Tennessee into the vortex of Secession, he was virtually ostracized and banished from the State, but endured his exclusion with heroic firmness and fortitude.

In 1862 he returned and reopened his court. But he manifested no feeling of vindictiveness toward those who had exiled him; on the contrary, in the all-abounding goodness of his heart, he threw over them the mantle of charity, and sought to protect them as far as was con-

sistent with his duty to his country. Judge Catron was a man of Herculean frame, and his physical health continued good until a few months previous to his death.

CATTLE PLAGUE (THE). This terrible scourge, known on the Continent of Europe and to some extent, also, in Great Britain, under the name of *RINDERPEST*, is not, as some have supposed, a new and hitherto unheard-of disease, but one which like the cholera or the plague has, at no very infrequent intervals, for centuries past, brought destruction upon the herds of Western Europe. Like the plague and the cholera, its home or birthplace seems to be in the East; and on the steppes of Eastern Russia, Siberia, and Turkistan it never dies out, though it is of a far milder type than when it visits the western countries of Europe. The "grievous murrain" which smote the cattle of Egypt, as a punishment for Pharaoh's obstinacy, was in all probability the same disease with that which has so often since that time fallen upon the herds of Egypt, and the countries of southwestern Europe. Homer, Plutarch, Livy, and Virgil, all allude often to pests among oxen; while Columella, at the beginning of the Christian era, in his *De Re Rustica*, describes their contagious character, and Vegetius, in the fourth century, gives a full account of the plague, and prescribes, as do the governmental officers of Europe at the present day, that the plague-stricken beasts should "with all diligence and care be separated from the herd, and be put apart by themselves, and that their carcasses be buried." In the year 376 of the Christian era, the cattle plague visited all parts of Europe, and Cardinal Baronius states that no cattle escaped, save such as were marked on the forehead with the sign of the cross.

The movement of large armies was generally followed by the cattle plague, the animals attached to the army commissariat propagating it with hardly an exception. In the ninth century it was thus widely distributed through Europe by the movements of Charlemagne's armies. The fourteenth century was remarkable for the prevalence of human plagues, the black death and other desolating epidemics ravaging the States of Europe fifteen times during that century, and being in each case either preceded or followed by grievous murrains among cattle. In England, horned cattle died by thousands, and the herdsmen, panic-stricken, fled from their herds, which roamed wildly about the country, carrying the plague into every district. One hundred and forty years later, in 1480, the "sweating sickness," which fell with such terrible severity upon the inhabitants of Europe, was accompanied by another murrain, which visited the British Islands as well as the Continent. There is no existing history of these murrains, which defines their character so fully as to enable us to say with certainty that they are identical with the disease now making such havoc with the English herds; but the presumption in favor

of their identity is strong, from the evident contagiousness of the plague, and the only measures of repression which were found successful in extirpating the disease, viz.: the separation of the diseased from sound stock, and the free use of the pole-axe to slaughter suspected animals, and their burial and the destruction of their hides, to prevent the spread of the contagion. Murraings were frequent on the Continent for the next two hundred and fifty years, but there seems to have been no general one in England after 1480, until 1714. It then appeared first in the neighborhood of London, and swept off many cattle; but the prompt slaughter of all suspected beasts, and their burial deep under the earth, proved effectual in suppressing it, and it did not extend its ravages over more than six or eight counties. Thirty years later, in 1745, it reappeared, and being dealt with less severely, was not extinguished under twelve years. The cattle plague of 1711-1714, though comparatively light in England, had raged with terrible severity on the Continent, one million five hundred thousand cattle having perished from it in the three years. The wars of Louis XIV., until his death in 1715, aided much in the propagation of the murrain, which was transmitted from one country to another by the long marches of his armies, and of the cattle on the hoof which accompanied them. The War of the Succession on the death of Charles VI. in 1740, was the signal for the commencement of another murrain more terrible than any which had preceded it. In eight years, 1740-1748, the western and central States of Europe alone lost three millions of horned beasts. The Hungarian cattle, used to feed the armies of Austria, carried with them the seeds of the plague, and communicated them to the cattle of Western Europe.

Early in 1745, this plague was brought into England from Holland, two calves which had been imported from that country communicating it to a herd of English cattle. The London cattle market was soon affected, but its spread was slow, and the Government did not deem it necessary to resort to very stringent measures for its suppression. A commission, whose powers extended only to Middlesex, was appointed in November, 1745, to prevent its spread. Inspectors, who were butchers and cowkeepers, were appointed to examine cowsheds and separate the sick from the sound beasts. The diseased animals were killed and buried twelve feet under ground, their hides being well slashed and their carcasses covered with two bushels of quicklime. The Government allowed forty shillings, about half the average price of cattle at that time, as compensation for the slaughtered beasts. The disease, however, continued to spread, the regulations for its suppression being but indifferently obeyed, and on the 12th of March, 1746, the first order in council for its more effectual eradication was issued. This order, after reciting the opinion of eminent physicians and cattle-breeders that the disease

was incurable, declared that the death of the infected beasts must be insisted upon. The following were the provisions of the order: "Plague-stricken beasts must be killed and buried with quicklime; the litter infected by them must be burned, and the sheds in which they died, cleaned, fumigated with sulphur, or gunpowder, and washed over with vinegar and water. Men who tended ailing beasts were not to go near sound stock till they had changed their clothes and washed their bodies. Convalescent cattle were not to be brought in contact with sound stock for a month. Travelling cattle were to be stopped in the highways for examination, and the sick beasts must be slaughtered. The local authorities who were intrusted with the execution of this order were authorized to appoint inspectors to see the rules enforced." This order was but partially enforced, nor were those that followed for the next eleven years much more generally obeyed. Some of the counties succeeded in ridding themselves of the pestilence, while others harbored it, and communicated it to those adjacent. Hence there arose a war of county against county, and a proscription of intercourse between the healthy and infected districts. In the second year of the plague, 100,000 head of cattle perished in Lincolnshire, and in the third year 70,000 in the two counties of Nottinghamshire and Cheshire. After nearly twelve years, the disease wore itself out by pure exhaustion, the animals susceptible to its influence having mostly perished. In February, 1759, a general thanksgiving was proclaimed for its cessation, no cases having occurred during the previous year. During the prevalence of this epidemic, every means of treatment or medication was resorted to in the vain hope of cure, but all in vain. Calomel, yeast, castor oil, porter, port, brandy, whiskey, and every thing else in the way of drugs was tried; copious bleedings and setons in the neck were prescribed, until it was found that no animal which was bled ever recovered; sweating and steaming were attempted, without success. There was another short outbreak of the murrain in England in 1768, and a more protracted and destructive one on the Continent; but in England it was speedily eradicated. Dr. Faust, from careful inquiry, computes that from 1711 to 1796 more than two hundred millions of horned cattle were cut off by this plague in Western Europe.

It has been already stated that the steppes of Eastern and Southeastern Russia, and Turkistan, were the birthplace and normal home of the Rinderpest. It is not there, however, the formidable and malignant disease which it becomes in moving westward. It is never absent from these great pasture grounds, but it is said not more than one-half of the animals affected by it die there, while in Hungary and Galicia, which are visited by it every six or seven years, the mortality is 65 per cent., and in England and Western Europe it is not less than 90 per cent.

The question, what is the character of the disease, has been one on which there has been great conflict of opinion. The French call it, "*Le typhus contagieux des bêtes à cornes* (the contagious typhus of horned beasts); but the Edinburgh committee of physicians and veterinarians, after numerous dissections, declare that it is not analogous to typhoid or typhus fever, but resembles more an internal and malignant scarlatina. It affects chiefly the mucous membranes, there being a general congestive but non-inflammatory vascularity of these membranes, especially in the alimentary tract, and the disease is marked by a complete arrest of the digestive functions, the stomach of the animal generally containing an enormous mass of dry undigested food, often amounting to one or two hundred pounds in weight, which acts as a sponge to absorb new liquid food or medicine, and resists its absorption into the system. The disease is not, evidently, the pleuro-pneumonia which excited so much alarm in this country a few years ago, and which was suppressed in Massachusetts by the relentless slaughter of all the animals affected; nor does it seem to bear much analogy to the small-pox, with which it has been confounded by some recent writers in England. That it is the same disease which committed the ravages which we have already described, in England and on the Continent in 1745-'57, and 1768, will be evident from the following descriptions, the first being from Layard's Essay, "*On the contagious Distemper among the Horned Cattle*," published in 1757; the second from Professor Seifman, a Polish Veterinarian, of the disease as it existed in that country; and the third, the official description of the disease at present raging in Great Britain, drawn up for the orders in council by Professor Simonds. Dr. Layard says: "The first appearance of this infection is a decrease of appetite; a poking out of the neck, implying some difficulty in deglutition; a shaking of the head as if the ears were tickled; a hanging down of the ears, a dulness of the eyes. After that, a stupidity and unwillingness to move, great debility, total loss of appetite, a running at the eyes and nose. . . . A constant diarrhoea, roofs of their mouths and barbs ulcerated. They groan much, are worse in the evening, and mostly lie down."

Professor Seifman's description is: "The beast eats little, stops its rumination, becomes nervous; the mucous membranes, gum, mouth, &c., throw out pimples; there is a running at the eyes and nose, and this running after a time gives out an offensive smell; an offensive diarrhoea ensues, the beast coughs, becomes thinner, sometimes grinds its teeth, lies down with its head at one side, and dies without effort."

Professor Simonds says: "The cattle show great depression of the vital powers, frequent shivering, staggering gait, cold extremities, quick and short breathing, drooping head, red-den ed eyes, with a discharge from them, and also from the nostrils, of a mucous nature, raw-

looking places on the inner side of the lips and roof of the mouth, diarrhoea or dysenteric purging."

Of these three descriptions, careful observers say that Layard's best depicts the disease as it now appears in Great Britain, except that there is somewhat less of the outward eruptions now than in his time. The pathological descriptions derived from the dissection of the victims to the disease in 1750, both in England and on the continent, and those made during the existing epidemic, are equally close in their resemblance to each other, and demonstrate beyond the possibility of a doubt the identity of the two epidemics. That the disease is eminently contagious and may be communicated through the clothing of a herd-keeper, the litter, or even the wood of the stall, or from the transmission upon the horns or hoofs of a sound animal who had been with diseased cattle, is fully demonstrated. The wind, the highways over which an infected herd has passed, and even still waters and running streams, also serve to propagate the contagion. Its ravages have been hitherto confined to neat cattle, but it is a peculiarity of the present epidemic that sheep are also affected, and not as heretofore mere carriers of the infection, themselves insusceptible to the virus.

This contagiousness of the disease suggested long since that there might be advantage in inoculation. The experiment was tried extensively in England, but without any good result. The inoculated animals had the disease as severely, and after the same period of incubation (from five to nine days), as those who were infected by their contact with diseased animals. In Russia, however, experiments which have been made on the herds in the steppes have proved more successful. These experiments, which have been conducted for the last fifteen years by eminent veterinary surgeons, have been reported by Professor Jessen, of Dorpat, Haller, Vicq d'Azyr, Abelgaard, Adami, Viborg, and Kausch, and serve to settle some points of interest. One of these is that, as in the case of the vaccine disease, the intensity of action of the inoculating virus decreases, according as it passes through a succession of beasts, or, as it is technically termed, through successive generations. Thus, at the Veterinary School at Charkow fifty per cent., or the normal number, of steppe oxen died at the first inoculation; but after the inoculating matter had passed through six cows, the seventh generation, or running from the nose of the sixth inoculated cow, only produced one death in thirteen cases. In 1853 upwards of a thousand beasts were inoculated with matter of the seventh generation, and not more than sixty died. In 1854 it was determined to inoculate oxen in the steppes themselves, and a large number were so treated, with the astonishing success that not a single animal died. This was a peculiarly favorable year; but, notwithstanding the exceptional character of the result, it

holds out hopes that means may be discovered to mitigate the intensity of the virus. Although none of these inoculated animals died in 1854, and few even sickened, they were all found to be efficiently protected against future attacks of the disease. Many of them were confined in the same sheds with beasts suffering from the Rinderpest at intervals for several years, but none of them received the contagion. In 1857 the Grand Duchess Helen founded an institution for inoculation on her property of Karlowka in Paltava, with such success that only three per cent. of the inoculated animals died. It must, however, be distinctly borne in mind that these favorable results have only been obtained with oxen of the steppe race. Cattle of other races are much more unfavorably disposed to inoculation. Before mitigation of the virus appears in their case, it must pass through from thirteen to fifteen generations. Drouyn de L'Huys, in his proposal for a Sanitary Congress at Constantinople, with the view of damming up cholera at its source, so that it may not reach Europe, has given us a hint which might be well applied to the cattle plague. Why should Central and Western Europe be periodically devastated by this murrain, when it might be prevented by the inoculation of the cattle in the steppes? Sheep and goats, it has been ascertained, can be rapidly inoculated from cattle. Sometimes they resist the disease, but generally the sheep have it in the most virulent form, and die. The disease does not seem, according to the experiments of Professor Röll of Vienna, to be mitigated by passing through the sheep, in whatever number of generations it may be tried; at least, the virus shows its full malignity when it is taken from the sheep and again tried upon cattle.

The first appearance of the cattle plague in England during the past year was at Lambeth, in the metropolitan district of London, on the 24th of June, and at Islington and Hackney on the 27th of June. The source whence it was introduced is a little uncertain, some authorities asserting that it came by a cargo of Russian cattle imported from Revel a short time before the plague was manifested, while others contend that it came from Holland, through the ports of which Hungarian cattle are sent to the English market as Dutch beasts, and many circumstances favor the assumption that the latter was the route by which it was brought. The Russian cattle had been two weeks on their way from Russia to Hull, were pronounced sound and free from disease by two veterinary surgeons, who examined them carefully on their landing there, on the 28th of May, and no case of the disease occurred until the 24th of June, twenty-six days later, and then not among these animals. As the period of incubation rarely if ever exceeds nine days, it seems absurd to suppose that they could have introduced the disease. On the other hand, her Majesty's Consul-General at Hamburg states that Hungarian cattle did introduce the Rinderpest into Utrecht in Holland

in May, and the constant exportation of cattle from that country to England, includes many Hungarian animals. It is certain that the disease appeared first in newly imported Dutch cows. Its spread into the English counties from the metropolis was very speedy. Early in July, Norfolk and many of the other counties had had cases of it, and in some instances its ravages had been frightful. In London, of about 15,000 cattle in the city and vicinity, full 12,000 perished by October, including entire dairies like those of Lord Granville and Miss Burdett Coutts, notwithstanding the utmost care and medical attention. Notwithstanding the utmost care to prevent its spreading, the facilities for its transmission were such that in a short time nearly all the English counties, and most of those of the lowlands in Scotland, were visited by the plague, and could trace it directly to its source in London. It was peculiarly malignant in its character, not over four per cent. of the cattle attacked recovering. The Government acted with commendable promptness in the matter, the Lords of the Privy Council holding frequent meetings, and issuing their first Order in Council on the 24th of July, and subsequent ones on the 11th, 18th, 25th, and 26th of August and the 22d of September. These Orders in Council were generally similar in character to those issued in 1746, requiring the local authorities (the justices, &c.) to appoint inspectors in all cases where the disease appeared, and prohibiting the removal of any diseased cattle, or those which had been exposed to infection, without a license from the inspector. They also authorized the inspector to seize and slaughter, or cause to be slaughtered, any animal laboring under such disease, and provided for the burial in deep graves, with quicklime and the slashing of the hides of such animals, and the use of quicklime upon the carcasses, as well as the thorough disinfection of all the premises where the disease had prevailed. The exportation of cattle to Ireland and to the Island of Lewis was also prohibited. These measures proving ineffectual, owing to the apathy and inefficiency of the local authorities in many parts of the kingdom, a Royal Commission was issued by the Queen on the 29th of September, addressed to certain members of both Houses of Parliament, and men of scientific and medical attainments, requiring them to investigate into the origin and nature of the disease, and to frame regulations with a view of preventing its spread, and of averting any future outbreak of it. The names of these commissioners were: Earl Spencer, K.G., Lord Cranborne, M.P., Right Hon. Robert Lowe, M.P., Lyon Playfair, C.B., C. S. Read, M.P., R. Quain, M.D., Bence Jones, M.D., E. A. Parkes, M.D., Thomas Wornald, President of College of Surgeons, Robert Coely, Surgeon, Charles Spooner, Principal of Veterinary College, and J. R. McClean, President of Institution of Civil Engineers, with Mr. Montagu Bernard, Secretary.

The commissioners sat daily for a month after their appointment, and on the 31st of October issued their first report, the result of careful and extensive inquiry in all parts of the kingdom, and in the countries of Western Europe. Unfortunately, however, there was a disagreement among the members of the commission on some points of vital importance; all of the commissioners, except Mr. McClean, believed that the disease could only be arrested by stopping for a time the movements of cattle throughout England, Scotland, and Wales. The majority of the commissioners recommended that this stoppage should be absolute, while Lords Spencer and Cranborne, Mr. Read, and Dr. Bence Jones were contented with preventing the movement of lean or store stock, while they would permit fat cattle to go to fairs and markets for immediate slaughter. Mr. McClean believed that there was no reason for alarm and no cause for action. Able as was the minority report, it could not be concealed that the only measure which promised success was one of simple prohibition of all movement. If any exception were made, the order would be evaded, and the purpose of the Government to prevent the spread of the disease, foiled. The majority demonstrated in their report that this would not involve any considerable hardship, as fat beeves could be slaughtered as easily in the country as in the city, and their carcasses sent to market. The price of meat would be enhanced for a time, it was true, but if the disease was allowed to spread it would be enhanced for years. On other points, such as the extinguishment of the seeds of the plague by disinfectants, the adoption of hygienic measures, in the care of cattle, the removal of manure heaps, the enforcement of greater cleanliness, and the avoidance of overcrowding, the report of the commissioners was very valuable. The following were the methods of accomplishing the disinfection of premises which have been visited by the plague, recommended in the report:

"1. When animals attacked with the plague have become convalescent, they ought to be kept apart from sound beasts for three weeks, and even then not to be permitted to associate with them till they have been thoroughly washed with (Macdougall's) disinfecting soap, or with a weak tepid solution of chloride of lime. The whole body, hoofs and horns, should be thoroughly washed, and the nostrils and mouth sponged out.

"2. During all the time that animals suffer from the disease, the litter fouled by them, with the dung and discharge on it, should be burned, and not be allowed to mix with other manure. It contains the poison in a concentrated form, and it is questionable whether it can be disinfected efficiently.

"3. The sheds in which the diseased animals have been must be thoroughly purified and disinfected. The roof and walls should be washed with lime. The floor and wood work, after being thoroughly washed with water containing

washing soda, should be again washed all over with a solution of chloride of lime, containing 1 lb. to a pailful.

"4. The hides and horns of animals which have died of the disease ought to be buried with the animal, according the Orders in Council. But the hides and horns of those which have been killed to escape the spread of the infection, must be dipped in, or thoroughly mopped all over, and, in the case of the hides, on both sides, with water containing 4 lbs. of chloride of lime to three pailfuls of water. Unless this be done with care, a most fertile source of contagion will be preserved.

"5. The attendants upon diseased beasts should not be allowed to go near the sound animals in the same farm."

Equally important were their suggestions in regard to the improvements of the stables and cattle sheds necessary to render them less susceptible to the destructive influences of the plague:

"1. As no successful plan of treatment has yet been proposed, the owners of cattle must, in the mean time, rely chiefly upon those hygienic measures which the experience acquired in other diseases shows to be important in preventing the spread of contagion, and in diminishing the intensity and area of an attack, when, in spite of such measures, they invade a locality hitherto uninfected. In the case of the cattle plague it is certain that no sanitary precautions can prevent the spread of the disease when it is actually introduced; still, from analogy, we may draw the conclusion that some effect may be produced on the rapidity of the spread, or on the virulence of the disease, by placing cattle in the conditions most favorable to health.

"2. With this view it is important to secure strict cleanliness, good drainage, efficient ventilation, and to prevent overcrowding in all cattle-sheds and cowhouses. No accumulations of litter fouled by the voiding of animals should be permitted in, or even close to the houses or sheds in which cattle are kept. Chloride of lime, carbolic acid, or the powder containing carbolate of lime, and sulphite of lime (in plain English, 'Macdougall's Disinfecting Powder'), should be used. The latter is probably the best; it contains a well-known disinfecting substance which is formed when sulphur is burned, and also a strongly antiseptic material, creosote, from coal tar. The sheds themselves should be swept and washed daily, and sprinkled with disinfectants. But such purification of the air of cattle-sheds or houses will be insufficient to preserve health if the cattle be overcrowded. Pure air and nourishing diet are of great importance in protecting animals from the attacks of disease. Pure water, derived from sources uncontaminated by drainage from surrounding dung-heaps, or from the absorption of vitiated air which hovers around them and in the sheds of cattle, is equally essential.

"Every farmer should look to the housing of his cattle in the present emergency, as he would

look to the housing of his own family, if cholera or other formidable disease were in his neighborhood. Thorough cleanliness of the houses, good drainage, freedom from evil smells, nourishing diet, with pure air and water, cannot give immunity from the disease, but they may offer obstacles to its propagation."

It would have been well to have added to these humane suggestions some stern rebuke, and to have insisted on a compulsory reformation of the cruel and often fatal sufferings inflicted on the poor animals in their transportation to market, whether by railroad cattle-trains, or by steamers. The mitigation of these evils in Great Britain, as well as in the United States, is imperatively demanded, for the sake of humanity as well as for the prevention of the transmission of disease.

But the unfortunate difference of opinion among the commissioners in regard to the movement of cattle gave rise to protracted discussion, and meantime no active measures beyond those indicated by the Orders in Council were adopted, and the disease continued to spread with fearful rapidity. Some of the counties and larger towns, in a spirit of self-preservation, prohibited the driving of beeves for slaughter, or any other purpose, over their lines, and a strife had begun to ensue between different counties. Up to the 1st of January, 1866, 78,549 cases were reported in England alone, and this was known to be far below the true number. Of these, 55,422 were reported as having died of the disease, or been killed because hopelessly infected with it. Good judges believed that the number of cases had considerably exceeded 100,000, and that not less than 90,000 had fallen victims to it. For the week ending January 6, 1866, the number of new cases was reported as 7,693, an increase of 1,437 over the previous week. The efforts made to arrest its progress had thus far been entirely unsuccessful. The number of horned cattle in the United Kingdom was estimated at between seven and eight millions, and their estimated value at about £70,000,000. The prevalence of the rinderpest had already greatly enhanced the price of meats, and the disease having extended its ravages to sheep, goats, and it was said, swine also, there was a sad prospect for animal food among the poorer classes. During the autumn of 1865, after other means of treatment had proved ineffectual, certain homœopathic physicians recommended the use of homœopathic remedies, and predicted most confidently a favorable result. The trial of these was made with great thoroughness, but they proved utterly powerless, and so far as could be ascertained did not protract the life of the animal in the least.

The United States Government very wisely, at the commencement of the first session of the present Congress, prohibited the importation of cattle and sheep from abroad, and also from Canada. As we have a sufficient number of both horned cattle and sheep for our own pur-

poses, and there is no necessity for supply from abroad, it would be running a useless risk at the present time to hazard the introduction of this terrible murrain into our country, by importing foreign cattle. With proper precautions, there is no necessity that this cattle plague should visit this country. It can be kept away by the maintenance of a proper quarantine, and this should be rigidly enforced.

CENTRAL AMERICA. There are now in Central America the following five independent republics:

I. **Guatemala.** President, Vincente Cerna, elected on March 8, 1865, for the term of four years. The new ministry, formed in May, 1865, is composed as follows: Justice, Public Worship, and the Interior, Manuel Echeverría; Exterior, Marquis Pedro de Aycinena; Finances and War, Manuel Cerezo. Minister of the United States near the Government of Guatemala, Fitz Henry Warren (appointed in 1865); Minister of Guatemala at Washington, Ant. José Yrisarri. Area, 44,500 square miles; population, about 1,000,000. The capital, Guatemala, has about 60,000 inhabitants. Receipts of the Government, in 1863, \$1,852,357; expenditures, \$1,344,419. The regular army numbers 3,200 men; the militia, 12,978. Value of imports, in 1862, \$1,093,044; of exports, \$1,586,900.

II. **San Salvador.** President (April, 1865, to April, 1869), Fr. Dueñas. Ministers: J. Arbizu (Exterior and Public Instruction), J. J. Bonilla (Interior), Cruz Ulloa (Finances and War). Minister of the United States, near the Government of San Salvador, James R. Partridge (since 1863). Minister of San Salvador at Washington, A. J. Yrisarri. Area, 7,500 square miles; population about 600,000. Capital, San Salvador. The receipts in the budget for 1865 are estimated at 750,000; the expenditures at \$250,000. The army consists of 1,000 regular troops, and 5,000 militia. Imports, in 1861, were valued at \$1,319,727; exports, at \$2,340,778.

III. **Honduras.** President, José Maria Medina (Feb., 1864, to Feb., 1868). Ministers: Fr. Cruz (Exterior and Interior); Mariano Alvarez (War and Finances). Area, 33,000 square miles; population, about 350,000. Capital, Comayagua, with about 18,000 inhabitants. Receipts of the Government, about \$250,000. Minister of the United States at Comayagua, Thomas H. Clay; Minister of Honduras at Washington, Louis Molina (who now represents both Nicaragua and Costa Rica).

IV. **Nicaragua.** President (1863 to 1867), Tomas Martinez. The cabinet is composed of the following ministers: Exterior, P. Zeledon; Finances, Dr. J. F. Aguilar; Instruction, Justice, and Worship, A. Silva; Interior and War, Don B. Salinas. Area, 39,000 square miles; population, about 400,000. Public receipts in 1863 and 1864, \$1,118,241; expenditures, \$1,109,087; surplus, \$9,184. Capital, Managua, with about 10,000 inhabitants. Nicaraguan minister at Washington, Louis Molina; U. S. Minister near

the Government of Nicaragua, Andrew B. Dickinson.

V. Costa Rica. President (1863 to 1866), Dr. Jesus Ximenez. Ministers: Exterior, Public Instruction, Worship, and Justice, J. Vello; Inferior and Public Works, Ulloa; Finances, War, and Navy, Echeverria. Area, 16,250 square miles; population (in 1860), 126,750. Capital, San José, with 80,000 inhabitants. Minister of the United States near the Government of Costa Rica (since 1861), Ch. N. Riotte; Minister of Costa Rica at Washington, Louis Molina. Public receipts, about \$1,000,000.

The most important event in the history of the Central American States was the attempt, made in May, 1865, by the former President Barrios, of San Salvador, to regain his power. The towns of San Miguel and La Unión declared themselves in his favor, yet on May 29, his partisans under Gen. Cabanas were completely routed and dispersed in the vicinity of La Unión. Gen. Barrios himself, when on the point of embarking with a number of his adherents for San Salvador, was arrested by the Government of Nicaragua in the port of Realajo, and in July delivered up to the Government of San Salvador, upon the condition that his life should be spared. The promise was given by San Salvador, but not kept, and Gen. Barrios was shot; an act which produced everywhere, but especially in Central America, the greatest indignation.

The Captain-General and President for Life of Guatemala, Rafael Carrera, died on April 14th. Toward the close of the year a revolutionary movement broke out in Guatemala.

CHEMISTRY. It is designed, in this article and those which under other titles relate to its subject, to furnish at least some hints or landmarks of the progress, since our last previous notice (1863), of this comprehensive and most important science; though it must be acknowledged in the outset that, to the attitude and tendencies in our time of chemical theory and philosophy, it will be least of all possible to do adequate justice. For the substance of some of the brief notices following, and in some instances also for their language, the compiler is indebted to the valuable abstracts and notes of Prof. Walcott Gibbs, in the *American Journal of Science*, and of the scientific department of the (London) *Reader*.

I. ELEMENTS. The prospect of a speedy and considerable increase in the number of known chemical elements, especially as arising in the years 1860-'61 through the spectroscopic discovery of *caesium*, *rubidium*, and *thallium*, has not since been sustained. True, the existence of elements of the three metals just named is placed beyond a doubt, as is also that of *indium* (Orc., 1863). As to *siderium*, the writer has met with no further information. It has, however, become admitted that the supposed elements, *donarium*, *norium*, and *wodanum*, are not such; and to the catalogue of bodies for a time mistakenly considered as elementary, it

appears that, as early claimed by Nicklès and Gibbs, *wasium* must now be added. Quite recently, Delafontaine and Popp have, independently of each other, examined Bahr's assumed oxide of wasium; and while both agree that this contains no new element, the former regards it as an oxide of cerium alone, the latter as such oxide mixed with those of yttrium and didymium. It is stated also that Popp's researches have thrown doubt on the elementary character of *lanthanum*. The question as to *erbium* and *terbium* will be considered in the article **YTTRIUM**. See, also **IODIUM**, **THALLIUM**, **THORIUM**, and **TUNGSTEN**.

II. ALLOTROPIC STATES. In addition, under this head, to the brief notices below, the reader is referred to the article **OZONE**.

Allotropic Conditions of Iron.—These, with the part they are believed to play in metallurgy, form the subject of a communication by M. De Cizancourt (*Comptes Rendus*, lxi., 578; *Chem. News*, October 27, 1865). The author believes that, in determining the qualities of iron, chemical composition is secondary, the controlling characteristics being the relations existing between the properties of the various products, and the degrees of oxidation of the ores the metal is obtained from. He adopts the distinction in respect to iron made by Berzelius, into *ferrosum* and *ferricum*, considering these as allotropic conditions analogous to those of sulphur and phosphorus. *Ferrosum* is the metal as existing in the ores of protoxide; *ferricum*, that present in anhydrous peroxide ores. The most characteristic form of *ferrosum* is the white crystalline cast-iron (*spiegel-eisen*), readily produced especially from carbonates. This has a strong affinity for carbon, and is to be ranked chemically with bodies combining with one equivalent of oxygen. *Ferricum* gives the malleable metal, and also blistered iron; and the carbon which it takes up at high temperatures, it tends to part with on cooling. The former modification easily passes into the latter; but the reverse change can scarcely be effected. *Ferricum* belongs to the class of bodies which combine with three or more equivalents of oxygen, and always with an uneven number.

Allotropic Silicium and Carbon in Cast-Iron, and their Influence on the Production of Steel by the Bessemer Process.—In a paper on this subject, in the *Chem. News*, June 16, 1865, Dr. T. L. Phipson argues the existence, as has long been admitted in case of carbon, also of two modifications of silicium in the various sorts of cast or pig iron. He distinguishes the modifications as *aO* and *bO*, *aSi* and *bSi*. He concludes that mere analysis of samples of iron proves little, and that the condition in which the constituents just named exist in them must be especially considered. It matters little how much carbon or silicium may be present in a pig iron, in order that it may make good Bessemer steel; but it is important that both the elements named should be present almost wholly

in the free state, that is, as δO and δSi . This paper, however, and the former, are chiefly interesting in connection with practical metallurgy.

An Application of Plastic Sulphur.—M. Dietzenbacher's modification of sulphur, by incorporation of iodine, carbon, &c. (noticed in the volume for 1863), has been proposed as a suitable material for making large plates for electrical machines, and which will be unaffected by moisture and other atmospheric influences.

M. A. Keller has recently stated that he has not succeeded in obtaining sulphur in a plastic condition by any of the admixtures named, unless he poured the fused sulphur either into cold water, or in a very thin layer upon a very cold porcelain tile.

III. COMPOUNDS. But few compounds of an organic nature will here be included, such being mainly reserved for a place in the article ORGANIC CHEMISTRY, &c., which see. It has been convenient, also, to speak in the preceding division of certain compounds under title of the element to which they belong, as under YTTRIUM, &c., and especially THALLIUM.

Alumina and Silica.—Pure alumina chemically prepared, is less refractory than chemically pure silica; but pure native alumina is more refractory than native silica (rose quartz of Norway, rock crystal or amethyst). Basic silicates of alumina are more refractory than acid, and clays are more refractory the more alumina they contain. (Note in *Amer. Jour. of Science*, from *Jour. für Prakt. Chem.*, xci., 19.)

Solubility of Gold in Acids.—The discovery by Mr. A. Reynolds of the solubility to some extent of gold in sulphuric acid, to which a little nitric acid is added, is mentioned by him in brief notes in the *Chemical News*, Jan. 23 and Oct. 1, 1864. The gold was dissolved from its alloy with silver, and in small amount. In a still later note, he states that the solution is favored by presence in the sulphuric acid of a little water (above that of the monohydrated acid, it would appear).

In the journal named, Oct. 8th, Mr. J. Spiller confirms the result stated, having apparently met with still better success. He says: "Native gold, and more quickly the precipitated form of the same metal, are soluble on digestion with hot concentrated sulphuric acid mixed with a little nitric acid, with the production of a yellow solution, which, on being diluted with water, lets fall a precipitate of gold, the color of which is either bluish purple or bronze brown, according as it is viewed by transmitted or reflected light." Some modification of the tint, however, occurs by presence of extraneous salts. By making a plate of gold the positive terminal of a few cells of a Grove's battery, and in nine parts sulphuric acid to one of nitric, Mr. Spiller secured solution of the gold with deposit of a bright gold surface on the other (platinum) terminal.

New Nitrogen Compounds.—Deville had

shown that certain elements, as boron, silicon, titanium, and magnesium, can combine directly with nitrogen. By exposing filings of magnesium to a current of perfectly dry nitrogen, MM. Geuther and Briegleb obtain a nitride of that metal, NMg . As Uhrlaub had shown, they find that chromium in like manner yields a nitride, NCr . Aluminium submitted to the action of nitrogen augments by 8 per cent. of its weight, and heated zinc absorbs a little nitrogen; while tungsten and molybdenum are not acted on.

New Compounds, apparently allied to Ammonia.—In course of a discussion before the British Association, 1865, Dr. Hofmann alluded to a "series of extraordinary bodies" lately detected by Dr. Lossen, and mentioned by the latter before the Berlin Academy. It is well known that among the products of the action of nitric acid upon certain metals, ammonia invariably occurs; and this would now appear to be but the last product in a series of such occurring between nitric acid and ammonia, and one of the bodies belonging to which Lossen has isolated. The new body, having the composition H_2NO , might be called protoxide of ammonia. It combines with acids, producing a series of magnificent salts, easily crystallizable. This body may be considered as ammonia from which one atom of hydrogen is displaced by the group HO , by some chemists termed hydroxyl, by others hydoryl; and the name *hydorylamine* has been assigned to it. The simplest method of obtaining it is that of submitting nitrate of ethyle to the action of metallic zinc, in presence of an acid.

Solution of Metallic Oxides in Fused Caustic Alkalies.—M. Stanislas Meunier has presented to the French Academy two memoirs on the subject indicated in the title here given. In the first of these he had shown that the oxides of mercury, bismuth, and cadmium dissolve quite freely in caustic potash or soda, kept fused, the result obtained on cooling and washing being differently colored powders, which appeared to represent definite combinations. In his second note (June 12, 1865), the author especially considers the reaction with binoxide of mercury, and the action of the fused alkalies upon the earths. From solution of the former a violet-colored body was obtained, its composition that of $\text{KO}, 2\text{HgO}$. Magnesia, baryta, strontia, and lime readily dissolved in the fused alkalies, but more freely in potash than in soda. These solutions of the earths appear to possess powerful oxidizing properties; since they dissolve many of the metals, including silver, iron, copper, lead, tin, antimony, and platinum, but not gold, raising some at least of these metals at the same time to a high state of oxidation. The authors believe that, during the reactions, the production of peroxides of the alkalies takes place.

Properties of Liquefied Carbonic Acid.—A communication on this subject, by Mr. G. Gore, appears in the *Philosophical Transactions*

(R. S.), 1861. The author describes a mode of manipulation by which carbonic acid was liquefied in small quantities in glass tubes, and with safety to the operator, although the pressure was as great as from 500 to 1,100 lbs. per square inch; and by which also various solid substances could be introduced into the acid so existing—the glass tubes permitting observation of the action taking place. The acid dissolved white phosphorus, anhydrous boracic acid, the iodide of sulphur, the biniodide and the perchloride of phosphorus, the bromides of arsenic and antimony, naphthaline, gamboge, and especially iodine and camphor; while upon a very large number of bodies it exerted no influence. It discolored gutta-percha, and produced in caoutchouc a considerable increase of volume.

Properties of liquefied Hydrochloric Acid Gas.—At the meeting of the Royal Society, May 4, 1865, Mr. Gore presented a paper on this subject, the method of experiment being similar to that indicated above. The pressure obtained was believed to be about 700 lbs. to the square inch; and the acid being in some cases liquid at intervals only [or sometimes, it appears, only about the body introduced], the results are modified by these circumstances; though the author considers that the action was thus probably increased.

The results of a great number of experiments show that for solid bodies in general the liquefied anhydrous acid has but a feeble solvent power; much feebler, indeed, than the same acid in its ordinary condition, as mixed with water. The facts may indicate low solvent power chiefly, and not to the same extent a low chemical activity, the latter becoming hindered by formation of insoluble films over the bodies immersed. Out of 86 solid bodies the liquefied acid dissolved but 12, and some of these only in minute degree; viz.: of 5 metal-iodides, 1—iodine; of 15 metals, 1—aluminium; of 22 oxides, 5—titanic acid, arsenious and arsenic acids, teroxide of antimony, and oxide of zinc; of 9 carbonates, none; of 8 sulphides, 1—tersulphide of antimony; of 7 chlorides, 2—pentachloride of phosphorus, and protochloride of tin; and of 7 organic bodies, 2 only. Oxides generally it converted into chlorides, and many carbonates also. The chlorate and nitrate of potash were decomposed. In the latter case, the liberated carbonic acid did not escape in bubbles; and as the author had formerly shown that carbonic and gaseous hydrochloric acids liquefied together did not separate, but were intimately dissolved, it is probable the like liquefaction and solution of the former took place in the cases referred to. The author mentioned that tubes, charged in October, 1860, with liquefied carbonic acid, had suffered no leakage by February, 1865.

Synthesis of Organic Compounds.—A sort of general view of the subject of the chemical synthesis of bodies known as organic, and which had formerly been obtained only through the agency of the vital processes in plants and ani-

mals, or through decomposition of products furnished by them, will be found in this *CYCLOPEDIA* for June, 1862—the examples of *alcohol* and *acetylene* being further considered in the volume for 1863. The number of instances of new syntheses of bodies of the class referred to is continually increasing, and new methods are in some cases discovered for such as had been already accomplished.

To several cases of syntheses of organic compounds proper, and of such compounds as might naturally be derivatives from some of these, it will be proper to refer briefly in this place. Thus, M. Schöyen has effected the production of *butyric acid* from the simpler body, ethyle gas, by means of successive reactions with chlorine, acetate of potash and acetic acid, and baryta. M. Freund has produced *acetone*, $C_3H_6O_2$, by action of chloride of acetylene on zinc-methylene; and M. Friedel has obtained the same substance by reaction of methylate of sodium [query: sodium-methylene?] with *chloroacetone*, C_2H_3Cl . This last body had been previously obtained by M. Harnitz-Harnitzsky, by reaction of chlorocarbonic acid (phosgene gas), $C_2O_2Cl_2$, with aldehyde. M. Semenov has prepared *ethylene* (olefiant gas) by heating a mixture by weight of 1 part absolute alcohol and 5 parts sulphuric acid; the introduction of sand to prevent frothing is unnecessary, and with careful heating the liberation of the gas commences at 100° , and is quite regular. By a method similar to one of those adopted by M. Berthelot for obtaining *acetylene*—the abstracting from bromide of ethylene of two molecules of bromhydric acid—M. Rebol in 1863 succeeded in forming a new hydrocarbon, a colorless liquid of the composition denoted by $C_{10}H_8$, to which he assigned the name of *calerylene*. This was obtained by heating in a tube sealed by aid of a lamp-flame, and for 140 hours the bromide of amylene with an alcoholic solution of potassa. By methods also similar, M. Sawitzsch, setting out from propylene, has procured *allylene*; and M. Caventou, starting with butylene, has obtained *crotonylene*.

MM. Berthelot and De Luca, by treating iodide of allyle with an alloy of tin and sodium, in 1856, separated the then new hydrocarbon, *allyle*, its formula being, according to them, C_3H_5 . Wurtz, however, is led by his examination of this body to double the combining proportions thus stated, giving C_6H_{10} . He has accordingly proposed for it the name of *diallyle*; and he has made it the starting-point of an extended series of new reactions and products. From *benzophenone*, $C_{14}H_{10}O_2$, the acetone corresponding to benzoic acid, M. Linnemann has obtained also an extensive series of compounds. Frankland and Duppa have succeeded in producing synthetically, not only an acid identical or isomeric with *butyric acid*—by action of iodide of methyle on disodium-acetic ether—but also the *butyric* and *capronic ethers*, the former by action of sodium on ace-

tic ether, and again of iodide of ethyle on the product first obtained. They do not decide at present whether the acids having the formula of butyric acid are identical, or only isomeric. These facts, thus briefly recorded, convey but meagre hints of what is being done in the way of the synthetic production and the transformations of organic bodies and their products.

Acetic and Caproic Acids.—Some time since, M. Harnitz-Harnitzsky effected the synthesis of benzoic acid, by reaction of chloro-carbonic acid with benzole. He has more recently (*Comptes Rendus*, May 1, 1865) extended the method to the series of hydrocarbons homologous with marsh-gas; and he has thus artificially prepared acetic acid, and its homologue, caproic acid. For the first-named of these, marsh-gas being passed along with chloro-carbonic acid into a vessel heated to 120°, a reaction occurs, in which the two former give place to chloride of acetylene and chlorhydric acid: thus, $C_2H_4 + C_2O_2Cl_2 = C_2H_2O_2Cl + HCl$. The greater part of the chloride of acetylene being collected in a vessel connected with the receiver, and which contained caustic soda [in solution, it appears; though one account speaks of addition of water only, making no mention of the alkali], the final result was an acetate of soda, from which the acetic acid is of course readily separable. So, the oxychloride of carbon (chloro-carbonic acid) with hydride of amyle, $C_{10}H_{12}$, furnished chloride of caproyle and chlorhydric acid, from the former of which caproic acid was ultimately obtained.

Substitutions among Alcohol-Radicals, in their Compounds.—We can in this place barely refer to two interesting papers, by C. Friedel and J. M. Crafts jointly, given in the *Amer. Jour. of Science*, July, 1865—the first entitled, "On the Replacement of one Alcoholic Radical by another in Compounds of the Ether Class;" and the second, "On Etherification." As an example of the results obtained by the authors, it was found that a mixture of acetate of ethyle and amyle alcohol, heated for 48 hours to about 250° C., and distilled, gave acetate of amyle and common alcohol; while, upon heating in like manner and distilling a mixture of the two latter bodies (time given, 40 hours, and temperature 240°) the reverse change to acetate of ethyle and amyle alcohol occurred.

IV. PHYSICO-CHEMICAL PHENOMENA AND PRINCIPLES.—In connection with the notices of certain interesting phenomena to be given under this head, and of which latter some are mentioned for the first time in this work, will be included also the statement of such applications as in each case have been suggested or actually carried into effect. (See also the separate article, DIALYSIS.)

Permeability of Heated Metals to Gases.—MM. Deville and Troost first proved the fact of permeability of metals at an elevated temperature to gases, by showing the passage, under such circumstances, of the gas, hydrogen,

through the pores of a white-hot platinum tube. In one form of these experiments, tubes of hammered and of cast platinum ($\frac{1}{16}$ th inch thick, in one case) were fitted by means of corks into the axis of a shorter and wider tube of glazed porcelain; a slow current of pure and dry hydrogen was then maintained through the porcelain tube, whilst a current of dry air was transmitted through the platinum tube. At ordinary temperatures no change was observed in either gas. But upon gradually heating the porcelain tube in a furnace when the temperature reached about 2,000° F. the oxygen contained in the air had entirely disappeared, and from the platinum tube there escaped only nitrogen, mingled with steam. The hydrogen must, therefore, have passed through the pores of the platinum, and combined with the oxygen of the air, generating the water-vapor. At temperatures still higher, nitrogen, vapor, and hydrogen were delivered; and upon gradually cooling, the several phenomena appeared in inverse order.

With a drawn tube of soft steel, thickness 3 to 4 millimetres, the same fact has been more recently established in another manner. This tube was suitably fixed within a larger one of porcelain, heated as before, and was made to receive at one end a stream of hydrogen, while at the other it communicated only with a glass tube 80 centimetres in height, and dipping below into a mercury bath. A stream of hydrogen was thrown into the heated apparatus for 8 or 10 hours. Upon then suddenly arresting this, the mercury rose on the instant to 740 mm., nearly the usual barometrical height. This showed a nearly complete vacuum to exist at once within the porcelain tube; and proved the escape of the hydrogen through the pores of the steel tube.

It has been suggested accordingly, that an iron tube introduced into a furnace where there are reducing gases would serve to carry off the hydrogen; and also, that air-pyrometers with iron or platinum bulbs cannot be relied on to measure very high temperatures; though glazed porcelain, it appears, would confine the gases completely.

The passage of gases into heated metals has been shown in a different manner by M. Cailletet; and the phenomena of gaseous diffusion, so ably investigated some years since by Mr. Graham, have been studied in the new direction in which M. Deville's experiments above detailed point, by M. Matteucci and by M. Stanislas Meunier.

Dissociation of Elements of Compound Bodies by Heat.—For a brief notice of this subject, see CHEMISTRY, ANNUAL CYCLOPEDIA, 1865. M. H. Sainte-Claire Deville has continued his researches in connection with this singular phenomenon, and has had several brief papers detailing his results published. In most of these researches his apparatus was essentially the same with that described in the notice referred to, and also above.

In his paper in the *Comptes Rendus*, lix., 873, 64, translated in the *Chemical News*, January 7, 1865, and which treats of the dissociation of carbonic oxide, he remarks that when certain bodies are decomposed at a high temperature, their elements are disposed to unite again, so that peculiar arrangements are necessary to demonstrate the separation of their molecules which has occurred. The decomposition taking place in many bodies by the electric spark is probably due to the great development of heat; and the reason that it is not in such cases followed by recombination is, probably, that the small amount of gas heated by the spark is surrounded by an atmosphere in movement and relatively cold. [This principle, though on a somewhat different scale, would doubtless apply in case of the combustion of meteoric bodies, as suggested in the article *ATMOSPHERE*, which see.]

Using within the dissociation-apparatus a brass tube, and keeping this cooled by a continual stream through it of cold water, while pure dry carbonic oxide was kept flowing into the porcelain tube, and the latter was raised to a high heat, as soon as this reaches the point of redness, the gas, delivered at the opposite end of the porcelain tube into a potash bulb or into baryta water, begins to give evidence of presence of carbonic acid; and after cooling and taking apart the apparatus, the brass tube is found blackened, on its under surface only, with deposited carbon, the quantity of this being in proportion to the amount of carbonic acid collected. Evidently, therefore, the carbonic oxide has been separated to some extent into its components oxygen, most or all of which goes to oxidize another portion of the oxide to the higher degree, and carbon, which is deposited. M. Deville concludes that the molecules rise from the lower part of the highly heated porcelain tube, being already dissociated (partially decomposed), when the carbon particles, solid, are caught on the cold surface of the metal tube, and are thus withdrawn from the attraction of the oxygen, so that recombination is prevented. He thinks the mode of experiment thus employed should be capable of numerous applications.

For the dissociation of sulphurous acid (note to the Academy of Sciences, February 13, 1865), the outside of the metallic tube was silvered; this silvered surface became blackened or sulphuretted, and also to some extent covered with a layer of anhydrous sulphuric acid; and the facts of course showed that dissociation of the sulphurous acid into sulphur and oxygen had occurred, a part of the latter going to raise the sulphurous to sulphuric acid. Like effects are produced on the former body by the induction spark. For chlorhydric acid, the silvered surface was amalgamated with a small amount of mercury: after some time this prepared surface was found covered with chloride of mercury, while the author succeeded in collecting some hydrogen. Carbonic acid was acted on by the

induction spark. Placing a ball of phosphorus on the surface of mercury in the endiometer-tube, and continually passing the spark for some days, the carbonic acid was completely dissociated, and a small amount of carbonic oxide alone was found in the tube.

A paper by the same author presented to the Academy of Sciences, May 1, 1865, "On the Phenomena of Dissociation in Homogenous Flames," serves rather to confirm than to extend the knowledge of the constitution of flame already possessed.

Crystallogenic Force: Phenomena and Applications. — M. Kuhlmann discovered some time since that, when substances which crystallize with facility, as mannite, and the sulphates of zinc, iron, and copper, are mixed with a thick solution of gum, or with any other substance interfering with free crystallization, and the mixtures are then spread on glass (previously well cleansed with solution of caustic potassa), and exposed to the atmosphere, the gradual formation of a dry mass by evaporation of the water is accompanied with the production within the former of the most beautiful arborizations. Each solution will produce a well-defined design; although, even under apparently the same circumstances, these are not always identical. Still, the forms assumed are very similar, as in some instances those of stars, in others of leaves and wreaths; and the modifications appear to depend on the nature of the salt, strength of the solution, and mode of preparation. M. Kuhlmann also observed that if amorphous substances, as magnesia, or sesquioxide of iron or of chromium, be mixed with bodies susceptible of crystallization, and these be added to a gummy fluid, the amorphous substances are drawn into the lines of the crystalline figure. The force concerned in determining crystalline forms, the author has designated the *crystallogenic* force. The crystalline figures produced as now described, are remarkable for their instability, the design often quite changing in part or wholly in course of a day, from changes of temperature, humidity of the air, &c. The author accordingly gave much attention to the methods of reproducing and preserving the forms, resorting for this purpose to photography, to vitrification on the surface of wares, to engraving or etching in different modes, to impression on paper, &c., and to galvanoplasty.

When designs of the sort described are produced on glass, porcelain, earthenware, iron, &c., the mixture also containing some suitable flux, and heat is then applied, the gummy matter disappears, and the mineral substances forming the figures become incorporated and fixed on the surface of the ware, thus ornamenting it permanently with the crystallogenic design in relief. The saline solutions being mixed with the easily vitrifiable chromate of lead, the design acquires a greenish color; and for various colors the oxides of copper, cobalt, and manganese were also used. The insoluble materials

thus incorporated must be in the finest state of division.

To etch the crystalline forms on glass, M. Kuhlmann mixed with a solution of sulphate of magnesia the fluoride of copper or zinc, then exposed the glass plate to sulphydric acid, or dipped it in strong sulphuric acid, in either of which cases fluorine is set free, corroding the glass along the outlines of the crystals. Better still, the plate may be exposed to action of gaseous fluorhydric acid.

For engraving, or rather raising, the forms on metals, having produced on the surface of an iron or copper plate a crystallogenic design, a surface of lead or copper is then laid over this, and the plates together are submitted to strong pressure; the design is thus imprinted on the second plate. From the latter a *fac-simile* of the design in relief is then obtained by the galvanic method; and this is used to print from. M. Kuhlmann believes that in these discoveries he has laid the foundation of a new industry. No account, however, of the adoption of the new methods by manufacturers has been met with. Full accounts of the processes thus far described will be found in *Le Technologiste*, Jan., Feb., and April, 1865.

The same author has described (*Comptes Rendus*, lx. 1115; *Chem. News*, August 25, 1865), certain interesting transformations of crystals, by keeping them for a sufficient time in solutions of a different nature. Thus, a crystal of carbonate of soda, placed in solution of sulphate of copper, gives place ultimately to a true artificial geode, the lining of which (at least) consists of amorphous carbonate of copper, the soda-crystal itself having meantime disappeared in the solution. A green and a blue hydrated carbonate thus produced corresponded in color respectively with azure stone and malachite, though they contained more water. Beautiful geodes of different colors were obtained by plunging crystals of carbonate of soda in solutions of sulphate of nickel, nitrate of cobalt, &c. By modifications of the process, other interesting products were secured; as, gold in beautiful crystalline spangles, by placing some of its chloride (contained in a porous vessel) in the midst of a solution of protoxide of iron, of hyposulphite of soda, or of oxalic acid.

Mineral Arborizations in Solutions of Alkaline Silicates.—Filling a glass jar of convenient size with solution of silicate of soda or potash, of the strength (with the former, at least) given by diluting the commercial solution with about five times its volume of water, and dropping in a few crystals of sulphate of copper or iron, a sort of mineral vegetation, of slender stalks and branches, and of the color of the sulphate used—olive green with iron, and light blue with copper—soon springs up; and this may, in the course of a few hours, quite fill the jar with delicate arborescent or moss-like forms, similar to those seen in the moss agate. The direction of the stalks and branches depends on the den-

sity of the solution; their production appears due to formation of mineral silicates; and the uniformity of direction of the branches in the same solution has been thought to indicate in the latter a sort of invisible cleavage. The two sulphates above named can be used together, and with them also sulphates of nickel and zinc. The illusion is heightened by previously sprinkling the bottom of the jar with washed sand, adding a little bichromate of potash to give the appearance of soil, and powdered sulphate of copper [or iron] over some parts, to imitate grass. With care, the vessel can be moved; or the silicate solution can, in some cases, even be displaced by a gentle stream of water, after the arborizations are formed. Some remarks on this topic appear in the *Jour. of the Franklin Institute*, June, 1865.

Efflorescence of Crystals.—Dr. Pape (*Poggendorff's Annalen*, No. 2, 1865) finds that this change always commences at certain points, which bear a constant relation to the form of the crystal. This we must suppose to hold true of spontaneous efflorescence only; since Faraday found that the point at which efflorescence shall begin can be determined by scratching the surface of a crystal; and this was true with crystals of carbonate, phosphate, and sulphate of soda, which had previously been kept without change for years. In a continuation, later, of his investigations, Pape shows that the spontaneous efflorescence is propagated in spots of determinate form, generally partaking more or less of the ellipsoid, and the proportions of the diameters of which are intimately connected with the form of the crystal. Akin to this appears to be the well-known fact of the difference in the heat-conducting powers of a crystal in the directions of its different axes. Upon newly formed crystals of Glauber's salt, large elliptical spots may be noticed within five or ten minutes after their removal from the mother-liquor. Sharply defined spots in like manner appear, after the lapse of a day or more, on sulphate of zinc. The most rapid spread is in the direction of the shorter axis of the crystal; the slowest, in that of the longer. The efflorescence-figure on any face thus depends on its position with regard to the axes. The author suggests that observation of these figures may be resorted to, when the ordinary criteria are unsatisfactory, for determining the system to which a crystal belongs.

V. THEORETICAL CHEMISTRY. For the most important of the topics requiring notice the present year, and which come appropriately under this head, the reader is referred to the separate article, NOMENCLATURE AND NOTATION, CHEMICAL.

Saturability, as distinct from Equivalency.—In an article entitled, "On a Defect in the Theory of Saturation" (*Philos. Mag.*, vol. xxviii.), Mr. E. J. Mills, after citing the facts—that the atomicity or saturability of a given body is expressed by the number of units' weight of hydrogen which can be made to combine with a certain

standard weight of it (as C_2 , C_2H_4 , &c., are completely saturated by additions respectively of $6H$, $5H$, &c.); and that owing to the difficulty of obtaining in some cases hydrogen compounds, and to the want of them in others, it has been allowed in practice to take a constant weight of some other element equivalent to a unit-weight of hydrogen, and most frequently so in case of the chlorine, bromine, and iodine compounds,—goes on to present certain cases, as that of the union secondarily of the chloride of silver (usually regarded as a perfectly saturated compound), with bromide of silver, in the proportions of 3 to 2, and also of compounds such as the chlorides of lithium and sodium (regarded in like manner), with certain proportions of water; and to urge these as illustrations of the principle assumed by him, that interchangeability of saturating function between any elements must depend not only on their being capable of transposition in terms of equivalent value, but also on their comparative affinities for the substance to be saturated. His conclusion is, that "Any two radicals are not equal in saturating power for a third, unless they are equal in equivalency and affinity also; and in most cases of combination there is a residual saturability, due to affinity, enabling the new compound itself to enter into combination."

Mechanical Energy of Chemical Action.—M. Schröder van der Kolk has a long and highly original communication on this subject in *Poggendorff's Annalen*, cxvii., 489 (July, 1864), from an abstract of which in the *Amer. Jour. of Science*, January, 1865, we condense a statement of the leading principles advanced in it. The author applies the theory of mechanical energy to chemical processes, especially in connection with the relations of chemical affinity to heat.

Citing the conclusions of Deville (see *Dissociation*, &c.) that by a sufficiently high temperature all chemical compounds may be resolved into their elements, while the separated atoms, upon the lowering again of their temperature, in some cases reunite, and in others do not so, he regards this distinction as being a fundamental one, marking two classes of bodies; and the result so reached he further connects with the facts observed by Favre and Silbermann, showing that certain combinations are effected with *evolution*, and others with *absorption*, of heat. Rejecting the heat consumed in "external work," everybody has—at whatever temperature above zero—an amount of "mechanical energy" measured by the quantity of such energy in it at zero, *plus* the quantity consumed in effecting molecular changes that have occurred in it above that point, and the quantity appearing in the given rise of temperature. An electric spark determines combination between H and O , and during the change much heat is evolved: previous to combination the elements had each a definite quantity of energy; hence, disregarding the external work, the

vapor-product, on cooling to the original temperature, will contain a quantity of energy *less* than that of its components by the amount of heat liberated in the act of combination. Now, in order to decompose again the vapor of water at such temperature, precisely this amount of energy must be resupplied.

With compound bodies, then, two cases occur; each given compound contains either *more* or *less* energy than that previously possessed by its components. The first class of cases are those in which, during decomposition, heat is given out; the second, those in which, in the like change, it is absorbed. Heating, then, a body of the *first* class to the point of decomposition, heat will during that change be given out; and the components, on cooling, will not reunite, their sum of energy having been by so much diminished. To secure their recombination, either the body must take up heat from the surrounding medium, or its own temperature must fall; but although it is possible that strong affinity may effect combination even under such circumstances, yet no instances of the kind appear to be known. The conclusions just stated in regard to the first of the two classes of bodies, are confirmed by the facts observed by Favre and Silbermann in respect to nitrous oxide, peroxide of hydrogen, chlorous and chloric acids, and hold true also of the chloride, iodide, and sulphide of nitrogen, all of which bodies, on decomposition by heating or otherwise, evolve heat, and do not recombine on cooling. The law holds also in case of certain changes of physical condition in dimorphous or polymorphous bodies, as when heated arragonite passes into calc-spar, &c. The converse of the law intimated—the case, namely, of the *second* of the two classes of bodies—is illustrated by carbonate of lime, which, decomposed by heat, absorbs heat: the compound has less energy than its components taken together have, and as a fact the base and acid reunite on cooling;—also in case of slacking quicklime: the compound $CaO + HO$ evolves heat in forming, and consequently this hydrate, decomposed by heat, forms again upon cooling.

But here an apparent exception presents itself. In the formation of carbonic acid and of water heat is evolved; decomposition can only take place by absorption of heat, at still higher temperatures; and on cooling, recombination ought to occur, but does not so [at least, in all circumstances]. This must be explained on the supposition that, in such cases, the purely chemical affinity does not at the lower temperatures suffice. On this view, two conditions are in general necessary for the formation of a compound: 1, a sufficient chemical force, or affinity; 2, the requisite amount of mechanical energy. Of the two classes of cases above considered, the most frequent are the irreversible, or those in which a body, changing under action of heat and with evolution of heat, does not of itself return to the original state. Of the other or reversible class

of instances, however, illustrations occur also in the latent heat of fusion and of evaporation. The heat of combination of a compound is the same, whether the latter be formed suddenly or by degrees.

The part played by affinity in these cases is further illustrated by such facts as that, while H and OI, CO and O, &c., combine suddenly in unlimited quantities by means of the electric spark, and with evolution of heat, in other cases, as N and O, combination by electric action occurs gradually, without evolution of heat, and only so long as the spark passes. In the first of these sets of cases, the components have enough of energy, but not of *affinity*: the electric spark initiates the supply of the latter, which may then be supposed to be kept up by the heat that at once begins to be evolved. In the second, the components are deficient in *energy*; and electricity furnishes this, each spark yielding only a definite amount of work. The case of ammonia forms an exception as yet unexplained. Finally, the author takes ground against the assumption often made that the heat of combination, in a given case, is to be taken as the measure of the chemical affinity; and he considers the former, regarded as difference in energy, as being rather the measure of the stability of the compound.

Constitution of Ammonium Amalgam.—This subject is treated of by Dr. Charles M. Wetherill, in an article in the *American Journal of Science*, September, 1865. The author remarks that the existence of the hypothetical radical, NH₄ (ammonium), depends less upon the characteristics of its so-called amalgam than upon the parallelism of its salts with those of the alkalis. But, once admitting the metallic nature of ammonium, it is difficult to avoid assigning a similar character to the radicals of many, if not all, of the organic bases; whence, there must be numerous compound metals, and the notion of a metal as an element is destroyed.

The so-called ammonium amalgam bears a close resemblance in physical properties to the amalgams proper. The mercury in it has lost its fluidity, and its relations of cohesion and adhesion are changed; thus, it has become pasty, and adheres to platinum, iron, and other metals. The mass has also become much increased in volume; but left to itself, it gradually shrinks, resolving itself again into mercury, and ammonia compounds and hydrogen [NH₄, (NH₄O)H]. In reflecting on the questions why ammonium should thus apparently blend with mercury, and then fall apart into NH₄ and H, and why it should unite with the mercury rather than at once oxidize by decomposing the water present, Dr. Wetherill conceived the idea that there is in reality no amalgam of ammonium formed; but that, in the reaction, the sodium decomposes the water, evolving hydrogen, and forming caustic soda, which in its turn sets free ammonia from the chloride, the mercury being also liberated (thus, $\text{NH}_4\text{Cl} + \text{H}_2\text{O} + \text{HgNa} = \text{NH}_4\text{O} + \text{H}_2 + \text{NaCl} + \text{Hg}$); and further, that in

the so-called amalgam the molecules of mercury have become altered in their capacity for cohesion, by catalysis, polarity of atoms, or some unknown cause, so that the bubbles of gas are retained, and swelling takes place.

The author accordingly experimented in a variety of ways upon the ammonium amalgam, obtained by agency of that of sodium. He proved that the change in the mercury was not due to action of nascent hydrogen, whether alone or in presence of ammonia, but only occurred when the ammonia itself was in the nascent condition. Among his experiments were—that of squeezing the amalgam through a piece of muslin, when it was immediately, and without change of temperature or other evidence of affinity, resolved into mercury; that of forming the amalgam by means of the battery, using different ammonia salts in contact with mercury at the negative pole, &c. When, upon filter paper placed on a glass plate, and moistened with solution of carbonate of ammonia containing lumps of the salt, a globule of mercury is deposited, and the current of a 10-cell Bunsen battery is passed through the mercury and paper, the mercury being in contact with the negative pole, the amalgam is finely produced, extending out in dendritic form toward the positive pole; but if a glass plate be pressed upon the materials so as to prevent the swelling, the amalgam is not formed.

From the results of his experiments, the author concludes that—1, the so-called ammonium amalgam is *not* an alloy of mercury and ammonium; 2, the swelling of the mass is due to retention of gas bubbles; 3, the coherence of the gases and liquids concerned is changed from a normal condition, exhibiting phenomena which may be classed with those of catalysis.

VI. APPLICATIONS OF CHEMISTRY.—To some extent, of course, applications of chemical principles and facts, and the processes for obtaining certain elementary and compound bodies, have been incidentally alluded to in preceding portions of this article, as well as also in others to which, in course of it, reference is made. As properly belonging under this head, for example, are the articles, sugar and wines.

Processes for Obtaining Oxygen.—Among processes lately proposed for this purpose, that of Webster is mentioned in this *CYCLOPEDIA* for 1862. Several others have since been published.

Mr. Robbins has described a process to which he has given the name of "Oxygenesis," and which, he states, furnishes the gas instantaneously and without the need of applying heat. The method is based on an experiment due to Schönbein: in it, a dry powdered mixture [according to one account] of *three* equivalents of peroxide of barium and *one* of bichromate of potash, is placed in a glass flask provided with an exit tube; and dilute sulphuric acid being then poured on, oxygen is given off freely and with effervescence. Theoretically, it is con

sidered that in this process ozone and antozone are simultaneously liberated, and that these uniting form common oxygen. Although M. Kuhlmann, among others, has done much to develop the uses and value of the baryta-compounds in the arts, yet the peroxide, at least, has not hitherto been produced and sold as a commercial article; so that it would as yet have to be specially prepared. The author of the paper, however, speaks of arrangements having been made for furnishing this compound more cheaply, and he states that the price of it has already been reduced from that formerly holding, viz., 5s. per lb. Other peroxides could be used, but such have proved less easy of preparation than that of barium.—*Chem. News*, March 12, 1864.

M. Fleitmann has a new process, depending on the circumstance that, when a concentrated solution of hypochlorite of lime (bleaching powder) is warmed with a little oxide of cobalt, the former is completely decomposed into chloride of calcium, which remains in solution, and oxygen, which escapes. The evolution of the gas takes place at from 70° to 80° C., and is steady and regular; and the whole of the quantity contained in the hypochlorite is given off. From $\frac{1}{2}$ to $\frac{1}{10}$ th of one per cent. of the cobalt oxide [one account states, the hydrated sesquioxide] suffices; and this serves to decompose an indefinite amount of the bleaching salt, since, if the oxide be separated and kept moist it may be used over again as often as desired. The author's theory of the process is that a lower oxide continually takes oxygen from the hypochlorite, passing into a higher, and returning at once again into the state of the lower oxide and free oxygen. The cobalt oxide need not be prepared separately; a few drops of any soluble cobalt salt added to the liquid sufficing to form it. The solution of hypochlorite must be clear, as it can be obtained by decantation, and flasks may be filled with it to $\frac{3}{4}$ ths of their capacity; while, on the large scale, steam-boilers could be used. The materials employed are quite bulky, and the volume of gas secured is proportionally much less than in case of chlorate of potash; but while in cost of a given volume of gas furnished these two methods are much the same, the new one has the advantage in steadiness and manageableness, as for lecture experiments in which the use of the gas-holder is not convenient.—Original paper in *Ann. der Chem. und Pharm.*, cxxiv. 64.

Mr. R. W. Artlett, having experimented largely with the process just named, finds that moist peroxide of iron or oxide of copper serves the like purpose with that of cobalt. A few drops of the nitrate of copper will suffice for the reaction. It is stated that M. Archereau, of Paris, obtains oxygen by raising to intense heat in a furnace somewhat like that of Siemens a mixture of silica and sulphate of lime (burned), silicate of lime being formed and oxygen with sulphurous acid escaping, the latter of which he proposes to remove by subjecting the mix-

ture to pressure, and absorbing any remnant with milk of lime. The process is said to furnish the gas so cheaply that it may be economically used with coal gas to make a lime light, in place of the ordinary arrangement of burners, for stores or halls. Still another process is that of M. Carlevaris, which consists in heating together the black oxide of manganese and silica (MnO_2 and SiO_2), when a silicate of the protoxide of manganese is formed, and one equivalent of oxygen set free.

Iodine.—M. Schwartz has indicated two methods of extracting iodine from the saline matter of certain mother-liquors: the first, that of dissolving the salts in water, and treating with bichromate of potassa and sulphuric acid, when the iodine is at once deposited; the second, that of boiling the salts with perchloride of iron, and dissolving the displaced iodine by bisulphide of carbon. The last-named method may perhaps serve for the separation of iodine from bromine.

Nitrogen, &c.—In one of a series of papers entitled "Contributions to Chemistry from the Laboratory of the Lawrence Scientific School," and which appear in the *American Journal of Science*, Prof. W. Gibbs presents (May, 1864) a mode of determination of nitrogen by weight, as also methods of separation of cerium from several other metals, and the uses of hyposulphate of soda and fluohydrate of fluoride of potassium in certain analyses of metals. The subject of separation of metals is continued in the number of the same journal for January, 1865.

Electro-Chemical Separation of Metalloids.—The electro-chemical method of separation of bodies from their combinations is already found, in case of simple bodies generally, and of a large number of their principal compounds, to serve, under most circumstances, better than the modes offered by pure chemistry. Among metalloids, the preparation of which by this method is of most interest, are, *nitrogen*, obtainable from ammonia or nitric acid; as also *chlorine*, *bromine*, and *iodine*. These are all procured by essentially the same method; that, namely, of decomposing in a U-shaped tube the hydrogenated combination of the given metalloid, using graphite conductors as the electrodes. *Arsenic* is of all the metalloids the most easily isolated, and that altogether, and from a variety of arseniferous substances. *Boron* and *silicium* are not easily separated in any considerable quantities.

A very Sensitive Reaction for Iron.—Natanson has observed that sulpho-cyanide of iron is soluble in ether, and that when a solution containing a trace of peroxide of iron and sulpho-cyanide of potassium, but exhibiting no visible red tint, is agitated with ether, the latter assumes a rose color resembling that produced in chloroform by traces of iodine. Of course, the precautions usual in testing for iron by sulpho-cyanide of potassium, must be taken in employing Natanson's process. Note in *Amer. Jour. of Science*, September, 1864.

Ozouf's Process for Carbonic Acid.—This process, described in a number (early part of 1865) of the Bulletin of the Society for the Encouragement of Industry (Paris), consists essentially in directing the gases, proceeding from coke burnt in a specially constructed furnace, and after the former have been properly washed, through a series of vessels containing solution of carbonate of soda; the carbonic acid, which is the principal constituent of the mixed gas from the coke, is taken up by the carbonate, converting it into the bicarbonate. The solution so changed is then pumped into a cylinder, and being heated to boiling-point, it parts with the second equivalent of carbonic acid—say, with one-half the volume of this gas existing in combination in it. The gas so disengaged should be of course quite pure; and it can be applied to a variety of uses, as the manufacture of soda and other effervescent waters, of white lead, &c. The potash solution from which it has been set free is ready for use over again.

Ozouf's Process for White Lead.—The report just referred to, also describes the application of carbonic acid, obtained in the manner given, to the manufacture of white lead. M. Ozouf's process is in this respect substantially that of Thénard, the passing of carbonic acid gas into vessels containing solution of subacetate (basic acetate) of lead. The inventor states, however, that by proportioning the quantity of carbonic acid gas to the composition of the subacetate,—the latter containing variable proportions of acetic acid, from two down to only one of the acid for every three equivalents of oxide of lead,—he is able to produce at will white lead of any definite composition; and this result is of course one of practical importance. A sample furnished by him, on analysis, showed a composition represented by the formula $3 (\text{PbO}, \text{CO}_2) + \text{PbO}, \text{HO}$.

Preparation of Potash.—A brief note in the *Journal of the Franklin Institute* for November, 1865, gives the substance of a mode of procuring potash from feldspar. In this, feldspar, fluorspar, and chalk are pulverized, mixed, and calcined. Floride of silicium is disengaged, silicate of lime is formed, and potash is set free. The alkali may be dissolved out with boiling water, and freed from any lime carried with it by carbonic acid. Some feldspars, however, are said to contain large quantities of soda, and on treatment to yield that base.

Recent improvements in the manufacture of soda and certain soda compounds, and in the way of utilization of the waste of the works, &c., are of sufficient interest to merit treatment in a separate article. (See SODA AND SODA COMPOUNDS.)

Preparation of Nitre.—The subject of *nitrification*, or the production of the nitrate of potash in the so-called nitre-beds, natural and artificial, is considered under CHEMISTRY, volume for 1862, and incidentally also in that for 1863. Manufacturers of saltpetre have of late years found it most advantageous to convert the cal-

careous and magnesian nitrates (obtained by leeching out of the nitre-yielding products of the beds) into nitrate of soda, by means of sulphate of soda, and then, by chloride of potassium, to convert the soda-salt into nitrate of potash (Regnault).

Still more recently, the fabrication of nitre has been rendered more simple and less expensive by decomposing at the same time, and without previous preparation, the chloride of potassium and the sulphate of potash procured from the salts of the sort of sea-weed known as *wrack*, by reaction of nitrate of soda with those salts. In the process, also, the slight solubility at low temperature of the nitrate of potash is turned to account, as well as its ready purification by crystallization and washing; and the salts of less value remaining in the mother-liquor are concentrated and dried for disposal to manufacturers of glass.

Preparation of Alum.—Mr. Spence, England, by making use of the schists which lie in contact with beds of coal, has recently succeeded in producing alum on a very economical scale. Having roasted the schist in small heaps, by aid of a little combustible matter along with bituminous material contained in the former, he treats the ash, reduced to powder, by sulphuric acid in the condition in which it comes from the chambers. The excess of acid required for acting on the clay of the schist is afterwards removed by saturating it in the filtered solution by a current of ammonia directly obtained from the ammoniacal waters of gas-works. Five tons of the schist yield four tons of alum; while in case of the employment of pyritous earths, a very much larger quantity of the primary material is required to yield the same result. Mr. Spence's works, in which this process is in use, turn out annually some 5,600 tons of alum, a quantity amounting to one-third of that produced each year in the whole of Great Britain.

Detection of Explosive Gases in Mines.—Of the modes of testing whether or not explosive gases are present in mines, by observing if a peculiar form be given to the flame of a lighted candle, or if a peculiar behavior or form be presented by the flame of a Davy's lamp, the former is exceedingly hazardous, while even the latter is not free from the danger of originating explosion. Mr. G. F. Ansell, of the Royal Mint, England, appears to have succeeded in supplying the want of safe tests, in the set of ingenious instruments recently devised by him for the determination, and one of them especially for the quantitative estimation, of the presence in any atmosphere of explosive gases or others different from those of common air. All these are in their construction based on the well-known principle that gases free to do so mutually intermix, and that through porous partitions, including many even of which the porosity is not apparent; and further, upon the law that, in such cases, the gases diffuse into each other with a rapidity inversely propor-

tional to the square roots of their specific gravities; so that the volume of a body of gas within an enclosed space tends to be increased or diminished at first, according as another gas separated from it by a porous septum is rarer or denser than itself.

In the simplest form of the instruments referred to, a U-shaped tube, blown at one end into a cup, has its bend filled with mercury so that this occupies the lower part of the cup, while over the latter is cemented a piece of porous tile. The cup being thus chiefly filled with air, inclosed, suppose it brought into an atmosphere of hydrogen: the specific gravities of the two are as (about) 14.4 and 1; the square roots of these numbers, as 3.8 and 1; so that for every 1 part of air diffusing out of the cup, 3.8 of hydrogen tend to enter it. In fact, owing to the pressure thus generated within the cup, effusion of gases goes on at the same time; but the former process being most rapid, the mercury is depressed in the cup and raised in the other arm of the tube. After the maximum effect of the diffusion is reached, effusion still continues, until the two atmospheres have come to a like constitution, and the mercury has returned to the same level in both arms. Upon then removing the instrument into common air, a reverse movement is set up, and the mercury at first rises in the cup, falling in the other arm of the siphon. But, placing the instrument, containing air, in carbonic acid (densities 14.4 and 22; square roots, 3.8 and 4.7), the pressure is at first diminished in the cup; and the phenomena are throughout the reverse of those just stated. As already implied, the theoretical elevation or depression can in no case be fully obtained; but either is likely to be of sensible amount. Alongside the smaller arm of the U-tube is accordingly placed a scale; and this is graduated to indicate the percentage of mine-gas present. In other forms, a float on the mercury in the smaller limb, connected with a cord passing over a pulley, and a small weight, moves an index over a circular scale, for the like purpose. But while all these require to be directly watched, in a fifth form, a small india-rubber balloon, allowed to expand only in length, is made by its elongation on taking through its pores a lighter gas, to act on a lever, release clock-work, and thus ring a bell. This instrument gives almost instant warning of the sudden irruption of explosive gases into a mine, and the bell continues to ring until by ventilation the atmosphere of the place has returned to its usual character.

The most valuable of all these instruments is, however, one resembling an aneroid barometer, and of about the size of a watch, having one of its faces of porous earthenware but ordinarily protected by a brass case, and an opening through its handle closed by turning a screw. This being commonly open, so that the cavity is filled with air, when an observation is to be made the orifice is closed: taking the instrument into a mine, and opening the case, if

the lighter mine-gases be present, in about forty-five seconds their maximum effect will be produced; and the position of the index will, by aid of a vernier, show the percentage of mine-gases present. Since trains of trucks running into or out of the mine disturb the pressure, the instrument should be used in the intervals between such disturbances. It is stated that no appreciable variation arises from temperature. Some of the forms can be connected with telegraphic arrangements. The instruments have been used in several mines, and have given full satisfaction to practical miners. Cuts of the instruments accompany their description, in the *Chemical News*, December 15, 1865.

Applications of Bisulphide of Carbon.—This peculiar liquid (composition, CS₂), an incidental product of the distillation of coal, and which has already received many interesting and valuable applications, has recently been applied with great success to the extraction of fatty matters from various seeds and fruits; and also, in Algiers, to the extracting from flowers of various essential oils, commonly known as perfumes; as those of roses, lavender, jasmine, &c. Messrs. Allbright & Co., of Birmingham, also use it to separate the common phosphorus from the red or amorphous phosphorus, now applied to the manufacture of chemical matches.

Extraction of Vegetable Oils by means of Volatile Hydrocarbons.—It has recently been found that all the more common vegetable oils, including palm oil, olive oil, colza oil, and linseed, rape-seed, and cotton-seed oils, may be extracted with great economy by means of some of the hydrocarbons from petroleum, coal, schists, and bitumen, and best by those which volatilize at a little above the boiling-point of water. The seeds or fruits, crushed or ground in the usual way, are digested with the hydrocarbons in tight vessels. From the solution of the vegetable oil in the mineral spirit which is obtained, the latter is afterwards expelled by applying a proper heat. The solvent is condensed for re-use, and the loss of it may be made very slight; while the yield of oil obtained by the means indicated is said to be from 40 to 50 per cent. greater than that secured by the ordinary method—with mechanical pressure. It has been stated that, by employment of this process, the yield of the olives pressed yearly in the neighborhood of Marseilles alone could be increased not less than 6,000,000 pounds.

Preparation of Clay with Glycerine, for Modelling.—Experiments recently made by M. Haas, of Stuttgart, confirm the opinion long advanced as to the value of glycerine for preserving the plasticity of clay intended for modelling. He found that clay, kneaded up with glycerine, and kept for two months in a warmed room, was still as plastic as on the first day. The clay should be first completely dried, then pulverized, and finally mixed with the requisite quantity of glycerine, of specific gravity of

1.231=27° Baumé. Incorporating glycerine with clay already moist, evaporation of the water later occurs, and the mass loses its plastic property. The expense of the glycerine might seem an obstacle in the way of this process. The dried clay requires nearly half its weight of glycerine; but the cost becomes of less importance in view of the fact that the clay so preserves its plasticity that, without further expense or labor of preparation, it can be used over again indefinitely. The prepared clay is, moreover, still much cheaper for modelling than wax, while it can replace the latter for all purposes, even to the most delicate operations; and it has the further advantage of maintaining the same consistency and plasticity from cold up to quite high temperatures.

In a note in the *Mechanics' Magazine*, November 24, 1865, Mr. Peter Hart states that, having in course of some experiments to prepare pipe-clay repeatedly for luting, he found that by mixing the clay with a solution of chloride of calcium (sp. gr., 1.350) the luting kept good during the whole remaining course of his experiments; while a portion of it tried about a year later was still plastic. As it appeared impossible to dry the mass, it would probably not serve for cases in which the modelled forms required drying.

Linoleum, and its Applications.—The name linoleum (*linus*, linseed, and *oleum*, oil) has been given to a substance obtained by oxidizing the linseed oil of commerce, thus converting it into a semi-resinous matter, and then combining this at a strong heat with resinous gums and other ingredients. The new product has the appearance, and many of the properties, of india-rubber. It can, like the latter, be made into a varnish or cement; and this can be employed for water-proofing clothing, for protecting iron or wood, and for coating the bottom of ships, as well as for cementing wood with iron or wood with wood. It can be vulcanized by heat, and that to the hardness of the hardest woods; and in this condition can be worked by filing, planing, or turning, and made to take a high polish. It can also be moulded in heated dies to any desired form; and combined with emery, it forms excellent grinding wheels. Among the articles made from it or by application of it, are said to be sheaves for pulleys, surgical-instrument handles, picture-frames, mouldings, veneers, &c.; and also carriage-aprons, sail-covers, tarpaulin, gas-pipes, paints and enamels for certain purposes, &c. One of its chief applications thus far has been to the making of washable felt carpets or floor-cloths. For producing this cloth, a face of the linoleum mixed with ground or powdered cork is rolled in upon one side of stout canvas, while the other side is water-proofed with the varnish already referred to. The fabric is printed with blocks in the ordinary way. The carpeting so produced is noiseless and pliable, is not affected by heat, washes readily, and is very durable.

Aniline Black: Printing and Qualities.—

This colored derivative of aniline may be said to complete the series of brilliant colors derived from that base; though from the other members of that series, as the red, the blue, and the violet, it differs in nearly all important respects. Mr. John Lightfoot, of Accrington, patented in January, 1863, a process of obtaining the then new aniline black, upon cotton, by printing or dyeing with the following mixture: chlorate of potash, and sal-ammoniac, each, 25 grammes; aniline, chlorhydric acid, and perchloride of copper, each, 50 gr.; acetic acid, 12 gr.; solution of starch, 1 litre. The fabric being printed with this mixture, dried, and warmed in "oxidation chambers," the black is then first developed; and it is afterwards fixed by washing in water slightly alkaline. The coloring matter is completely insoluble, and remains intimately fixed in the fabric. The disadvantages attending this process, however, among them the injury done to the strength of the fibre, led to its abandonment; and the same appears to be true of M. Camille Kæchlin's process, in which the copper was for the first time introduced into the fabric instead of the mixture, and in form of a sulphate; and of M. Cordillot's, in which the chloride of copper is replaced by ferrocyanide [or perhaps, ferricyanide] of ammonium.

M. Lauth (*Bulletin de la Société Chimique de Paris*, December, 1864, p. 416; *Le Technologiste*, April, 1865) describes a modification of Lightfoot's process introduced by him, and in which he prints by using with the aniline and potash salts also an insoluble oxidable salt, but which shall become soluble upon the tissue; for example, the sulphide of copper. By the oxidizing action of the chloric acid, or of the chlorine set free during reaction of chlorhydrate of aniline up chlorate of potash, the sulphide of copper is transformed into sulphate. The author states that this process is economical, while in it the mixture does not attack the metallic rollers or other mechanism, nor does it weaken the fabric—no more, at all events, than madder black. The color is fixed at 20° to 40° C., and is very permanent; while the composition of the dye allows of its being printed with all sorts of colors.

The aniline black has an altogether unique appearance, velvety, and very rich. The incorporated dye is completely insoluble in water, even boiling and with soap; and also, it is stated, in alkalies or acids. The latter indeed change the black to green; but the original color is restored by alkalies. Bichromate of potash deepens the shade, but in concentrated solution slightly reddens it. Strong chloride of lime bleaches it, but after a time the color is almost perfectly restored.

In the same number of *Le Technologiste* is a description of a mode of preparing aniline green, by previous preparation of aldehyde, and then treating in the manner given a mixture of this with fuchsine, sulphuric acid, and cold water.

New Solvent for Aniline Dyes.—A new sol-

vent for the greater part of the aniline dyes has been discovered by M. G. de Claubry, and communicated by him in a paper (March 27, 1865, it appears) to the French Academy of Sciences. In place of alcohol and methylated spirit, which are high-priced or injurious to the workmen, M. de Claubry proposes to substitute a decoction of Panama bark (*Quillaria saponaria*) or of Egyptian soap-wort (*Gypsophila strutum*). Solutions of the coloring products are readily obtained by pouring the boiling decoction upon the powder, repeating the operation after stirring and decanting, if part of the powder remain undissolved. The red dyes thus dissolve most readily; the blues, less so. For a purple dye, accordingly, it may be necessary to mix the solutions at the last, in order to obtain the required hue. It is stated, also, that the new menstruum insures greater uniformity of tone, since it is not, like the alcoholic solutions, liable to change of constitution by evaporation during use.

Processes for Revising the Writing of Old Documents, on Parchment or Paper.—The process recommended for the purpose named (more especially for parchments, it appears), by M. E. Moride, and given in *Le Technologiste* for August, 1864, is as follows:

1. Moisten the parchment as speedily as possible, and without agitation or rumpling, in cold distilled water.
2. Having let the sheet drip, plunge it during five seconds only in a solution of oxalic acid, strength of one-fifth.
3. Wash rapidly in two waters; any oxalate of lime with which, as is often the case, the parchment may be covered, will thus be removed.
4. Introduce the manuscript into a solution of 10 grammes of gallic acid in 300 grammes of distilled water.
5. After the reappearance of the characters, wash the parchment in a plenty of water, and dry it between sheets of bibulous paper, renewed as long as required; and finally, submit it to the action of a press. To restore simply a few words or lines that may be well-nigh effaced, apply the liquids with a camel's-hair pencil, following regularly the order above given, and using at the close alternately, first, the acid solution and bibulous paper, and then water and other paper of like sort to absorb it. Very great delicacy and promptitude are requisite throughout the operation; and, since in spite of precautions the writing will sometimes spread into cloudy spots, and remain illegible, this risk should be borne in mind; and though the rightful holders of writings may resort to the process given, it would scarcely be proper for the legal depositaries of documents held in trust for others, to incur its hazards.

In the journal quoted, also, date of December, 1864, M. E. Knecht-Senefelder considers generally the causes—in the composition of various sorts of paper and of factitious parchment, and in the varying composition and qualities of inks, &c.—of the gradual alteration or in many cases effacement, with lapse of time, of the writing of deeds and other documents;

and finding, in case of common inks, the principal cause of such changes in the differing proportions of the *sulphate of iron* and *gallic acid* (of which such inks are essentially composed), employed in their preparation, and the consequent different degrees of facility with which the paper takes up and retains these ingredients respectively; or else, in an absorbent action exercised by calcareous substances present in the paper, he proposes accordingly the following mode of proceeding for the restoration generally of old writings on parchment or on paper of any sort:

Into one of two vials put 1 part gallic acid and 200 parts distilled water; into the other put 1 part sulphate of iron and 200 parts distilled water. Begin by making trial of the solutions by means of a small camel's-hair pencil, applying one of them five or six times upon some single letter of the document, and the other in like manner with another pencil upon some other letter near to the former. Observe which of the two applications renders its letter the more black; and then employ that solution which has succeeded best, for bathing the entire sheet. Or pass the proper solution lightly with a pencil two or three times over the lines of writing. Finally, it is well to turn pure water over the sheet before letting it dry, in order to prevent a yellow discoloration of it due to the materials applied; though it is also stated that such tint can subsequently be removed, if necessary, by a weak solution of bichloride of tin, in the proportions given for the solutions last named above.

Chemistry in the Smithsonian Institution.—In the *Report* of this Institution for 1864, the Secretary states that, "In compliance with requests made by different departments of the Government and of Congress, particularly since the war, it [the Institution] has conducted various series of investigations, principally in relation to questions involving mechanical, chemical, or physical principles, and has made reports on subjects of this kind amounting, in the aggregate, to several hundred." In order to facilitate such researches, a laboratory has been established and kept constantly in working condition; and the privilege of using it has been given to various competent persons, for experimenting in the different branches of physical science. The laboratory, at the time of publication, was occupied by Dr. Wetherill, who was conducting analyses of air from the halls of Congress, &c.; and from these a report was to be made, under direction of the Institution, on the ventilation of public buildings of the city of Washington. As among important publications, more or less directly connected with the subject of chemistry, which have been issued by the Institution, are named, the work of Dr. Hare, on the *Explosibility of Nitro*; that of Drs. Gibbs and Gent, on the *Ammonia-Oxide Bases*; and that of Dr. H. Draper, on *Astronomical Photography*. Many of the Reports, also, since 1853, have contained reviews

of the progress, from year to year, of the physical and chemical sciences.

Among the papers to be found in the *Report* for 1863, are: *A Brief Sketch of the Modern Theory of Chemical Types*, by Dr. Charles M. Wetherill, the paper being illustrated with numerous examples of formulæ and with diagrams; and *Purple Dying, Ancient and Modern*, translated for the Institution from the German periodical, "*Aus der Natur*" (Leipzig); and in the volume for 1864, *Ozone and Antozone*, by Dr. Wetherill; Extract of a Memoir by M. Becquerel (translated), *On the Preservation of Copper and Iron in Silt Water*; *Preservation of Wood*, translated from "*Aus der Natur*," *Caoutchouc and Gutta Percha*, from the same; and *The Products of the Combustion of Gun-cotton and Gun-powder under circumstances analogous to those which occur in Practice* (Pogg. Ann., April, 1863), a translation, with remarks by Dr. B. F. Craig.

Works and Lectures.—Without proposing to enter into a full enumeration of recent and important chemical works, &c.—such as may, or may not, have been elsewhere mentioned—the writer deems it proper in this place to call attention especially to the recent edition of the extensive and excellent work on Chemistry of Prof. W. A. Miller; to the still more recent works, in harmony with the new chemical philosophy and nomenclature, of Prof. A. W. Hofmann, entitled, *Modern Chemistry, Experimental and Theoretic*, and of Prof. A. W. Williamson, entitled (it appears), *Chemistry for Students*; and also to the following published lectures: The "Cantor Lectures," series for 1864, six in number, by Dr. F. C. Calvert, *On Chemistry Applied to the Arts* (*Chemical News*, 1864; *Journal of the Franklin Institute*, 1865); and the series for 1865, *On Some of the Most Important Chemical Discoveries made within the last Two Years* (*Chemical News*, November 3, 1865, and on); a lecture *On the Present State of the Chemistry of Gas Lighting* (*Chemical News*, July 7, 1865), by Dr. H. Letheby; six lectures *On Animal Chemistry* (*Chemical News*, July 21, 1865, and on), delivered before the London College of Physicians, by Dr. William Odling; and one, *On Lecture Illustrations* (*Chemical News*, July 28, 1865, and on), by Prof. Hofmann, before the Chemical Society, and which is published with numerous illustrative diagrams and drawings.

CHILI, a republic in South America. President (September 18, 1861–1865), José Joaquín Pérez. Ministry, A. Covarrubias (Interior and exterior); F. Errázuriz (Justice, Worship, and Instruction); A. Reyes (Finances); J. Manuel Pinto (War and Navy). The Senate is composed of 20 members, elected for a term of 9 years. The Chamber of Representatives consists of one member for every 20,000 inhabitants, elected for a term of 8 years. Minister of the United States near the Government of Chili, Maj.-Gen. Judson Kilpatrick (appointed 1865); Chilean Chargé d'Affaires in Washington, F. S. Asta-Burnaga). Area, 170,000 square miles; popula-

tion (1863), 1,700,055. The number of foreign born residents was, in 1854, 19,669. The expenditures of the Government were estimated for the year 1863 at 7,585,983 piastres. The regular army numbered in 1863, 2,871 men; the national guards, 28,077 men. The fleet consisted of 4 steamers, with 27 guns. The imports of the year 1863 amounted to 20,487,517 piastres, and the exports to 20,118,852 piastres. The movements of shipping during the years 1861–'63, were as follows:

	ENTERED.		CLEARED.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
1861.....	2,450	894,959	2,423	674,887
1862.....	2,830	955,523	2,793	971,565
1863.....	2,596	820,014		

Of the vessels, entered in 1863, 1,474, of an aggregate tonnage of 272,550, sailed under the Chilean flag.

No country of South America manifested in 1864 a warmer sympathy with the struggle of Peru against Spain than Chili. Spain regarded the conduct of the Chilean Government as a breach of international comity, and demanded satisfaction. An amicable arrangement was, however, reached in May. The Spanish Chargé d'Affaires in Chili, S. Távira, declared that he regarded the explanatory note transmitted to him by the Chilean Government, relative to the hostile attitude which the country had observed during the Peruvian conflict, as sufficient satisfaction; and the President, in his message to Congress, in June, congratulated that body upon the satisfactory settlement of the difficulty. The Spanish Government, however, disavowed the conduct of its representative, whom it recalled on July 25, 1865. The further negotiation concerning the difficulty was intrusted to Admiral Pareja, the commander of the Spanish fleet in the Pacific, who, on September 17th, arrived at Valparaiso in his flagship, the *Villa de Madrid*, and notified the Chilean Government that the former arrangement concluded with Señor Távira had been disapproved at Madrid, that he was invested with the power to demand immediate reparation, and that a refusal to comply with his demands would result in a commencement of hostilities. The first communication from Admiral Pareja to the Chilean Minister of Foreign Affairs, is dated on board his flagship, September 17th. In this lengthy document he proceeds to review the cause of complaint on the part of Spain against Chili, and divides the subject into five parts. In the first he complains "that the outrages and insulting cries and threats committed and uttered against Spain, in front of the house then occupied as her Most Catholic Majesty's Legation, were not sufficiently punished;" secondly, "the publication of the disgraceful newspaper called the '*San Martín*,' whose columns were filled daily with the grossest attacks against Spain and the objects dearest to Spaniards;" thirdly, that the Peruvian steamer-

of-war Lerzundi was allowed to receive coal and enlist men in Valparaiso, while coal was refused to the Spanish vessels, because it had been made contraband of war by the Government of Chili. The fourth complaint relates principally to the same subject as the preceding one; and lastly is cited the case of a French man-of-war allowed to receive coal, when at war with the republic of Mexico, while the ships of Spain were refused the same, because supposed to be at war with Peru.

The admiral goes on to say that he is instructed to demand that "satisfactory explanations be given for each of these grievances; and, moreover, that one of the forts of the republic shall salute the Spanish ensign with a salvo of twenty-one guns, which will be answered by one of an equal number to the Chilean flag." In conclusion he states, that "if within four days from the date of this communication no answer to it shall be received, all diplomatic relations will be considered at an end between Spain and Chili, and the persons composing the Spanish Legation will be received on board the ship carrying his pennant; and if the necessity should occur to use the force under his command, which he should most sincerely regret, he will consider himself bound to obtain indemnification for the losses suffered by the Spanish squadron in consequence of the dispositions made by the Chilean Government; such indemnification not being now claimed by the Government of Spain save in the possibility of recurring to force of arms, when it will then be held by the undersigned as a part of his solemn duty."

In reply to this, Señor Alvaro Covarrubias, the Chilean Minister of Foreign Affairs, first acknowledges its receipt, under date of September 21st, and then goes on to review fully all the complaints contained therein. With regard to the first charge, he asserts that the occurrences before the house of the Spanish Consul involved no insult to the Spanish flag, as had been acknowledged by Señor Tavira, by the Spanish Government, and by Admiral Pareja himself. The language of the paper "San Martín" had been publicly rebuked by the President of the Republic in a much more emphatic manner than that suggested by the admiral. As regards the third and fourth charges, the decree concerning the coaling of the Peruvian steamer had been issued at a time when no state of open hostilities was supposed to exist, while, on the contrary, such a state did seem to the Chilean Government to exist at the time when coal was refused to the Spanish vessels. On these grounds, the note says, the Chilean Government "cannot confess itself culpable of imaginary insults against Spain, nor accept the humiliating and disgraceful proposal that the Spanish flag should be saluted by the guns of the republic—a proposition which is peremptorily and firmly refused."

To this note Pareja replied by a "second ultimatum," dated "on board the Villa de Ma-

drid, in the port of Valparaiso, September 22d," in which he says, that obeying the orders of his Government, he must make known, that if at six o'clock on the morning of the 24th of September, the Government of the republic should not have acceded to his request, all diplomatic relations existing between Spain and Chili would be at an end, and he would be obliged, at the expiration of that time, to seek to obtain with the force at his command that satisfaction which the Government of Santiago refused to give by means of pacific measures, as he ardently desired.

The Minister of Foreign Affairs, in his reply to this ultimatum (September 23d), defined the position of his Government as follows: "The Government of the republic henceforth refuses, whatever future contingencies may arise, all demands for indemnification arising from the employment of the forces at the command of the Spanish Admiral. The entire and exclusive responsibility, incalculable evils which the coming conflict will bring to Chili and her people, foreign as well as native, must rest upon the oppressor, upon the Government of Spain and its agents who wish to submit the republic to the most distressing and injurious proceedings without a shadow of justice, without even a plausible pretext. Consequently, the Government of the undersigned will reclaim from that of Spain the amplest and most complete reparation for all damages that may be sustained by Chili growing out of the present difficulties."

The Government of Chili at once furnished copies of the correspondence with Pareja to the Diplomatic Corps resident in Santiago, and at a meeting of that body, composed of the following gentlemen, viz.: Thomas Nelson, Minister of the United States, acting as President; William Taylour Thompson, of Great Britain; F. Cory, of France; Antonio Ferro, Hernojenes de Irisarri, and Levenhagen, representing the kingdom of Prussia and the republics of Colombia and Guatemala—a very strong remonstrance was addressed to the Spanish Admiral against his precipitate action, but which elicited no satisfactory reply. In the third and last note of the ministers, dated September 28th, they say: "The undersigned consider that the said note does not destroy the observation and objections which they permitted themselves to make to H. E. in regard to the proceedings which he has adopted in order to arrange the differences existing between the Government of her Catholic Majesty and the Republic of Chili; finding themselves obliged, to their regret, to reiterate and maintain the reserves and protests contained in their communications of the 22d and 24th of this month."

As soon as Pareja's intentions were fully disclosed, and his determination to enforce the demand of Spain by hostilities, notwithstanding all efforts to the contrary, looked upon as settled, the Congress of Chili, in both houses, passed a declaration of war, as proposed, over the signatures of the President and all the mem-

bers of the cabinet. A loan of twenty millions of dollars was authorized, and unlimited power granted the Executive for raising troops and procuring ships for the defence of the country.

At this time the blockading squadron off the coast of Chili consisted of the *Villa de Madrid* (flagship) and *Resolucion*, steam screw frigates, at Valparaiso; the *Blanca* and *Berenguela*, vessels of the same class, at Caldera; the *Marquez de la Victoria*, another screw frigate at Coquimbo, while the gunboats (screw) *Covadonga* and another, name unknown, were to be used as tenders, or to blockade the minor ports of the south coast. The huge iron-clad frigate and ram *Numancia*—a most formidable ship, of thirty-nine heavy guns—was at Callao, but soon after joined the blockading fleet.

On September 28th the Chilean corvette *Esmeralda* and steamer *Maipo* succeeded in getting through the blockading fleet. They were well armed and fully manned, and were provisioned for a long cruise.

Admiral Pareja in so far yielded to the remonstrances of the diplomatic corps against the legality of the blockade of some forty ports by seven steamers, as to restrict it to six; viz., Valparaiso, Caldera, Coquimbo, Herradura (Guayacan), Tomé, and Talcahuano, thus acknowledging the illegality of the former general blockade, on paper, and giving a good case to all who had been exposed to loss by the previous notification. Even this restricted blockade the Spaniards found it impossible to make effective, and soon after raised the blockade of Tomé and Talcahuano.

The Government and Congress of Chili showed an unflinching determination to resist the Spanish aggression to the last. Congress successfully labored to restore confidence to the funds; roads were begun to open up direct communications to the principal towns, where formerly such were all by sea; a line of telegraph was being rapidly pushed forward, to connect the extremes of Chili. By a decree of October 7th, all customs duties were for the present abolished, whether on imports or exports; and thirty-six coast towns were declared ports* of Chili. By a decree of October 19th this freedom was annulled, so far as the ports effectually blockaded were concerned. The Government also decreed: First, that all the subjects of the Spanish crown resident in whatever part of Chili, should remove to Santiago, and there be matriculated, and brought within the vigilance of the authorities; and, secondly, that the notaries, bankers, and managers of insurance,

railway, and other companies, should not authorize any transfer of Spanish property or assets.

On November 26th the Chilean steamer *Esmeralda* succeeded in capturing the Spanish gunboat *Covadonga* off Papudo, having on board Admiral Pareja's correspondence. The engagement lasted about half an hour, fourteen of the Spaniards were wounded and two killed. The *Esmeralda* sustained no damage whatever. The prisoners taken were a commandant, six officers, and about one hundred and ten men, who were treated very kindly both by the authorities and the people. The commander of the *Esmeralda*, Don Juan Williams Robollo, was rewarded for his bravery by being raised to the rank of post captain, and his countrymen commenced a subscription to present the gallant seaman with a sword of honor. Previous to this affair the Chileans had captured a launch belonging to the Spanish ship *Resolucion*. This launch, mounting a cannon, had been doing duty at Quiriquine, Tomé, and Talcahuano. On the evening of the 17th of November the little Chilean tug steamer *Independencia*, two guns, was steaming along the coast of Itata, and when within cannon-shot of the launch was brought to by a discharge. The steamer stopped at once and put out her lights. The launch came alongside demanding her surrender and boarding her with forty men. As soon as they were on deck the crew of the *Independencia* seized and made every man prisoner, took the launch in tow, and handed over the prize and prisoners to the authorities at Maule.

The want of success in his operations against Chili, and especially the news of the capture of the *Covadonga*, so affected the mind of Admiral Pareja that he committed suicide November 28th. He was temporarily succeeded in the command of the squadron by Commodore Nunez, of the *Numancia*, who raised the blockade of all the Chilean ports except two, Valparaiso and Caldera.

On December 5th a special envoy of the Government of Chili to Peru, Domingo Santa Maria, concluded with a Peruvian commissioner, Toribio Pacheco, an offensive and defensive treaty against Spain. (See the text of the treaty under PERU.) No publicity, however, was given to the treaty until it was ratified by the Chilean Congress, and the solemn proclamation of the treaty did not take place until January 14, 1866.

In the southern provinces of Concepcion and Valdivia gold mines were discovered, and new coal mines were opened in the south. Favorable reports were also received of the quicksilver mines lately discovered in the hills about Valparaiso.

The Chilean Congress, in July, had a long and animated discussion on amending Article No. 5 of the Constitution. This article No. 5 is as follows: "The religion of the Republic of Chili is the Roman Catholic, to the exclusion

* These ports are the following: In the province of Chiloé, Chacabuco and Castro; in Llanquihue, Mellipulli and Calbuco; in Valdivia, Rio Aueno; in Arauco, Carampangue and Lebu; in Concepcion, Cobura, Lata, Lotilla, Penco, and Lirquem; in Mañe, Curanipe and Buchupureo; in Colchagua, Llico and Enman; in Santiago, San Antonio and San Antonio de las Bodegas; in Valparaiso, Algarrobo and San Jose; in Aconcagua, Lapallar, Papudo, Pichidangu, and los Vilos; in Coquimbo, Tongal, Guayacan, Tatoralillo, and Guanta; in Atacama, Carrizal-Bajo, Sarcoc, Pina, Blanca, Flamenec, Chanaral de las Animas, Toltal, Cobre, Papozo, Pan de Azucar, and Oblispio.

of the public exercise of any other." The discussion terminated in a way quite satisfactory to the Liberal party, notwithstanding the full strength of the Catholic party was brought to bear for the purpose of upholding this article. The law, as now approved by Congress and sanctioned by the Executive, declares in Article 1—That worship within buildings belonging to private persons is allowed to those who do not profess the Roman Catholic religion; and in Article 2—That Dissenters are allowed to establish and sustain private schools for the initiation of their own children in the doctrines of their religion.

CHINA. An empire in Eastern Asia. Emperor Ki-Tsang (before his accession to the throne, Tsai-Sung), born in 1855, succeeded his father, Heng-Fund, in 1861. Population estimated in 1849 at 415,000,000.*

The beginning of the year 1865 found the power of the Taipings broken. Their great leaders were mostly dead, and their vast armies dispersed. Numerous bands, however, constituting together a considerable force, continued the rebellion. In the latter part of 1864 their chief leader, and "Protector-General," Shi-Wong, said to be a brother of Chung-Wong, the best leader in the old army, issued two notifications, one to the people of the country, and another to the foreign treaty powers. In the address to the people, the Protector-General informs them that the Tartar dynasty must be displaced, and that the empire of China must be governed by Chinese. No violence will be offered to those who submit to Taiping rule. The second notification issued by the Taiping leader is addressed to the treaty powers. The Protector-General deprecates all feelings of hostility between his people and foreign powers. He intimates his intention of pushing his campaigns over the empire. He proposes terms of cooperation with the powers. These terms are, a constant supply of arms and ammunition to begin with. Then it is proposed that foreign nations shall commence a career of conquest under the sanction and authority of the heavenly dynasty. The plan laid down is that the powers shall ravage the coasts, seize whatever ports they choose, to become their own property, and retain for their own use all the spoil they can lay hands upon. Furthermore, the Taipings undertake to conduct operations in the interior and move toward Peking simultaneously with the progress of the foreigners along the coast. The Taipings go on to say that every city which they take will be duly plundered, and one-half of the proceeds in each case handed over to their powerful allies.

The headquarters of the Taipings were at Changchow, in the province of Fo-kien, and distant from the treaty fort of Amoy only fifteen miles. In March and April several engagements took place in the vicinity of Chang-

chow; in one the rebels lost 2,000 men, in the later one they defeated the Imperialists with a loss of 1,000 men. In May they evacuated Changchow, where they had been for some time so closely invested that a few weeks, it was thought, would have rendered their situation untenable. Having collected a number of Europeans and made their men perfect in drill, they pressed forward in the south and southeast, and contributed their share to the general disorder of the empire, which at this time was suffering from two other rebellions. After this time, little was heard of the independent operations of the Taipings, and they are mentioned only in connection with the other rebels. In May, the American Burgevine, while on his way from Amoy to join the Taiping garrison at Changchow, was arrested by the Mandarins. The Chinese officials informed the American Consul at Amoy, who repeatedly, but in vain, demanded his release, but he was kept as a prisoner by the Viceroy at Foochow. Subsequently it was officially reported that, with other prisoners, he had been drowned.

In January, 1865, an insurrection of the Mohammedan Dsunganes in Western Tartary, the origin of which dates back to the year 1862, assumed large and threatening dimensions. According to advices received from St. Petersburg, the loss of the province of Ili to the Chinese, as well as the remainder of Western Tartary, was a settled matter from the beginning of the year. Kashgar, Yarkand, Aksu, Tchongoutchak, and all the other principal towns in the region, were wrested from them by the insurgents. The only place which the Chinese continued to hold was Kuldja, the capital of Ili province, on the Russian frontier. According to direct advices, received by the St. Petersburg "Invalide," and dated November 4, Kopal, Russian province of Semipalatinsk (which borders upon Chinese Toorkistan), Kuldja (Urga), with its Chinese garrison, was still being besieged by the Dsunganes, who were in hopes of taking it shortly. The Kirghise of the region, finding the Chinese power on the decline, began to rebel and plunder; and there was a rumor that 5,000 Chinese militia, who had been colonized in those parts, intended crossing the frontier, and seeking refuge in Russian territory, where they would be well received and provided with land from the abundant domains of the Government. In Kashgar and Yarkand the Dsunganes had been beaten by the tribes of Kiptchak. According to a current, but, the "Invalide" says, absurd report, the English had asked permission of the Kiptchak to establish a factory on the Lake Sari Kach, situate in a dominant position on the ridge separating Kunduz from Kashgar.

The Nien-fei ("northern rebels"), whose insurrection, like that of the Mohammedans, began several years ago, obtained also in the first months of the year 1865 several successes. They contrived in the early part of April to

* For further statistical information, see ANNUAL CYCLOPEDIA for 1864.

take possession of the country north of the Yellow River, and to occupy the unwall'd city of Chung-sing, situated near the junction of the river with the Grand Canal. The Imperialists sought to prevent the Nien-fei from gaining possession of the canal, and thereby interrupting the direct communication with Pekin. They succeeded in driving them from this important position, and then guarded the right bank of the Huang-ho, thus protecting the wealthy cities in the Kiang-peh. San-ko-lin-sin, the commanding general of the Chinese army, was, however, killed in battle, and was succeeded by Tsing-Kuo-Fan, who, it was thought, would prove, as a general, greatly inferior to his predecessor. The rebels derived great strength from the presence of three renowned leaders, viz., Miao, a son of the late Miao Pei-ling, Chang, a son of the equally renowned Chang Lo-hsing, and Shên, a son of the Manchow Shên Pao, who was executed in 1864 for corrupt practices in Shan-si. In May and June the Nien-fei obtained many successes in Shantung, and pressed on as far as the left bank of the Huang-ho (Yellow River). In July they advanced, in conjunction with bands of Taipings and of Mohammedans, to within 200 miles of Pekin, and at one time were even reported to have captured that city. This report was, however, not confirmed; but they were driven off by the Imperialist troops, and their power in the latter part of the year considerably decreased.

In the latter months of the year acts of piracy along the coast of China became very frequent and troublesome to the foreign commerce. Among the vessels captured by the pirates was the Hamburg vessel J. H. Bockleman, and a Prussian bark, Fohkien, owed her escape only to the fortunate circumstance of another vessel heaving in sight. Of the boldness of the pirates and the inability of the Chinese Government to stop their operations, the "Overland China Mail" of Hong Kong speaks as follows: "They have the best information, have well-manned boats, armed in a very efficient manner, safe harbors of refuge, excellent markets for their plunder, and such an amount of voluntary or enforced coöperation from the petty mandarins, soldiers, and coast populations, that they are everywhere certain of assistance, and, if needs be, of support. We have further in these revelations the most convincing proofs of the utter powerlessness of the Chinese naval squadrons to effect any thing against the pirate fleets, even when spurred into motion by the remonstrances of our consuls, or shamed into a momentary display of energy and courage by the presence and coöperation of our gunboats. So numerous, so powerful, and so well-informed, too, have the pirates become, that the gunboats themselves, generally so successful, have begun to return baffled and without success. The attention of the Chinese Government must sooner or later be called to this matter."

The only remedy, it was thought, for the

present, could be found in arming every vessel. In November several gunboats attacked a fleet of piratical vessels, destroying ten craft and capturing a lorch'a.

An Imperial decree, of April 3d, announced that Prince Kung was degraded and deprived of his appointment for corruption and for disrespect toward the Emperor. His disgrace was unconnected with the foreign policy, and in May he was reinstated in the Foreign Board.

Mr. Robert Hart, the Inspector-General of Customs at Hong Kong, obtained in 1865 from the Government of Pekin a concession in favor of ship-owners which cannot fail to be of the greatest advantage to foreign merchants. Under the new arrangement the natives of China are permitted to purchase foreign vessels, and to sail them under the Chinese flag. It may, therefore, soon be expected that the unwieldy Chinese junks will be set aside for foreign ships, manned by foreign seamen, and commanded by foreign captains. The effect of this highly advantageous concession on the part of the Pekin Government will thus be to give new facilities for the carrying on of the coasting trade along an immense range of the Chinese seaboard.

In August a treaty of commerce between China and Holland was ratified.

The letters of the Roman Catholic missionaries in China mention a great religious movement as taking place at present among all the population of that vast empire. Hundreds of villages, they say, are becoming converted to Catholicism, but the number of missionaries is quite insufficient to gather in the abundant harvest. The bishops of China have, therefore, made an earnest appeal to the devotedness of the Catholic priests in Europe to aid in the conversion of so many millions. Of Protestant missionaries (including ladies) there were in China, in 1865, one hundred and eighty-seven, while over fifteen were either absent on leave or on their way out to join the mission. They were distributed over the various stations as follows: Canton, 30; Hong Kong, 22; Swatow, 7; Amoy, 14; Fuhchan, 20; Ningpo, 21; Shanghai, 25; Hankow, 5; Chefoo, 9; Tungchow, 7; Tientsin, 11; and Pekin, 16. Of these, 92 are American, 78 are English, and 18 are German.

On October 5th a regular postal communication was opened between Kiakh'ta and Tientsin, by way of Ourga, Kalgain, and Pekin. Single letters, or letters containing enclosures of money or documents, as also parcels and telegraphic despatches, are forwarded four times a month both ways. The post leaves St. Petersburg for Kiakh'ta every Tuesday and Friday, and reaches Kiakh'ta in five weeks.

CHOLERA, ASIATIC. This disease, which had three times previously during the present century scourged the countries of Europe, and committed terrible ravages on this continent, appeared during the summer of 1865 in Arabia, Turkey, and Egypt, and visited the countries bordering on the Medierranean, and in the

autumn prevailed with considerable severity in Paris and the north of France, and attacked a few of the inhabitants of the southern seaports of England. It was also brought to the port of New York by a ship from Havre, but a rigid quarantine being maintained the disease gained no foothold on the land. In view of the strong probability of its reappearance both in England and America in the summer of 1866, it may be well to give a brief history of its progress in the past, its causes, diagnosis, prognosis, and treatment. The home of the disease is, and has been for centuries, in the East. The low marshy grounds overflowed often by the great rivers of India, Siam, Burmah, and Cochin China, reeking with abundant filth and vegetable decay, to which the abject poverty and degradation of the miserable inhabitants of those regions largely contribute, are fitting nests for breeding and nursing the pestilence. Accordingly we find that for the last five hundred years it has been endemic in all these countries, and that every few years it has assumed an epidemic form and ravaged the territory for hundreds of miles, slaying its tens of thousands of victims. In the year 1629, Bontius, a Dutch physician residing at Batavia, described to the medical profession in Europe this formidable and deadly disease, and his description was preserved and repeated by other medical writers; and perhaps a hundred years later, British and French physicians in India, who had witnessed its ravages, confirmed the description of Bontius, and sent home accounts of the destructive character of the plague. Outside of the profession, however, in Europe and America, intelligent citizens knew little and cared less in regard to the diseases of India and the East. So remote was the country, and so slow and difficult the communication with it, that it never entered the minds even of professional men, that it could find its way to the distant shores of Europe, or the still more distant ones of America. The time came, however, as intercourse with the East grew more frequent and easy, when the pestilence began to move out from its nest and march eastward and westward. Why, at the precise period when it first started upon its travels, it should have invaded countries hitherto free from it, is one of those inexplicable facts in the history of epidemics, upon which speculation is useless. It is, nevertheless, well ascertained that after remaining stationary for centuries, in the year 1817 it raged with great violence at Jessore, a large town near the mouths of the Ganges. It spread, not very swiftly, but yet with awful certainty, in all directions, and by August of the following year had reached Bombay, on the western side of the peninsula. Thence it travelled through Arabia, Persia, Mesopotamia, Syria, etc., on its westward course, and, continuing to extend itself eastward from its place of origin, invaded the Burmese empire, Siam, Java, China, and the other populous countries of that portion of the earth.

Still, its progress was very slow. Several days

frequently lapsed before it passed from one town to another only a few miles distant. The means of communication were, in the regions where it prevailed, very imperfect, and to this cause its sluggish movements must be attributed. In these days of steam its course is more rapid.

Up to 1823 its ravages had not extended beyond Asia; but in that year it appeared at Orenburg and Astrachan, two towns situated on the eastern frontier of Russia. Here it remained until 1828, when it increased in violence, attacking a tenth of the inhabitants of the province of Orenburg, and proving fatal to a fourth of those affected.

In 1830 it reappeared at Astrachan. In less than a month 4,000 persons died of it in that city, and over 21,000 perished from it in the province. Ascending the Volga, it reached Moscow, destroying thousands in that city; and, continuing its fatal course, appeared at St. Petersburg on the 26th of June, 1831. From Astrachan it also diverged along the northern coast of the Black Sea, and thence spread into Austria, Poland, Prussia, and Northern Germany generally. In August, 1831, it was conveyed to Cairo by a caravan from Mecca. Thousands perished from it on the road, and over 15,000 died of it in the former city.

On the 26th of October, 1831, the disease appeared for the first time in England, at Sunderland, a town situated on the North Sea, near Newcastle. It was supposed to have been introduced from Hamburg by a returned collier. It showed very little disposition for some time to pass beyond the limits of this city, and was mainly confined to the worst parts of the town; according to a statement made at that time, it crept like a skulking hyena from one dirty lane to another, affecting localities remarkable for their filth, poverty, and wretchedness, and carrying off those who, from decrepitude, drunkenness, hunger, or uncleanness, were already fit subjects for the grave.

From Sunderland it spread slowly through the northern part of England and Scotland, and did not break out in London till the 14th of February following, when some persons living in the immediate vicinity of the shipping were attacked. In this city, as in all others in which the disease had made its appearance, the districts mainly affected were those chiefly distinguished for their filthiness and an utter disregard of all sanitary regulations. Thus, for instance, the streets of St. Olive, St. Thomas, and Whitechapel, which were the most unhealthy districts, were stated to be "a disgrace to the civilized world." In Whitechapel, the great majority of its confined and crowded streets, courts, and alleys were without ventilation, water, or sewerage. In Lambeth, where the cholera also prevailed extensively, the cleansing, drainage, and water supply were either totally wanting or grievously defective. It was invariably noticed that the disease was especially prevalent in those sections where typhus and typhoid fevers and other affections

due to dirt and overcrowding were most liable to occur.

On the 8th of June, 1832, the cholera broke out at Quebec, this being its first appearance on this side of the Atlantic. It was supposed to have been introduced in an emigrant ship, many of the passengers of which had died from it during the voyage. Two days afterwards it appeared at Montreal. On the 24th, New York was unexpectedly attacked—the cities and towns along the coast to the north entirely escaping. From New York it extended to Albany, Philadelphia, Cincinnati, New Orleans, etc.—most of the larger towns being visited, but some unaccountably remaining exempt from its ravages. The first case in New York occurred at the corner of Gold and Frankfort Streets. The patient was a native male citizen. Some cases immediately followed in Cherry Street; the subjects were Irish emigrants, who had arrived at Quebec in the autumn of 1831, and had resided in Albany till the month of May, 1832, when they had removed to New York. On the 27th, the disease manifested itself at Bellevue Hospital. The patient was an aged woman who had not been out of the institution for three years, and who had held no communication with the city. Reade, Washington, and Duane Streets, the Five Points, and the whole region of the Sixth Ward, were visited by the epidemic with fearful violence. Rotten Row, in Laurens, between Grand and Broome Streets, was another deadly centre of the malady. In all these places, as well as in the others where it raged with the greatest intensity, the local and removable conditions of general insalubrity were abundant.

The epidemic reached its height in New York on the 21st of July, from which period it continued to decline. It did not finally disappear from the United States for three or four years.

So much for the first epidemic of Asiatic cholera. In Great Britain and Ireland over 116,000 cases and 40,000 deaths occurred. In the cities of Quebec, Montreal, New York, and Philadelphia, embracing, at that time, about 450,000 inhabitants, there were over 18,000 cases and 8,000 deaths.

The sporadic cases which occurred in the United States, and especially in the Western States, as late as 1836 finally ceased entirely, and for twelve years Western Europe and the United States were freed from its scourge. In India, however, it continued to be endemic, and as often as once in three or four years blazed out in a fierce and destructive epidemic. Other of the Asiatic countries were also visited again, and their population decimated by it. At length it again took up its line of march northward and westward. Early in 1846 it appeared at Kurrachee, near the mouth of the Indus, where it raged with terrific violence, more than 8,000 of its victims dying within a few days. Thence it passed on to Teheran, the capital of Persia, where its severity was such that 300 perished daily for several weeks in a population of not more than 60,000. "Those who

were attacked dropped down suddenly in a state of lethargy, and at the end of two or three hours expired without any convulsions or vomiting, but from a complete stagnation of the blood, to which no remedies could restore its circulation."

Entering Europe almost by the identical route which it traversed on its first visitation, though travelling with much greater rapidity than it did at that time, the cholera ravaged parts of Russia and Turkey during the years 1847 and 1848. In the summer of 1848 it seemed to decline in violence, and hopes were entertained that Western Europe would not be visited by it. These hopes, however, proved fallacious. In the autumn of 1848 it appeared in France and Great Britain, revisiting, during the next eight months with almost unerring certainty, every place in which it had appeared in the epidemic of 1832-'33, and seeking out the same filthy lanes and undrained sections of the cities where it had then committed its greatest ravages. Its character was even more malignant than in its previous visit. 53,293 persons were carried off by it in England and Wales, without reckoning fatal cases of diarrhoea, most of which were really cholera in its earlier stages.

On the 9th of November, 1848, the ship New York left Havre for the city of New York, with 985 passengers. There was no cholera either at Havre or Paris when the vessel sailed, and the passengers remained healthy till they had been out sixteen days. One of them was then taken ill with a disease resembling cholera, another and another case followed, until, when the vessel arrived at Staten Island, on the 4th of December, eight or ten had died, and as many were still suffering from the disease. Cases continued to occur at quarantine among the passengers and the patients of the Marine Hospital. A few days after the ship arrived at quarantine, an individual came from there to the city, and stopped at a German emigrant house on the corner of Cedar and Greenwich Streets. He was attacked with the disease, and being carried back died in a few hours. On the 11th of December another case occurred in the same house. This house was excessively filthy, and contained upwards of two hundred lodgers, mostly emigrants. One other case occurred at 161 Washington Street, and then the disease ceased its ravages. In all, there were ninety-two cases and forty-eight deaths.

But as usual it was only resting from its labors. During the first week in April, 1849, it reappeared at quarantine, and by the 30th of May forty-three had died of it. In the city it made its irruption in the most filthy regions and among the lowest of the population.

Meanwhile it had appeared in New Orleans, and had spread over the greater part of the Eastern and Western States; the emigrant parties and military expeditions on the prairies suffered severely from it; many tribes of Indians expe-

rienced its attacks, and the mortality from it in California was fearful. It did not entirely disappear from the United States till 1855, and in 1854 became very violent in some localities. In 1853 and 1854 it prevailed again in Great Britain, and in 1855 and 1856 the allied armies in the Crimea suffered intensely from the pestilence.

After a period of nearly ten years it again commenced its westward march, and in the beginning of May, 1865, it broke out with terrible fury among the pilgrims to Mecca, who congregated in that city to the number of more than 200,000, and under the circumstances of privation, filth, and suffering, best calculated to aggravate its intensity. It is stated that, within the space of less than three weeks, more than a million sheep and camels were slaughtered as sacrifices, and their offal left to putrefy in that tropical climate. This alone is sufficient to account for the fearful mortality which so speedily followed. It was said that fully 150,000 of these poor wretches were attacked by it either at Mecca or on their way to or from that city, and the pilgrimage routes were marked for long distances by their bones.

On the 10th or 11th of May, the first death from cholera occurred at Alexandria, in Egypt, the disease having been brought to that city by pilgrims returning from Mecca. From that date to the 16th of July, 3,800 deaths had ensued from the pestilence, and there had been about 10,000 cases in a population of less than 60,000. Rosetta Santa and Zagari were attacked about the same time. In June it had reached Cairo. On the 3d of July it appeared at Constantinople, and almost simultaneously several cases occurred at Ancona. From Alexandria it was imported into Marseilles in a steamer. Its ravages in Cairo were frightful, nearly 500 perishing from it in a single day. In Constantinople, where it produced a terrible panic, under the influence of which one hundred and fifty thousand of the inhabitants fled from the city, many of them only to perish by the way, its malignity was remarkable. The authorities carefully concealed the number of deaths, which were believed in the height of the epidemic to have exceeded 2,000 per day. A terrible fire which occurred on the 5th of September and lasted till the 8th, destroying 15,000 houses, checked it completely, as the great fire in London did the plague in 1666. Some of the cities of Italy, Ancona in particular, were terribly scourged, the want of cleanliness and sanitary measures furnishing the disease with a great number of victims, while other cities, establishing a rigid quarantine and maintaining strictly their sanitary police, were able to keep it at bay, or at most had but a few isolated cases. In Marseilles it was less virulent, though still formidable. It was carried to Paris from Marseilles by travellers, but great efforts had been made to place the city in a favorable sanitary condition, and though many were attacked, the disease was milder and more

amenable to treatment in most cases than in the East. On the 24th of October there were two well-marked cases of it at Southampton, England. The disease spread to some of the neighboring towns, but the timely appearance of cold weather soon checked its progress.

On the 3d of November the steamship *Atlanta* came into the lower bay of New York having cholera on board. She was last from Havre (12th October), where she had received about 400 German passengers, mostly in the steerage, who had passed through Paris where cholera was then prevailing, and on the second day out a child died from a mild attack of cholera; others were attacked soon after, and during the voyage sixty were taken ill, some of them, however, with small-pox; sixteen died, and the remainder for the most part began to recover. After her arrival at quarantine thirty-six more were taken ill, of whom four died. The survivors who were ill were removed to the floating hospital, *Florence Nightingale*, where they recovered. There were 525 passengers in the steerage. None of the cabin passengers took the disease. None of the small-pox cases proved fatal. The vessel was detained at quarantine and thoroughly purified, and the disease did not spread, though there were in the city of New York in November and December a number of cases presenting to some extent the symptoms of cholera. There has been hitherto a remarkable uniformity in the mortality from cholera. In 1830-'32 in Great Britain and on the Continent, the deaths in private practice were about 39.5 per cent., in hospitals 57.25 per cent. In 1849 in New York the whole number of cases reported outside the hospitals in fifty-two days were 2,631, of which 915 died, or 34.78 per cent.; in the hospitals there were 1,621 cases, of which 880, or 53.71 per cent., died. In Egypt, Turkey, and Italy, during the present epidemic, the number of deaths was about 55 per cent. of the whole number of cases. In Marseilles the mortality was less, and in Paris not over 30 per cent. The disease was carried in November from Marseilles to Point-à-Pitri in the island of Guadeloupe, and there it has raged fearfully, nearly 6,000 of the inhabitants of that island and those immediately adjacent having fallen victims to it.

The causes which produce cholera and aid in its dissemination are of two kinds, the *remote* and the *proximate*. The *remote causes* are the existence of extensive vegetable decay, producing malarious and depressing influences, want of cleanliness, want of efficient ventilation; the poisoning of the air by the escape of foul and noxious gases from sewers, vaults, and privies, imperfect drainage and sewerage, the accumulation of decaying garbage in the streets, cellars, and elsewhere. The presence of the noxious odors and gases from these sources, and their absorption into the human system by the lungs and the absorbents, will of itself produce diarrhoea, nausea, prostration, the congestion of the blood upon the vital organs, and often

spasm, collapse, and death. Their existence in the highest degree of intensity in the bottom lands of the Ganges, the Brahmaputra, the Irrawadi, or the Meinam, may account for its apparently spontaneous generation there. In other countries, however, there has been needed apparently a germ of the disease to fall into these prepared seed-beds, to develop into the formidable and deadly epidemic. It is well settled that this germ is found in the discharges, either by vomiting or purgation, of those who are affected by it; and these excreta, permitted to flow into uncleansed gutters, privies, or sewers, impart their deadly character to whatever of decayed animal or vegetable matter may be brought in contact with them, and thus the disease is communicated with fearful rapidity through the poisoned air to hundreds, and perhaps thousands. This may serve to explain why the disease rages so frightfully in the crowded and filthy tenement houses, and the dirty and uncleansed back slums of our great cities, and why when it has once obtained a foothold there it is eradicated with such difficulty. Every case furnishes the poison which will be absorbed by scores or hundreds of persons, who will, if they remain in the vicinity, most surely be attacked by the disease, and if they attempt to fly, will, in all probability, bear it off with them.

Contagious, in the ordinary or in the medical sense of that word, namely, as being communicated by contact with the patients affected by it or by inoculation of the matter discharged, cholera certainly is not, but that it is *portable*, or capable of being transmitted by the carrying of these germs, from one place to another, in the excretions of persons who have already absorbed the poison, there can be no sort of doubt. And it is not impossible that the deadly virus, after having lain dormant for months, and perhaps for years, may be quickened into new vitality by some influences, climatic or other, which only develop it in the presence or in the approach of the pestilence. How otherwise shall we explain satisfactorily its return with such unerring certainty after an interval of some years, not simply to the same neighborhood, but to the same house, and the same room, to commence anew its ravages? This has occurred too often in London, in Edinburgh, in Glasgow, in Montreal, and in New York, to be a mere matter of accident.

The progress of the disease and the mode of its transmission from one city and country to another during the present epidemic, fully demonstrates its portable character: it has, in every instance, from its first appearance at Alexandria, on the 11th of May, to its introduction into Guadaloupe, and its existence on the Atalanta, been satisfactorily traced to emigrants, pilgrims, or travellers who have come directly from localities and dwellings where it existed. The investigations of Dr. Snow, an eminent physician and sanitarian of London, in the epidemic cholera of 1854-'56, fully confirm this

view. His theory was: 1st, that cholera was exclusively a disease of the alimentary canal; 2d, that the primary change in the alimentary canal is always induced by the induction therein of a specific poison; 3d, that the poison is exclusively contained in the intestinal contents of the infected person—that is to say, in what is purged from the bowels and vomited from the stomach. There is nothing breathed from the lungs, nothing thrown off from the skin that will propagate the disease; 4th, that the poison is neither a gas nor a vaporous, but a material substance, and exists either as a liquid or a solid. It cannot, therefore, be carried far by the atmosphere, and when dry must be attached to clothing, or disseminated through water, to be carried long distances.

He believed that the dissemination of the disease was accomplished in one of the following ways: 1st. The moist concretions of cholera on the clothes and bedding of infected persons might be carried mechanically by the vapor of water, and enter the mouth and nostrils in that form, and so be swallowed. In this way laundresses who washed the clothes of cholera patients often took the disease. 2d. The poison might dry on infected clothing, and from such clothing, on its being unfolded or moved, the solid organic matter might escape in small substance, to be wafted in the air, and be absorbed through the mouth by any one exposed to it. The disease was introduced into Guadaloupe by the clothing contained in a trunk belonging to a person who died on the voyage thither from Marseilles, where the cholera was then raging. The laundress who washed the clothing died of the cholera, and all her family. 3d. Persons who lay out the dead, and others in attendance, might actually carry the poison in their hands and infect themselves by taking food when their skin was not properly cleansed. Twenty-seven physicians and medical assistants in Constantinople were attacked and died during their attendance on the disease, and in Paris and Toulon similar results have followed. 4th. The very utensils, such as basins and cups, used by the sick, might convey the poison, as well as the cloths on which these utensils, after an imperfect washing, have been dried.

To these modes stated by Dr. Snow may be added that the effluvia from basins, bed-pans, etc., used by cholera patients, if suffered to remain, especially in small, close, or ill-ventilated rooms, charge the atmosphere and the bedding with the poison, which is often taken up by the absorbents or being inhaled passes into the stomachs of those in attendance. Further than this, the excretions thus charged with poison, if thrown into gutters, cesspools, privies, or open sewers, will communicate their deadly character to the vegetable and animal matters with which they are brought in contact, and the exhalations arising from these may be absorbed and induce the disease. Dr. Rich, who had charge of the cholera lazaretto in Malta, and afterwards in the Balearic Islands, in 1831.

noticed that the attendants who removed the excretions were attacked by the disease, and covered the surface of the vessels used with oil, and had a charge of chlorine gas passed at once through each, and from that time no new cases occurred among the attendants. As an illustration of the virulence of the poison of cholera, even when largely diluted, the following case, related by Dr. Snow, may be given. In 1854, there was a well in Broad Street, London, into which the contents of a sewer had been percolating for months. Of this water hundreds of persons had been drinking, and although cholera was present in other parts of London, there were no cases in this locality. At last a case of cholera occurred, and by means of the sewer the excretions of the patient were mingled with the water of the well. Within three days, more than five hundred persons, who used the water from this particular well, were attacked with the disease. Believing that the disease was communicated by this water, Dr. Snow removed the handle of the pump, and thus cut off the use of the water, and no more new cases appeared.

This view of the *portability* of the disease justifies the maintenance of a rigid quarantine, to prevent its admission from foreign ports, and indeed renders it imperative. If it once obtains a foothold it will naturally prevail most in those sections where filth, overcrowding, poor ventilation, and imperfect sewerage prevail; and once established there it will not be eradicated for many months, nor without great difficulty. It is, therefore, of the greatest importance that special pains should be taken to maintain cleanliness throughout our cities and towns, and to avoid those evils which, if they do not engender, at least aggravate disease.

We turn next to consider the *pathology* of the disease, or the portion of the human organism affected by it, and causing the symptoms which are characteristic of it.

We may, then, define Asiatic Cholera as a specific poison introduced in some manner into the system, and after a longer or shorter period of incubation, acting either through the blood primarily, or more probably through the nervous system, and especially on the great sympathetic nerve and its ganglia, producing at first great excitement, but, speedily, still greater depression of the vital powers—causing a kind of tetanic contraction of the capillary vessels and arteries, and thus emptying all the blood-vessels of the surface into the great central veins, and preventing the oxygenation of the blood by prohibiting its passage back to the heart through the lungs. This driving back the blood into the great central veins produces congestion and oppression of the liver, heart, kidneys, and alimentary canal, and the effort of Nature to relieve the system by violent purgation and vomiting, only results in exudation of the serous fluid of the blood, and secretions into the stomach and bowels, causing a rapid exhaustion and collapse. From this condition

unassisted Nature rarely rallies; but in a few and exceptional cases, a reaction takes place, and a fever sets in, which usually proves fatal.

The symptoms of the disease, from commencement to termination, may, with propriety, be detailed at some length, and in such a way as to enable the non-professional reader to recognize the disease without difficulty. Within a longer or shorter period after the poison has been absorbed by the system, usually only a very few hours, though in exceptional cases it may be days, there is a vague feeling of uneasiness in the stomach and bowels, accompanied by a sense of heat and disorder, with some looseness, a simple feculent diarrhoea, with little or no griping, at first with but infrequent discharges, three or four in a day, but increasing by the second day to ten or twelve. Accompanying this diarrhoea there is soon occasional nausea, with a constantly increasing lassitude and languor. After purging, the patient is giddy or dizzy, and very weak. There is an empty, hollow feeling at the stomach, and soon some vomiting, at first of no great amount, but a thin watery fluid mixed with a little bile, and perhaps some undigested food. By this time there is a slight tendency to shivering, though no distinct chill. The stomach and bowels are distended, and the more frequent stools are no longer feculent, but thin, whitish, having the appearance of whey or rice water, with starchy looking fæces floating in them, and, though there may be once or twice traces of bile, it soon disappears. There is a restlessness about the patient, and he complains of ringing in his ears, a tingling sensation in his hands and feet, as if they were asleep, and slight cramps in his feet. The pulse, at this stage, is somewhat quicker and weaker than in health, the tongue is moist and slightly furred, but the patient complains of thirst. The features have an unnatural sharpness, and the countenance an anxious and apprehensive expression.

If now the case is suffered to go on without medical interference, or a further time elapses before any thing is done for the patient, the purging becomes more frequent, abundant, and sudden, the discharges being violent, "shot out," as the attendants will say, and always of the rice or barley water character, with flaky or starchy particles floating in them, and with each purging there is a sinking of the pulse, severe cramps in the feet and legs, and increased helplessness and prostration. Vomiting accompanies the purging, and the matter ejected from the stomach is similar in character to that which comes from the bowels, with occasionally some traces of bile; but the vomiting is not so copious as the purging, and after a time ceases. As the patient grows weaker the purging ceases also; but before this, spasms of a tetanic character have developed from the cramps which at first affected the feet and legs; the fingers and toes thrill and tingle as if they were asleep; this is followed by a quivering—rather strange than painful—feeling in the hands and feet:

then a sudden twitching, and stiffening, and twisting of the toes and fingers, which greatly alarms the patient, and often brings tears. Then the calves of the legs, and the muscles of the arms and thighs and loins are drawn up in excruciating knots; the integuments of the abdomen are raised in irregular folds, the belly itself drawn violently backward toward the spine, the diaphragm upward and inward, and toward the chest. There is hardness and constant pain in the region of the bowels, and the flesh is sore to the touch. Agonizing, however, as these spasms are, there is no convulsion, no blunting of the intelligence, no unconsciousness. In the interval of these spasms, the expression of the countenance is bloodless and corpse-like; there are livid circles around the mouth, and the dull, sunken eyes; the features are sharp and contracted; the expression helpless, wild, and terror-stricken; the lips blue; the face and neck have a leaden, brown, or purple hue, according to the complexion of the patient or the severity of the attack; the hands are withered, and the fingers wrinkled and sodden, resembling those of the washerwoman when just taken from her tub; the large superficial veins are very dark, almost black; the respiration is broken, labored, and irregular, inspiration appearing to be effected by an immense effort of the chest, while the nostrils, instead of expanding, collapse, and stop the ingress of the air, and the expiration is hurried and convulsive. The breath is intensely cold, much colder than the atmosphere; the tongue, perhaps, white and loaded, but always moist, flabby, and chilled, having a feeling like the nose of a dog or a bit of dead flesh. The feet, legs, thighs, and arms, and soon the abdomen and chest, also have the discoloration so marked in the dead body, and the toes, like the fingers, are shrunken and withered. The patient tosses incessantly from side to side, laboring and struggling for breath; his voice is a hoarse, plaintive whisper, or occasionally a low poignant wail or a weak whine; he calls constantly in piteous tones for "water, water, water," to allay the all-consuming thirst, and in broken sentences, a word at a time, complains of the weight and anguish at his heart, and the fire in his stomach, bowels, and throat. His skin is deadly cold, and wholly or nearly insensible to the action of either mustard or blister, yet at times he complains of feeling too warm, and endeavors to throw off the bedclothes. The secretions have all ceased; there is no urine, no bile, no saliva, and no tears. There is no genuine perspiration, but a cold, clammy sweat, possessing in a marked degree the death odor, exudes from the relaxed pores of every portion of the body; the lips and cheeks puff out and flap in expiration, with a white froth between them as in apoplexy. The spasms have cramped the very vitals; the pulse, which has been growing feeble and feebler for hours, ceases, at the wrist; the broken heavings of the chest grow fewer and fainter; there is a quivering among the tendons of the wrist; a long, weary, con-

vulsive sob, but no rattle, and all is over. Of course, all of these symptoms may not be present in every case; in rare and exceptional instances, the preliminary diarrhoea has been absent, and an obstinate constipation has continued up to the time when the explosive purgation and cramps set in; but in no case of genuine cholera are the rice-water stools, the terrible cramps, the tetanic spasms, the oppressed breathing, the chilled breath, the dog-nose feel of the tongue, the withered, sodden condition of the hands and fingers, and the wild, haggard, pinched, and anxious expression of the countenance absent. The entire course of the disease which we have thus endeavored to portray may be run in twelve hours, or it may occupy three or even four days. Spontaneous recovery, without medication, when the attack is severe, is exceedingly rare.

From the description given of the pathology and characteristic symptoms of the disease, it is not difficult to determine the indications to be fulfilled in the treatment of the disease. There may be a diversity of views as to the particular means by which the object is accomplished, but all would agree as to the principles upon which the treatment ought to proceed. In the first, or what some physicians would call the preliminary step, but which is, nevertheless, really cholera, the diarrhoea which precedes the more violent purging, vomiting, and spasms, the first indication is to check the diarrhoea without inducing inflammation or undue excitement of the system. It is to be understood and remembered, that the purging is an effort of nature to rid the system of the poison which it has imbibed; and though it is likely to be ineffectual, yet it should not be checked in such a way as to leave the alimentary canal in a state of violent irritation, but so far as possible the highly excited nervous and vascular tissues of the intestines must be soothed and quieted. Those who have read carefully the statement given of the pathology of the disease, will recollect that one feature of it was, that the general vascular system, the small blood-vessels which approached the surface were greatly depressed and constricted, and the blood thrown from the surface inward upon the central veins and the vital organs. Another indication, then, is to restore the circulation upon the surface, to call the blood back from the internal organs which are becoming oppressed by it, to run its usual course in the superficial veins and arteries. The accomplishment of this will fulfil a third indication, that of restoring the secretions from the liver, kidneys, salivary glands, &c., which have been suppressed by the overwhelming amount of work thrown upon them, and the want of vitalized or aerated blood to stimulate their action. The circulation fully restored, and the system relieved from the depressing influence of the poison, the next indication will speedily be fulfilled. The liver will again secrete, and send forth the bile to restore healthy action in the stomach and bowels, and the kidneys once

more undertake their functions of eliminating their secretion from the blood. The fifth indication is to moderate and control the reaction which now sets in, in such a way as to avoid congestion, local determination, or inflammation of the vital organs.

If the disease has passed beyond this stage before any attempts are made to grapple with it, the indications for treatment are somewhat changed. The tendency to spasm, which is closing with violence the superficial blood-vessels, and hurling the non-oxygenated blood, dark, thick, and viscid, upon the already overburdened vital organs, must be controlled and subdued, the surface circulation restored, and the secretions reestablished, a work of great difficulty, but one which in most cases of considerable vital power can be accomplished.

Even when the symptoms of oppression of the lungs and heart have grown still more distressing, and the poor victim already cold and deathly, except where the fierce fire of the disease burns and tortures stomach and heart, tosses in piteous distress from side to side, and finds no relief, his case may yet not be past all hope. If, even then, the blood can be impelled to the surface and the extremities, before it becomes too viscid for movement; if secretion can be reestablished and a free glowing perspiration made to take the place of the clammy and fetid exudation which now bedews the skin, the limbs resume their vitality, and the misery at the heart be relieved, the patient may yet be saved; and to these objects all the resources of medical skill must be directed.

Let us, then, glance at the different methods of treatment which have been recommended, having in view the fulfilling of these indications. The thousand remedies which have been prescribed empirically, and without reference to the nature of the disease, merit no further notice than this, that their prescribers have sometimes ignorantly blundered upon remedies which did accomplish the objects desired, though without any intention on their part.

In the preliminary stage the authorities are very generally agreed on the propriety of using alteratives rather than astringents and stimulants solely. Perhaps nothing better for this purpose has been or can be prescribed than the aromatic syrup of rhubarb of the shops, with the addition of two grains of carbonate of soda to the ounce. Of this a tablespoonful may be given as a dose to an adult, to be repeated if necessary twice or thrice, and if the diarrhoea is obstinate, with the addition of twenty or twenty-five drops of laudanum. Absolute rest in this stage of the disease is indispensable. The patient must take to his bed and keep it, and be warmly covered. If the disease is obstinate, apply a flannel roller around the abdomen, and repeating the dose of laudanum and rhubarb, give an enema of two to four ounces of starch emulsion with a teaspoonful of laudanum, and surround the patient with bags of hot sand, bottles of hot water, stockings filled with hot boiled potatoes,

mashed, or something of the kind which will promote free perspiration and bring the blood to the surface. A mustard poultice to the abdomen, and others to the calves of the legs, will prove advantageous, if there is fullness and pain in the abdominal region, or any tendency to cramps.

The treatment of this stage by the missionaries in Constantinople, in 1848, in 1855, and in the recent epidemic, which proved wonderfully successful, varied but little from this; it was as follows, as stated by the Rev. Cyrus Hamlin, D. D., who had been most active in the treatment of cholera among all classes:

"The mixture which I used in 1848, 1855, and 1865 has saved thousands. It consists of equal parts by measure of—1. Laudanum and Spirits of Camphor; 2. Tincture of Rhubarb, thirty drops for an adult, on a lump of sugar, will often check the diarrhoea. But to prevent its return, care should always be taken to continue the medicine every four hours in diminishing doses, twenty-five, twenty, fifteen, ten, nine, when careful diet is all that will be needed.

"In case the first dose does not stay the diarrhoea, continue to give in increasing doses thirty-five, forty, forty-five and sixty drops at every movement of the bowels. Large doses will produce no injury while the diarrhoea lasts. When that is checked, then is the time for caution. I have never seen a case of diarrhoea taken in season which was not thus controlled, but some cases of advanced diarrhoea, and especially of relapse, paid no heed to it whatever. As soon as this becomes apparent, I have always resorted to this course: Prepare a teacup of starch, boiled as for use in starching linen, and stir into it a full teaspoonful of laudanum for an injection. Give one-third at each movement of the bowels.

"In one desperate case, abandoned as hopeless by a physician, I could not stop the diarrhoea until the seventh injection, which contained near a teaspoonful of laudanum. The patient recovered, and is in perfect health. At the same time I use prepared chalk in ten grain doses, with a few drops of laudanum and camphor to each." The missionaries also applied mustard poultices to the pit of the stomach, and enjoined perfect rest. The "Potter's Powder" of the shops (prepared chalk, pulverized camphor, and carb. ammoniac) will be found, in many cases, a preferable mode of administering the chalk and camphor, to that suggested by Dr. Hamlin.

In more advanced cases the missionaries say: "When there is vomiting and purging, perhaps also cramps and colic pains, the following mixture should always be resorted to: Equal parts of laudanum, tincture of capsicum, tincture of ginger, and tincture of cardamom seeds. Dose, thirty to forty drops, or half a teaspoonful in a little water, and to be increased according to the urgency of the case. In case the first dose should be rejected, the second, which should stand ready, should be given immediately after the spasm of vomiting has ceased. Use large

mustard poultices of strong pure mustard on the stomach, bowels, calves of the legs, feet, &c., as the case seems to require."

Some of the more eminent of the English and French physicians oppose the use of opium in any form, and advocate the use of diffusible stimulants, compound spirits of ammonia, champagne, and brandy, with inhalations of chloroform, and the internal use of that remedy, with spirits of turpentine and brandy, six drops of chloroform, forty of turpentine, and a wine-glass of diluted brandy, and follow this by calomel (five grains) and beef's gall (ten grains), alternating the calomel and chloroform at intervals of an hour or oftener, till reaction comes on. Others use chloroform and brandy without the spirits of turpentine. The object which these physicians desire to attain by the use of the chloroform, by inhalation and internally, is the subduing of the cramps and spasms, thereby enabling the superficial circulation to be restored. The success which has followed this mode of treatment is said to have been marked; but it is not so well adapted as that which has been already described for administration by those who have had no medical knowledge or experience, and the success which has resulted from it would seem to be no greater.

The first stage of the disease, prior to the establishment of the tetanic spasms, and at all events before the stage of exhaustion or collapse, is the favorable one for successful treatment. Taken at this stage, cholera is not often a fatal disease. Ninety-five, and in some countries ninety-nine out of every hundred patients attacked, recover if properly treated.

But when the cramps and spasms have tortured the patient, when the blood has retreated upon the centres of life, and the poor fellow, already apparently more than half dead, whispers in those painful tones for "water, water, water," while his wild, despairing gaze seeks vainly for help, and his poor, withered, sodden hands are laid piteously on his breast, the case is, though not hopeless, yet one demanding the highest courage, perseverance, and skill. We have shown what are the indications for treatment at this stage, in which the struggle is emphatically one for life. By what medicines shall these indications be best fulfilled?

The appliances for maintaining and rousing the heat of the surface already mentioned, bags of sand, bottles of hot water, or flannel cloths wrung out in very hot water and covered with blankets, must be continued and increased; the mustard poultices should be often renewed, and the abdomen, thighs, and legs covered with them; frictions with hot cloths kept up with vigor and zeal, the patient kept on his back, and carefully covered. An eminent physician who has had large experience in the treatment of the disease in India, in Europe, and in this country, urges that in addition to these external means of endeavoring to restore vital action, the following treatment should be adopted: A large injection of from three to four pints of as hot

water as the hand can bear, with six ounces of brandy (whiskey would probably be equally effective), and two drachms (teaspoonful) of laudanum, should be thrown up the rectum, and at the expiration of an hour may be drawn off by a tube, when it will be found quite cold, and another enema of hot water without the laudanum and brandy immediately thrown up. At the same time administer by the mouth, every half hour, a teaspoonful of a mixture of equal parts of laudanum and spirits of camphor in a half ounce of brandy. At the expiration of an hour from the administration of the second injection throw up a third, adding this time again the brandy and laudanum. At intervals of half an hour, midway between the doses of laudanum and camphor, give five grains of *quinine*, either in the form of solution, or better, if attainable, in the sugar-coated pills. If this is rejected repeat it immediately, and if the laudanum and camphor are thrown up, give a grain and a half of dry opium every hour till the patient ceases to vomit. Apply, if possible, mustard poultices to the spine, and rub the limbs vigorously with dry warm flannel sprinkled with powdered mustard, and check the tendency to vomiting by linen cloths wrung out in hot water and laid on the pit of the stomach. Appease the thirst by giving the patient bits of ice of the size of a hickory-nut, to suck or swallow whole, and if the cramps are distressing control and relieve them by the firm application of roller bandages. This treatment may well be called heroic, but the eminent practitioner who commends it, asserts that it had very rarely failed, and that it is to be maintained till the withered, puckered, sodden fingers begin to become plump and warm with the heat of the returning circulation, and then when the signs of reaction are becoming marked, stop the injections, double the interval between the doses of quinine and between those of laudanum and camphor, and immediately give twenty grains of calomel. If at the expiration of two hours the evacuations have not become bilious and natural, repeat the dose. If they have, stop the quinine and the laudanum and camphor, and give ten grains of calomel, which should be followed up, at the expiration of two or three hours more, with a full dose of castor oil (two ounces or more). If by this time, as will probably be the case, the patient has passed urine and dropped into a restful slumber, he is saved, and requires henceforth only good nursing and simple farinaceous food, with mild tonics, to be restored to complete health.

There is, in some cases, apparently irrespective of the treatment, a tendency to a severe fever in the period of reaction. The fever is analogous to typhus, though with perhaps an unusual tendency to congestion of the brain. This tendency is to be corrected by leeches behind the ears or on the neck, blisters on the back of the neck, and ice to the head. In other respects the treatment does not differ materially from that of ordinary mild cases of typhus.

The missionaries at Constantinople resorted to a less heroic treatment when called to cases of collapse, yet were successful, losing but 17½ per cent. of patients of this class. They gave in frequent doses their compound of equal parts of laudanum, tincture of capsicum, tincture of ginger, and tincture of cardamom seeds, giving forty drops or more every half hour, or oftener if rejected by the stomach, and adding a table-spoonful of brandy at the same intervals. They maintained the same external measures of relief, hot bags of sand, bottles of hot water, mustard poultices, &c., already described. The thirst they relieved by gum arabic water or camomile tea, in small quantities, and Sydenham's white decoction. For a day or two after the attack was controlled the patient was kept on a diet of rice water, arrowroot, Sydenham's decoction, crust water, and camomile tea.

During the entire prevalence of the epidemic in Constantinople these heroic men went forth day after day among the caravansaries and the hovels of the poor, both often intensely filthy, equipped with a bottle each of these two mixtures above described, a few pounds of ground mustard, a bottle of brandy, a paper of camomile flowers, and a paper of gum arabic, and ministered healing to hundreds and thousands, who, but for them, would have perished.

There is, however, strong opposition among very eminent practitioners to the use of opium and permanent stimulants in cholera. We have already referred to the recommendation of the use of chloroform, both by inhalation and internal administration, in the early stages of the disease. Dr. Davies, who was appointed by the Royal College of Physicians to investigate and report upon the treatment of cholera, gave details of forty-seven cases of cholera, and thirteen of the worst forms of the preliminary diarrhœa, treated by chloroform internally in doses of from seven to ten minims every hour, half hour, or quarter of an hour, according to the severity of the symptoms. Of these ten, all cholera cases, died, and the remainder recovered. These were almost wholly from the better classes, and were therefore hardly a fair average. Dr. Davies was not disposed to confide in chloroform so fully as some of his colleagues. Dr. Braithwaite insists upon relying upon it to the exclusion of opium, camphor, calomel, or quinine, giving only, where absolutely necessary, compound spirits of ammonia, with chloric ether and champagne, or some other mild wine. So far is he from seeking to check the vomiting and purging that he would encourage it by administering large quantities of cold water, with a little mustard in it, if necessary, and by the use of castor oil. He would put the patient in a hot hip bath with his feet in a foot bath, the hot water to have a pound of flour of mustard in it, and the temperature to be maintained or increased by adding hot water, till reaction sets in, and the cramps and spasms relax.

Another mode of treatment which has made some stir in the medical world, is that intro-

duced by Dr. Chapman, of applying ice to the spine to control and subdue the spasm, availing himself otherwise of the usual external remedies.

The followers of Hahnemann have boasted of their wonderful success in the treatment of the disease in Berlin in former epidemics, but their statistics were based on too small a number of selected cases to be a fair criterion of the success of their peculiar mode of treatment; and during the prevalence of the epidemic at this time in Europe, their method has proved such a failure as to be strongly reprobated by many who were formerly favorably disposed toward it. In the French Academy of Sciences, at its session of October 30, 1865, M. Elie de Beaumont presented facts showing that the region of the copper mines of Rio Tinto in Andalusia, Spain, had never been visited by the cholera, although there was a large mining population there, and though the adjacent country had suffered severely from its ravages; and that this immunity was probably due to the fumes of sulphurous and arsenious acid disengaged in the roasting of the ores. It was stated that the inhabitants of a village two leagues distant, where cholera prevailed, had sent to the mine to obtain a quantity of the ore to roast in a public place to put an end to the disease. This suggested the use of arsenious acid as a remedy, which had been tried with success in some cases. The sulphate of copper, it was said, had also been found a valuable medicine in the treatment of cholera.

After all, the spread of cholera in any city or town will depend very greatly upon its sanitary condition. Once introduced from abroad it may, even in the most cleanly city and the best ventilated dwellings, find some victims among the feeble, the intemperate, and the licentious; it may indeed strike down now and then a subject among those whose habits are irreproachable, but whose health is not firm; but it will soon pass away if the filth, foul air, bad ventilation, and drunkenness, and lewdness, which furnish it with its most numerous victims, are not present to give it aliment. But when it visits a city reeking with animal and vegetable decay, and every foul odor, like Constantinople or Cairo (and we fear we might add, too truly, New York), it will riot in destruction, and though its most numerous victims will be the poor, the vicious, and depraved, it will not spare the dwellers in lofty dwellings, nor those of pure and peaceful life. Paris, by timely and careful sanitary precautions, escaped with a comparatively light visitation, and other cities may well follow her example.

CLEMENS, Hon. JEREMIAH, an American statesman, born in Huntsville, Alabama, December 28, 1814, died at his residence in that town, May 21, 1865. He was educated at La Grange College and the University of Alabama, studied law at the University of Transylvania, in Kentucky, and was admitted to the bar in 1834. In 1843 he was appointed United States

Attorney for the Northern District of Alabama, and in 1839, 1840, and 1841 he was elected to the State Legislature. In 1842 he went to Texas as lieutenant-colonel, having raised a company of volunteer troops. On his return he was again elected to the Legislature in 1843-'44—in the latter year he also served as Presidential Elector. In 1848 he was appointed Governor of the Civil and Military Department of the Gadsden Purchase in Mexico, which position he held until the close of the war. From 1849 to 1853 he represented Alabama in the United States Senate, and was again Presidential Elector in 1856.

Mr. Clemens was a member of the Convention in Alabama which voted the State out of the Union, but protested against its action. He subsequently gave way to the popular tide setting so strongly against him, and for a time accepted office under the Confederacy. In 1864, however, he had returned to his former allegiance, and in a letter addressed to his fellow-citizens, warmly advocated the reelection of Mr. Lincoln, and defended his policy.

Mr. Clemens was one of the ablest men of Alabama, having, perhaps, more genius than any other man the State has produced. He had attained eminence at the bar whilst still young, and in the Senate of the United States he took high rank as an able and eloquent debater, and was generally esteemed for his genial social habits. He was the author of several very successful novels, among which are "Barnard Lyle" (1853); "Mustang Gray" (1857); and "A Story of the Times of Aaron Burr and Alexander Hamilton." He was also engaged in the preparation of a history of the war, giving an insight into the character, causes, and conduct of the war in that portion of Northern Alabama where he lived, but which his death leaves unfinished.

COBDEN, RICHARD, an English Statesman and author, the champion of Free Trade and leader of the Liberal party in England, born at Dunford, near Midhurst, England, June 8, 1804, and died in London, April 2, 1865. His father was a freehold farmer, and held the small estate of Dunford in his own right. Young Cobden was educated at the grammar-school of Midhurst, which had then a high reputation, and on the death of his father, which occurred while he was yet a lad, he was taken under the guardianship of his uncle, who was a London warehouseman, and soon entered his relative's establishment as youngest clerk. After a time he removed to another establishment in the same department of trade, where, though diligent in business, he attracted the attention of his employer by his eagerness to acquire information, and the extent and variety of his reading. His employer, a merchant of the old school, remonstrated with him often for reading so much, assuring him that if he persisted in the habit, it would ruin him for life. Mr. Cobden took the warning in good part, but lived to see it falsified, for his em-

ployer failed in business, and Cobden, when a prosperous tradesman in Manchester, sustained him from his own abundant resources. At an unusually early age, Mr. Cobden left the indoor duties of the warehouse to enter upon the active, but somewhat perilous career of a commercial traveller, and in this capacity solicited orders for the house which employed him. In his new sphere he became exceedingly popular, and brought a large amount of orders to the house which he represented, while he carefully avoided the vices which were so prevalent in the class to which he belonged. His frankness, probity, and manliness of character, as well as his evident talent for business, made him friends among the customers of the house; and when, in his twenty-sixth year, his employers withdrew from business and he had found a business in which he felt that he could do well, one of these customers, Mr. John Lewis, loaned him five hundred pounds to aid in purchasing the stock and good will of the establishment he was desirous of buying. The young men with whom he had associated himself in his new enterprise established three houses: one at Sadden, near Clitheroe, for the printing of calicoes, under the firm name of Sheriff, Foster & Co., and two for their sale, one in London, under the title of Sheriff, Gillet & Co., and another in Manchester, under Mr. Cobden's personal supervision, under the firm name of Richard Cobden & Co. He speedily introduced a new system of business into the cotton print trade. Up to that time it had been the custom of the manufacturers to print a few pieces of their new designs, and watch cautiously and carefully to ascertain what patterns were most acceptable to the public, and then print large quantities of those which were preferred, and supply the retail dealers. Mr. Cobden possessing admirable taste, excellent business tact, and a remarkable knowledge of the trade in all its details, abandoned this slow and cautious policy, and fixing upon the best designs, printed off large quantities at once, and pushed their sale energetically throughout the country. Those pieces which remained unsold in the home market were promptly shipped to other countries, and as a consequence the house was soon in a highly prosperous condition. To further the interests of his firm, Mr. Cobden visited the Continent repeatedly, extending his tour with the best results to Greece, Egypt, and Turkey in 1834, and to the United States in 1835. By this time Cobden's prints had become fashionable, and such was the admirable taste of the designs, that even the families of the aristocracy and the Princess Victoria appeared in public clad in them. It was in 1835 that Mr. Cobden first manifested an interest in political affairs. The occasion was the struggle on the part of the inhabitants of Manchester to procure an act of incorporation for their town. Mr. Cobden contributed a number of able articles in support of this movement to the "Manchester Times," over the signature of "Libra,"

and the editors of the "Times" became interested to form the acquaintance of their unknown correspondent, and requested him to visit their office. He was solicited to address a meeting called to aid the movement, but declined, as he had never spoken in public. As his friends insisted, however, he made the attempt, but failed signally. Not deterred by this failure, he overcame his diffidence, and soon was in demand as a forcible and impressive speaker. On the incorporation of Manchester he was elected one of its first Aldermen, and soon began to be a recognized leader in the efforts to establish a system of National education. It was in connection with this enterprise that he first became personally acquainted with John Bright.

In 1835, in the very dawning of the Free Trade movement in Manchester, when as yet the people were in the midst of their plentiful harvests, indifferent to any change in the corn-laws, and Parliament, with its large majority of landholders, scouted and scorned the idea of any change which should render their profits less exorbitant, Mr. Cobden joined the little band of Free Traders. His first effort in behalf of the cause, was a stout pamphlet entitled "England, Ireland, and America," by a Manchester manufacturer. This pamphlet was from beginning to end a vigorous and powerful protest against the foreign policy of Lord Palmerston. Soon after he contributed to "Tait's Magazine" four articles, subsequently collected in a pamphlet having for their object to allay the fear of Russia which was then excited by the Government and others. Like his former pamphlet this was earnest, pertinent, and logical. In both there were passages which indicated how deeply the opposition to the corn-law monopoly had imbedded his whole being, and these, incidental as they were, served to exhibit the spirit and purpose of the man.

It was not, however, till the autumn of 1838, when two years of bad crops had raised the price of wheat to seventy-two shillings the quarter, just double what it had been in 1835, and the corn-laws still prevented importation, that the people were ready for any decisive movement to agitate for the abrogation of those laws. In September, 1837, Dr. Bowring, who had been travelling in Egypt, and on the Continent, on a mission for the promotion of free commercial intercourse, visited Manchester, and in a public meeting denounced the corn-laws in unmeasured terms. An anti-corn-law association was immediately formed, pledged to exert itself against any and every corn-law. Eleven thousand pounds sterling were raised at once, and a lecturer procured to deliver popular addresses on the subject throughout Lancashire. These proved successful in inciting the people to think on the subject, and soon the Manchester Chamber of Commerce, which though professing dissatisfaction with the corn-laws, had been strangely apathetic in regard to them, took strong and decided ground, and resolved

to petition Parliament for total repeal. Other anti-corn-law associations sprang up in the other manufacturing towns of England, and in February, 1839, delegates from all met at London, and had an interview with Lord Melbourne, then Premier, and, through Mr. Villiers, prayed to be heard at the bar of the House, in support of his motion for the repeal of the corn-laws. Parliament refused their request with scorn. The delegates returned to Manchester and there formed a permanent organization to be called "The Anti-corn-law League," which should embrace in its membership the entire country, and to agitate for repeal throughout Great Britain by means of tracts, lectures, periodicals, etc., etc. The struggle for the next five or six years between the landholders and privileged classes for the retention of their monopoly, and the anti-corn-law league for the repeal of all restrictions on the importation of bread-stuffs, was a desperate one.

In 1841 Mr. Cobden was elected a member of Parliament for Stockport, and almost immediately took rank with the ablest debaters and the most accomplished statesmen in that body. The efforts of the landholders, at first, to put him down by jeers and derision, were met with such dignity and self-possession that they were not repeated. The number of Free Traders increased with each Parliament, but Cobden was at all times their acknowledged leader. In this position he came often into collision with the premier, Sir Robert Peel, who inclined to half measures, but with each conflict the premier's respect for the great Free Trader rose, till finally the long battle was won, and one by one the hereditary enemies of Free Trade were compelled to abandon the doctrines they had cherished for a lifetime, and give in their adhesion to the propositions of a Manchester manufacturer. The premier, in the session of 1846, moved the repeal of the corn-laws in the House of Commons, and the Duke of Wellington performed the same duty in the House of Lords, greatly against his will, and only, it was said, on the assurance of Sir Robert Peel that if he did not, he should be compelled to resign and ask the Queen to send for Mr. Cobden to form a ministry. But the labor necessary for the accomplishment of this great change had not been all, or mainly, expended in the House of Commons. During all the vacations of Parliament, Mr. Cobden had been constantly engaged in appealing to the people in behalf of Free Trade. The manufacturing towns had given in their adhesion to the cause, but the agricultural districts were only to be converted by patient labor and clear demonstration. After a time, great numbers of the landed aristocracy who at first opposed Cobden with great bitterness came round to his views, and when at last victory crowned the efforts of the league, there was general rejoicing. But this constant and severe effort had materially impaired Mr. Cobden's naturally vigorous constitution, as it had seriously injured his fortune. His health was

somewhat improved by a year or more of travel, during which he visited France, Spain, Italy, Germany, and Russia. Before he set out upon this journey, Lord John Russell, then premier, offered him a place in the cabinet, which he declined. During his absence, the Anti-corn-law League, and the Free Traders generally, subscribed and presented to him on his return the munificent sum of £80,000 (\$400,000), a contribution made to testify their sense of gratitude to him for the benefits he had conferred upon the country, and which, while it should enable him to withdraw from his business, would leave him at liberty to devote his whole time to the service of the nation. A part of this sum was expended in the purchase of his paternal estate of Dunford and the lands adjacent, and the fitting it up as a desirable residence for a country gentleman, and the remainder was invested in the bonds and stock of the Illinois Central Railroad, an investment which was for a time unproductive, but which before his death had begun to yield a liberal return for the capital invested.

In 1848 Mr. Cobden returned to his legislative duties, having been elected both for the West Riding of Yorkshire and for Stockport, in his absence. He chose the larger constituency, and labored with great zeal for the repeal of the navigation laws, another of those ancient abuses which should have been done away long ago. There was at this time one of those absurd panics in relation to a French invasion, which have kept the British nation in a state of terror much of the time for the last fifteen or twenty years, and have cost them untold sums, but Mr. Cobden's effective ridicule did much toward quieting it. In the spring of 1848, on the 23d of May, on the occasion of Mr. Hume's motion, Mr. Cobden took bold and decisive ground in favor of Parliamentary reform. In this he included extension of the suffrage, the vote by secret ballot, and the shortening of the duration of Parliaments. While the question of Free Trade was undecided, he had appropriately refused to take an active part in any other measure of reform; but that once settled, he was free to advance to other measures of hardly less importance. He also sought earnestly the reduction of the national expenditure of a war-like character, and the introduction of a stipulation for arbitration into all international treaties; and for the latter purpose he encouraged and took part in the Peace Congresses which were held for several years in the different capitals of Europe.

Then came the Crimean war; and Richard Cobden and John Bright, who had been reproached with cowardice and pusillanimity for their advocacy of universal peace and good will among men, when the populace were madly bent on a war with France, were not the men to desert their principles when war came with a powerful foe, and was waged in reality for an abstraction. It was of course unpopular to breast the waves of clamor and obloquy which

beat against them: when a nation is drawn or driven into war, however unjust or unrighteous may be the contest, it is always difficult to stem the popular current which invariably sets in for war; but neither Cobden nor his friend Bright were wanting in moral courage, and they dared, in the face of the bitterest abuse, to maintain their views in Parliament throughout the struggle. At length peace was restored, and with the negotiations which resulted in the Treaty of Paris, in 1856, came a new triumph for Cobden. The arbitration clause, of which he had so warmly urged the incorporation into all future treaties of the great powers of Europe, was, in substance, incorporated into this treaty.

The Chinese war in 1857, in which, on pretexts which were utterly unjustifiable as a ground of war with a weak and almost helpless nation, the Government had sanctioned acts of most barbarous aggression and had carried their invasion to the Chinese capital itself, was even more abhorrent to Mr. Cobden's sense of right than the war with Russia. He denounced it with all his eloquence, and moved and carried through the House of Commons, by a majority of sixteen, a vote of censure on the Ministry, and of want of confidence in the Government. Palmerston, now premier, at once dissolved Parliament, and appealed to the country in a new election. The war-cry was raised, and in the insane fury of the moment, Cobden and Bright and a large number of the Free Trade and Peace men were defeated. The triumph of the Palmerston party was short, however; Milner Gibson, who, though defeated in his own borough, was returned from another, overthrew the Palmerston government in 1858, on a vote of confidence, and after a short trial of a Tory Cabinet, that was defeated; and the adroit and sagacious Palmerston discovered that he could only return to power by introducing a large liberal element into his new Cabinet. Mr. Cobden, meantime, soon after his defeat, went abroad and spent nearly two years on the Continent and in the United States. His extended tour in the latter country, and the familiarity he gained with our institutions, was of great service to him and to the interests of freedom in the years that followed. During his absence he had been returned to Parliament by the borough of Rochdale; and as he approached the Liverpool harbor, the steamer on which he was returning was boarded by a deputation of gentlemen, who informed him that Lord Palmerston had designated him as President of the Board of Trade in his new cabinet. Mr. Cobden promptly declined the offered post, in a personal interview with Lord Palmerston, alleging as a reason that his views had always differed so much from those of the premier, that he could not in justice to his own character for consistency, or his duty to his country, consent to serve as member of a cabinet with those from whom he conscientiously differed so greatly. Palmerston was disappointed and annoyed by his refusal, but

he could not avoid honoring him for his fidelity to his convictions. At the earnest solicitation of the premier, Mr. Cobden consented to negotiate the Treaty of Commerce with France, in doing which he was involved in no complicity with the other action of the ministers, while he conferred a great and lasting benefit on both countries, and greatly diminished the probabilities of war between them. This treaty of commerce, which reduced the prohibitory duties respectively on British and French goods to an *ad valorem* of twenty-five or thirty per cent., abolished all duties, with but the fewest possible exceptions, on British manufactured goods, and reduced materially the charges on English iron, coal, and coke, was, both in its inception and its completion, despite the numberless obstacles which prejudice, protectionist views, and personal hostility brought to bear against it, one of the greatest triumphs of diplomacy in our own or any other age. It was fitly regarded by Mr. Cobden's friends as the crowning achievement in his long career of advocacy of the doctrines of Free Trade. After its completion, Lord Palmerston, on the part of her Majesty, offered to Mr. Cobden a baronetcy and a place in the Privy Council, but he declined, modestly but firmly, both the hereditary rank and the personal honor.

In the five years which followed, the frail tenure of his health prevented him from accomplishing as much public labor as had been his wont, but his pen was active, and occasionally he made speeches in Parliament and to his constituents, in which the old fire and eloquence gleamed out, while the principles he advocated, though sometimes new in their application, were the same which had guided his whole public life. He urged the repeal of the paper duty, as a tax on knowledge; the reduction of the national expenditure, especially in the vast sums wasted on fortifications, armored ships, experimental cannon, and small-arms. He was ever the earnest and consistent friend of the United States and the decided opponent of the multifarious schemes for recognizing, aiding, or giving countenance to the so-called Southern Confederacy; and even in our darkest hours, when many of our friends in Great Britain regarded the cause of the Union as hopeless, his words ever came with a cheery tone to encourage us to hold on and hold out till the final victory was gained. To his vigorous remonstrances, too, was it mainly due, that on several critical occasions the English Government did not drift into war with the United States. He did not live to see the end, but he came so near it as to predict on the 5th of February, 1865, its coming within ninety days, a prediction which was fully verified. His death was the result of a visit to London in order to be present in Parliament at a very inclement season, which induced a severe paroxysm of asthma, proving fatal April 2, 1865.

CODIFICATION. It has been well remarked that the American Revolution of 1776 effected our independence of the Government

of England, and left our independence of her laws, her language, and her literature yet to be achieved. The latter was necessarily to be the work of time, and the ninety years which have elapsed have already done a great deal. We have an American literature; our language has adopted many "Americanisms," and in our laws there have been many departures from the ancient law of the mother country. It is now proposed, in the State of New York, to make a still greater departure, in the form of codifying the whole body of the law.

The *civil law*, which dates its origin back more than twenty centuries, and which obtains in all of Europe but a portion of Great Britain, and in all of America but the United States and the British Provinces, has several times been codified. The codes of Theodosius, of Justinian, and of Napoleon, and in this country, of Louisiana, are all codifications of the *civil law*. But the *common law*, whose origin is scarcely one thousand years distant, and which obtains in all the British dominions, and in all of the United States but Louisiana, has never yet been codified, though in different periods such minds as those of Bacon, Bentham, and Brongham have contemplated it.

Scattered as the rules of the common law are, through the whole body of the statute law, the customs of the people, and the decisions of the courts for several centuries, and subject to constant changes by adjudication, it would seem that codification had at length become a necessity; yet in the language of Chancellor Kent, "the great objection to all kinds of codification, when it runs into detail, is that the rules are not maleable, they cannot accommodate to circumstances, they are imperative." Those rules being reduced to the form of a statute, come within the maxim that "the statute is like a tyrant; where he comes he makes all void; but the common law is like a nursing father, and makes void that part only where the fault is, and preserves the rest."

Notwithstanding all this, the State of New York has long entertained the idea of codifying its law, and has made itself a pioneer in the task. The attempt was first made in the revised statutes of 1830. All prior revisions of the statutes had been mere compilations, but this was an essay at codification. Carried out as it was by three minds, well fitted for the task, though necessarily running very much into detail, it has received the sanction of thirty-five years of stability. In the previous thirty years there had been two revisions—in 1801 and 1818.

The favor with which this effort at codification had been received prompted the New York Constitutional Convention of 1846 to make a further attempt. There was, accordingly, inserted in the Constitution a clause, that the Legislature, at its first session after the adoption of the Constitution, should appoint three commissioners, whose duty it should be to reduce into a written and systematic code the whole

body of the law, or so much and such parts thereof as to the commissioners should seem practicable and expedient; and a further clause providing for three commissioners "to revise, reform, simplify, and abridge the rules of practice, pleadings, forms, and proceedings of the Courts of Record."

Accordingly, in 1847, the Legislature created two commissions—one, in reference to proceedings, consisted of Arphaxed Loomis, Nicholas Hill, Jr., and David Graham. Mr. Hill having resigned, David Dudley Field was appointed in his place. Their report was made in part in 1848, and their code adopted. With various amendments since made, that is now the code of practice in the State. The residue of their report was afterwards made, but was never adopted by the Legislature. The first part of their work bore the marks of haste; but rendered necessary as it was by the then recent amalgamation of the Courts of Law and Equity, it obtained a fast foothold, and now bids fair to achieve permanency. It has been adopted in some others of the States.

The other commission—to codify the whole body of the law—consisted of Reuben H. Walworth, who, as Chancellor of the State, had established an enviable monument of juridical ability, Alvah Worden, and John A. Collier. Chancellor Walworth declined the task, and Anthony L. Robertson, afterwards Chief Justice of the Superior Court, was appointed in his place. In 1849 a new commission was appointed, consisting of John C. Spencer (who had been one of the revisers of the statutes in 1830), Alvah Worden, and Seth C. Hawley. In 1850 that law was repealed. Here the provision of the Constitution slumbered until 1857, when David Dudley Field, William Curtis Noyes, and Alexander W. Bradford were appointed commissioners, with the proviso that they should receive no compensation. These gentlemen were all extensively engaged in the practice of the law in the city of New York, and, of course, devoted only their leisure moments to the task. They made reports of their work in its progress from time to time, and made their final report in the latter part of 1865. In the mean time Mr. Noyes had died.

The law appointing them required them to present to the next Legislature a general analysis projected by them. Such report was made in 1858, in which they proclaimed the ambitious purpose of presenting "in a condensed and convenient form the great body of the law, not the laws of England, nor the laws of France, nor yet the laws of Rome, but the laws of the foremost American Commonwealth, formed out of those which were brought in by our ancestors and those which have sprung from the genius and the wants of our own land."

Their occasional reports, as well as their final one, have been distributed very generally among the judges and the profession, but do not as yet seem to have attracted much attention, or

awakened much interest, and it remains to be seen whether their work will receive any more notice from the Legislature than did the second report of the Commissioners of Practice. It is, however, somewhat significant of the difficulty of the task and of the public feeling on the subject, that the injunction of the Constitution has produced so little fruit in twenty years.

The aim of the commissioners has been, in connection with the work of the Commissioners of Practice, to form five distinct codes of the law of the State:

1. Proceedings in civil cases.
2. Proceedings in criminal cases (including the law of evidence).
3. The political code, declaring the rights of citizens, defining the territory, and prescribing the general and local Government of the State.
4. The penal code, defining crimes and punishments.
5. The civil code, embracing the law of personal rights and relations, of property, and of obligations, and having four divisions. The *first*, relating to persons, defines their civil condition, enumerates their personal rights, and declares their personal relations such as husband and wife, parent and child, guardian and ward, and master and servant. The *second*, relating to property, embraces real and personal property, the interests and estates therein, and the modes of acquisition, uses, powers and wills, corporations, shipping, and navigation. The *third*, relating to obligations, embraces the whole subject of contracts, express or by implication of law, and the law of sale, exchange, bailment, service carriage, trusts, agency, partnership, insurance, indemnity, suretyship, pledge, mortgage, lien, and commercial paper. The *fourth* relates to relief and the mode of securing rights by specific performance or by damages, and the relation of debtor and creditor, and includes and explains some few of the many maxims of jurisprudence.

The commissioners properly speak of this as an "immense range of subjects," and of the work as a "vast undertaking." This is no place to discuss the manner in which the work has been accomplished. That task will be performed in other forums. It is enough now to speak of it as the beginning of a work which the enterprising and energetic spirit of our people will yet accomplish, for our people will not long submit to be tied down by rules having their origin and their interpretation in an age of feudalism, utterly antagonistic to the enlarged freedom which is the very soul of our institutions.

How far the proposed code departs from those ancient laws, it is not proposed now to consider. The commissioners say that all they profess is "that they have endeavored to collect those general rules known to our law which are applicable to our present circumstances and ought to be continued." This may or may not embrace all the reforms which our

"present circumstances" demand. One thing is certain, that there is great perspicacity in their comprehension of the topics of which they treat. Whether they are as felicitous in the language in which they clothe their proposed enactments is another thing, and that is of no small moment, for *verba ligant homines* is very often true in the law.

There are several considerations which affect the question whether it is probable that the code as proposed will be adopted?

One is, the small amount of time and attention that the commissioners have been able to devote to the task. Aiming to codify the whole body of the law, it required an intimate knowledge of the whole law, an examination of all the adjudications upon it for several centuries, and a deep and careful consideration of all the changes which the change of circumstances in those centuries had made or rendered necessary. Less than that might render the proposed plan valuable as a suggestion of improvements, but hardly sufficient as a complete system of itself.

The code Napoleon, with all its aids from pre-existing codes, was ten years under the consideration of the courts of France, and the ablest men in the kingdom. The penal code alone of Prussia was twenty-five years in preparation. The code Justinian, with like aid from previous codifications, was confided to seventeen persons, who completed their work in three years.

Another question is, whether it has not been too minute in its details, and not confined itself to what is deemed the proper office of a code, namely, the annunciation of general principles. If it has this fault, it is a serious one, for one of the great merits of the common law, and which has ever been one of the greatest objections to its codification, has been its elasticity, whereby its general principles could be and have been adapted to any change of circumstances which time wrought out; such as the discovery of the mariner's compass, the art of printing, the use of steam as a motive power, the magnetic telegraph, the advancing freedom of the masses, etc., etc. All experience has shown that any modification of the law which deprives its administrators of the power of adapting it to the ever-varying changes of human affairs and compels a resort to the Legislature is injurious precisely as it is dilatory, expensive, and uncertain.

While certainty in the law is the mother of repose, so human laws must ever keep pace with human progress. To achieve both these objects at the same time—to frame a code of laws that shall unite stability with elasticity—that shall insure the certainty which gives repose, and the expansiveness that shall embrace the ever-varying demands of human progress, is a task which has never yet been achieved, and to which perhaps no human genius is equal. Though that end may not be fully attainable, it may yet be approached, and that work will come the nearest to that end which deals

most in general principles, and the most successfully avoids details; that which draws the most largely upon the wisdom of the past for its rules of conduct, of duty, and of right, and which leaves the most to the future in the application of them to the affairs of life. It is evident that the commissioners have realized these ideas, and the great question yet to be solved is, how well they have performed the mighty work of carrying them out. *Hic labor, hoc opus est.*

Another question of interest is, How much of the law does this work profess to codify? All of it or only a part, and if so what part? "No body of law depends," or it would seem can depend, "merely upon the enactments of the legislative power. A great number of its maxims and principles originate and are formed, in all nations and at all times, by the opinions and manners of the people, by the decisions of the judges, and by scientific exertions for the elaboration and development of the law which already exists as well as that which lives in the minds of the people." "A legal maxim of this kind introduced and established by public opinion, habit and custom, by the practice of the courts or by the jurists, has equal force with an explicit law" (*Kaufman's Makelday*). The reports of the commissioners would seem to imply that this branch of the law is embraced within the scope of their work. It is not easy to perceive how this part of the task can be performed at all, and still more how it could be performed with the limited means within their command. Very much of the value of the work, if this topic is included, must depend on the manner in which it is accomplished. The work certainly shows great labor by the commissioners; but still the question is, how far any labor within the time employed could possibly accomplish this whole task?

Another question is, how far the proposed code has a tendency to produce uncertainty by changing words or phraseology. It sometimes takes many years and many adjudications to settle the meaning of a word or phrase in the law. A change from the well-settled phraseology often leads to serious difficulties. Any indulgence of the code in this practice will create a formidable obstacle in its way. Take, for instance, a specimen of its attempt to enact a legal maxim; "where one of two innocent persons must suffer by the act of a third, he by whose negligence it happened must be the sufferer." The word "negligence" has obtained a definite meaning in the law. The true rule is, that in the assumed case the loss must fall on him who by his act has enabled the offending party to perpetrate the wrong, and it is not at all necessary that the act shall be one of "negligence," for the act, to have the effect, may either be by design or after all reasonable precautions. Does the proposed enactment mean to alter the law, by limiting it to negligence, or does it mean to require a new definition of that word?

And yet another important question is, whether this proposed code is intended to be confined to the common law strictly so called, or will embrace also the Law Merchant and the Civil Law, or such parts of them only as are now received as a part of the law of the State.

It is only now about one hundred years since, under the lead of Lord Mansfield, the Law Merchant, as it had obtained for centuries in the commercial States of Europe, was introduced into and engrafted upon the prevailing law in England. The law as thus improved was at our Revolution made the law of our land. But Lord Mansfield did not bring in the whole of the Law Merchant, and since his day, both in England and in this country, more and more of it has been adopted as parts of the prevailing system. So it has been in England and in this country, that within the same period other portions of the Civil Law have been introduced into our existing law. Now the questions are, Does the proposed code embrace the whole of the Law Merchant and the Civil Law, or only such parts of them as have been already adopted by us? And if only the latter, does the code mean to arrest this prevailing practice of drawing upon the wisdom of the Civil Law for our rules of action? If such is the purpose or such will be its effect, then it would seem to be of questionable propriety to shut our vast and growing interests off, from the advantage of seeking for aid in the knowledge and experience of many ages. If such is not the purpose, then the code will necessarily be shorn of much of its intended permanency and certainty, by the continuance of the practice of incorporating into our system other rules of the civil law. It is not easy to say how this is: for the code includes the Law of Insurance, the whole of which is taken from the Civil Law. Yet in the Law of Sales of Chattels, the common law rule of *Caveat Emptor* is preserved. The Civil Law says that a sound price means a sound article. The Common Laws says No, let the purchaser look out for himself. And he has no remedy for latent defects, however much they may impair the value of the thing bought, unless he has taken a warranty or has been actually defrauded. This code not only adopts this very unjust rule of the common law, but actually makes it worse by means of its proposed enactment that no warranty shall be implied, thus stopping the progress of our courts toward the adoption of the honest rule of the two. These instances are illustrations only of the difficulty of the task undertaken, and of the importance of the question asked in this regard.

These objections may seem trivial, but they are not, because they show a tendency to unsettle the law where it has been the work of centuries to render it certain.

But be this as it may, this effort will be memorable as the first attempt to codify the whole body of the common law, and subject it to a

process to which the civil law has been once and again subjected, with undoubted profit and advantage to the peoples among whom it has been attempted. Whether this effort also will be beneficial, must depend on how far there will be preserved that elasticity which has hitherto enabled the common law to keep pace with advancing freedom and civilization among men.

Following in the track of New York, the British Province of Canada has aimed at codification of its law. The codification of the body of the law has been completed by the commissioners appointed for that purpose, and their report will soon be presented to the Colonial Legislature for its consideration. The code of civil procedure has not yet been completed, and though in an advanced state, is not yet ready for legislative action.

COGSWELL, MASON FITCH, M. D., an eminent physician and medical writer, born at Hartford, Conn., November 10, 1809, died in Albany, January 21, 1865. He was the son of Dr. M. F. Cogswell, formerly a prominent physician and surgeon in Hartford; graduated at Yale College, and subsequently entered the office of Dr. Alexander Stevens, of New York, with whom he remained as a private student until the year 1832, when he received his degree from the College of Physicians and Surgeons of New York. In 1833 he commenced practice in Albany, and gradually, with the increase of years and the growth of experience, rose to the first rank of his profession. He was for a long time one of the physicians of the City Hospital. On the breaking out of the war he was appointed examining surgeon at this post, many thousand volunteers passing under his supervision. He was subsequently surgeon of the Post Hospital, assistant surgeon of the United States Hospital, and, at the time of his decease, had been nominated surgeon.

In 1862, during the Peninsular campaign, he was active in organizing a field hospital at the White House in Virginia, and the exposure and arduous labors incident to that work led to serious inroads upon his health. In February, 1863, with Dr. Thomas Hun, he was appointed, under the direction of the Sanitary Commission, to inspect the Western hospitals, and the duty was performed with efficiency and thoroughness.

Dr. Cogswell's public and professional career was eminently characterized by a strong sense of duty, strict integrity, and untiring self-devotion. He was animated, always, by the purest and noblest impulses, guided by reason and principle. He carried his heart with him to the bedside, and, whilst alleviating suffering by his skill, solaced the patient with his gentle kindness and sympathy. His loyalty to his country seemed to be infused into his care for the sick and wounded soldiers, and imparted warmth and earnestness to his hospital labors.

COLLAMER, Hon. JACOB, LL.D., U. S. Senator from Vermont, born in Troy, N. Y., in

1792, died at Woodstock, Vt., Nov. 9, 1865. In childhood he removed to Burlington, and was graduated at the University of Vermont in 1810. He studied law at St. Albans, and was admitted to practice at that place in 1812, after which he made the frontier campaign as a lieutenant of artillery in the detached militia in the United States service. He accomplished his course of preparatory collegiate and professional studies without any other pecuniary means than such as his own industry supplied. Until 1833 he practised law in Washington, Orange, and Windsor Counties, commencing at Barre. In 1821, 1822, 1827, 1828, he represented the town of Royalton in the General Assembly. In 1833 he was elected an Associate Justice of the Supreme Court of Vermont, and was continued on the bench until 1842, when he declined a reelection. In 1843 he was chosen to represent the Second District in Congress, was reelected in 1844 and 1846, but in 1849 declined to be again a candidate. In March, 1849, he was appointed Postmaster-General by President Taylor, but on the death of the President, he, with the entire cabinet, resigned. He was soon afterwards made Supreme Judge of his own State, holding that office until 1854, when he was chosen United States Senator, which office he filled up to the time of his death.

He served as Chairman of the Committee on Post-offices and Post-roads, and also of that on the Library, and as a member of other important committees. Judge Collamer was a man of clear and acute intellect, and of great integrity of character. His principles of political action were well defined, and were held with great tenacity; they were the result of his own independent reflection, rather than of party relations, and though not pressed with any thing like undue obstinacy, were never yielded to considerations of mere expediency. He was a sturdy advocate of freedom and human rights, and a devoted lover of the Federal Constitution. He received the degree of LL.D. from the University of Vermont, and from Dartmouth College, New Hampshire.

COLOMBIA, UNITED STATES OF, a republic in South America, President (April 1, 1864, to April 1, 1866), Dr. Manuel Murillo. Ministry: Valenzuela (Interior); Ouenca (Finances); Santiago Perez (Exterior); War and Navy, Gen. Valerio Barriga. The President is elected by an absolute majority of the States; a direct vote of the people is given at the election. The Senate consists of 27 members, 3 for each of the States. The number of the Chamber of Representatives is at the rate of one representative for every 50,000 inhabitants, and every fraction not less than 20,000. Minister of the United States near the Government of Colombia, Allan A. Burton (appointed May 21, 1861); Colombian Minister at Washington, Gen. Eustagio Salgar (reappointed in 1865). The area amounts to 480,800 square miles. The population of the nine States composing the republic is about as follows:

Antioquia.....	597,323	Magdalena.....	100,284
Bolívar.....	173,006	Panama.....	173,732
Boyaca.....	442,996	Santander.....	494,000
Cauca.....	437,103	Tollima.....	250,968
Cundinamarca.....	391,006	Total.....	3,794,478

The capital of the republic is Bogota, in the State of Cundinamarca. According to the message presented by President Murillo to the Federal Congress in February, 1865, the expenditures were estimated in the budget of the next financial year at 2,715,128 piastres; the receipts at 2,020,000 piastres; deficit at 695,128.

The public debt amounted in 1861 to 44,000,000 piastres, of which 84,690,000 were due to Englishmen. The Federal army numbers 2,000 men on the peace footing. In time of war, every State is required to furnish a contingent of one per cent. of its population. The imports of the year 1863 amount to 14,500,000 piastres, and the exports to 12,500,000 piastres. The value of the merchandise over the Panama Railroad was valued, in 1863, at 82,500,000 piastres, and, in 1864, to 100,000,000 piastres. The number of passengers in 1864, was 41,185.

Several of the States were, during the year 1865, agitated by internal troubles, but the Federal Government was not involved in them, and at the close of the year universal quiet was restored.

At the election held for President, General Tomas C. de Mosquera was chosen, receiving the votes of seven States. In the State of Panama, nearly all the votes were cast for General José H. Lopez, and the State of Antioquia voted for Señor Pedro José Berrio.

Both the Government and the people of the United States of Colombia continue to express in the strongest terms their sympathy with the republicans of Mexico and the governments of Chili and Peru in their struggle against European aggression. The Legislature of the State of Boyaca adopted the following resolution unanimously:

The Legislative Assembly of the Sovereign State of Boyaca, has heard with grief and indignation the news of more insidious and tyrannical measures on the part of Spain, the old enemy of America, who is now threatening Chili; this Assembly prays Providence so to guide the policy of the National Government of Colombia, that in the event of another conflict impending over the Continent of Columbus, her conduct may be essentially dignified, energetic, and American.

Similar resolutions passed the Legislatures of other States.

A law passed by the Colombian Congress on April 19, 1865, concerning the civil rights of foreign residents, called forth an immediate protest from the English and French Ministers as conflicting with the rights of foreigners residing or passing through the country. The Minister of the United States referred the matter to the Home Government, which, in consideration of the great American interests at stake, and especially on the Isthmus, protested also against the law, as shown by the following

extract from his communication, dated Bogota, November 22, 1865 :

The undersigned has received orders from his Government to represent to that of Colombia that the United States of America cannot consider this new law as having any force or obligation which affects their citizens, in any case when said law may contravene the existing treaties or international law.

The undersigned, obeying the imperious demand of that frank straightforwardness which always ought to characterize the intercourse between friendly nations, holds it to be his duty to represent to the Colombian Government, besides : that the Government of the United States of America finds itself obliged to retain the hope that the citizens of either of the two republics, within the territories that are subject to the jurisdiction of the other, be they passing through or residing in it, are respectively entitled to a real, effective, and prompt reparation for all injuries done there to their rights in contravention of the stipulations of the existing treaties between the two countries, or of modern international usages ; and as the Government of the United States acknowledges its just obligation to make such reparation to Colombian citizens, whenever such injuries should unexpectedly be done to them, in the same manner it hopes, and will insist upon, that equal justice be done to its own citizens, when their rights have been or may be so violated.

As the correspondence which formerly had taken place about this matter between the Department of your Excellency and this Legation, has been made public, it behooves the Government of your Excellency to decide if the interests of their respective countries will be served by giving publicity also to the present note.

The undersigned avails himself of this occasion to renew to your Excellency the assurances of his distinguished consideration. ALLAN A. BURTON.
To His Excellency Sr. Santiago Perez, Secretary of Home and Foreign Relations, &c., &c.

The one hundred and fifty miles of telegraph constructed by the American firm of Davidson, Stiles & Woolsey, having been completed to the satisfaction of the Government, the latter party have contracted for four hundred additional miles, which are to be constructed immediately.

COLORADO. A territory of the United States, lying between the thirty-seventh and forty-first parallels of north latitude, and the hundred and second and hundred and ninth degrees of longitude, west from Greenwich, and embracing an area of one hundred and five thousand eight hundred and eighteen square miles. It is at present divided into seventeen counties, viz. : Arrapahoe, Boulder, Clear Creek, Conejos, Costilla, Douglas, El Paso, Fremont, Gilpin, Huerfano, Jefferson, Lake, Laramie, Park, Pueblo, Summit, and Weld. The capital and the chief town of the territory is Denver, in Arrapahoe County. It was organized as a territory by act of Congress of March 2, 1861, which vested the legislative power in a Governor and Legislative Assembly, to consist of a Council and House of Representatives. The legislature, treasurer, auditor, and superintendent of schools were authorized to be elected by the people ; all other officers, including the judiciary, were to be appointed by the President of the United States.

In consequence of the great influx of population into Colorado subsequent to the discov-

eries of gold in the Rocky Mountain ranges, measures were taken in 1864 to form a State Government, and an enabling act was passed for that purpose at the first session of the thirty-eighth Congress. A convention was called in the territory in the same year, by which a constitution was adopted. The project for obtaining admission into the Union failed, however, by a considerable vote, mainly in consequence of the unpopularity of prominent men connected with it, and no further action was taken in the matter until the succeeding year, when a convention assembled in Denver, August 8, to consider the propriety of forming a State Government and of framing a constitution, to be subsequently submitted to the people for ratification. On August 12, the convention adopted a constitution, which was voted upon on September 5, with the following result :

For the Constitution.....	3,025
Against the Constitution.....	2,570
Majority in favor.....	155

This instrument gives the right of suffrage to "every white male citizen of the age of twenty-one years and upward, who is by birth, or has become by naturalization or by treaty, or shall have declared his intention to become a citizen of the United States, according to the laws thereof, and who shall have resided in the State of Colorado for six months next preceding the election, and shall have been a resident ten days of the precinct or election district in which he offers to vote, shall be deemed a qualified elector, and entitled to a vote at the same." Exceptions are made in the case of insane persons, felons, soldiers or sailors in the United States service, and persons refusing to take the oath of allegiance to the United States. Among the miscellaneous provisions of the Constitution was one, submitting to popular vote the question whether the word "white" in the above clause should be stricken out, which was decided in the negative by a majority of three thousand seven hundred and sixteen in a total vote of four thousand six hundred and sixty-eight.

The Constitution further provides that the legislative power of the State shall be vested in a Senate and House of Representatives, to be called the Legislative Assembly ; the former to consist of thirteen members, to be elected for two years, and the latter of twenty-six, to be elected annually. The Senate may, ultimately, be increased to thirty-nine, and the house to seventy-eight members. The sessions are to be annual. Members of the Legislative Assembly must be above the age of twenty-one, citizens of the United States, and residents and qualified voters of the districts they are elected to represent. Bills may originate in either House, but may be rejected or amended by the other. The Legislature is required at its first session to provide for a census, to be taken between January and July, 1866, and every six years thereafter, and which shall form the basis of a new apportionment of senators and repre-

representatives. The executive and administrative department is to consist of a Governor, Lieutenant-Governor, who must be each thirty years of age or upwards, Secretary of State, Treasurer, Attorney-General, and superintendent of Public Instruction, who are to be elected every second year, and are to hold office for two years. The Lieutenant-Governor is made the presiding officer of the Senate. The judicial office is made elective, and its duration is limited, in the higher courts, to three years, and, in the lower courts, to two years. The compensation provided for different public officers is as follows:

Governor, \$2,000 per annum.
Lieutenant-Governor, \$8 per diem, during the session of the Legislature, and mileage.
Secretary of State, \$1,500 per annum.
Treasurer, \$1,000 per annum.
Superintendent of Public Instruction, \$1,000.
Attorney-General, \$1,000.
Members of Legislature, \$5 per diem, during the session of the Legislature, and mileage.

The judges of the Supreme Court are authorized to receive a salary to be fixed by the Legislature, and which shall not exceed \$6,000, nor be less than \$4,000. By a special provision, the pay of members of the Legislature ceases if the session exceeds forty days in duration. Other clauses prohibit the establishment of banks of issue, or the circulation of any species of bank bills except those authorized by act of Congress; vest the title of property owned by religious, educational, or charitable corporations in trustees; and provide for a State University. Amendments to the Constitution are to be adopted by a two-thirds vote in each branch of the Legislature, and subsequently ratified by popular vote. The following was also passed by the Convention:

Is Irrevocable Ordinance, adopting the Constitution of the United States, and for other purposes.

Whereas, The People of Colorado, by their delegates duly elected, in convention assembled, have deemed it expedient to make application to Congress for the admission of Colorado into the Union as a State, on an equal footing with other States, and have framed a constitution for said State; and whereas it is deemed right and proper for this convention to declare on the behalf of the people of said Territory, that they adopt the Constitution of the United States. * * * * *

Now, therefore, this convention, duly elected by the people of Colorado, pursuant to a call of the same, being duly organized, do hereby, on behalf of, and by the authority of the people of said Territory of Colorado, adopt the Constitution of the United States, and accept all of the following propositions, to wit:

We do declare by authority of, and in behalf of the people of the Territory of Colorado, and ordain by this ordinance irrevocable, except upon the above conditions, that there shall be neither slavery nor involuntary servitude in the State of Colorado, otherwise than in the punishment of crimes, whereof the party shall have been duly convicted; that perfect toleration of religious sentiment shall be secured, and no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship; and that the people inhabiting said Territory of Colorado, do agree and declare that they forever disclaim all right and title to the unappropriated lands lying within said Territory, and

that the same shall be and remain at the sole and entire disposal of the United States; and that lands belonging to citizens of the United States residing without the State, shall never be taxed higher than the lands belonging to residents thereof; and that no taxes shall be imposed by said State on lands or property therein belonging to, or which may hereafter be purchased by the United States.

It is further ordained, That all treaties of whatever name or nature made between the Government of the United States and any foreign power, are hereby fully ratified and confirmed by this Constitution.

The Constitution having been adopted, an election for State officers took place in the succeeding November, which resulted in the return, with one exception, of the Republican candidates by large majorities. For Governor, William Gilpin, the regular Republican candidate, received three thousand one hundred and twenty-three votes, to one thousand eight hundred and thirty-five for Scudder, independent Republican, and two thousand five hundred and ninety-nine for Craig, the democratic candidate. The Republican candidate for Secretary of State was elected by four thousand five hundred and twenty-two votes against two thousand six hundred and forty-four, given to his democratic competitor. The Legislature elected was largely Republican in both branches. At the same time George M. Chilcott, Republican, was elected representative in Congress by three thousand one hundred and four votes against one thousand six hundred and ninety-six for Belden, independent Republican, and two thousand one hundred and nineteen for Cavanaugh, Democrat. The following represents the present State Government of Colorado:

EXECUTIVE DEPARTMENT.

Governor—William Gilpin, Republican.
Lieutenant-Governor—George A. Hinsdale, Democrat.
Secretary of State—Josiah H. Gest, Republican.
Treasurer—Alexander W. Atkins, Republican.
Superintendent Public Instruction—Rufus K. Frisbee, Republican.
Attorney-General—U. B. Holloway, Republican.
[All elected for two years from the first Monday in January, 1866.]

SUPREME COURT.

William H. Goraline, Republican, on all tickets.
Allen A. Bradford, Republican, also on democratic ticket.
J. Bright Smith, Republican, on straight ticket.
[To draw for terms of one, two, and three years; successors to be elected for three years.]

In compliance with an ordinance adopted by the Constitutional Convention, the Legislature, elected in November, 1865, convened at Golden City, fifteen miles west of Denver, on the second Tuesday of the succeeding December, and was organized by the choice of the Republican candidates for presiding officers in both branches. John Evans, the former territorial governor, and Jerome B. Chaffee, recently speaker of the House in the territorial legislature, both Republicans, were elected United States Senators, and early in January, 1866, in compliance with a joint resolution of the legislative assembly, presented the papers relating to the State or-

ganization to the President of the United States, asking his influence in favor of the early admission of the State into the Union. This the President declined to do, but submitted the whole matter to Congress, as will appear by the following communication :

I transmit herewith a communication addressed to me by Messrs. John Evans and J. B. Chaffee as United States Senators elect from the State of Colorado, together with the accompanying documents. Under the authority of the act of Congress, approved the 21st day of March, 1864, the people of Colorado through a convention formed a constitution making provision for a State Government, which, when submitted to the qualified voters of the Territory, was rejected. In the Summer of 1865, a second convention was called by the Executive Committees of the several political parties in the Territory, which assembled at Denver on the 8th day of August. On the 13th of that month, this convention adopted a State Constitution, which was submitted to the people on the 5th of September, 1865, and ratified by a majority of 155 of the qualified voters. The proceedings in the second instance having differed in time and mode from those specified in the Act of March, 1864, I have declined to issue the proclamation for which provision is made in the fifth section of the law, and therefore submit the question for the consultation and further action of Congress.

(Signed) ANDREW JOHNSON.

WASHINGTON, D. C., Jan. 12, 1866.

This document was referred to the Senate Committee on Territories, which, on January 18th, reported a bill for the admission of Colorado into the Union, under the Constitution adopted by her people.

The population of Colorado, according to the census of 1860, was thirty-four thousand two hundred and seventy-seven, besides from six to eight thousand tribal Indians, principally Arapahoes and Utes. During 1860 and 1861 the influx of emigrants, led thither by reports of the abundance and richness of the gold and silver mines among the mountains, was such as to increase the population to upward of sixty thousand. The operations of this class of miners being for the most part individual and confined to surface working, the superficial deposits of the precious metals were soon exhausted, or at least did not prove sufficiently remunerative to the restless adventurers who worked them. At the same time came reports of discoveries of rich deposits of gold in the new Territories of Montana and Idaho, under the influence of which nearly the whole of the floating population, which had built up Colorado so rapidly, moved northward to the new diggings. The result has been that the population in 1865 was estimated at several thousand less than in 1860. Other causes have, however, contributed to this result, among which may be mentioned the obstacles to emigration, created by the recent hostilities and depredations of the neighboring Indian tribes, and the high prices of labor and the necessities of life, and also the necessity of a large capital for the profitable working of the mines.

The mineral wealth of the country is nevertheless almost incalculable; and, even under favorable circumstances, it is probable that

many years will elapse before the veins of gold, silver, copper, iron, and coal, with which the mountain regions abound, can be properly worked. The surface working, or "gulch mining," as it is called, has for some time ceased to be profitable, and the chief attention is now given to solid mining, which, for the reasons above enumerated, and also on account of the expensive machinery required, and the difficulty of separating a fair percentage of the precious metals from the ore, has for the last two years been prosecuted with comparatively little activity. Probably not more than twenty-five of the hundred stamp mills in the Territory were in operation during 1865. When expenses return to the currency standard, and travel to Colorado becomes safe, and when the experiments now making to give increased productiveness to smelting the ores are completed, the business will undoubtedly become profitable and be actively resumed. Meanwhile the population now resident in the territory is a permanent and industrious one, and forms a nucleus well adapted for building up a prosperous commonwealth. The principal centre of the mining business at present is situated a little to the north and west of Denver, along and up Clear Creek, and around the towns of Blackhawk, Central City, and Nevada. The second centre, which, however, is now very imperfectly developed, is near what is called the South Park, a beautiful table land of prairie and wood, about fifty miles south of Denver. For actual production of the precious metals, Colorado ranks second only to California. No accurate statistics exist as to the value of the amount produced by her mines, but the most trustworthy data show that it is not far from twenty-five millions.

The year 1865 was a disastrous one to the agricultural interests of Colorado. In consequence of the difficulty of obtaining food, and particularly grain and vegetables from the East, a larger breadth of land was planted than during any preceding year. The uplands were found to be even more fertile than the bottom lands, and for the purpose of obviating the ill-effects of the long dry seasons to which the region is liable, preparations were made at great expense to irrigate thousands of acres. The rains proved unusually abundant, and every thing indicated a season of plenty, when the country was visited by immense swarms of grasshoppers, which devoured almost every growing thing. Only a few fields of grain and potatoes escaped their ravages, but not enough of any species of crops was raised to affect the price of imported grain or vegetables. This visitation is, however, regarded as only an exceptional occurrence, and with proper irrigation, which is about to be widely introduced, it is anticipated that the profits of farming will hereafter be large. As a sheep-raising country, the mountain region is known to offer great advantages.

Two important undertakings were commenced

in 1865, the successful completion of which will considerably lessen the distance between Colorado and the East and the West. The one is a new road from Denver to Leavenworth, known as the Smoky Hill route, one hundred miles shorter than that previously used, and much better; and the other, a short and expeditious route from Denver to Salt Lake City, over Boulder Pass and the Middle and North Parks, on which, in August, large forces of laborers were employed, commencing at each terminus.

COMMERCE. The restoration of peace, after four years of domestic war, gave a fresh impulse to the movements of commerce, and to her sisters, manufactures and agriculture. The official returns of the general commerce of the country include the movements to the 30th June only, the termination of the fiscal year of the United States; hence but little of the increase experienced during the calendar year of 1865 is indicated by the official tables of the Treasury Department at Washington, thus ending in June, 1865. The following are the general results for the last official year (July, 1864, to June, 1865, both inclusive) compared with the three previous years:

Statement of the value of domestic and foreign produce and manufactures exported from the United States during the fiscal years ending June 30, 1862, 1863, 1864, and 1865, respectively, reduced to gold value; including specie, amount of reduction, and value of exports in gold for each year.

YEARS.	Currency value, including Specie.	Reduction.	Gold Value.
1862....	\$229,983,955	\$2,611,429	\$227,197,556

Total reduction.....	298,766,539	
Total gold value, 4 years.....		\$892,211,398

Comparative statement of Imports and Exports (reduced to gold value) during the fiscal years ending June 30th, 1862, 1863, 1864, and 1865, and exhibiting the excess of importations over exportations each year.

YEARS.	Imports.	Exports, gold value.	Excess of Imports.
1862....	\$273,257,051	\$227,127,556	\$46,229,495
1863....	252,919,930	252,419,208	500,717
1864....	329,562,895	218,489,252	111,073,643
1865....	224,839,310	194,175,393	30,663,917
Total	\$1,092,179,676	\$892,211,398	\$199,968,298

The effects of civil war upon commerce cannot be more clearly demonstrated than in the

reduction of the tonnage owned throughout the country between the years 1861 and 1865, from an aggregate of 5,539,818 tons to 4,986,401 tons, including steam vessels, while the tonnage employed in foreign trade was reduced from 2,642,000 tons in 1860, to 1,092,000 tons in 1865, a falling off equivalent to about sixty per cent. The following are the official returns for the past six years:

YEAR.	Registered sail tonnage.	Registered steam tonnage.	Enrolled and licensed sail tonnage.	Enrolled & licensed steam tonnage.	Total tonnage.
1860.....	2,448,941	97,296	2,086,990	770,641	5,358,868
1861.....	2,540,090	103,608	1,192,589	774,296	5,509,518
1862.....	2,177,256	118,998	2,924,449	596,465	5,112,165
1863.....	1,892,399	138,215	2,660,313	489,755	5,196,081

1865*-Old	1,022,465	69,589	1,866,594	553,189	3,511,787
" *New	482,109	23,469	724,901	844,515	1,579,694

In order to illustrate the commercial movements of the country since the discovery of gold in California, and the effects of such discovery, the following comparative table is useful:

YEAR.	EXPORTS OF THE UNITED STATES.			Total Imports.
	Domestic Produce.	Foreign Merchandise.	Total.	
1849....	\$192,666,955	\$13,088,865	\$145,735,830	\$147,357,439
1850....	196,946,912	14,951,809	151,898,720	173,188,313
1851....	196,689,718	21,695,293	218,385,011	216,224,932
1852....	192,368,984	17,239,882	209,608,866	212,945,443
1853....	213,417,697	17,558,460	230,976,157	267,973,647
1854....	253,399,879	24,858,194	278,258,074	304,562,351
1855....	246,708,538	28,448,598	275,156,546	261,468,520
1856....	310,586,290	16,375,575	326,961,909	314,689,942
1857....	338,985,065	23,976,617	362,961,682	360,899,141
1858....	293,758,379	20,388,142	314,146,521	292,613,150
1859....	335,594,385	20,595,077	356,189,462	338,765,189
1860....	378,189,274	26,968,922	405,158,196	362,166,254
1861....	228,609,486	15,271,791	243,911,277	296,598,135
1862....	213,069,519	16,869,466	229,938,985	273,357,051
1863....	305,884,998	16,474,256	322,359,254	329,919,920
1864....	281,899,371	20,116,190	301,984,561	329,562,895
1865....	306,306,768	30,399,365	336,697,123	284,839,310

It should be stated that the years 1862-'63-'64-'65 were those in which specie payments were suspended. The imports above are given in the gold valuation, while the exports of 1862 and 1865 are estimated upon a depreciated paper valuation.

Tonnage of the several districts of the State of New York on the 30th June, 1865, and the total of the United States under the old admeasurement.

Annexed is a comparative summary of the clearances from the port of New York during the calendar year of 1865. As many vessels arriving from foreign ports clear thence for a coastwise port, the clearances for foreign ports are generally much fewer than the direct arrivals:

	No. Vessels.	Tonnage.	Seamen.
American vessels...	990	664,006	20,453
Foreign vessels...	8,202	1,495,226	54,264
Total cleared in 1865	4,192	2,159,822	74,717
" 1864	4,460	2,259,448½	74,894
" 1863	4,666	2,891,605	76,689

" 1852	8,085	1,855,514	50,459

The American shipping engaged in the foreign trade of the port of New York has declined from 3,034 tons in 1861 to 1,430 tons in 1865, while the foreign tonnage has increased from 943 tons in 1858 to over 3,200 tons in 1863 to 1865. The general results are as follows for the year 1865, compared with previous years:

	AMERICAN.		FOREIGN.	
	No. Vessels.	Tonnage.	No. Vessels.	Tonnage.
1865...	1,892	807,580½	1,451	446,756½
1864...	2,959	1,144,485	1,490	470,566½
1863...	2,407	1,231,951	1,440	478,087
1862...	3,071	1,321,674½	1,508	491,580½
1861...	2,686	1,442,282½	1,411	477,631½
1860...	2,457	1,340,257½	904	220,000

In the table below are given the number of vessels, and the amount of American tonnage, also the amount belonging to foreign countries, and the total amount of both American and foreign entered at the port of New York from foreign ports since the year 1821. This includes only the craft engaged in the foreign trade, and is exclusive of the arrivals and departures from and to other domestic ports:

YEAR.	No. Arrivals.	Tons—American.	Tons—Foreign.	Total tons.
1821..	912	155,723	16,240	171,963
1822..	1,172	208,082½	23,707½	231,790½

It will be seen by this table that during the war the influence of Southern privateers was very considerable. This is apparent from the steady decrease of American tonnage, and an equally steady increase of the foreign. The decline of the aggregate tonnage has also been steady since the year 1862, but it has arisen from causes affecting the general commerce of the country.

COMMERCIAL INTERCOURSE. The regulations adopted by the Federal Government relative to intercourse between the citizens of the Northern States and those in insurrection, have been stated in previous volumes. The Act of Congress passed July 13, 1861, authorizing the President to declare by proclamation the people of certain States to be in a state of insurrection, and that all commercial intercourse with them should cease, produced a clear and distinct condition of war. Under the operation of the law, a question arose as to the course to be pursued with those cities and towns of the Southern States which might be subdued and occupied. If commercial intercourse continued to be broken off with those people, it was asked how they were to be fed and subsisted. By the modern laws of war, it has been held that the Power which declared war might modify that declaration in relation to intercourse with particular places for particular purposes. On this ground, the above-mentioned act contained a provision authorizing the President, in his discretion, and under regulation from the Treasury Department, to permit intercourse in such articles, and with such places and persons as the public service might require. This provision was inserted in the law because the President, having no power to declare war, of course had no authority to modify that war, except only as it should be given to him by Congress, which had the power to declare war. The object of the provision was, not to get supplies from the enemy, nor to buy their produce and pay them money to relieve them, but merely to sustain the people of that part of the country which was held by military possession. In the execution of the law a different construction was given to it. Regulations were made by the Treasury Department, and approved by the President, under which licenses were granted from time to time to individuals to trade upon the Mississippi for the purpose of getting cotton. The effect of this system was very serious upon the characters of the officers of the army there in command. At the session of Congress in the summer of 1864 an act was passed to put a stop to that kind of trade by revoking the authority to grant licenses except for supplying the necessities of the loyal inhabitants within the lines of actual occupation. This resulted in generally stopping the previous trade. But the same act, passed through Congress with much haste, contained a section authorizing the Secretary of the Treasury to appoint agents to purchase for the United States any products of States declared to be in insurrection, at such places as the Secretary should designate, etc. In the month of December, 1864, the President issued his order directing, under the regulations of the Secretary, the agents appointed to go down and execute the law and make the purchases. By the regulations and the executive order, the whole of the people of the country who had control of any productions for sale were authorized to come into the places designated

and offer them for sale. A vigorous traffic thus sprung up, and was in active progress when Gen. Grant issued the following order:

HEADQUARTERS ARMY OF THE U. S.,
CITY POINT, March 10, 1865.

Special Orders No. 48.—The operations on all Treasury trade permits and all other trade permits and licenses to trade, by whomsoever granted, within the State of Virginia, except that portion known as the Eastern Shore, and within the States of North Carolina and South Carolina, and that portion of the State of Georgia immediately bordering on the Atlantic, including the city of Savannah, are hereby suspended until further orders.

All contracts and agreements made under or by virtue of any trade permit or license, within any of said States, or parts of States, during the existence of this order, will be deemed void, and the subject of such contracts or agreements will be seized by the military authorities for the benefit of the Government, whether the same is at the time of such contracts or agreements within their reach, or at any time thereafter comes within their reach, either by the operations of war or by the act of the contracting parties or their agents.

The delivery of all goods contracted for and not delivered before the publication of this order is prohibited. Supplies of all kinds are prohibited from passing into any of said States or parts of such States, except such as are absolutely necessary for the wants of those living within the lines of actual military occupation, and under no circumstances will military commanders allow them to pass beyond the lines they actually hold.

By command of Lieut.-Gen. GRANT.

T. S. BOWERS, Asst Adj't-Gen.

It was regarded at the time and under the existing state of military affairs as the most important order Gen. Grant had ever issued. It appeared by official records to affect contracts covering 500,000 bales of cotton, 16,000 barrels of turpentine, 5,000 barrels of tar, 2,000 barrels of rosin, and 100,000 boxes of tobacco. This order was revoked by Gen. Grant on April 11th.

On April 11th President Lincoln issued his proclamation declaring closed to foreign and domestic commerce the ports of Richmond, Tappahannock, Cherry Stone, Yorktown, and Petersburg, in Virginia; of Camden, Elizabeth City, Edenton, Plymouth, Washington, Newbern, Ocracoke, and Wilmington, in North Carolina; of Charleston, Georgetown, and Beaufort, in South Carolina; of Savannah, St. Mary's, Brunswick, and Darien, in Georgia; of Mobile, in Alabama; of Pearl River, Shieldsboro, Natchez, and Vicksburg, in Mississippi; of St. Augustine, St. Marks, Port Leon, St. Johns, Jacksonville, and Apalachicola, in Florida; of Teche and Franklin, in Louisiana; of Galveston, La Salle, Brazos de Santiago, Point Isabel, and Brownsville, in Texas.

On April 29th, President Johnson having succeeded President Lincoln, and "being desirous to relieve all loyal citizens and well-disposed persons residing in insurrectionary States from unnecessary commercial restrictions, to encourage them to return to peaceful pursuits," issued his proclamation ordering that all restrictions upon internal, domestic, and coast-wise commercial intercourse be discontinued

with such parts of the insurrectionary States as were east of the Mississippi River. There were excepted, however, the restrictions prescribed in compliance with any act of Congress, and the following articles contraband of war, to wit: "Arms, ammunition, and all articles from which ammunition is manufactured, gray uniforms and cloth, locomotives, cars, railroad iron and machinery for operating railroads, telegraph wires, insulators, and instruments for operating telegraph lines."

All existing military and naval orders of restriction were revoked. This was the first step toward removing all unnecessary restrictions upon trade in all parts of the Southern States embraced in the lines of military occupation.

On May 9th the Secretary of the Treasury, Mr. McCulloch, issued a series of rules and regulations based upon this order of the President, for the purpose of putting it in immediate operation. These rules and regulations opened the door to trade by declaring, in the first place, that clearances for shipments of goods should be granted upon application of any "loyal person or parties," to such places as under the revenue and collection laws of the United States have been created and declared ports of entry and delivery in the coastwise trade. Under this provision goods of all kinds not declared contraband of war for the time being, could be sent southward, and the pressing needs of the people supplied. The facilities thus offered to the enterprise and capital of the North led to large shipments. Among the articles first sent were such as would enable the agricultural interest to commence work without delay, with a view to an early crop of Southern staples. After articles of merchandise reached one of the locations named by the President, the only restriction upon their sale was the obtaining of a license, which could be had by applying to the nearest officer of the Treasury Department, with the declaration by the person or persons so applying, that he or they are "loyal to the Government," and the payment of the fee prescribed by the internal revenue law. Articles of local production and consumption were totally exempt from the operation of these regulations, and could without fee or restriction be freely transported and sold at such points in the States as the owner or owners might desire. Cotton not produced by persons with their own labor, or the labor of others in their employ, was to be sold to and resold by an agent of the Government appointed for that special duty. Upon this class of cotton twenty-five per cent. of the value thereof was to be paid to the Government. On cotton, the product of the holder's own labor or of others in his employ, three cents per pound as a shipping fee was required.

On May 16th the President issued a proclamation to enjoin upon all naval, military, and civil officers, diligently to endeavor by all lawful means to arrest the Confederate cruisers on the high seas; and he added as follows:

And I further proclaim and declare that if, after a reasonable time shall have elapsed for this proclamation to become known in the ports of nations claiming to have been neutrals, the said insurgent cruisers and the persons on board of them shall continue to receive hospitality in the said ports, this Government will deem itself justified in refusing hospitality to the public vessels of such nations in ports of the United States, and in adopting such other measures as may be deemed advisable toward vindicating the national sovereignty.

On May 16th the Secretary of the Treasury issued a circular of instructions, respecting his regulations issued on the 9th. As the district west of the Mississippi had not been included nor the trade affected by the President's proclamation, the regulations of the previous year continued in full force. The usual clearance and entry of goods at the custom-houses was required for shipments east of the Mississippi, and when products other than cotton were offered for shipment from Southern ports, a certificate of a collector of International Revenue that the tax had been paid, was required.

On May 22d the President issued another proclamation, raising the blockade of the Atlantic Coast, and of the Gulf Coast, except a few ports in Texas, and relaxing the restrictions to all ports east of the Mississippi. The proclamation was as follows:

Whereas, By the proclamation of the President of the 11th day of April last, certain ports of the United States therein specified which had previously been subject to blockade were, for objects of public safety, declared, in conformity with previous special legislation of Congress, to be closed against foreign commerce during the national will to be thereafter expressed and made known by the President;

And whereas, Events and circumstances have since occurred which in my judgment render it expedient to remove that restriction, except as to the ports of Galveston, Lasalle, Brazos de Santiago, Point Isabel, and Brownsville, in the State of Texas;

Now, therefore, be it known that I, Andrew Johnson, President of the United States, do hereby declare that the ports aforesaid, not excepted as above, shall be open to foreign commerce from and after the first day of July; that commercial intercourse with the said ports may from that time be carried on, subject to the laws of the United States, and in pursuance of such regulations as may be prescribed by the Secretary of the Treasury. If, however, any vessel from a foreign port shall enter any of the before named excepted ports in the State of Texas, she will continue to be held liable to the penalties prescribed by the act of Congress, approved on the 18th day of July, 1861, and the persons on board of her to such penalties as may be incurred, pursuant to the laws of war for trading or attempting to trade with the enemy.

And I, Andrew Johnson, President of the United States, do hereby declare and make known that the United States of America do henceforth disallow all persons trading, or attempting to trade, in any ports of the United States, in violation of the laws thereof, all pretence of belligerent rights and privileges, and give notice that from the date of this proclamation all such offenders will be held and dealt with as pirates.

It is also ordered that all restrictions upon trade heretofore imposed in the territory of the United States east of the Mississippi River, save those relating to contraband of war, to the reservation of the rights of the United States, to property purchased in

the territory of an enemy, and to twenty-five per cent. upon the purchases of cotton, are removed.

All provisions of the internal revenue law will be carried into effect under the proper officers.

[L. s.] In witness whereof I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the city of Washington, this, the 22d day of May, in the year of our Lord one thousand eight hundred and sixty-five, and of the independence of the United States of America the eighty-ninth.

ANDREW JOHNSON.

By order of the President:

W. HUNTER, Assistant Secretary of State.

Again, on June 13th, the President issued another proclamation declaring that all restrictions upon internal, domestic, and coastwise intercourse and trade, and upon removal of products of States declared in insurrection, reserving and excepting only those contraband of war, and those relating to the restoration of right of the United States to property purchased in the territory of an enemy and imported, were removed, and that on July 1st all restrictions on foreign commerce with the Southern ports, with the exceptions aforesaid, would be removed.

The proclamation also contained the following respecting the State of Tennessee:

I hereby also proclaim and declare that the insurrection, as far as it relates to and within the State of Tennessee, and the inhabitants of the said State of Tennessee as reorganized and constituted under their recently adopted constitution and reorganization and accepted by them, is suppressed, and therefore also that all disabilities and disqualifications attaching to said State and the inhabitants thereof consequent upon any proclamations issued by virtue of the fifth section of the act entitled "An act further to provide for collection of duties on imports and for other purposes," approved the 13th day of July, 1861, are removed; but nothing herein contained shall be considered or construed as in anywise changing or impairing any of the penalties and forfeitures for treason heretofore incurred under the laws of the United States, or any of the provisions, restrictions, or disabilities set forth in my proclamation, bearing date the 29th day of May, 1865, or as impairing existing regulations for the suspension of habeas corpus and the exercise of military law in cases where it shall be necessary for the general public safety and welfare during the existing insurrection. Nor shall this proclamation affect, or in any way impair, any laws heretofore passed by Congress and duly approved by the President, or any proclamation or orders issued by him during the aforesaid insurrection abolishing slavery, whether of persons or property, but on the contrary all such laws and proclamations heretofore made or issued are expressly saved and declared to be in full force and virtue.

Again, on June 24th, the President issued another proclamation removing all restrictions from the trade of States or parts of States west of the Mississippi, excepting so far as they were retained in Southern States east of the Mississippi, and officers of customs alone were required to exercise supervision.

These repeated proclamations having rendered nugatory in whole or in part the previous regulations issued by the Secretary of the Treasury, a new series was prepared. These declared all restrictions, except as aforesaid, to be removed, and gave to the officers of the cus-

toms all supervision to prevent the shipment of the prohibited articles. The other subordinate officers acting under the previous regulations were discharged. Agents to purchase products on Government account were required to close their business and send forward their resignations. Instructions of similar effect were given to all persons acting under previous regulations except the usual officers of the customs.

On August 29th the President issued his final proclamation, removing all restrictions, as follows:

Whereas, By my proclamation of the 13th and 24th of June, 1865, removing restrictions in part upon internal domestic and coastwise intercourse and trade with those States recently declared in insurrection, certain articles were excepted from the effect of said proclamation as contraband of war; and

Whereas, The necessity for restricting trade in said articles has now in a great measure ceased, it is hereby ordered that on and after the first day of September, 1865, all restrictions aforesaid be removed, so that the articles declared by the said proclamations to be contraband of war may be imported into and sold in said States, subject only to such regulations as the Secretary of the Treasury may prescribe.

In testimony whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this 29th day of August, in the year of our Lord 1865, and of the Independence of the United States the 90th.

ANDREW JOHNSON.

By the President,

WM. H. SEWARD, Secretary of State.

This proclamation restored the commercial intercourse between the several States to the freedom which existed before the war.

In July an International Trade Convention assembled at Detroit. It consisted of four hundred members, and its deliberations were confined principally to subjects relating to the commerce of the States lying directly upon the great lakes, reciprocity, and the Niagara ship-canal. A Committee on Agriculture and Manufactures presented a series of resolutions, which were adopted, declaring that for the purpose of securing a permanent recompense to American labor and its products, as well as from financial necessity, "a discrimination in favor of these productions upon which American labor depends for its present prosperity, should be exercised by the Government when imposing duties upon foreign imports, because when human industry and labor languish, its ability to respond to the excise demands must be correspondingly impaired."

The Convention also recommended that the State of New York should at once proceed to enlarge her canals to such capacity as to allow the passage of ships, and adjust the tolls in favor of Western products. The Transit Committee declared in their report that the annual increase of the productions of the States bordering upon and tributary to the northern lakes had exceeded the capacity of transportation of all avenues to the Atlantic, and that the canals and various lines of railroads to and from those lakes "are wholly inadequate to the demand of the increased and rapidly growing commerce." Hence

they hailed with satisfaction the proposed enlargement of the Welland and St. Lawrence Canals; and demanded, that in the event of the negotiation of any treaty of reciprocity between the United States and British Provinces, the Federal Government should be careful to secure a guaranty of a sufficient depth of water to enable ocean steamers of not less than one thousand tons, cargo-carrying capacity, to pass from Port Colborne, C. W., to tide water.

CONANT, HANNAH O'BRIEN CHAPLIN, an American author, editor, and translator, born in 1812, at Danvers, Mass., died in Brooklyn, N. Y., February 18, 1865. She was the daughter of Rev. Jeremiah Chaplin, D.D., a Baptist clergyman distinguished for his learning, who, for many years, received students in theology into his family for instruction, and who was subsequently the first president of Waterville College. Possessing a remarkable aptitude for acquiring knowledge, and especially for linguistic attainments, and her family associations being almost entirely with eminent scholars, she was, at twenty years of age, far beyond most of her sex in scholarship. At that time she married Rev. Thomas J. Conant, D.D., an eminent Hebraist and Biblical scholar, and for many years a professor in Hamilton Theological Seminary. Though thoroughly domestic in her habits, and having the training of a large and interesting family on her hands, Mrs. Conant found time for literary pursuits, and kept up with the scholarship of the age in those departments which accorded alike with her husband's tastes and her own, the oriental languages and literature, in their bearings upon the Scriptures. At the same time she maintained a very thorough acquaintance with the current literature of the time. In 1838 she entered upon the editorship of the "Mother's Monthly Journal," then published at Utica, N. Y., and the brilliancy and ability of her editorial articles and essays soon won for the periodical a large circulation. In 1844 she translated a religious tale by Strauss, the evangelical court preacher at Berlin, entitled, "Lea; or, the Baptism in Jordan." In 1850-'52 she published translations of Neander's Commentaries on Philipians, John, and James." In 1855 appeared her first original publication (with the exception, we believe, of some Sabbath-school books), "The Earnest Man," a biography in one volume of the missionary Judson. In 1856 she published a "Popular History of English Bible Translation." In 1857, "The New England Theocracy," a translation of an outline of the early ecclesiastical history of New England, by Uden, a pupil of Neander; and in 1859, "The History of the English Bible," a work of great research and of rare ability, and which has become the standard authority on the subject. For more than ten years previous to her death she had resided in Brooklyn, and had been engaged in assisting her husband, who was the principal translator employed by the American Bible Union, in the preparation

of their new version of the Scriptures. For this service, Mrs. Conant's profound acquaintance with the oriental tongues, her complete command of language, and her exquisite literary tastes, admirably fitted her, and her assistance was of great value to the learned professor. But her intellectual activity was not satisfied with these labors. Aside from her home duties, which were never neglected, she found leisure to contribute constantly to the periodical press. Her leading articles and literary and art papers in the New York "Examiner," the "Independent," and other journals, attracted attention by the elegance and purity of their style, and the justice and taste of their criticisms. She had been confined to her house by illness for several months, but a fatal termination of her disease was not apprehended till about a week before her death.

CONFEDERATE STATES. At the beginning of 1865 the Government and people of the Confederate States were apparently as resolute in their policy of resistance and separation as at any previous period, but serious and alarming apprehensions existed lest that policy should ultimately be a failure. Four months previous the Confederacy presented the appearance of territorial compactness with its Northern frontier from the Atlantic to the border of Missouri, protected from invasion by a formidable military defence. The lapse of this short period had served to widen the separation of the Western portion by a more complete Federal occupation of the Mississippi River. Another division had been made between the Mississippi and the Savannah Rivers, and the third extended northward to the Richmond Peninsula and westward to Knoxville in Tennessee. In the Western division the war languished in consequence of the disorganization produced in Gen. Price's forces by the disasters and desertions in Missouri. East of the Mississippi were the remains of Gen. Hood's army, just driven, with severe loss, from before Nashville. It offered protection to the large district embracing a portion of the States of Mississippi, Alabama, Georgia, and Florida, which was confronted by the well-organized and victorious army of Gen. Thomas, whose base was the Tennessee River. The railways in the rear of Gen. Hood on his line of retreat had been injured, and in places torn up. His force was liable to be much reduced by lack of supplies. On the south Mobile was threatened by the Federal fleet and the forces at New Orleans. The Eastern division presented an aspect no more encouraging. Gen. Sherman was preparing to move from Savannah through the Carolinas to cooperate with Grant against Richmond. His successful march through Georgia was an indication that while Thomas held Hood and Grant held Lee, he could, at his pleasure, move anywhere within the interior of the enemy's country. This was certain to take place unless an army could be suddenly created under Beauregard sufficiently strong to stay the progress of

his overwhelming forces. Before he had advanced ten days from Savannah, it was evident the enemy could not resist him, and he would be left free to destroy the communications by which supplies were brought to the armies defending Richmond, and, what was worst of all, to demoralize the labor system and the discipline of the slaves at the most populous points on his route. Thus the Confederacy was broken into fragments, and the annihilation of the military strength of the most important one of these was fearfully threatened.

At the same time the forces actually held in the field were so reduced as to be unable to attempt any serious offensive operation. Mr. Davis, a few months previous, declared in Georgia, that one-third of the army was absent without leave; and probably the number absent was in truth nearer one-half. It was stated in Richmond that from October 1, 1864, to February 4, 1865, nearly 72,000 men had deserted from the Confederate armies east of the Mississippi. The men were at home. In many instances they took no trouble to conceal themselves. Yet there were laws with penalties to be enforced, under which all deserters might be brought back to their posts. Not only was more than half the original territory of the Confederacy now lost, but Savannah and Wilmington had just been taken, and the last of its remaining seaports, Mobile and Charleston, were about to be more seriously threatened than ever before.

At the same time the finances of the Confederacy had reached an exhausted condition. The Treasury was empty, and the Government unable to turn to an available account the large resources of cotton in its possession. The money of the people, which now consisted of Government notes, had declined to such a point as to indicate that the credit of the Government was nearly gone. During the early part of the summer of 1861 gold and silver remained in circulation, although the State banks had suspended specie payments immediately after the secession of each State, but was so rapidly hoarded or bought up for speculation, that it soon disappeared, and gave place to every denomination of "fractional currency" known as "shinplasters." These soon became scattered over the States, and very few were ever redeemed. The Legislatures of the States during the winter gradually caused many of these notes to disappear, leaving the field clear for county and corporation fractional issues. These in turn, during the ensuing year, were made to give way, by further legislative action, to the postage stamps and half dollar notes of the Confederate Treasury. In the summer of 1862 this money became plentiful; but the first issues were limited, and being made upon inferior paper and in a poor style, they were rapidly worn, and soon assumed a miserable appearance. However, bank notes were now withdrawn, although at a premium, and Confederate money formed the entire currency.

The following statement shows the value of gold in this currency at Richmond from October, 1861, to the evacuation of that city:

1861.	For \$1.00 in Gold.	1862.	For \$1.00 in Gold.
October.....	1 10 to 1 15	January.....	1 18 to 1 22
November.....	1 15 to 1 17	February.....	1 25 to 1 26

		February.....	45 00 to 60 00
		March.....	60 00

Standing face to face with these gloomy realities on the one hand, and beholding the North on the other hand swelling still more the numbers of its vast armies and replenishing their stores from almost exhaustless resources, the Southern leaders gave no signs of wavering, nor uttered apprehensions of failure; but the effects of this apparent state of weakness upon the minds of the people were manifest from the measures taken to meet the crisis.

The assembly of the Legislature of Virginia early in January adopted a resolution for the appointment of Gen. Lee to the command of all the armies, which was laid before Mr. Davis, and to which he replied as follows:

EXECUTIVE OFFICE, RICHMOND, January 19th.

Meers. James F. Johnson, President pro tem, of the Virginia Senate, and Hugh W. Sheffield, Speaker of the Virginia House of Delegates.

GENTLEMEN: I have the honor to acknowledge the receipt of your joint letter of the 17th inst., enclosing a resolution of the General Assembly of Virginia, passed on the 17th inst., and communicated in confidence, as directed by the Assembly. This resolution informs me that, in the opinion of the General Assembly of Virginia, the appointment of Gen. Robert E. Lee to the command of all the armies of the Confederate States would promote their efficiency and operate powerfully to reanimate the spirits of the armies, as well as of the people of the several States, and to inspire an increased confidence in the final success of our cause.

In your communication, you kindly assure me that the General Assembly, with a sincere confidence in my patriotic devotion to the welfare of the country, desire, in this critical period of our affairs, by such suggestions as occur to them, and by dedication, if need be, of the entire resources of the Commonwealth to the common cause, to strengthen my hands and to give success to our struggle for liberty and independence. This assurance is to me a source of the highest gratification; and while conveying to you my thanks for the expression of confidence of the General Assembly in my sincere devotion to our country and sacred cause, I must beg permission, in return, to bear witness to the unhesitating spirit with which Virginia has, from the moment when she first drew the sword, consecrated the blood of her

children and all her material resources to the achievement of the object of our struggle.

The opinion expressed by the General Assembly, in regard to Gen. Robert E. Lee, has my full concurrence. Virginia cannot have a higher regard for him, or a greater confidence in his character and ability, than is entertained by me. When Gen. Lee took command of the Army of Northern Virginia, he was in command of all the armies of the Confederate States. By my order of assignment, he continued in this general command, as well as in the immediate command of the Army of Northern Virginia, as long as I could resist his opinion that it was necessary to him to be relieved from one of these two duties. Ready as he has ever shown himself to be to perform any service that I desired him to render to his country, he left it for me to choose between his withdrawal from the command of the army in the field, or relieving him of general command of all the armies of the Confederate States.

It was only when satisfied with this necessity, I came to the conclusion to relieve him of general command, believing that the safety of the Capital and the success of our cause, depended, in a great measure, on then retaining him in command in the field with the Army of Northern Virginia. On several subsequent occasions the desire, on my part, to enlarge the sphere of Gen. Lee's usefulness, has led to renewed consideration of the subject, and he has always expressed his inability to assume the command of other armies than those now confided to him, unless relieved of the immediate command in the field of that army now opposed to Gen. Grant.

In conclusion, I assure the General Assembly that whenever it shall be found practicable by Gen. Lee to assume command of all the armies of the Confederate States, without withdrawing him from direct command of the Army of Northern Virginia, I will deem it promotive of the public interests to place him in such command, and will be happy to know that by so doing I am responding to their expressed desires. It will afford me great pleasure to see you, gentlemen, as proposed in your letter, whenever it may be convenient for you to visit me.

I am, very respectfully and truly yours,

JEFFERSON DAVIS.

About the same time the members of the Virginia delegation in the Confederate Congress, believing that the Confederacy was in extraordinary danger in consequence of serious misfortunes; that the public spirit was depressed; that the apprehensions for the public safety were increased by the belief that the public misfortunes were partially the result of mismanagement, and that one of the most important measures to be adopted was a reconstruction of the Cabinet, resolved to make this opinion known to Mr. Davis as the advice of his friends. The advice was thus tendered by the delegation, that a general reconstruction of the Cabinet was demanded by public sentiment, and was necessary for the restoration of the public confidence. The movement failed to accomplish the end designed. A correspondence ensued between Mr. Davis and his Secretary of War, which was made public. The delegation in a subsequent address say: "Misconceiving the spirit of our proceeding, our distinguished fellow-citizen, Mr. Seddon, without a general reconstruction of the Cabinet, resigned the office of Secretary of War. If we have unintentionally wounded his sensibilities, we deeply regret that such a consequence resulted from our action or from his construction of it.

"In a letter accepting his resignation the President declines to approve the propriety of his decision to resign, because, he adds, 'I can not admit the existence of a power or right in the legislative department of the Government, or in any part or branch of it, to control the continuance in office of those principal officers in each of the Executive Departments whose choice the Constitution has vested in the Chief Magistrate,' etc. He observes that the circumstances which gave rise to Mr. Seddon's resignation are without precedent. In conceding a just and legitimate influence to enlightened public opinion, he denies 'that the declaration of a State delegation, or even of one or both Houses, is entitled to be considered as the authentic expression of such opinion, or as requiring concession from a coördinate department of the Government.'

"The public can now judge how far the discussion of such topics was relevant to our action, and how justly or wisely the publication of such a correspondence, or the spirit which pervades it, responds to the proceedings and purposes of this delegation. That the friendly advice of a delegation, or the more authentic counsel of Congress, should be repelled in such a manner, with such claims and at such a time, is a circumstance which we deplore for the sake of the country, and, let us add, for the sake of the President. It will not provoke us to a resentful controversy. It cannot abate our devotion to the public cause. It does not alter our principles of action. But since, by the publication of this correspondence, members of the Cabinet have (probably with their consent) been placed before the tribunal of public opinion at issue with the Virginia delegation upon the question whether they should have remained or been retained in office, notwithstanding the condition of our country and all the indications of public sentiment, this delegation do not recoil from that issue."

The resignation of Mr. Seddon was followed by the appointment of Maj.-Gen. John C. Breckinridge as Secretary of War.

The Congress was at this time in session at Richmond, having assembled in November, and the public expectation was directed to that body for measures needed to strengthen and reinvigorate the army. The military committee considered that there were two sources of supply to the existing strength of the army: first, by the abolition of all details between eighteen and forty-five years of age; and, secondly, by the consolidation of existing regiments, and the reduction to the ranks of all officers without commands in the field. In their opinion some exceptions were required in the first measure, in order to exempt a limited number of skilled mechanics and citizens, indispensable in producing materials of war in Government establishments. It was proposed to fill the places of able-bodied white men engaged in any sort of labor in or out of the army, with slaves, and to give an unlimited power of detail for all

purposes over men above forty-five years of age. Thus, every able-bodied white man, between eighteen and forty-five, who was not an officer commanding in the field, would become an arms-bearing soldier. Retired and disabled officers and soldiers, and men above forty-five, would fill all other positions and discharge all other duties. It was further proposed to Congress to consolidate existing companies, battalions, and regiments, and to officer them by an examining board, appointed to select from all the officers of the organizations commissioned, those who were best qualified. The officers not selected were to be dropped, and required to organize themselves into companies, battalions, and regiments, to be officered from among themselves.

This measure of consolidation, etc., it was estimated, would add at least ten thousand able-bodied soldiers to the fighting army. It was further contemplated to make some reduction in the list of exemptions, and to create additional guards against the exemption of those fit for service. The proposition to arm the slaves had been incidentally discussed before this period, but was not regarded as a probable measure.

Meanwhile the public press was most vigorous in efforts to rally the military spirit of the people. It called for a prompt and resolute execution of the conscription law, by the apprehension of all who were absent without leave, and the summary execution of all deserters. It declared there was an abundance of bread and meat in the country, but the Commissary Department, or the railroads, were inefficient, and that the details of the former abounded in speculation and partiality. It clamored from all quarters for the appointment of the best officers to the military command, and denounced the executive officers and Congress because its clamors were unheeded, and charged the latter with being predisposed for peace.

In order to improve the condition of the Treasury, it was proposed in Congress to lay a special export duty on cotton and tobacco. Some members advocated the seizure by the Confederacy of all the cotton and tobacco, on the ground that it was necessary to adopt new measures adapted to the altered situation and circumstances. But two resources remained by which to assist the currency and the country: one was to call upon the States to give up to the Government the benefit of their separate State credit; the other was to draw upon the mine of wealth which the country possessed in its cotton and tobacco. The time had come when the issue was clearly presented whether the Government should take the cotton, or "let the Yankees take it." It was further urged, that the wheat, corn, meat, and other products of the country, had been impressed by the Government at rates far below their market value, and there was no reason why cotton and tobacco should be exempted.

The month of January, however, passed away without any action by Congress upon the important measures for strengthening the army or improving the condition of the treasury, or reviving the confidence of the people, and without any vigorous efforts on the part of the Executive to recover absentees from the army, or to check the progress of Sherman, who had begun his northern march from Savannah. On the contrary, advocates of an honorable peaceful settlement of the war had arisen in Congress, asserting that they were sustained by the volume of sentiment in the country and in the army, and by their own sense of duty, and that they were determined, in some form, the statesmanship of the country should be invoked to an honest effort "to end the carnival of death" by negotiation. In Congress a discussion took place upon the subject of peace, and the true course by which to commence the preliminaries. Views like these soon developed a division of sentiment. Those who opposed them, urged that they led directly to disorganization, distraction, and ruin; the "peaceful settlement" proposed, logically meant a reconstruction and submission on the best terms that could be begged. It was doubtless the existence of these views which led Mr. Davis to consent, against his own convictions of success, to appoint three commissioners to confer with President Lincoln, together with the belief that such conference would demonstrate to the Southern people again that subjugation or war were still the only alternatives before them. "Better go down fighting," said the public press, "better be subjugated and conquered than live to reflect that we brought our ruin upon our heads by a deceptive reconstruction." These were the views of Government, the majority of Congress, and of all exercising political authority. No step backward had been taken by its standard bearers since the Confederate flag was first raised aloft. If they might fail, they still seemed to be resolved to disappear forever as Confederates, with its folds waving over them to the last. This spirit was exhibited in the instructions of Mr. Davis to the three commissioners, which were, substantially, that negotiations should be conducted as between two independent nationalities, and that pending the negotiations an armistice of ninety days should be proclaimed.

The recent loss of Fort Fisher had produced a mingled feeling of dismay and indignation against the authorities at Richmond. It was urged that all the disasters of the previous two months had resulted from the policy which permitted Gen. Sherman to march unopposed through Georgia, and diverted Hood across the Tennessee River. This absence of opposition, however, resulted from the misinformation existing in the Cabinet at Richmond in regard to the troops in Georgia who were supposed likely to check Sherman, although he had one of the finest armies ever in the field. Neither did the authorities at Richmond compre-

head the sentiment beginning to prevail extensively in Georgia and South Carolina, and even in North Carolina and Virginia, which was one of strong disaffection. There was a deep conviction existing in those States that the Executive regarded the safety of Richmond as more important than any other point, whereas the loss of particular places in South Carolina, by cutting the communications, would involve the surrender of Richmond.

Amid this unsatisfactory state of public feeling, the peace commissioners returned from Fortress Monroe. Their mission had been an entire failure. A public meeting was at once called for midday in the African Church at Richmond to express the feelings of the people. Mr. Hunter, one of the Commissioners, Mr. Benjamin of the Cabinet, and other persons of eminence in the Confederacy appeared. Mr. Hunter said :

Having called you to order, it is proper that I should explain the object and purposes of this meeting. We stand here to consider the most momentous public issue that ever agitated a nation—one in which is involved the very life and being of a people, the existence of their laws and Government, their liberty and honor. Whatever is sacred in human affections, or dear to the hearts of men, is involved in this contest, and may God grant us the wisdom to devise, and the arm to execute those measures which, under His hand, shall effect our deliverance in this great crisis of our affairs. We are not responsible for the lives that have been given up in this contest, and our skirts are clear of the blood which has been shed. We entered it to maintain the right of self-government—a right which should have been as dear to our enemies as to us. It is a great American idea, the growth of American soil, and should in their eyes be as sacred as it is to us. For four long years we have been engaged in a war, the like of which has not been seen in modern times—the only approximations to which were the wars of Wallenstein and Attila, and the thirty years' war of Germany. And now, after these years of waste and destruction, we have been lately informed by the President of the United States that there can be no peace except upon the conditions of laying down our arms and absolute submission, to come in as rebels, and submit to laws confiscating our property, and awarding the death penalty to our citizens. Nor is this all. We are required to submit to an amendment to the United States Constitution, to turn loose the thousands of slaves in our midst without restraint, and without the education which they would require for self-preservation.

If any thing more was wanting to stir the blood, it was furnished when we were told that the United States could not consent to entertain any proposition coming from us as a people. That Government which makes treaties with the meanest and weakest of nations, tells us, a nation of seven millions of men, with arms in their hands, that it cannot entertain any proposition coming from rebels. Even upon the theory that we were rebels, upon what authority could they refuse to treat with us? There has been no civil war of any magnitude, which has not been terminated by treating. It would seem possible that Lincoln might have offered something to a people with two hundred thousand soldiers, and such soldiers, under arms. Could it be probable to him that we could go into the United States Government as rebels, assuming the responsibility of all the blood that has been shed, confessing that we have kept up a wicked and needless war, submitting to laws confiscating our property, and taking the lives of our people? It is true, he said that these laws would be

administered by him in a spirit of kindness; but when did men ever give to one man the power over their lives and property, and all that they hold dear, trusting to his spirit of kindness, and divesting themselves of the power to resist his tyranny? And it is to be remembered that whenever we go into the Union as a conquered people, we give up the laws of the United States, and must take such as they choose to make for us; and we go in without representation in making those laws; for Mr. Lincoln told us, told me, that while we could send representatives to the Yankee Congress, yet it rested with that Congress to say whether they would receive them or not. Thus we would cast every thing away, and go to them as a subdued, subjugated, and degraded people, to be held in subjection by their soldiery. Nor is all told yet. More than three million slaves are to be let loose, and one billion five hundred thousand dollars' worth of property destroyed at one fell swoop. These slaves are to wander about and become the lazzaroni of the land. The Congress would be continually interfering between the white and black man; the laws would be made by a Congress hostile to us, and any attempt to make these thriftless wanderers useful would be interfered with. If, under the old Government, they interfered with our domestic institutions, what would become of us if we were helpless in their hands, and those hands holding the power to arbitrate in all questions concerning us? They would raise questions about the State laws, and soon sweep away the barrier we might erect for the protection of social order and industry in our midst. But, fellow-citizens, I will not attempt to draw a picture of subjugation which must loom up before the eyes of every man who considers it. It would require a pencil dipped in blood to paint its gloom. I pass from this to the question of what is to become of the slaves. We know that in large districts of our country the men have been taken away by them, and the women left. Who is to support them? Under our system they were provided for and happy. Under their system they must perish; that system will destroy the whole negro race in this country. In the fierce competition for food between the white and the negro, the latter will be blasted like human life before a burning sirocco, and vanish like the mist before the sun. We draw the sword not for ourselves alone, but also for their sake. And the world, which stands coldly looking on, will find that the men whom they have excluded from their sympathy, are the hope of the black race. It was the exclamation of a celebrated French woman: "Oh, Liberty! what crimes are committed in thy name!" and we may parody by exclaiming: "Oh, Philanthropy! how much misery is caused in thy name!" Well may the negro rise up and pronounce judgment against it.

He then presented, in glowing words, the gains which would come with successful resistance, and said: "I trust and believe in the success of our cause. If our people exhibit the proper spirit, they will bring forth the deserters from their caves, and the skulkers who are avoiding the perils of the field will go forth to share the dangers of their countrymen."

Mr. Benjamin, Secretary of State, followed, and alluding to the numbers present and the cheers greeting the sentiments, he said: "How different from one short week ago. It seems an age, so magical has been the change. Then despondency and hope deferred weighed upon us. Men were querulous, and asking if it were true that no honorable peace were attainable except by continued warfare. Then it was said it was our perverse indisposition to negotiate that led to the arrogance of the invader. This

delusion went so far that it penetrated the legislative halls, and threatened the disruption of the harmony of our councils. Now, cheerful voices are heard all around, and hope beams on every countenance."

This great change he ascribed, not to any military successes, not to any new allies in foreign lands to stretch their arms to assist, but to the knowledge which had come to the hearts of the people. "We now know," he said, "in our hearts that this people must conquer its freedom or die."

He proceeded to relate how the peace commission came to be sent and its result, and asked, "What is our present duty? We want means. Are they in the country? If so, they belong to the country and not to the man who chances to hold them now." After portraying the determined spirit with which cotton had been sacrificed on the Mississippi to prevent its falling into the hands of "their enemies," he further said: "I now ask has any man a right to hold a bale of cotton from his country? No! I will say something in regard to tobacco. Take all the cotton and tobacco and make it the basis of means, without which we cannot go on. I want more, I want all the bacon, every thing which can feed soldiers, and I want it as a free gift to the country. Talk of rights! What right do the arrogant invaders leave you? I want another thing. War is a game that cannot be played without men. Where are the men? I am going to open my whole heart to you. Look to the trenches below Richmond. Is it not a shame that men who have sacrificed all in our defence should not be reinforced by all the means in our power? Is it any time now for antiquated patriotism to argue refusal to send them aid, be it white or black?"

Continuing, he said: "Our resources of white population have greatly diminished, but you had 680,000 black men of the same ages, and could Divine prophecy have told us of the fierceness of the enemy's death-grapple at our throats; could we have known what we now know, that Lincoln has confessed, that without 200,000 negroes which he stole from us, he would be compelled to give up the contest, should we have entertained any doubts upon the subject? I feel that the time is rapidly coming on when the people will wonder that they ever doubted. Let us say to every negro who wishes to go into the ranks, on condition of being made free, 'go and fight—you are free.' If we impress them, they will go against us. We know that every one who could fight for his freedom has no chance. The only side that has had advantage of this element is the Yankee people, who can beat us to the end of the year in making bargains. Let us imitate them in this. I would imitate them in nothing else. My own negroes have been to me and said, 'Master, set us free, and we'll fight for you. We had rather fight for you than for Yankees.' But suppose it should not be so? There is no harm in trying. With all my early

attachments and prejudices, I would give up all. It can only be done by States separately. What State will lead off in this thing? South Carolina I know will follow Virginia, as well as every other Southern State, if she but take the lead. When shall it be done? Now, now. Let your Legislature pass the necessary laws, and we will soon have 20,000 men down in those trenches fighting for their country.

"You must make up your minds to try that, or see your army withdrawn from before your town. I came to say disagreeable things. I tell you you are in danger, unless some radical measure be taken. I know not where white men can be had. It is said there are quartermasters' clerks, railroad employes, and men in bomb-proofs, but I tell you there are not enough able-bodied white men in the country. Do you suppose we have worked night after night, by this infamous gaslight you have here, and not found out this thing?"

The further proceedings of the meeting are unimportant. On the next day a member of the House of Congress, long a friend of Mr. Davis, brought forward a bill to give effect to the suggestions of Mr. Benjamin, and providing for the voluntary enlistment of slaves for military service. When the bill was offered in the House a motion was made to reject it, which was lost by yeas 21, nays 53. It did not propose to change the relation of the slaves to their owners except by the consent of the States in which they resided, and in pursuance of the laws thereof. A motion was then made to postpone the matter indefinitely, which was lost; another to refer it to the military committee was also lost; and the motion of the original mover for a select committee passed. The great degree of favor manifested for the bill indicated a radical change of sentiment, which finally, under the influence of events, ended in emancipation. The objections urged against the measure were that it would be virtually staking success in this great struggle on the capacity and fidelity of negro troops; that it would be obnoxious to a large portion of the soldiers; that the proposed liberation of the slaves becoming soldiers at the termination of the war was nothing but abolitionism; that by conscription of the slaves every ground assumed at the commencement of the war would be surrendered; and that it would be a confession of weakness which would operate to disadvantage both at home and abroad.

A resolution had already been offered in the Senate, instructing the Committee on Military Affairs to report a bill with the least possible delay, to take into the military service of the Confederate States, by voluntary enlistment, with the consent of the owners, or by conscription, not exceeding two hundred thousand negro soldiers, but was defeated. At the same time the demand for the appointment of Gen. Lee to the command of all the armies was successful. The appointment was made, and he at once issued the following order:

HEADQUARTERS CONFEDERATE ARMY, Feb. 9, 1863.

By authority of General Order No. 3, from the Adjutant and Inspector-General's office, I assume command of the military forces of the Confederate States. Deeply impressed with the difficulties and responsibility of the position, and humbly invoking the guidance of Almighty God, I rely, for success, upon the courage and fortitude of the army, sustained by the patriotism and firmness of the people, confident that their united efforts, under the blessing of Heaven, will secure peace and independence.

The headquarters of the army, to which all special reports will be addressed, will be for the present with the Army of Northern Virginia. The stated and regular returns, and reports of each army and department will be forwarded, as heretofore, to the office of the Adjutant and Inspector-General.

[Signed] R. E. LEE, General.

The reasons urged in favor of the appointment of Gen. Lee as Commander-in-chief, serve to show the existing evils which it was expected thereby to obviate. The appointment, it was said, would remove a load of anxiety by which all were depressed. They would feel at once that a hand both strong and steady was laid upon the wheel, and that it signified business and battle.

A firm assurance would at once grow up in the minds of the people that the strength and resources of the land would be applied in the wisest and most efficient manner, and that each separate command would be placed in the hands best able to wield it without favor or affection. The armies would eagerly hail such an appointment. But the most marked effect would be upon the Federals. They would understand there was to be no child's play. His name was specially connected with one measure of military necessity before the Congress which he had strongly urged should be passed, the very conception of which implied a grim resolve. It was the demand for negro soldiers.

Two days later he issued the following address to the soldiers:

General Order No. 2.

HEADQUARTERS ARMIES OF CONFEDERATE STATES, }
February 11, 1863.

In entering upon the campaign about to open, the General-in-chief feels assured that the soldiers who have so long and so nobly borne the hardships and dangers of the war, require no exhortation to respond to the calls of honor and duty. With the liberty transmitted by their forefathers, they have inherited the spirit to defend it. The choice between war and abject submission is before them. To such a proposal, brave men, with arms in their hands, can have but one answer. They cannot barter manhood for peace, nor the right of self-government for life or property.

But justice to them requires a sterner animadversion to those who have abandoned their comrades in the hour of peril. A last opportunity is offered them to wipe out the disgrace, and escape the punishment of their crimes. By authority of the President of the Confederate States, a pardon is announced to such deserters and men improperly absent, as shall return to the commands to which they belong, within the shortest possible time, not exceeding twenty days from the publication of this order, at the headquarters of the department in which they may be.

Those who may be prevented by interruption of communication, may report within the time specified, to the nearest enrolling officer, or other officer on duty, to be forwarded as soon as practicable; and upon

presenting certificates from such officer, showing compliance with this request, will receive the pardon hereby offered. Those who have deserted to the service of the enemy, or who have deserted after having been once pardoned for the same offence, and those who shall desert, or absent themselves without authority, after the publication of this order, shall be excluded from its benefits. Nor does the offer of pardon extend to other offences than desertion and absence without permission.

By the same authority it is also declared that no general amnesty will again be granted, and those who refuse to accept the pardon now offered, or who shall hereafter desert or absent themselves without leave, shall suffer such punishment as the courts may impose, and no application for clemency will be entertained.

Taking new resolution from the fate which our enemies intend for us, let every man devote all his energies to the common defence.

Our resources, fitly and vigorously employed, are ample, and with brave armies, sustained by a determined and united people, success, with God's assistance, cannot be doubtful. The advantage of the enemy will have but little value if we do not permit them to impair our resolution. Let us then oppose constancy to adversity, fortitude to suffering, and courage to danger, with the firm assurance that He who gave freedom to our fathers will bless the efforts of their children to preserve it.

R. E. LEE, General.

The portion of this order which appeals to the deserters was not followed by the success desired. Those men, in large numbers, appeared to be tired of the war. The views of Gen. Lee on the future aspect of affairs at this time, are expressed in the following letter:

HEADQUARTERS ARMY NORTHERN VIRGINIA, Feb. 4, 1863.
Brig.-Gen. Henry A. Wise, Commanding, etc.:

GENERAL: I have received the declaration of principles and rights made by your brigade, and return my thanks to yourself, your officers, and men. The spirit evinced in this document is the true one. If our people will sustain the noble soldiers of the Confederacy, and evince the same resolution and fortitude under their trials, which have characterized the army, I feel no apprehension about the issue of this contest. I do not see how we can, by any compromise or negotiation, abate aught of the rights claimed in this admirable declaration, without a surrender of the liberties we derived from our ancestors.

As long as soldiers are animated by such sentiments, and supported by the country, I believe that our overthrow is beyond the power of the enemy.

Very respectfully, your obedient servant,

R. E. LEE, General.

The public sentiment was in advance of Congress on the vital subject of strengthening the army. The calling of the slaves to the field was earnestly urged by Gen. Lee, and the failure of the bill in the Senate for that purpose; as above mentioned, was followed by immediate action on the part of the Virginia Legislature. On February 16th, in the Assembly of that body, the following resolution was reported by the Committee on Military Affairs:

The General Assembly of Virginia, deeply impressed with the importance of calling into active service the whole physical strength of the Confederate States in this momentous crisis, and it being the opinion of the highest military authority that the efficiency of our army may be greatly increased by the enlistment of negroes; therefore

Resolved, By the General Assembly of Virginia, That the Government of the Confederate States is

authorized, and the consent of this State is hereby given, to enlist such number of able-bodied slaves for the military service as may be deemed necessary, upon such terms and under such limitations as may be agreed upon between the Confederate States Government and the owners of such slaves.

The subsequent action of the Legislature led to the final passage of the measure by the Congress. Various propositions were introduced and considered. A bill, however, matured and passed by the House reached the Senate, and was there defeated; but under the action of the Virginia Legislature, her Senators were induced to change their vote, and it was passed. It made no change in the relation of owners of slaves, and authorized the General-in-chief to employ twenty-five per cent. of all between the ages of eighteen and forty-five years in military service, in whatever capacity he might direct. They were to receive the same pay, rations, and clothing, as other troops. At this time the public opinion in favor of the measure had become almost unanimous among both civilians and soldiers. It was passed at too late a moment to be executed with any effect.

Meanwhile, Gen. Sherman was beginning to loom up in the South. He had moved from Savannah with more than his usual vigor, and far more than his usual celerity. A broad track of desolation, sweeping along the great interior lines of railroad, marked his steps. By destroying these roads he deprived the Confederate forces of the feasibility of communication and combination, severed the communications of Gen. Lee with the South, and dissolved all the bonds of slavery. At the same time, Gen. Grant was filling up his ranks and concentrating from all points toward the doomed city, whose fall his army had so long awaited. The growing apprehension at the progress of Sherman caused the reappointment, to command the Army of the Tennessee, of Gen. Johnston, who had been relieved before Atlanta by Gen. Hood, and now succeeded Gen. Beauregard. On this occasion he issued the following order:

General Order No. 1.

CHARLOTTE, NORTH CAROLINA, February 25th.

In obedience to the order of the General-in-chief, the undersigned has assumed command of the Army of Tennessee, and all the troops in the Departments of South Carolina, Georgia, and Florida. He takes this position with strong hope, because he will have in counsel and on the field the aid of the high talents and skill of the general whom he succeeds. He exhorts all absent soldiers of the Army of Tennessee to rejoin their regiments and again confront the enemy they have so often encountered in Northern Georgia, and always with honor. He assures his comrades of that army who are still with their colors, that the confidence in their discipline and valor which he has publicly expressed, is undiminished.

[Signed]

J. E. JOHNSTON.

This change was made in compliance with public opinion, and with the request of Gen. Beauregard.

At this time the new circulation of the Treasury had reached five hundred millions of dollars, but its depreciation was such that currency was scarce both for the use of the author-

ities and the people. The proposition before Congress to impress the cotton and tobacco, contemplated taking a portion of that belonging to each man at a specie valuation, and issuing in payment bonds, payable in specie five years after the end of the war. The property thus impressed was to vest immediately in the Confederacy, and such part as was necessary should be applied to the use of the army, and the remainder to that of the Treasury, for the payment of appropriations. It was further proposed to issue a new class of notes, called "revenue bills," to the amount of two hundred millions of dollars, which were to be paid out for services rendered, and on contracts made after the month of May ensuing. These bills were to be paid out on specie valuations, and to be redeemed in Government cotton at fifty cents a pound, when presented in amount equivalent to the value of one or more bales. When redeemed the bills might be reissued, and the cotton so redeemed from the Government, and all cotton and tobacco transferred by Government, was to be forever after exempt from impressment, and might be unrestrictedly exported to neutral countries. It was further proposed to pay off the Government liabilities by the additional issue of four hundred millions in Treasury notes, and increase the taxes double the rate of the previous year, thereby absorbing the excessive circulation, and paying revenue bills at specie rates in future transactions. The arrears due to the army at this time were so considerable, that private individuals proposed to contribute to the relief of the Treasury for the payment of the troops, and the Secretary signified through the press his desire to receive such assistance. An offer was made by one citizen to be one of twenty-five to contribute two hundred thousand dollars each toward paying Gen. Lee's army.

It was not, however, until the 7th of March when the Congress acted decidedly upon a measure of taxation. The law enacted on that day levied a tax of eight per cent. on all property not expressly taxed at a different rate, on specie and bills of exchange twenty per cent., on currency five per cent. The interest on Government bonds was taxed as income under the existing laws. Upon profits made by buying and selling merchandise, on property of any description during the years 1865 and 1866, a tax of ten per cent. was levied, in addition to the tax on such profits as income, and upon all profits exceeding twenty-five per cent., a tax of twenty-five per cent. The property, income, and moneys of hospitals, asylums, churches, schools, and charitable institutions were exempt from taxation; also all property within the Federal lines, as long as it remained within such lines. The taxes were made due and were to be collected on the first day of June, one-half to be paid in Treasury notes, and the other half at the option of the party, in certificates of indebtedness, without any allowance for interest. It was also provided that upon all the

subjects of taxation mentioned in the act, and in the act approved on the 17th of February, 1864, there should be levied for the year 1865 an additional tax, equal to one-eighth the amount of tax on the same subjects imposed for the year 1865, which tax should be payable in Treasury notes of the new issue, and the money arising therefrom should be first appropriated to the payment of the increased compensation of soldiers, provided that this additional tax should not be construed to apply to or increase the tax in kind. A bill was also passed to raise coin for the purpose of furnishing the necessary supplies for the army, which authorized the Secretary to borrow the sum of three millions of dollars in coin; or, in case of failure, to levy a tax of twenty-five per cent. payable in kind on all the gold and silver coin, gold dust, bullion, and foreign exchange in the Confederate States. A division of public opinion was still apparent upon the measures by which the war could be brought to a close. It reduced the strength of the army, diminished the efficiency of the measures of the Government, and delayed the action of Congress on important measures. Among the methods proposed to arrive at the desired result was the following by Vice-President Stephens:

1. Let President Lincoln issue an address to the army and people of the South, embodying in that address what he has before said as to peace, and also what passed at his interview with the Commissioners.

2. Agree to appoint Commissioners on the part of the United States to meet State Commissioners on the part of such States as desire to meet at Nashville, Louisville, or Cincinnati, in April or May, to consult as to a peace, on the basis of such States returning to the Union upon the sole condition of obedience to the Constitution and laws of the republic.

3. An election by such States as shall send Commissioners to that convention, of Senators and Representatives to the Congress of the United States, to enter such Congress upon equal terms with other members of it, and such States to have equality on the floor of Congress with other States.

Whatever measures might have been proposed, they would have been of no avail without the concurrence of those in whose hands was held the public authority. These, whose official existence depended on final success, with all the ardor and earnestness that could arise only from the most sincere convictions of duty admitted no alternative to success through war. The Congress itself, near the close of its session, united in an appeal to the people to contribute every effort for the cause. This appeal not only presents many truths of the existing state of affairs, but is the last joint declaration ever made of the views and feelings of those who had been foremost in commencing and conducting this terrible strife. It was made, too, within about one month of the time when the organization of the Confederate States was destined to disappear forever from the midst of human affairs. It was as follows:

FELLOW-CITIZENS: The result of the Peace Commission is known to the country. The hopes of

those who have hitherto believed that an honorable termination might be put to the war, by negotiation, have been rudely disappointed. The enemy, after drawing us into a conference, abruptly terminated it by insisting upon terms which they well knew we could never accept. Our absolute surrender and submission to the will of the conqueror are the only conditions vouchsafed by our arrogant foe. We are told that if we will lay down our arms and place our lives, liberty, property, and domestic institutions at the feet of President Lincoln, that he will be merciful to us. Upon his clemency we must rely to save us from universal confiscation and extermination.

Yes; these are the conditions upon which the people of the sovereign States composing this Confederacy may be allowed to do—what? To return into the "Union" from which they solemnly and deliberately withdrew themselves, because their interests and their honor required it, and their repugnance to which four years of remorseless and cruel war have served to intensify. Thanks be to God, who controls and overrules the counsels of men, the haughty insolence of our enemies, which they hoped would intimidate and break the spirit of our people, is producing the very contrary effect. From every part of the country there comes up in response a shout of mingled indignation and defiance.

A noble enthusiasm reanimates our gallant army who have been battling so long for freedom and independence! Let us all be united now. Let there be no parties or factions among us. Let us rise to the might of the great occasion. Let us all be willing to spend and be spent in the cause of our country. Let us contribute freely, all that we have if need be, to carry on the war until our final triumph is secured. Let us take fraternal counsel together, and calmly consider our condition and prospects. Such a survey, we believe, must tend to reassure and encourage even the least sanguine.

We have, it is true, recently met with serious disasters. Our fortune is being severely tried. We have suffered much, and must be prepared to suffer more, in the cause in which we are struggling. Is the cause worth the sacrifice? To answer correctly, we must constantly keep in mind the end for which we are contending. What is our object in this war? The establishment of our independence, through which alone are to be secured the sovereignty of the States and the right of self-government. What is the alternative? Can the imagination over-color the picture which would be presented in the event of our failure? If we fail, not only political degradation, but social humiliation, must be our wretched lot. We would not only be political vassals, but social serfs. An enemy that has shown himself destitute of the ordinary sensibilities of human nature, and whose worst passions are embittered and inflamed against us, would assume the absolute control of our political and social destinies. In vain would a proud though vanquished people look even for that mercy which the conquered receive from a generous foe. Those "State rights" which we have been taught to prize so dearly as the greatest bulwark of constitutional liberty, and which from the earliest period of our history we have so jealously guarded, would be annihilated. The Confederate States would be held as conquered provinces by the despotic Government at Washington. They would be kept in subjugation by the stern hand of military power, as Venetia and Lombardy have been held by Austria—as Poland is held by the Russian Czar. Not only would we be deprived of every political franchise dear to freedom; but socially we would be degraded to the level of slaves, if, indeed, the refinement or malice in our enemies did not induce them to elevate the negro slave above his master. Not only would the property and estates of vanquished "rebels" be confiscated, but they would be divided and distributed among our African bondsmen.

But why pursue the hideous picture further?

Southern manhood revolts at the bare idea of the spectacle presented. Can you think of it unmoved? Can property—can life itself—be so dear to you as to allow you to weigh them for one moment against degradation so abject—against misery so profound? We do not and cannot believe it. If the proud memories and traditions of our first great Revolution do not nerve you to eternal resistance to such a consummation—nor the examples of our forefathers, who wrestled for the independence they bequeathed us during long years of suffering greater than we have endured—let not the precious blood that has been already shed, by our bravest and best in the present struggle, cry out to us from our yet reeking soil in vain! Fruitlessly, indeed, have these sons and brothers—martyrs of liberty—bled and died if we falter now in the path which they have illumined before us.

In the Revolution of '76 our armies and our people suffered far more than we have done. Our cities then were almost all in the hands of the British, and we were entirely cut off from all supplies from abroad, while our facilities for producing them, were infinitely less than they now are. Greene tells us that the battle of Eutaw was won by men who had scarcely shoes to their feet, or shirts to their backs. They protected their shoulders from being galled by the bands of their cross belts, by bunches of moss and tufts of grass. A detachment, marching to Greene's assistance, passed through a region so swept by both armies, that they were compelled to subsist on green peaches as their only diet. There was scarcely any salt for fifteen months, and when obtained it had to be used sparingly, mixed with hickory ashes. We need but allude to the terrible winter which Washington passed at Valley Forge with an army unpaid, half starved, and half naked, and shoeless, to convince us that much as our brave soldiers are now enduring, their forefathers, for a like cause, endured far more.

Washington did not then despair. Lee does not now despair of the final triumph of a righteous cause. Why should we be doubtful, much less despondent, of our ultimate success?

The extent of our territory, the food-producing capacity of our soil, the amount and character of our population, are elements of strength which, carefully husbanded and wisely employed, are amply sufficient to insure our final triumph. The passage of hostile armies through our country, though productive of cruel suffering to our people, and great pecuniary loss, gives the enemy no permanent advantage or foothold. To subjugate a country, its civil government must be suppressed by a continuing military force, or supplanted by another to which the inhabitants yield a voluntary or forced obedience. The passage of hostile armies through our territory cannot produce this result. Permanent garrisons would have to be stationed at a sufficient number of points to strangle all civil government before it could be pretended, even by the United States Government itself, that its authority was extended over these States. How many garrisons would it require? How many hundred thousand soldiers would suffice to suppress the civil government of all the States of the Confederacy, and to establish over them, even in name and form, the authority of the United States? In a geographical point of view, therefore, it may be asserted that the conquest of these Confederates, States is impracticable.

If we consider the food-producing capacity of our soil, we need feel no apprehension as to our ability to feed the people and any army we may put into the field. It is needless to go into details or adduce statistics in proof of this. It is obvious to every well-informed mind. Although the occupation by the enemy, and his ruthless policy of destroying the harvests, granaries, and agricultural implements of our people wherever he moves, had undoubtedly

diminished the amount of our cereals, still, in view of the fact that in every State without exception its agricultural labor has been devoted almost exclusively to the raising of breadstuffs (while before the war it was mainly devoted to the production of cotton, tobacco, and other exports), it is impossible to doubt that there is ample supply of food in the country. It is true that the deportation of our slaves by the enemy, and the barbarous policy reprobated by all authorities on ethics or international law has considerably diminished our agricultural labor. But when we reflect that in 1860, our exports, almost entirely the products of slave labor, amounted to two hundred and fifty millions of dollars, it may be safely assumed that our slaves, though reduced in number, are fully equal to the task of feeding both the population at home and the army in the field. Our transportation, it is true, is defective and inadequate, but this may be indefinitely improved by more energetic efforts and more thorough and systematic organization. We cannot believe, therefore, that on our bountiful soil, so richly blessed by Nature, there is any danger of our failing in this great contest for want of food, or of our being starved into submission to the hateful yoke of the conqueror.

But if we look to the amount and character of our population, we see especial reasons why we should be encouraged to hope for, nay, to be assured of an ultimate success. No people of our number can be subjugated, unless, false and recreant to themselves, their courage, faith, and fortitude fail them. We have upon our rolls a very large army of veteran soldiers. It is true—and it is sad truth to confess—that the number present for duty is terribly disproportioned to the entire aggregate. This is too notorious for concealment, and we have no desire to conceal anything. We wish to speak frankly and truthfully to you of the actual condition of things. The number of absentees from your armies has been a fruitful cause of disaster. On many a hard-fought field the tide of success had turned overwhelmingly in our favor, if all had been present whom duty required to participate in the strife. We will not stop to inquire into the causes of an evil which we have so much reason to deplore. The remedy is plainly in the hands of Congress, and it is our province to apply for it. But it is partly, also, in yours, and we appeal to you to use it. Let every good citizen frown down upon and indignantly discountenance all evasions of military duty—whether temporary or permanent—no matter how plausible the pretext, or how palliating the reason.

No duty in this crisis of our affairs can be more imperative than to fight for one's country, family, and home. Let no skulker, deserter, or absentee without leave from the army be tolerated in any community. Let the reproachful glance of our women, between whose honor and the brutal foe our noble army stands as a flaming sword, drive him back to the field. With proper effort, strict discipline, and an elevated tone of public opinion throughout the country, desertion and absenteeism in the army can be arrested, and all men liable to military duty put into and kept in the ranks of our army. If this be effected, we can maintain in the field a force sufficient to defy subjugation. But it is in the character of our population, especially, that we find those elements of strength which impress us with the conviction that we never can be conquered. Our people are peculiarly military in their characteristics. Better soldiers than those in our army, history has never shown. They have endured extreme hardships, and suffered with a fortitude, and fought against constant odds, with a gallantry that has earned the gratitude of their country and extorted the admiration of the world. But in addition to their military attributes, our people are preeminently of a proud and haughty spirit, and deeply imbued with the spirit of constitutional freedom. 1

belongs to their race and lineage; and, as Burke long ago remarked, their relation to the servile race in contact with them has intensified the feeling and invested this love of liberty with a sentiment of personal privilege. To suppose that a people with such military, political, and social characteristics will ever voluntarily submit to be ruled by any other Government than one of their own choice is too insulting to their pride to be entertained for a moment. And to doubt their capacity to achieve independence, and to maintain themselves as a separate Power among the nations of the earth, is to close our eyes to all the teachings of history—to ignore the proof which our forefathers have stamped upon its pages—to believe that human nature has changed, that we are a degenerate race—unworthy descendants of our Revolutionary sires.

The appointment by the President of Lee as "General-in-chief" has done much to restore confidence to the country, and to reinspire the army. All feel that we may safely repose this weighty trust and responsibility in that great soldier and devout patriot. All feel that we may lean upon him as our tower of strength. All feel that his calm courage and steadfast purpose, his military skill and wise judgment, will enable him to wield our armies with the maximum efficiency and strength. May God strengthen him for the great task to which a confiding people have called him!

To provide means for carrying on the war, Congress has been compelled to impose upon the country a heavy burden of taxation. But heavy as it is, it is not too heavy for the country to bear, and not heavier than our wants imperatively demand. It is impossible to maintain the mighty contest in which we are engaged, without vast expenditures of money. Money can only be raised by loans or taxation. Our condition does not enable us to effect the former. We must of necessity, therefore, resort to the latter. We appeal to you with confidence to submit cheerfully to the burdens which the defence of our country, your homes, and your liberties, render necessary. To contribute according to his means to that defence is as much an obligation upon the citizen as it is to peril his life upon the battle-field.

Let us then, fellow-countrymen, tread in the plain path of duty. No nation that has trod it faithfully and fearlessly ever, in the world's history, has stumbled and fallen. "Nations," says Burke, "never are murdered; they commit suicide." Let us not be guilty of the folly and crime of self-destruction. *** Considered, therefore, in every point of view, is it possible to believe that the people of the Confederate States will ever incur subjugation, or accept submission as the result of the great struggle in which we are engaged? Neither is it possible to believe that these States, compelled, by long years of unjust and unconstitutional action toward them by the Northern States, to withdraw from political union with them, can ever be tempted by any promises, or so-called "guarantees," again to unite themselves under a common government. Forced into this revolution by their faithless disregard of the obligations of the constitutional compact, and by the selfish and sectional legislation which they fastened upon us, what in the course of this war has occurred to change our opinion as to their character and purpose? The barbarity and unrelenting ferocity which has characterized their conduct of it, has excited the indignant wonder of the world. Falsehood, duplicity, and mean cunning, marked their course in its inauguration; and, in its progress, every artifice of low diplomacy and persistent misrepresentation has been resorted to by them to lessen us in the estimation of mankind. Our struggle for the right of self-government—which they themselves have always declared to be inalienable—has been held up to the world as a contest for the maintenance of African slavery—a purely State institution, over which neither the Confederate State Government nor the

United States Government has any constitutional control. To prevent foreign nations from according to us that recognition to which we were entitled by public law, and even the very language of existing treaties—a recognition of which they have themselves accorded to other countries on far slenderer grounds—they have deliberately falsified accounts of military operations, and our capacity and resources for continuing the contest.

A war which has been carried on for four years with every varying fortune, their ministers of state have again and again assured foreign powers could not possibly be waged by us for more than two or three months. And after all their insolent boasts of their power to crush us, they have been compelled to resort to foreign enlistments, and the arming of our captured slaves, in order to fill up the ranks of their armies. In spite of these practices, winked at, if not countenanced by European powers—they have practically confessed their inability to vanquish us in regular warfare, by the inhuman policy of destroying the dwellings, the food, and the agricultural implements of our non-combatant population—thus endeavoring, by the starvation of their wives and children, to break the indomitable spirit of our soldiers.

In the invasion of our soil neither private property, nor age, nor sex, has been spared from the rapacity and brutal passions of their mercenary legions. Wherever they have passed over the surface of our fair land, the blackness of desolation has marked their path, and such barbarous desolation has been their boast. Public records have been destroyed—institutions of learning—public and private libraries—pillaged or burned, and the temples of God sacrilegiously defiled.

Fellow-countrymen, will you, can you ever submit to be ruled by such a people? Can you ever join hands with them in fraternal union? Can you with all these things freshly before you—daily occurring on your native soil—ever return to political union with these despoilers of your houses, these violators of your wives and daughters? Never! A dark crimson stream divides you, which all the skill of negotiation can never bridge over. The Southern people have determined to be free and independent, and if their fortitude and courage do not fail them, it is impossible to doubt the issue. But there must be no halting, no hesitation, in the only path that leads to the goal. We must prove to our enemies, and prove to the world, that we cannot be conquered. We must convince them that though our soil may be overrun, the faith of our people in the great cause for which they are contending is unbroken, is unchanged—their will invincible. Let us emulate the example of the Russian people when invaded by the great army of Napoleon. Let us be willing to make any and every sacrifice, and consider it but a mere offering on the altar of our country. By the light of the blazing ruin of what had once been a proud palace, Napoleon read this inscription, which Rostopshin had affixed to his gate: "Frenchmen! I have spent eight years in embellishing this residence. Here I have lived happily in the bosom of my family—the inhabitants of this estate, numbering seventeen hundred and twenty persons, have quitted it at your approach; and I have, with my own hands, fired my beloved home, to prevent its pollution by your presence!" Shall our patriotism be colder and more calculating than that of the subjects of a despotic ruler? Have we less reason to resist—less reason to detest the invading armies of the North, than the Russians had to oppose and hate the French? Our enemies, with a boastful insolence unparalleled in the history of modern civilization have threatened not only our subjugation, but some of them have announced their determination, if successful in this struggle, to deport our entire white population, and supplant it with a new population, drawn from their own territory and European countries! While such

a threat may well excite our ridicule and contempt, the devilish spirit which prompts it must provoke in us an indignation that would render the feeblest people invincible! Think of it!!! That we, the descendants of a brave ancestry, who wrested from a powerful nation, by force of arms, the country which we inhabit—bequeathed to us by them, and upon which we have been born and reared; that we should be uprooted from it, and an alien population planted in our stead, is a thought that should inspire us with undying hostility to an enemy base enough to have conceived it. Every motive of honor and of self-interest, of patriotism and of domestic affection, every sentiment of manhood and self-respect, unite in nerving us to resist, to the last extremity, our cruel invaders. Success gives us a country and a proud position among the nations of the earth. Failure makes us the vassals of an arrogant people, secretly, if not openly, hated by the most enlightened and elevated portions of mankind. Success records us forever in letters of light upon one of the most glorious pages of history. Failure will compel us to drink the cup of humiliation even to the bitter dregs of having the history of our struggle written by New England historians! Success is within our reach.

Early in the month of March the movements of Sherman and others, in cutting off the railroad communications, were felt at Richmond. The subsistence of Gen. Lee's army was greatly jeopardized. Virginia and North Carolina were the only remaining States from which supplies could be expected. These were also dependent on the voluntary action of the people. Gen. Lee, in an appeal to the inhabitants of Virginia, said: "I cannot permit myself to doubt that the people will respond to it when they reflect upon the alternative presented to them. They have simply to choose whether they will contribute such commissary and quartermaster stores as they can possibly spare to support an army which has already done and borne so much in their behalf, or, retaining their stores, maintain the army of the enemy engaged in their subjugation. I am aware that a general obligation of this nature rests lightly upon most men—each being disposed to leave its discharge to his neighbor—but I am confident that our citizens will appreciate their responsibility in the case, and will not permit an army which, by God's blessing and their patriotic support, has hitherto resisted the efforts of our enemy, to suffer through their neglect." In the same strain Governor Vance appealed to the people of North Carolina. County and neighborhood meetings were convened, subscriptions of provisions were taken, either as sales, loans, or donations. Very considerable quantities were thus obtained.

The Government attached less importance to Richmond, as a point never to be evacuated or surrendered, than the State authorities. Mr. Davis expressed his views on the evacuation, not only in public assemblies, but in messages to Congress. His views were that, if the campaign of the previous year against Richmond had resulted in success instead of failure; if he had been compelled to evacuate Richmond as well as Atlanta, the Confederacy would have remained erect and defiant as ever. Nothing could have been changed in the purpose of its

government, in the indomitable valor of its troops, or in the unquenchable spirit of its people. The baffled and disappointed foe would in vain have scanned the reports of their proceedings at some new legislative seat for any indication that progress had been made in the gigantic task of conquering a free people. There were no vital points, on the preservation of which the continued existence of the Confederacy depended. There was no military success of the enemy which could accomplish its destruction. Not the fall of Richmond, nor Wilmington, nor Charleston, nor Savannah, nor Mobile, nor of all combined, could affect the issue of the contest. Members of his cabinet and many of the public papers expressed similar opinions. There were others, on the contrary, who believed and openly declared this opinion would be a fatal error; that the evacuation of Richmond would be the loss of all respect and authority toward the Confederate Government, the disintegration of the army and the abandonment of the scheme of an independent Southern Confederation; that the hope of recognition among nations would be gone forever; that its loss would be the material ruin of the cause, and in a moral point of view absolutely destructive, crushing the heart and extinguishing the last hope of the people. It would be the abandonment of Virginia, and with her North Carolina and Tennessee, forever. These views with others to be hereafter noticed subsequently exerted a decisive influence on the continuance of the war.

It had now become apparent to all, that as a result of Gen. Grant's plans, the dangers of Richmond were rapidly increasing. Gen. Sheridan had made his march up the Shenandoah valley; an unknown force, supposed to be Gen. Thomas's, was known to be moving east from Knoxville, in Tennessee, while Grant held Gen. Lee at Richmond, and Gen. Johnston was left to confront, as best he might, the steady progress of Gen. Sherman, awaiting whom there was a large coöperating force which had captured Wilmington and advanced toward Raleigh, the capital of North Carolina. The Congress at Richmond was on the eve of adjourning *sine die*, when their departure was delayed by a message from Mr. Davis. Once more and for the last time, as it proved, he addressed them. He deemed it to be his duty to request a postponement of the adjournment, in order that he might submit to their consideration certain matters of public interest. The country is now environed with perils, which it is their duty calmly to contemplate. Recent military operations of the enemy have been successful in the capture of some of their seaports and in devastating large districts of their country. He then says: "The capital of the Confederate States is now threatened, and it is in greater danger than it has heretofore been during the war. The fact is stated without reserve or concealment, as due to the people, whose servants we are, and in whose courage and constancy entire trust is

reposed; as due to you, in whose wisdom and resolute spirit the people have confided for the adoption of the measures required to guard them from threatened perils."

The message proceeded to say that men and money were both wanted for carrying on the war. The measures adopted by Congress were insufficient either to supply the Treasury or to fill up the ranks of the army. The bill for arming the negroes had been passed so late as to lose much of its value. All class exemptions should be repealed; a general militia law was required; and the writ of *habeas corpus* should be suspended. At the same time it was further stated that a prospect of opening negotiations between Gens. Grant and Lee had disappeared, and it was evident that "neither with the Confederate authorities of any State, nor through the commanding Generals, will the Government of the United States treat or make any terms for the cessation of hostilities. There remains, then, for us no choice but to continue this contest to a final issue; for the people of the Confederacy can be but little known to him who supposes it possible they would ever consent to purchase at the cost of degradation and slavery, permission to live in a country garrisoned by their own negroes, and governed by officers sent by the conqueror to rule over them."

This message (*see* PUBLIC DOCUMENTS) was regarded by Congress as asserting that the public interests were likely to suffer from their defective legislation. In the Senate a select committee made a report, confined to the specific allegations of the President, and intended to show that whatever culpability there might be, it did not lie at the door of the legislative department. It admitted the inference that the culpability must have arisen from faulty administration, but with admirable forbearance repressed any disposition to retort by setting forth details. In the House the message was referred to the Committee on Military Affairs, who made a report stating why measures repealing all class exemptions, and enacting a general militia law, were not adopted, and saying: "Congress had placed at the disposal of the President all male persons between the ages of fifteen and fifty, and the committee could not see that advantage could accrue from the passage of a general militia law, but were of the opinion that the power would be more efficient in the hands of the Governors of the States."

"So far as the question of putting negroes in the service as soldiers was concerned, the committee remarked that the President himself, and the Minister of War had both declared against the immediate expediency at the beginning of the session. Hence it was not earlier considered."

The Congress adjourned on March 18th, without further action on the message. A bill was, however, passed to enable the Secretary of the Treasury to procure specie from any State in exchange for Treasury notes at market rates, *etc.* Mr. Miles, also, from a joint select com-

mittee, reported an address to the people, inserted on a preceding page.

Here closes the history of the important civil measures by the Confederate Government at Richmond. All that remains is the dire conflict of arms, and the surrender or flight of the vanquished. The boldness of the confidence expressed by the leaders up to this moment, which doubtless excites the wonder of the reader, was honest and sincere. Richmond had withstood an assault of three years, and her position, under the defence of Lee, had come to be looked upon as impregnable. Three-fourths of a year Grant had been held before Petersburg, and all his efforts to reach the western communications of the capital had in every instance been thwarted. Even at this very period, Sheridan, leaving Winchester and sweeping all opposition before him up the valley of the Shenandoah with his body of military horsemen, aimed to reach Lynchburg, but on approaching the James west of Richmond, found himself confronted by a swollen and impassable stream. Falling back, and moving round the left wing of Lee's army, he joined Gen. Grant before Petersburg. So long as Gen. Lee could hold Grant back from the west of Richmond, the Confederacy was safe; and no one supposed the hour was near when the former could be defeated.

On March 26th, Gen. Sheridan with his command reached City Point. Three days afterward he began to move, with his command supported by the 5th corps of infantry under Gen. Warren, and the 2d corps under Gen. Humphrey, against the Southside Railroad. To resist him Gen. Lee detached from the lines at Petersburg, Gens. Pickett's and B. Johnson's divisions of infantry, Gen. Huger's battalion of artillery, and F. Lee's division of cavalry; at the same time he called upon Gen. Longstreet, who commanded the forces north of the James, for men to strengthen the positions thus weakened. On the morning of Sunday, April 2d, before Gen. Longstreet could obey the orders of Lee, Gen. Grant had detected the weakness of the line, and prepared an attack. His forces carried with slight opposition the outer Confederate line, which was thinly held by Gen. Heth's division, then pressed inward, striking two of the detached forts, of which there was a series behind the whole length of the outer works. The two detached forts were named Gregg and Alexander. The former was carried, after terrific opposition, and the latter evacuated at the outset. The Federal forces then swept onward toward Petersburg, but were checked in their progress by Gen. Longstreet, until a fresh line was formed before the city. At this time, Mr. Davis, while at church, received information from Gen. Lee that he could no longer resist the progress of Grant. No further onslaught was made by the Federal forces during the ensuing night, but at dusk Gen. Ewell with all the troops under his command north of the James (about 4,000) fell back from their lines and passed

through the excited streets of Richmond, and before daybreak had crossed the bridges over the James, which were soon after given up to the flames. At about the same hour the Confederate troops began to leave Petersburg, having set on fire the cotton stored there. They crossed over to the north side of the Appomattox River on a pontoon bridge, and advanced sixteen miles during the night. Their retreat was covered by Gen. Field's division, under Gen. Longstreet. No pursuit was made by Gen. Grant, who was aiming to intercept the retreat further westward.

The plan of Gen. Lee, who was highly gratified to find his army safe out of the breastworks, was to recruit his forces with the supplies he hoped to find at Amelia Court House, and to fall in detail upon Grant's forces, which having in view a vigorous pursuit, were breaking up into bodies of one or two army corps, and scattered over the country. But at Amelia Court House no supplies whatever of provision were to be found, although urgent and precise orders had been issued for this purpose two weeks previous. In this dilemma, the first object before the commander was to procure supplies for his troops. For this purpose, nearly half his army was required for foraging parties. The country on the line of his march consisted of straggling woods and pine barrens, with occasional patches of clearings. In search of food, the foraging parties were obliged to go considerable distances, and, thus divided and scattered, large numbers were captured by Gen. Grant's forces. The retreat is thus described by a writer familiar with its scenes:

"Those foragers who returned to Lee brought little or nothing with them. The suffering of the men from the pangs of hunger has not been approached in the military annals of the past fifty years. But the suffering of the mules and horses must have been even keener; for the men assuaged their cravings by plucking the buds and twigs of trees just shooting in the early spring, whereas the grass had not yet started from its wintry sleep, and food for the unhappy quadrupeds there was none. As early as the morning of the 6th, Lee sent off half his artillery toward the railroad, to relieve the famished horses. The artillery, making slow progress, thanks to the exhaustion of the horses, was captured by the Federals on the 8th.

"It is easy to see that the locomotion of an army in such a plight must have been slow and slower. The retreat was conducted in the following fashion: About midnight the Confederates slipped out of their hasty works, which they had thrown up and held during the previous day, and fell back until 10 or 12 o'clock the next morning. Then they halted, and immediately threw up earthworks for their protection during the day. It was not long before the wolves were again on their heels, and from their earthworks the Confederates exchanged a heavy fire with their pursuers throughout the day. Delayed with the necessity of guarding

an ammunition train from thirty-five to forty miles in length, enfeebled by hunger and sleeplessness, the retreating army was only able to make ten miles each night. The delay enabled the active Sheridan to get ahead with his cavalry, and to destroy the depots of provisions along the railroad between Burkville and Danville. Upon the 5th many of the mules and horses had ceased to struggle. It became necessary to burn hundreds of wagons. At intervals the enemy's cavalry dashed in, and struck the interminable ammunition train here and there, capturing and burning dozens upon dozens of wagons. Toward evening of the 5th, and all day on the 6th, hundreds of men dropped from exhaustion, and thousands let fall their muskets from inability to carry them any further.

"The scenes of the 5th, 6th, 7th, and 8th, were of a nature which can be apprehended in its vivid reality only by men who are thoroughly familiar with the harrowing details of war. Behind, and on either flank, an ubiquitous and increasingly adventurous enemy—every mud-hole and every rise in the road choked with blazing wagons—the air filled with the deafening reports of ammunition exploding, and shells bursting when touched by the flames—dense columns of smoke ascending to heaven from the burning and exploding vehicles—exhausted men, worn-out mules and horses, lying down side by side—gaunt famine glaring hopelessly from sunken, lack-lustre eyes—dead mules, dead horses, dead men everywhere—death, many times welcomed as God's blessing in disguise—who can wonder if many hearts, tried in the fiery furnace of four years' unparalleled suffering, and never hitherto found wanting, should have quailed in presence of starvation, fatigue, sleeplessness, misery—unintermitted for five or six days, and culminating in hopelessness?

"Yet there were not wanting occasional episodes which recalled something of the old pride of former memories, and reminded men that this hunted, famished crowd was still the same army that had won two Bull Runs, which had twice (in pursuit of a fatal policy) trodden its enemy's soil, and had written Fredericksburg, Chancellorsville, and a dozen other names upon its banners.

"The reader will have gathered that when Gen. Lee found his depots along the Danville road destroyed by Sheridan, he had no alternative but to make for Lynchburg. He still hoped to get rations and to turn suddenly upon Grant, whose army was dispersed into many columns. The fatigue of the pursuit, though unaggravated by famine, was beginning to tell upon the pursuers. But in pressing for Lynchburg, Lee found himself in a dangerous predicament. He was on a strip of land, not more than seven or eight miles broad, between the James and Appomattox Rivers. On the afternoon of the 7th, Lee's situation seemed so unpromising, that Grant, for the first time, sent to propose surrender. Lee at once replied that

his circumstances did not seem to him such as to justify his entertaining such a proposal. On the morning of the 8th, Grant renewed his solicitations. Lee did not decline, but debated the matter, calling a council of war in the evening. No determination was arrived at on the 8th, and at midnight the usual dreary retreat was resumed. The springs of energy and will, unstrung by long want of food, had run down in the men like the machinery of a broken clock. Hitherto the retreat had been covered by Longstreet and Gordon alternately, but now the Federal force, which had got ahead of Lee and was obstructing his retreat, had become so considerable that Gordon was thrown out with 2,000 men in front, while Longstreet, whose pluck neither hunger, nor fatigue, nor depression could abate or subdue, still covered the rear.

"At daybreak on the 9th, a courier from Gordon announced to Lee that a large body of Federal cavalry (in other words, Sheridan's army) was across the road at Appomattox Court House. At the same moment a heavy force of infantry under Grant was pushing Longstreet vigorously in the rear. Between Longstreet and Gordon were the remaining wagons, and clinging to them thousands of unarmed and famished stragglers too weak to carry their muskets. Lee sent orders to Gordon to cut his way through, *coute qu'il coute*. Presently came another courier from Gordon, announcing that the enemy was driving him back. Lee had at this moment less than 30,000 men with muskets at their hands. The fatal moment had indisputably come. Hastily donning his best uniform, and buckling on his sword, which it was never his fashion to wear, Gen. Lee turned sadly to the rear, to seek the final interview with Gen. Grant.

"There is no passage of history in this war which will, for years to come, be more honorably mentioned and gratefully remembered than the demeanor on the 9th of April, 1865, of Gen. Grant toward Gen. Lee. I do not so much allude to the facility with which honorable terms were accorded to the Confederates, as to the bearing of Gen. Grant and the officers about him toward Gen. Lee. The interview was brief. Three commissioners upon either side were immediately appointed. The agreement to which these six commissioners acceded is known.

"In the mean time, immediately that Gen. Lee was seen riding to the rear, dressed more gayly than usual and begirt with his sword, the rumor of immediate surrender flew like wild-fire through the Confederates. It might be imagined that an army, which had drawn its last regular rations on the 1st of April, and harassed incessantly by night and day, had been marching and fighting until the morning of the 9th, would have welcomed any thing like a termination of its sufferings, let it come in what form it might. Let those who idly imagine that the finer feelings are the prerogative of what are called the 'upper classes,'

learn from this and similar scenes to appreciate 'common men.' As the great Confederate captain rode back from his interview with Gen. Grant, the news of the surrender acquired shape and consistency, and could no longer be denied. The effect on the worn and battered troops—some of whom had fought since April, 1861, and (sparse survivors of hecatombs of fallen comrades) had passed unscathed through such hurricanes of shot as within four years no other men had ever experienced—passes mortal description.

"Whole lines of battle rushed up to their beloved old chief, and, choking with emotion, broke ranks and struggled with each other to wring him once more by the hand. Men who had fought throughout the war, and knew what the agony and humiliation of that moment must be to him, strove with a refinement of unselfishness and tenderness which he alone could fully appreciate, to lighten his burden and mitigate his pain. With tears pouring down his cheeks, Gen. Lee at length commanded voice enough to say, 'Men, we have fought through the war together. I have done the best that I could for you.' Not an eye that looked on that scene was dry. Nor was this the emotion of sickly sentimentalists, but of rough and rugged men, familiar with hardships, danger, and death in a thousand shapes, mastered by sympathy and feeling for another what they never experienced on their own account."

Thus Richmond had fallen, and General Lee and his army were prisoners of war. Mr. Davis, who had left Richmond with the members of his cabinet at the time of its evacuation by the army, selected Danville as the temporary seat of Government, and here a proclamation was issued. (See ARMY OPERATIONS.)

Admiral Semmes, formerly of the Alabama, was made a brigadier-general and placed in command of the defences of that place, which were manned by a naval brigade transformed into batteries of light artillery, supported by one or two battalions of troops belonging to the Virginia army, who had been absent on furlough, and were then returning to their respective commands at Petersburg. At Danville the fugitive Government remained secure until authentic information was received of the surrender of General Lee and his army, when it hurried away by railroad to Greensboro, North Carolina; here a mounted escort of Mississippians, belonging to the army of Virginia, was provided for Mr. Davis, attempts to take whose life had been made three times before leaving Richmond. On April 18th, he and his Cabinet, consisting of Secretaries Benjamin, Breckinridge, Mallory, Postmaster-General Reagan, and the following named officers belonging to the President's staff, viz.: Col. J. P. Wood, Colonel Thomas L. Lubbeck (formerly Governor of Texas), Colonel William Preston Johnston (son of General Albert Sidney Johnston), and Colonel Burton N. Harrison (Private Secre-

tary), set out from Greensboro', on horseback, to seek a place of greater safety further South. Two divisions of cavalry, commanded by Generals Debrill and Ferguson, were detached from General Wheeler's corps, to protect and guard the front and rear of the cavalcade. A long wagon train, containing the personal baggage of the cabinet, and the most valuable archives of the waning Government, also composed a part of the column. It wound leisurely along from twenty to twenty-five miles a day, until it arrived at Charlotte, N. C., where a halt was made for four or five days during the negotiations between Generals Sherman and Johnston, which Mr. Davis approved, as the only thing that could be done under the circumstances. Upon the refusal of President Johnson to approve the negotiations, Mr. Davis and his Cabinet set out on their journey southward with all possible speed. Abbeville, South Carolina, was reached on May 1st, and on the same night a further advance of forty-two miles was made, and on the next morning crossed the Savannah on a pontoon bridge, and reached Washington, Georgia.

On the 4th of May Mr. Davis determined to dispense with his cavalry force, and on taking leave of the commander of the escort, said: "I expected to cut my way through to a place of safety with the two divisions of cavalry along with me, but they have become so much demoralized by the reports of stragglers and deserters from Johnston's army that I can no longer rely upon them in case we should encounter the enemy. I have, therefore, determined to disband them, and try to make my escape, as a small body of men can elude the vigilance of the enemy easier than a larger number. They will make every endeavor in their power to capture me, and it behooves us to face these dangers as men. We will go to Mississippi, and there rally on Forrest, if he is in a state of organization, and it is to be hoped that he is; if not, we will cross the Mississippi River and join Kirby Smith, and there we can carry on the war forever. Meet me south of the Chattahoochee, as this department has been surrendered without my knowledge or consent." Six days after, he was captured. (*See ARMY OPERATIONS.*)

It became apparent at once to the Southern people, that with the loss of Richmond and the army of Gen. Lee, the war might degenerate into an irregular contest, in which passion would be the controlling motive; the area of conscription would become so narrowed as greatly to reduce the military strength; the civil organization was gone; the treasury and commissariat were exhausted, and all those means which were necessary to sustain a cause depending upon popular faith and enthusiasm. But another and more alarming danger now began to threaten them. The demoralization among the slaves, produced by the war and its incidents, had reached such an extent as to convince the people that in a longer continuance of hostilities they would be compelled to fight

not only the armies of the North, but also their own slaves. The horrors of such a contest were too terrible to contemplate. The only alternative, of submission to the United States, was accepted at once. Arms, and munitions, and men, surrendered, from the James River to the Rio Grande. Hostilities ceased entirely, and the work of civil reconstruction commenced.

CONFISCATION. Soon after the cessation of hostilities, steps were taken in various parts of the South to enforce the Confiscation laws. Preparations were made in Richmond, Va., in July to condemn the property of various persons who came within the provision of the President's amnesty proclamation, known as the twenty thousand dollar clause. Notices were served upon the tenantry of several landholders of supposed wealth to pay no more rent to the parties from whom they rented the property. These proceedings, however, were not carried to the extent of condemnation. In September it was said by the District Attorney, Mr. Chandler, of Norfolk, that he had received orders to suspend all actions for confiscations.

Grave charges were made in reference to the returns made to Government as the proceeds of sales of property confiscated, and it was asserted that the net amount realized by the Government from the confiscation sales of property in New Orleans did not exceed \$100,000, although the sales included valuable properties in that city.

The case of the *United States vs. Leroy M. Wiley* (see *CYCLOPEDIA* for 1863, p. 220), came up before the Supreme Court of the United States on a motion in behalf of Mr. Wiley to dismiss the writ of error and appeal of the United States, on the ground that the President's pardon and the acceptance and compliance of the terms thereof by the defendant, discharged and remitted the forfeiture for which sentence of condemnation was pronounced in the District Court, by pardoning the acts by which alone, if at all, that forfeiture was incurred. The decision was not given before the close of the year.

The case originated in an information filed in a District Court of the United States, and one Charles Gould named as the informer, under the acts of Congress of 1861 and 1862, commonly known as the "Confiscation acts," for the confiscation and forfeiture of 1,756 shares of the capital stock of the Great Western Railroad Company of 1859, and of upwards of \$50,000 due on coupons of bonds of the same corporation as property of the defendant on the twofold ground alleged in the information:

1. Of alleged use of property by Mr. Wiley in aid of the Rebellion, under the act of 1861; and,
2. Alleged treasonable acts of Mr. Wiley, under act of 1862.

The motion to dismiss this case was announced by Mr. Laroque, in its support.

It involved the question: "Does the Presi

dent's pardon remit the forfeiture of rebel property, and reinstate the rebel in all his rights thereto?"

On the reorganization of the Southern States proceedings in cases of confiscation were suspended, and in Florida the decree was reconsidered in cases not closed, and the defendant allowed a rehearing, with the liberty of pleading the President's pardon.

CONGREGATIONALISTS. The most important event in the recent history of American Congregationalism is the National Council, which met, according to appointment, at Boston, on June 14th. The Council organized by electing Governor Buckingham, of Connecticut, Moderator. Among the prominent men attending the Convention were Dr. Edward Beecher and his brothers, Henry Ward and Charles; Rev. Dr. Patten, of Chicago; Rev. Dr. B. P. Stone, of Concord, N. H.; Dr. Labaree, President of Middlebury College, Vt.; Judge Parish, of Ohio; Senator Pomeroy, of Kansas; Gov. Smith, of Vermont; President Hopkins, of Williams College; Prof. Park, of Andover Seminary; and from abroad, Rev. Dr. Vaughan, editor of the "*British Quarterly*;" Rev. Dr. Raleigh, an eloquent Scotchman; Rev. Dr. George Smith, Secretary of the British Congregational Union; and Rev. Mr. Monod, son of a distinguished French divine.

The different states of the Union were represented among the delegates to the Convention as follows:

California.....	4	Missouri.....	3
Colorado.....	2	New Hampshire.....	33
Connecticut.....	55	New York.....	41
Delaware.....	1	New Jersey.....	2
Illinois.....	38	Nebraska.....	2
Indiana.....	3	Oregon.....	1
Iowa.....	32	Ohio.....	30
Kansas.....	6	Pennsylvania.....	6
Maryland.....	2	Rhode Island.....	4
Massachusetts.....	97	Tennessee.....	1
Minnesota.....	10	Vermont.....	14
Maine.....	38	Wisconsin.....	22
Michigan.....	25	Whole number.....	492

One of the first acts of the Council was to adopt (on June 15th) the following address to President Johnson:

The National Congregational Council, now in session in Boston, representing nearly 3,000 churches in all sections of the country, desire to present you their Christian salutations, to assure you of their profound sympathy in your great and trying labors, to promise you their loyal support and their prayers, and express their solemn conviction that the hundreds of thousands embraced as worshippers in our churches will most heartily coöperate with you in extending the institution of civil and religious liberty throughout the land.

WILLIAM A. BUCKINGHAM, Moderator.

The reply of the President to this address was as follows:

WASHINGTON, June 19.

To Gov. Wm. A. Buckingham, Moderator of the National Council of Congregational Churches, Boston: I received with profound thanks the despatch of your Council. In the arduous and embarrassing duties devolved upon me I feel the need of the coöperation and sympathy of the people, and of the assistance of the Great Ruler of the universe. These duties I shall endeavor to discharge honestly and to

the best of my judgment, with the conviction that the best interests of civil and religious liberty throughout the world will be preserved and promoted by the success and permanency of our country. Let us all labor to that end, and the mission upon which this people have been sent among the nations of the world will be accomplished.

ANDREW JOHNSON.

On June 19th the Rev. Dr. Post, Chairman of the Committee on the State of the Country, reported a series of resolutions, ascribing thanksgiving to Almighty God for the victory over rebellion and the results of that triumph, giving praise to the army and navy, and expressing sympathy for the friends of the fallen; expressing deep indignation at the assassination of the late President Lincoln, and extending to his successor assurances of sympathy and coöperation; denouncing the rebellion as transcending the enormities of treason recorded in the history of any other country; urging the Government, while blending mercy with justice, to deal with the traitors in such a manner that the greatness of their crime will be forever recognized; regarding the late war as a judgment on slavery, and on the complicity of the nation with it; enjoining just dealing with the freedmen, and favoring, protecting, and fortifying them in their new status *by bestowing upon them the elective franchise and all the rights of citizenship*; speaking of the wide field for religious work opened by the termination of the war; regarding the present time as a crisis demanding the most effectual means of education and evangelization, and the religious faith of the forefathers as the most effective for the work; stating it to be the duty of the churches represented in the Council to diffuse their faith in this new field; offering renewed thanksgiving for the past, and expressing faith in the future support of the Almighty. After some discussion, the resolutions were unanimously adopted.

On June 22d the members and delegates of the Council, with about an equal number of invited guests, made an excursion to Plymouth to visit "Forefathers' Rock." A business session was held on Burial Hill, at which a new Declaration of Faith, embodying the substance of one previously presented to the Council, with some modifications of portions of the same, was adopted. The following is the new Declaration of Faith:

"We, in common with all Christian believers, confess our faith in God, the Father, the Son, and the Holy Ghost, the only living and true God; in Jesus Christ, the incarnate Word, who is exalted to be our Redeemer and King; and in the Holy Comforter, who is present in the Church to regenerate and sanctify the soul.

"With the whole Church, we confess the common sinfulness and ruin of our race, and acknowledge that it is only through the work accomplished by the life and expiatory death of Christ that we are justified before God, and receive the remission of sins; and that it is through the presence and grace of the Holy Comforter alone that we hope to be delivered from the power of sin and to be perfected in holiness.

"We believe, also, in the organized and visible Church, in the ministry of the Word, in the sacraments of Baptism and the Lord's Supper, in the resurrection of the body, and in the final judgment—the issues of which are eternal life and everlasting punishment.

"We receive these truths on the testimony of God, given originally through prophets and apostles, and in the life, the miracles, the death, the resurrection of his Son, our divine Redeemer. This testimony is preserved for the Church, in the Scriptures of the Old and New Testament, which were composed by holy men as they were moved by the Holy Ghost.

"Affirming now our belief that those who thus hold 'one Lord, one faith, one baptism,' together constitute the one catholic Church, the several households of which, though called by different names, are the one body of Christ; and that these members of His body are sacredly bound to keep 'the unity of the spirit in the bond of peace;' we declare that we will coöperate with all who hold these truths, with them we will carry the Gospel into every part of this land, and with them we will go into all the world, to preach the Gospel to every creature.

"May He, to whom 'all power is given in heaven and earth,' fulfil the promise which is all our hope: 'Lo, I am with you alway, even to the end of the world.' Amen."

On the subject of Congregational policy, the Council adopted, almost unanimously, the following resolutions offered by Prof. Park:

Resolved, That this Council recognizes, as distinctive of the Congregational polity:

1. The principle that the local or Congregational Church derives its power and authority directly from Christ, and is not subjected to any ecclesiastical government, exterior or superior to itself.

2. That every local or Congregational Church is bound to observe the duties of mutual respect and charity, which are included in the communion of churches one with another; and that every church which refuses to give an account of its proceedings, when kindly and orderly desired to do so by neighboring churches, violates the law of Christ.

3. That the ministry of the gospel, by members of the churches who have been duly called and set apart to that work, implies in itself no power of government; and that ministers of the gospel, not elected to office in any church, are not a hierarchy, nor are they invested with any official power in or over the churches.

The report of the committee on raising \$750,000 for the purpose of evangelization (\$300,000 for the American Home Missionary Society, \$250,000 for the American Missionary Association, and \$200,000 for the Congregational Union), was unanimously adopted. The report recommended that the officers of the first two societies use all efforts in their power to increase their receipts to the amount named, and also proposed a simultaneous collection in all the Congregational churches in the land, on the Sabbath (December 17th) preceding next "Forefathers' Day," to secure, if possible, the church-building fund of \$200,000 for the American Congregational Union. The report of the Committee on a Congregational House in Boston, arguing the desirableness of such an edifice as a repository of the library of the Congregational Association, was likewise adopted. The report stated that the Congregational Association had property to the amount of \$10,000,

and also had secured subscriptions of \$20,000 toward the object; \$100,000 was needed in all, and should be raised mainly in New England.

The committee on the "American Protestant Assembly" presented a report regarding "the fearful spread of Papacy, as a civil and ecclesiastical authority, and urging a vigorous defence against the encroachments of Roman Catholicism and infidelity." The report recommended the appointment of a committee of five clergymen and an equal number of laymen, in forming a proposed union of different denominations; and it was adopted.

In accordance with the recommendation of the National Congregational Convention, the Congregational churches took up a collection, December 17th, for the purpose of raising \$200,000 for church extension. The contributions from most of the churches were liberal, though some, even among the largest and wealthiest congregations, postponed the taking of the collection. The contributions reported up to January 11, 1866, amounted to \$89,880.

The first Congregational State Conference in any of the former slave States was organized at Hannibal, Mo., October 27th, under the name of "The General Conference of Missouri." Congregationalism has fifteen churches in Missouri, all of recent origin. The first Congregational Church of Maryland was organized at Baltimore in May, and the first church of Louisiana at New Orleans in December.

According to the English "Congregational Year Book for 1866," the statistics of Congregationalism in Europe and in the British Colonies were in the years 1864 and 1865 as follows:

CHURCHES.	1864	1865
In Great Britain, Ireland, and the islands of the British Seas.....	2,768	2,735
In the American Colonies.....	117	117
In the Australian Colonies.....	124	143
In foreign lands.....	217	287
	3,226	3,282
Free Churches (Independent) in the French Empire.....	106	147
In Belgium.....	20	22
In Switzerland.....	—	60
	126	229
<i>Congregational Ministers.</i>		
In England.....	1,730	1,730
In Wales.....	409	853
In Scotland.....	97	106
In Ireland.....	26	26
In the colonies.....	215	226
In foreign lands.....	176	179
	2,663	2,712

In the London postal district there were, in 1865, 220 churches, 178 pastors, 94 ministers without pastoral charges. The number of students in Cheshunt, Hackney, and New Colleges, was given at 100.

The Congregational Memorial Hall Fund amounted, at the close of the year 1865, to about £50,000.

CONGRESS, CONFEDERATE. (See CONFEDERATE STATES.)

CONGRESS, UNITED STATES. The second session of the thirty-eighth Congress,* commenced on the 5th of December, 1864. The Senate was called to order by the President *pro tem.*, Senator Daniel Clark. The House was at the same time called to order by the Speaker, Mr. Schuyler Colfax.

For the Message of the President to Congress, *see* ANNUAL CYCLOPEDIA, 1864, PUBLIC DOCUMENTS.

In the House, on Dec. 13th, the joint resolution authorizing the President of the United States to give the requisite notice of one year, for terminating the treaty made by Great Britain in behalf of the British Provinces of North America, was taken up. The consideration of the resolution had been postponed from the previous session.

The motion to lay on the table having failed to pass, the question came up on the passage of the resolution, and it was adopted by the following vote:

YEA—Messrs. Allison, Ames, Ashley, Baily, Au-

* The following is a list of the members of Congress:

SENATE.

California—John Conness, James A. McDougall.
Connecticut—James Dixon, Lafayette B. Foster.
Delaware—Geo. B. Riddle, Willard Saulsbury.
Illinois—William A. Richardson, Lyman Trumbull.
Indiana—Thomas A. Hendricks, Henry S. Lane.
Iowa—James Harlan, James W. Grimes.
Kansas—Samuel C. Pomeroy, James H. Lane.
Kentucky—Garrett Davis, Lazarus W. Powell.
Maine—Lot M. Morrill, Nathan A. Farwell.
Massachusetts—Charles Sumner, Henry Wilson.
Maryland—Reverdy Johnson, Thomas H. Hicks.
Michigan—Zachariah Chandler, Jacob M. Howard.
Minnesota—Alexander Ramsey, Morton S. Wilkinson.
Missouri—John B. Henderson, B. Gratz Brown.
New Hampshire—Daniel Clark, John P. Hale.
New Jersey—William Wright, John O. Ten Eyck.
New York—Edwin D. Morgan, Ira Harra.
Nebraska—James W. Nye, William M. Stewart.
Ohio—Benjamin F. Wade, John Sherman.
Oregon—Benjamin F. Harding, James W. Nesmith.
Pennsylvania—Charles R. Buckalew, Edgar Cowan.
Rhode Island—William Sprague, Henry R. Anthony.
Vermont—Solomon Foot, Jacob Colamer.
Virginia—Lemuel J. Bowden, John S. Carlile.
West Virginia—Peter G. Van Winkle, Waitman T. Willey.
Wisconsin—James R. Doolittle, Timothy O. Howe.

HOUSE.

California—Thomas B. Shannon, William Higby, Cornelius Cole.
Connecticut—Henry C. Deming, James E. English, Augustus Brandegee, John H. Hubbard.
Delaware—Nathaniel B. Smithers.
Illinois—Isaac N. Arnold, John F. Farnsworth, Elihu B. Washburne, Charles M. Harris, Eben C. Ingersoll, Jesse O. Norton, John R. Eden, John T. Stuart, Lewis W. Ross, Anthony L. Knapp, James C. Robinson, William E. Morrison, William J. Allen, James G. Allen.
Indiana—John Law, James A. Cravens, Henry W. Harrington, William S. Holman, George W. Julian, Ebenezer Dumont, Daniel W. Voorhees, Godlove S. Orth, Schuyler Colfax, Joseph K. Edgerton, James F. McDowell.
Iowa—James F. Wilson, Hiram Price, William B. Allison, J. B. Grinnell, John A. Kasson, A. W. Hubbard.
Kansas—A. Carter Wilder.
Kentucky—Lucien Anderson, George H. Yeaman, Henry Grider, Aaron Harding, Robert Mallory, Green Clay Smith, Brutus J. Clay, William H. Randall, William H. Wadsworth.
Maine—Lorenzo D. M. Sweet, Sidney Perham, James G. Blaine, John H. Rice, Frederick A. Pike.
Maryland—John A. J. Creswell, Edwin H. Webster.
Massachusetts—Thomas D. Elliot, Oakes Ames, Alexander H. Rice, Samuel Hooper, John B. Alley, Daniel W. Gooch,

gustus C. Baldwin, John D. Baldwin, Baxter, Beaman, Blaine, Blow, Boutwell, Boyd, Brandegee, Brooks, Broomall, Ambrose W. Clark, Cole, Henry Winter Davis, Dawes, Dixon, Eckley, English, Farnsworth, Ganson, Gooch, Grinnell, Higby, Holman, Hooper, Hotchkiss, Asahel W. Hubbard, John H. Hubbard, Hulburt, Ingersoll, Jenckes, Julian, Kelley, Francis W. Kellogg, Orlando Kellogg, Kernar, Knox, Loan, Marvin, McClurg, Samuel F. Miller, Moorehead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Odell, Charles O'Neill, Orth, Patterson, Perham, Pike, Pomeroy, Price, Alexander H. Rice, John H. Rice, Robinson, Edward H. Rollins, Schenck, Scofield, Scott, Shannon, Sloan, Smith, Smithers, Spaulding, Starr, Stevens, Thayer, Thomas, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Whaley, Williams, Wilder, Wilson, and Yeaman—85.

Nays—Messrs. Alley, Ancona, Arnold, James S. Brown, Chanler, Cobb, Cox, Thomas T. Davis, Denison, Donnelly, Eden, Edgerton, Eldridge, Eliot, Finck, Frank, Garfield, Harding, Harrington, Herrick, Knapp, Law, Lazear, Littlejohn, Long, Mallory, Marcy, McDowell, McIndoe, McKinney, William H. Miller, James R. Morris, Morrison, Noble, John O'Neill, Pendleton, Radford, Samuel J. Randall, James S. Rollins, Ross, John B. Steele, William G. Steele, Stiles, Stuart, Sweet, Townsend, Wads-

George S. Boutwell, John D. Baldwin, William B. Washburn, Henry L. Dawes.

Michigan—Fernando C. Beaman, Charles Upson, John W. Longyear, Francis W. Kellogg, Augustus C. Baldwin, John F. Driggs.

Minnesota—William Windom, Ignatius Donnelly.

Missouri—Henry T. Blow, John G. Scott, Joseph W. McClurg, Samuel H. Boyd, Austin A. King, Benjamin F. Loan, William A. Hall, James S. Rollins.

Nebraska—Henry G. Worthington.

New Hampshire—Daniel Marcy, Edward H. Rollins, James W. Patterson.

New Jersey—John F. Starr, George Middleton, William G. Steele, Andrew J. Rogers, Nehemiah Perry.

New York—Dwight Townsend, Martin Kalbfleisch, Moses F. Odell, Benjamin Wood, Fernando Wood, Elijah Ward, John W. Chanler, James Brooks, Anson Herrick, William Radford, Charles H. Winfield, Homer A. Nelson, John B. Steele, John V. L. Pruyn, John A. Griswold, Orlando Kellogg, Calvin T. Halburd, James M. Marvin, Samuel F. Miller, Ambrose W. Clark, Francis Kernan, De Witt C. Littlejohn, Thomas T. Davis, Theodore M. Pomeroy, Daniel Morris, Giles W. Hotchkiss, Robert B. Van Valkenburgh, Freeman Clarke, Augustus Frank, John B. Ganson, Reuben E. Fenton.
Ohio—George H. Pendleton, Alexander Long, Robert C. Schenck, J. F. McKinney, Frank C. LeBlond, Clinton A. White, Samuel S. Cox, William Johnson, Warren P. Noble, James M. Ashley, Wells A. Hutchins, William E. Finck, John O'Neill, George Bliss, James R. Morris, Joseph W. White, Ephraim R. Eckley, Rufus P. Spaulding, James A. Garfield.

Oregon—John R. McBride.

Pennsylvania—Samuel J. Randall, Charles O'Neill, Leonard Myers, William D. Kelley, M. Russell Thayer, John D. Stiles, John M. Broomall, Sydenham E. Ancona, Thaddeus Stevens, Myer Srouss, Philip Johnson, Charles Denison, Henry M. Tracy, William H. Miller, Joseph Baily, Alexander H. Comroth, Archibald McAllister, James T. Hale, Glenn W. Scofield, Amos Myers, John L. Dawson, James K. Moorehead, Thomas Williams, Jesse Lazear.

Rhode Island—Thomas A. Jenckes, Nathan F. Dixon.

Vermont—Frederick E. Woodbridge, Justin S. Morrill, Portus Baxter.

Virginia—Joseph E. Segar, Lucius H. Chandler, Benjamin M. Kitchen.

West Virginia—Jacob B. Blair, William G. Brown, Killian V. Whaley.

Wisconsin—James S. Brown, Ithamar C. Sloan, Amasa Cobb, Charles A. Eldridge, Ezra Wheeler, Walter D. McIndoe.

Delegates from Territories.

Arizona—Charles D. Poston.
Colorado—Hiram P. Bennett.
Dakota—William Jayne.
Idaho—John M. Cannaday.
New Mexico—Francisco Perea.
Utah—John F. Kinney.
Washington—George E. Cola.

worth, Ward, Wheeler, Windom, and Benjamin Wood—57.

NOT VOTING—Messrs. James C. Allen, William J. Allen, Anderson, Blair, Bliss, William G. Brown, Freeman Clarke, Clay, Coffroth, Cravens, Creswell, Dawson, Deming, Driggs, Dumont, Fenton, Grider, Griswold, Hale, Hall, Benjamin G. Harris, Charles M. Harris, Hutchins, Philip Johnson, William Johnson, Kalbfleisch, Kasson, King, LeBlond, Longyear, McAllister, McBride, Middleton, Nelson, Perry, Pruyn, William H. Randall, Rogers, Strouse, Voorhees, Webster, Chilton A. White, Joseph W. White, Winfield, Fernando Wood, and Woodbridge—40.

In the Senate, on December 14th, Mr. Chandler, of Michigan, offered the following resolution, which was referred to the Committee on Foreign Affairs:

Whereas, at the commencement of the present rebellion the United States were at peace with the Governments of the world, and upon terms of comity and good will with Great Britain; and whereas that nation, before the arrival on her soil of our minister accredited by the administration of President Lincoln, precipitately acknowledged the rebels as belligerents, thus recognizing their flag upon the ocean, without which recognition it would have been regarded and treated as piratical by all other powers; and whereas she then proclaimed perfect neutrality between a republic with which she had entertained friendly relations for upward of half a century, and its treasonable subjects; and whereas numbers of her subjects, with the knowledge of her Government, commenced fitting out British fast-sailing ships, loaded with munitions of war, for the purpose of running into our blockaded ports to the rebels, thus furnishing them the means of organizing and continuing the rebellion, and without which it could not have sustained itself six months; and whereas, in addition to the above, and with the knowledge of the Government, British subjects and members of Parliament engaged in the manufacture of piratical English ships, owned by British subjects, manned by British seamen, and sailing under British colors, for the purpose of burning, destroying, and utterly driving from the ocean all peaceful merchant vessels sailing under the United States flag; and whereas many private and unarmed American ships have been burned and destroyed by these pirates from British ports, thus causing great loss and damage to the citizens of the United States:

Therefore,
Resolved, That the Secretary of State be instructed immediately to make out a list of each ship and cargo thus destroyed, with a fair and separate valuation thereof, and the interest thereon at the rate of six per cent. per annum from the date of capture or destruction to the date of presentation, and that he be directed to demand from the British Government payment in full for all ships and cargoes destroyed as aforesaid.

In the House, on December 15th, Mr. Davis, of Maryland, from the Committee on Foreign Affairs, reported the following resolution, and demanded the previous question on its adoption:

Resolved, That Congress has a constitutional right to an authoritative voice in declaring and prescribing the foreign policy of the United States, as well in the recognition of new powers as in other matters; and it is the constitutional duty of the President to respect that policy not less in diplomatic negotiations than in the use of the national force when authorized by law; and the propriety of any declaration of foreign policy by Congress is sufficiently proved by the vote which pronounces it; and such proposition while pending and undetermined is not a fit topic of diplomatic explanation with any foreign power.

It was laid on the table, by a vote of yeas 69; nays 63.

On the 19th the resolution was again considered. It was divided at the words "authorized by law," and the first division agreed to—yeas 118; nays 8: the latter part was agreed to—yeas 68; nays 58.

In the House, on January 6th, Mr. Ashley, of Ohio, moved to reconsider the vote by which the joint resolution proposing an amendment to the Federal Constitution, in reference to slavery, was rejected. He said:

"Mr. Speaker, if slavery is wrong and criminal, as the great body of enlightened and Christian men admit, it is certainly our duty to abolish it, if we have the power. Have we the power? The fifth article of the Constitution of the United States reads as follows:

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the Legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as one or the other mode of ratification may be proposed by the Congress; provided that no amendment which may be made prior to the year 1808 shall in any manner affect the first and fourth clauses in the ninth section of the first article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.

"The question which first presents itself in examining this provision of the Constitution is, what constitutes two-thirds of both Houses? or, what, in the eye of the Constitution, is two-thirds of the House of Representatives? Is it two-thirds of the entire number of members to which all the States, including the States in rebellion, would be entitled, if they were all now represented, or is it two-thirds of the members who have been elected and qualified?

"This question would have entered largely into the discussion of the subject now under consideration had not your predecessor, Mr. Speaker, decided, and this House sustained him in declaring, that a majority of the members elected and recognized by the House made a constitutional quorum.

"It has, so far as the action of this body can dispose of the question, been authoritatively settled, and settled as I think it should have been, by declaring that a majority of the members elected and qualified constitutes a quorum, and that two-thirds of a quorum can constitutionally pass this amendment. The question having been thus disposed of, I do not care to make an argument in support of a proposition thus authoritatively settled.

"My colleague from the first district (Mr. PENDLETON), in a speech which he made at the last session against the passage of this amendment, raised the question as to the constitutional power of Congress to propose, and three-fourths of the Legislatures of the States to adopt, an

amendment of the character of the one now under consideration. He claimed that, though Congress passed the proposed amendment by the requisite two-thirds, and three-fourths of the Legislatures of the several States adopted it, or, indeed, all the States save one, it would not legally become a part of the national Constitution. These are his words:

But neither three-fourths of the States, nor all the States save one, can abolish slavery in that dissenting State, because it lies within the domain reserved entirely to each State for itself, and upon it the other States cannot enter.

"Is this position defensible? If I read the Constitution aright and understand the force of language, the section which I have just quoted is to-day free from all limitations and conditions save two, one of which provides that the suffrage of the several States in the Senate shall be equal, and that no State shall lose this equality by any amendment of the Constitution without its consent; the other relates to taxation. These are the only conditions and limitations.

"In my judgment, Congress may propose, and three-fourths of the States may adopt, any amendment, republican in its character and consistent with the continued existence of the nation, save in the two particulars just named.

"If they cannot, then is the clause of the Constitution just quoted a dead letter; the States sovereign, the Government a confederation, and the United States not a nation."

"Mr. Speaker, there is not a single section or clause in the national Constitution which clothes the political organizations which we call States with any of the attributes of a sovereign power, but, on the other hand, prohibits in positive and unmistakable language any State from doing any act which a sovereign might do without the consent of Congress.

"The supreme power of the national Government is rigorously maintained throughout the Constitution, and it is most emphatically ordained in article six, clause two, of the Constitution, as follows:

This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the Constitution or laws of any State to the contrary notwithstanding.

"Section eight, article one, enumerates seventeen distinct sovereign powers of a national character conferred on Congress by the Constitution, and, as if to leave no doubt on the minds of any, this extraordinary enumeration of powers is followed by this sweeping and significant provision:

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"If I understand this provision correctly, it

means that the framers of the Constitution intended that the national Government should be intrusted with the interpretation of the Constitution, not only as to the construction of the powers delegated by it to Congress, but to all departments of the national Government. They never intended that any State, or any number of States, nor the officials of State governments, should be competent in any capacity to judge of the infractions of the national Constitution by any department of the national Government, nor of the propriety of any law passed by Congress. Any citizen has the undoubted right to express his opinions, and criticise the action of the general Government or of any department thereof; but neither is a State nor are the officials of a State clothed with any authority to decide as to the constitutionality of any law passed by Congress, nor as to the propriety of any act done by any department of the national Government.

"It is past comprehension how any man, with the Constitution before him, and the history of the convention which formed that Constitution within his reach, together with the repeated decisions of the Supreme Court against the assumption of the State rights pretensions, can be found at this late day defending the State sovereignty dogmas, and claiming that the national constitution cannot be so amended as to prohibit slavery, even though all the States of the Union save one give it their approval.

"That provision of the national Constitution which imposes upon Congress the duty of guaranteeing to the several States of the Union a republican form of government, is one which impresses me as forcibly as any other with the idea of the utter indefensibility of the State sovereignty dogmas, and of the supreme power intended by the framers of the Constitution to be lodged in the national Government."

Mr. Orth, of Indiana, followed, saying:

"The bill now under consideration proposes to submit the following amendment of the Constitution to the several States for adoption or rejection, according to the terms prescribed by that instrument, and if ratified by the votes of three-fourths of the States will then become a part of our fundamental law:

ART. XIII., Sec. 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

Sec. 2. Congress shall have power to enforce this article by appropriate legislation.

"The effect of such amendment will be to prohibit slavery in these United States, and be a practical application of that self-evident truth, 'that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness.'

"This bill originated in the Senate during the last session of Congress, in obedience to what was believed to be the general sentiment of the

American people, and passed by the necessary vote of two-thirds of the members of that body. It was then sent to this House for concurrence, and after considerable discussion, was defeated by a vote of 95 in the affirmative and 66 in the negative (twenty-one members not voting), being twelve votes less than necessary to make the two-thirds vote required by the Constitution. The question now before us arises upon a motion to reconsider such vote, action upon which was continued from the last to the present session of Congress.

"Congress cannot amend the Constitution, and hence, if this bill should pass, the question will then simply be referred to the people of the several States for their action. In other words, we, by our action here, simply authorize the people to determine for themselves whether they will ratify or reject the proposed amendment. To me it seems that on such a proposition there should not be a dissenting voice. Whatever questions may otherwise divide us, we all assent to the proposition that our people are capable of self-government, and have the right to alter their laws, fundamental as well as statutory."

Mr. Scofield, of Pennsylvania, in support of the measure, said:

"If the war should end now without a division of the Union, what would be the status of slavery? It has been abolished in Maryland by the new constitution; but it is said that the soldiers had no right to vote, and without their votes the constitution was not adopted. West Virginia has provided for gradual emancipation, but that State, it is alleged, has no legal existence, and therefore its action is null and void. In the State of Virginia a new constitution prohibiting slavery has been adopted by the loyal people within the Union lines; but the constitutionality of this action has been much questioned, even by anti-slavery men. Missouri has partially abolished slavery, and the convention, soon to assemble there, it is supposed, will dispose of what is left. In Tennessee, Arkansas, and Louisiana, slavery has been prohibited by conventions representing the Union people of those States; but it is said that these conventions were irregularly called, and their action is therefore void. In Kentucky, such slaves as enter the United States Army are freed by act of Congress; but it is alleged that the act is unconstitutional. Congress has abolished slavery in the District of Columbia, and prohibited it in all the Territories; but it is said the first act is void, without the assent of Maryland and Virginia, and the latter is in conflict with the dictum of the Supreme Court in the case of *Dred Scott*. In all the remainder of the States the slaves were liberated by the President's proclamation; but that instrument, it is said, is too just to be legal. Under these several enactments, however, the slaves, without waiting to test their validity, are leaving their old masters, forming new associations, seeking education, earning new homes, learning self-reliance, and

thus erecting barriers to the revival of slavery stronger than legislation itself.

"It is apparent from this statement that if the confederacy should suddenly collapse, liberating our Union fellow-citizens that are believed to exist in large numbers within its picket lines, we would still leave the slavery question, out of which the whole trouble grew, to be settled and disposed of. It ought to be equally apparent to all observing persons that there is but one way to end the strife. Slavery in the end must die. It has cost the country too much suffering and too much patriotic blood, and is in theory an institution too monstrous, to be permitted to live. The only question is, shall it die now, by a constitutional amendment—a single stroke of the axe—or shall it linger in party warfare through a quarter or half a century of acrimonious debate, patchwork legislation, and conflicting adjudication? The people were consulted upon this question last fall, and they have responded in favor of emancipation. I respect their opinion, not because I am a politician, but because experience has taught me to rely upon the judgment of the unambitious classes. I am reminded that there was a large minority. True, but the suffering consequent upon this terrible war, and not love of slavery, made the minority so large. The people suffered from the draft, from taxation, and from a depreciated currency, and untruthful men told them that their own Government imposed these hardships, not from the necessities created by the rebellion, but from mere love of despotic cruelty. Consult your Democratic constituency and you will find they are not so much infatuated with slavery as many suppose. I think I would not misrepresent the largest portion of the Democrats in my own district if I say that however much they may have condemned anti-slavery agitation prior to the rebellion, they would now be glad to have the institution buried out of their sight forever. Two classes alone would object: those who are so poorly endowed as to be jealous of negro competition; and those who, being more happily born, apprehend that their pride and importance might in some way be compromised if the distance between themselves and any portion of the laboring classes were lessened.

"The President, in obedience to the advice of the people and the dictates of his own kind heart, and unimpassioned judgment, has recommended that we should submit this amendment to the action of the States. Why should it not be done?"

Mr. Bliss, of Ohio, followed in opposition to the measure, saying: "Upon what reasoning and recognition of facts does any member of this Congress claim the possible power, under the fifth article of the Constitution, to take the initiatory steps to the change proposed? Are the States whose people, in part, are in rebellion against the General Government, out of the Union in theory and in fact? Are they foreign powers, and their inhabitants foreign people, not subject to the Constitution and laws of the United States?"

If so, why do we raise and send mighty hosts to enforce, by the sword, the bayonet, and the cannon, obedience and subjugation to that Constitution and to those laws? If the people of the so-called seceded States are not citizens in the Union, why are our courts engaged, under an act of Congress, in confiscating their estates for acts of treason against their Government? Treason implies citizenship; it cannot be committed by an alien or an enemy. If those States are not out of the Union in theory of law, and if their people owe the allegiance to the Government of the United States which is claimed of them, then clearly those States are among the number of States three-fourths of whom must unite their voices upon any proposition to amend their Constitution.

"That they are not so legally in the Union, and so to be regarded as States with a controlling portion of their people in rebellion, is a new and recently assumed proposition, and at war with every executive manifesto, proclamation, and declaration from the first act of secession till now. From the commencement of what every one has called rebellion the people of the Federal States, of all parties, and without distinction, have agreed upon the common idea and doctrine that ordinances of secession are null and void; that the sovereignty of the Constitution was unalterably fixed upon all the people of the realm, and on that faith, and that only, the Union-loving patriotism of the country has responded to all calls made by the military administration, and allowed the blood of the nation to be freely poured out and expended, and a grievous national debt to be incurred. Are we now to see the predominating party, holding these great issues in its hands, change front upon this vital question? If so, then manifestly, with the policy of the nation in their hands, there is no hope of a restoration of the Union. A change in our public councils must occur, or we shall be stripped of the birth-right which we most valued.

"But were the proposed action practicable in a legal point of view, I should shrink from the policy as putting us upon untenable ground, and making us to assume the character of aggressors while we profess to be fighting against and punishing aggression—we, who ought in this terrible business to have no stain upon our hands. Undoubtedly the rebellion is a great wrong; but it would certainly be meeting wrong with wrong to deny them their original constitutional rights in the Union when they shall have returned to it. Whoever wishes for their return should openly condemn all such policy. Whatever moral question may be involved in the subject of negro slavery in any State of the original Confederacy, is a question for determination and settlement only by the people of such State. To abandon or maintain the institution according to the sense, will, and policy of the people of such local sovereignty, was an undisputed right before and at the time of their entering into the Federal Union; and the great

compact of confederation, the Constitution of the United States, gave them no new right in that respect, but only guaranteed to them the undisturbed enjoyment of a preëxisting right, with such full recognition of the same throughout the country as should enable them safely to assert their right of property in the labor of slaves, even in the recapture of fugitives from their service in any State. By the amendment it is proposed to crush out a sovereign right and power which never was placed within the jurisdiction of any authority except the local sovereignty by whose laws it exists. Such is the main principle of the Government framed by Washington and his compeers. It cannot now be changed except by revolution.

"The success of this proposition would dash the cup of hope from the lips of a majority of the people of all the adhering States. It is the desire of a great majority of our people to reconstruct the Union upon its old basis. Upon that basis compromise can be made and the war honorably closed; but upon no other or more restricted plan can it be done. Subjugation of the South, and away over it, can be accomplished only by standing armies. We cannot dictate in any other way the abandonment of their constitutional and reserved rights. Can we afford the blood, the expense, the general suffering, the lack of all substantial success, which must attend upon such policy?"

Mr. Rogers, of New Jersey, on the same side, said: "If the position in reference to the amendment of the Constitution taken by gentlemen on the other side of the House be true, then the other relations of the States, the marital rights, the rights of husband and wife, of parent and child, of master and servants, the right of licensing hotels, the right of making private contracts, the rights of courts, the manner in which they shall obtain evidence, the allowance of parties to be witnesses, the jurisdiction and powers of State courts, the rights of suffrage for State officers, constitutions of States, and all the rights which now belong to the States, upon the same principle may be interfered with, abolished, and annulled. Those rights, like those connected with the institution of slavery, belong solely and exclusively to the jurisdiction of the States, and were never delegated to the General Government. Does any man here believe that Congress, by a constitutional amendment, can so far alter the organic law of the land as to interfere with marital relations in the States; interfere with the manner in which evidence shall be given; take away the constitutional provision that a man shall enjoy property by descent in certain ways defined by the organic law of a State, and blot all State laws out of existence? I ask, do gentlemen here believe that by constitutional amendment the General Government would have a right to do away with all those express and reserved rights of the States, and which were never delegated to that General Government, and never constituted a part of the jurisdiction

of the Congress of the United States or of the people, except that the people of each State could act and legislate upon those individual concerns according to their own judgment exclusively and the dictates of their own consciences?

"You must remember that it is proposed by this amendment that the States in which slavery exists shall have no vote, because they are not in a position to exercise the right to vote upon this question. But it is proposed that three-fourths of the States—States wherein slavery does not exist; States which have no interest in that species of property—shall get together, and by the action of three-fourths of them deprive of their property the citizens of the loyal border States; the men who have braved this current of war, and shown the proudest and purest patriotism of any class of men on the face of the earth; the men who have invested their money in slave property; the men whose fathers fought side by side with the men of New York and New Jersey on the battle-fields of the country, to drive back the invaders of England. Shall it be said that under a republican Government, in a country supposed to be one of liberty, that we can trample on the rights of those men by taking their property without any compensation whatever, and robbing them of that which by the Constitution of the country is guaranteed to them, and which by the blood of their fathers who fought against the wickedness and tyranny of England was handed down to them to be perpetuated to them and their children and children's children unimpaired forever?"

Mr. Pruyn, of New York, said: "When this subject came up at the last session, I stated my views somewhat at length in regard to it. My position then was substantially that under the power to amend the Constitution we could not interfere with or take away the reserved rights of the States. I do not now propose to discuss the subject of slavery in any way; I did not then. I look upon the question before us simply as one of power, and it is immaterial in this view whether it relates to slavery, to the marital relation, to the laws of descent, or to any other of the subjects over which the State governments have entire control. I then remarked that if gentlemen would look at the debates of the State conventions which passed upon the adoption of the Constitution of the United States, they would clearly see that that instrument would never have been ratified had it been supposed by the States that under the power to amend, their reserved rights might one by one be swept away. This is the first time in our history in which an attempt of this kind has been made; and should it be successful it will, in my judgment, be an alarming invasion of the principles of the Constitution.

"I have only to say in addition, that further investigation has confirmed the views I before expressed, and I cannot therefore vote in favor of this proposition, believing the subject to be one not legitimately within our jurisdiction.

If it be asked what then can be done, I answer: leave the matter with the States, where it belongs, or obtain a supplementary article to the Constitution, not as an amendment, but as the grant of a new power based on the consent of all the States, as the Constitution itself is."

Mr. Davis, of New York, replied: "What powers, sir, were in the purview of those who framed the Constitution and of those by whose votes it was adopted? If gentlemen will rise from the narrow and restricted interpretation of the text to the magnificence of the exordium by which our fathers in that Constitution announced the formation of a republican Government founded on the principles of equality and justice, they will find that the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to themselves and their posterity, ordained and established our Constitution and the Government of the Union. These were the great and cardinal purposes for which the Government was framed. Liberty, that civil and religious liberty which was so clearly and beautifully defined in the Declaration of Independence, and which, in the language of that declaration, had been proclaimed to the world as the inalienable inheritance of every man, gave vitality to the Constitution and the Government which by it was called into life. The unfortunate restriction which then existed in our land upon universal freedom, in the form of African slavery, was regarded as temporary in its character, and as tolerable only by reason of the exigencies of the hour. Our fathers predicted that the time would soon come when the interests of the country would demand that slavery should pass away. Jefferson predicted it, Washington prayed for it, and all the great men of that great age believed that the stain of African slavery would soon cease from the land."

Mr. Odell, of New York, supported the same views, saying: "That slavery is dead is an admitted truth. So said my friend and colleague at the last session of Congress. Others upon both sides of this Chamber have admitted the same fact; and the press of the land has been reiterating the same statement since the rebellion began.

"It is an accepted truth, both North and South, that the peculiar institution is gone, with or without restoration.

"Now I am in favor of giving it a constitutional burial; not by the irregularity of a proclamation by the President, of doubtful constitutionality even in his own mind, as he has frequently admitted, and which was conceded by the late Baltimore convention that renominated Mr. Lincoln, when they proposed this amendment to the Constitution as one of the planks of their platform, which was accepted by him in his letter of acceptance of their nomination. He and they both have thus expressed doubts as to the proclamation. And hence we have

this more legal way of disposing of the evil before us.

"Again, it cannot be put out of the way by the uncertain and irregular Army orders of our generals in the field in command of our armies. They all deal with slavery in harmony with their own peculiar views.

"The Constitution gives to the two Houses of Congress the only legal and certain authority, the only constitutional method of ending and putting away forever an institution that has only brought us trouble and discord at home, and reproach and dishonor abroad.

"Let the evil now be removed in accordance with the provisions of the Constitution. Then it will be done effectually, legally, and in a manner to command the respect of the nation, of the men that are directly interested, and also of the civilization of the world.

"I am aware that able men upon this floor have objected to this action, they claiming that the provisions of the fifth article of the Constitution do not admit of this construction. In my mind I find no difficulty. The power referred to I am satisfied is ample.

"Story on the Constitution, volume three, page 688, says :

A Government which, in its own organization, provides no means of change, but assumes to be fixed and unalterable, must, after awhile, become wholly unsuited to the circumstances of the nation; and it will degenerate into a despotism, or, by the pressure of its inequalities, bring on a revolution. It is wise, therefore, in every Government, and especially in a republic, to provide means for altering and improving the fabric of government as time and experience, or the new phases of human affairs, may render proper, to promote the happiness and safety of the people. The great principle to be sought is to make the changes practicable, but not too easy; to secure due deliberation and caution; and to follow experience rather than to open a way for experiments suggested by mere speculation or theory.

"If I were in doubt upon the subject, I have only to refer back a short period in our national history, and there see the record of my own party upon this question of amendment, and upon the subject of slavery, and in the light of this record and history my way is plain."

Mr. Mallory, of Kentucky, in opposition, replied: "I hold that this is an improper time to amend the fundamental law of the country. Such an act should not be consummated amid the fiery passions and vehement hates engendered by civil war. It should be the work of calmness and of peace. It is to last for all time. There is an idea of perpetuity attached to constitutions and constitutional amendments which does not belong to ordinary acts of legislation. They should therefore be the work of unclouded wisdom, and not spring from the wrath and smoke of the battle-field. If we have spent a large portion of our time here since the war commenced in repealing or revising or amending our hasty and crude legislation, it should admonish us to refrain from laying a rude and innovating hand on the Con-

stitution itself. When the sky shall again be clear over our heads, a peaceful sun illuminating the land, and our great household of States all at home in harmony once more, then will be the time to consider what changes, if any, this generation desires to make on the work of Washington, Madison, and the revered sages of our antiquity.

"I hold also that it is an act of bad faith on the part of those in power to seize this time of patriotic sacrifice on the part of all to carry out and culminate a favorite partisan scheme against which nearly two million voters protested at the late election. But this conduct has grown familiar to us all, and I barely make the suggestion, as worthy of consideration in connection with the whole political career which this war has been made to pursue under the dictation of an unhealthy fanaticism.

"But I hold, finally, that the Constitution does not authorize an amendment to be made by which any State or citizen shall be divested of acquired rights of property or of established political franchises. The construction which our fathers gave to the Constitution, and to which we have all hitherto adhered, guaranteed to the slaveholding States the right of property in slaves. This proposition is too well settled for discussion. It needs only to be stated. It is true that the provision of the Constitution which authorizes its amendment is very broad, and contains but one express limitation. But it is always implied as a limitation of power that a well-settled principle of public law shall not be violated. To majorities are intrusted great and diversified powers, but among them, however great and numerous, is never granted the power to rob a minority of its vested rights. This amendment, in my judgment, proposes to commit this wrong in regard to every slave State on which it can ever be brought to operate. I deny the power. If it can be exercised on the subject of slavery, it can on all others. If the rights of a State and of its citizens on this subject can be destroyed, all other rights may perish by similar usurpations of power. A minority would thus be left no resource save that of revolution. I cannot give my sanction to a measure fraught with the entire overthrow of the wholesome doctrine that States have certain reserved sovereign rights which no external power can take away."

Mr. Pendleton, of Ohio, thus explained his views: 'I have endeavored to maintain that the right of amendment granted by this Constitution is limited in two ways: First, by the letter of the Constitution itself; and next, by the spirit and intent and scope of that instrument, and by the idea which underlies it all as a foundation.

"My colleague, who sits behind me (Mr. Cox), and my colleague from the Toledo district (Mr. Ashley), admit that the power of amendment is limited by the letter of the Constitution itself; but they assert that it is limited

by that rule and no other. This is the answer made to my argument on this special amendment. It avoids the objections I took to it, and asserts in reply the unlimited power. I shall not repeat those objections. I beg gentlemen to remember that this is not a question of revolution or of physical force; it is not a question of abstract right or of natural justice, but of power delegated by the written text of the Constitution itself. From the times of the ancient prophets he was an honorable and upright man who stood by his word, though it led to his own injury.

"Now I desire to ask gentlemen whether it is true that the power of change in that Constitution is limited only by its written language? There are but three points in which that Constitution, by its letter, could not be changed. The first was the right of importation of slaves before 1808; the second was the rule of taxation, and the third was the equality of representation in the Senate. The prohibition of change in one article was necessarily limited by the article itself to the year 1808. My colleague from the Toledo district, in the speech which he made the other day, told us with reference to this point:

If I read the Constitution aright, and understand the force of language, the section which I have just quoted is to-day free from all limitations and conditions save two, one of which provides that the suffrage of the several States in the Senate shall be equal, and that no State shall lose this equality by any amendment of the Constitution without its consent; the other relates to taxation. These are the only conditions and limitations.

"I deny it. I assert that there is another limitation stronger even than the letter of the Constitution; and that is to be found in its intent and its spirit and its foundation idea. I put the question which has been put before in this debate, Can three-fourths of the States constitutionally change this Government, and make it an autocracy? It is not prohibited by the letter of the Constitution. It is not forbidden. It does not come within the two classes of limitations and conditions asserted by my colleague. Why is it that this change cannot be made? I will tell you why. It is because republicanism lies at the very foundation of our system of government, and to overthrow that idea is not to amend but to subvert the Constitution of the United States; and I say that if three-fourths of the States should undertake to pass an amendment of that kind, and Rhode Island alone dissented, she would have the right to resist by force. It would be her duty to resist by force; and her cause would be sacred in the eyes of just men, and sanctified in the eyes of a just God. Let me go a little further. Can three-fourths of the States make an amendment to the Constitution of the United States which shall prohibit the State of Ohio from having two houses in its Legislative Assembly? My colleague would not agree to that. Why not? It is not prohibited in the Constitution. The letter of the Constitution is

not against it. It is an amendment which may be republican in form; it contravenes no tenet of republicanism that a Legislature shall be of one house only. Why could it not be done? Because the equality of the States lies at the very foundation of our system, and also because the control of the States over their internal affairs is equally at its foundation. And I know my colleague too well to suppose that he would not join with me in saying that such a usurpation of power on the part of three-fourths of the States would justify our own State in drawing the sword.

"Sir, can three-fourths of the States provide an amendment to the Constitution by which one-fourth should bear all the taxes of this Government? It is not prohibited. To be sure there is a rule in the Constitution that taxation shall be uniform, but that provision, according to the theory of my friend from Ohio, is revocable and changeable as the rest. The gentleman knows that that amendment would not be within the scope of the power granted to three-fourths of the States, and that it would justify resistance.

"Can three-fourths of the States, by an amendment to this Constitution, subvert the State governments of one-fourth and divide their territory amongst the rest? It is not forbidden; I read no prohibition in the language of the Constitution, and yet my colleague would not contend that could be done. He would justify resistance.

"Can three-fourths of the States so amend the Constitution of the States as to make the Northern States of this Union slaveholding States? I know that the majority of this House would repudiate that doctrine. I would repudiate it myself. Believing, as I do, that the Federal Government can no more make a slave than it can make a king, I, for one, would be ready to resist it to the last extremity.

"I have been endeavoring to show that the limitations in the letter of the Constitution were not the only limitations upon the power of amendment. And I have done it for the purpose of leading gentlemen of this House to a conclusion I am prepared to take. I have shown that you cannot, under the power of amendment, contravene the letter and spirit of the Constitution; that you cannot subvert republicanism; that you cannot destroy the liberties of the States; that you cannot decide the status of the citizens of the States. I would lead them to the conclusion that there is no power on the part of the Federal Government—on the part of three-quarters of the States, I intended to say—to adopt the amendment that is now proposed; and that if you do it, if you attempt to impose that amendment upon the dissenting States by force, it will be their right to resist you by force, and to call to their aid all the powers which God and Nature have given them to make that force effective."

Mr. Stevens, of Pennsylvania, said: "If the amendment should be adopted by three-fourths

of the States, while the other fourth refuse to ratify it, do the non-agreeing States go out of the Union or remain in it?"

Mr. Pendleton replied: "If the amendment be without the scope of the power granted, legally, they remain in the Union, and the other States go out."

"Nobody pretends that the States are clothed with the powers of sovereignty by the Federal Constitution. Nor does that instrument necessarily strip them of the sovereign rights which they had before the Constitution was made. The States have sovereign powers to-day except so far as that Constitution, by their voluntary act of adoption, has taken those powers from them. They do not derive power from the Federal Government. It inheres in them, and I would like to inquire of my colleague from the Toledo district (Mr. Ashley), if he denies the sovereignty in the States because they have agreed to suspend, or, if you please, to delegate certain powers of sovereignty which would otherwise belong to them, upon what basis can he pretend there is sovereignty in the Federal Government, which has not now and never had any authority except that which is expressly delegated to it by these States themselves?"

"But, Mr. Speaker, the gentleman from Ohio (Mr. Ashley) is led by his anxiety to pass this amendment into the declaration of another doctrine, which, although not entirely novel, is somewhat new upon this floor. He holds to the doctrine that ordinances of secession destroy State governments, but do not affect the relations of the States, that is, of the territory and the people to the Federal Government. He holds that an act of secession is an abdication by the people of their rights, but not a release from their duties; that it destroys, not the tie which binds them to the Union, but their form of Government, leaving them subject to the jurisdiction of the Federal Government and its absolute sovereignty with all the rights of local government, and he deduces from this the conclusion that the seceding States have no voice on this amendment, but are absolutely bound by it. That doctrine was promulgated by a senator from Massachusetts (Mr. Sumner), nearly three years ago, in a series of resolutions presented to the Senate, and my colleague will remember that they met with no more indignant response than from the honorable, able, learned, and patriotic gentleman from Massachusetts (Mr. Thomas), who then had a seat upon the floor of this House."

Mr. Cox, of Ohio, followed, expressing his belief in the power to adopt the amendment. He said: "While in a state of war, and with nearly half the States in default and absent, I may deny the wisdom of acting either by the one mode or the other, pointed out for the amendment of the Constitution in this particular—I will not deny a power so essential to peace, safety, and sovereignty. No ingenious refinement or dazzling eloquence shall lead me to deny a power which may yet prove our sal-

vation, when wisely used. Who upon this side asks me to shut the door in the face of such a saving power? Let him remember that while the power may now threaten to destroy, the power to save is forever bound up with it. The power that can create, the same can destroy. Under the ribs of death at the last moment this power may be invoked to create the heart and soul of union, and that, too, by the array of States in their sovereign capacity, as modified by their granted powers."

"Do you tell me that such sovereignty can only guarantee, but cannot destroy property, either in man or beast, in land or house? If a convention of States can take jurisdiction to protect property, they can to destroy. It is admitted that the States individually can do this. If by the Constitution they as States, all consenting to it, have provided a mode of doing it, what matters it whether it is done by them in their individual capacity or in their conventional capacity? Whenever two-thirds agree to propose amendments, and three-fourths shall ratify, either by convention or legislature, the proposition is 'a part of this Constitution.' It is the States that do this in the first instance, all according in making the amending clause; again by their convention in proposing; and again by ratifying. Therefore I join my colleague in singing hosanna to that principle of our Government just denounced by the gentleman from Kentucky (Mr. Smith), as so nefarious—the sovereignty of the States. I see here not one monster iron crown, like that of Lombardy, compelling, as from an omnipotent sceptre, the subject States, but each of the States making for themselves a fundamental law or organic compact."

"This power of unlimited amendment is an element of democracy. It has been the characteristic of our democratic institutions that our ancestry, however prudent and wise, did not tie the hands of the children nor shackle their liberties by laws so irrevocable that no mode of change was allowed. In our State constitutions this power of amendment has been and is being exercised almost every decade. Why? On the principle of Jeremy Bentham (Benthamiana, page 220), that at each point of time the sovereign for the time possesses such means as the nature of the case affords for making himself acquainted with the exigencies of his own time. With reference to the future he has no such means. He thus argues against the transfer of the Government from those who possess the best means to those who possess the least means of information. Shall the past century rule the present? No, not unless they are better informed or feel more interest in the future generation than in their own. Why should we of the nineteenth century tie up the hands of the twentieth? Why should the dead forever rule the living? Is a tyranny inexorable because it is established in the past? Is a law immutable because made by the fathers? If the law be despotic, who then

shall reverse it? From these general principles he deduces the reason why I choose to argue this amendment rather upon its unwisdom than upon the lack of power to make it. 'It is only,' he says, 'when the law is mischievous, that an argument of this stamp will be employed to support it. Suppose a law a good one, it will be supported, not by absurdity and deception, but from its own excellency. A declaration that this or that law is immutable, so far from being a proper argument to enforce its permanency, is rather a presumption that such a law has some mischievous tendency.'

"Another reason for discussing the question of power is, that it is the most valuable gift from the States to the Federal Government, if it be not an express reservation of power in the States. Perhaps, as both Federal and State Governments take part in the amendment of the Constitution, the power to amend is both a reserved and a delegated power. Whatever it is, it is so valuable that I cannot surrender it. Not now. If ever peace comes, it will be through its exercise upon this very question of slavery. I regard that Government with a constitution which has not the liberty of amendment as lacking the means of its own conservation. Such an amendment is a safety-valve, or governor, upon the engine of State. A State without it is in perpetual danger of violent revolution. Such an amendment is a peaceful, legal, and salutary revolution. It is the beauty of our system of written constitutions that, like machines, with a principle of compensation belonging to them, any irregularity may be corrected without breaking the machine or impairing the movement. Such powers of change save the State from such terrible red-handed revolution as that now upon us. Rufus Choate once described, as if he foresaw it, the present revolution 'as a great sea lifting itself, with darkened sky, and not very imitable thunder; a tempest which overturns and successfully resists the existing public authority, arrests the exercise of supreme power, introduces by force, or by resort to a primary right of nature, a new, paramount authority into the rule of the State.' Had this bloodless and legal revolution by amendment of our Constitution been wisely exercised upon this very subject of slavery, as Crittenden, Douglas, ay, even Toombs and Davis, insisted in 1860, we would not be fulfilling so sadly the magnificent picture which Choate painted of tempestuous and fratricidal strife!

"While, then, I concede the power, do I fear that the amendment may pass and become a law in spite of all the guards thrown around it? I do not fear any open march toward monarchy or despotism. I fear in time of war and the passionate strife it begets that this amendment may radically change the Government; that it may be by force, fraud, by indirection, and by an unfair count of States, be made to change our policy. Because such amendments, interfering in home affairs by the Federal power, tend tow-

ard consolidation, I am against them. My colleague (Mr. Pendleton) himself will admit that an amendment may be made even to the very system of government, legitimate in its operation, which may do this. You can amend the Constitution as to the distribution of its powers so as to place the judiciary and the legislature in the hands of the Executive. Thus you compoene power. When these departments are made one—whether that one be legislative, executive, or judicial—as they may be by amendment, it is Jefferson's definition of tyranny. Who will doubt the power of amendment to do this? And yet who so base as to propose it here, or, if proposed, to ratify it? It is by these delusive moral radical reforms, reaching into home affairs by the Federal power, that I fear most the destruction of our Government. Hence I am jealous of the exercise of the power to amend, and especially in this instance. But if the people of the States even choose to abuse their power to amend and destroy their Government, who can say them nay? If they are foolish enough to call in a king, or connect religion with State, or declare polygamy the corner-stone of public liberty, who shall deny them, provided they follow the mode they themselves have ordained to make the organic law?

Mr. Thayer, of Pennsylvania, in reply, said: "Mr. Speaker, the discussion of the measure now before the House has been of a very extended and exhaustive character, and the arguments which have been made against it are very numerous and very varied. If I were to attempt to sum them up, I should occupy a much longer time than at this stage of the debate I intend to consume. But they may, perhaps, in some general way, be grouped as follows:

"There is, in the first place, the argument of the want of constitutional power, which is a proposition of a very important character.

"There is then the argument *de injuria*, made by the honorable gentleman from Kentucky (Mr. Clay)—the argument which bases itself upon the alleged injustice to private rights of the measure now before the House.

"There is, in the third place, the argument founded upon the alleged inexpediency of the measure.

"There is, in the fourth place, what I might perhaps characterize as the chronological argument—the argument that, although the power is possessed, and although it may not be inexpedient in itself, this is not the proper time for the passage of such an amendment, or the discussion of the question which it involves—an argument which seeks to delay to some indefinite and unappointed time the great issue with which Providence now confronts the country.

"There is again, sir, the want-of-brains argument made by the gentleman from Kentucky (Mr. Mallory). The honorable gentleman will of course not understand me as applying those

words to the argument which he made, and to which I listened with much pleasure. I mean the argument that the men who made this Constitution were so great that none who came after them are fit to lay hands upon it or touch it; that no alterations in the circumstances of man, that no revolutions of Government, that no change in human circumstances, can justify the men of the present generation in attempting to improve in any the slightest particular the work of the great statesmen who framed the Constitution of the United States.

"There is, in the last place, what I may style, without intending any personal disrespect to the gentleman from New York (Mr. Fernando Wood), who made it, the infernal argument. I suppose that he would call it the ethnological argument, but with the sentiments which I hold I cannot dignify it with that high-sounding description. I call it the infernal argument. It was the argument which was boldly advanced by that gentleman, and which he attempted to sustain here, that slavery was the best, the natural condition of the black race, the condition to which it was decreed by Heaven, and that therefore we should not struggle against the natural and just condition to which Heaven in its wise purposes had consigned them:

"Sir, I shall not undertake, in the brief time in which I intend to occupy the attention of the House, to comment upon these various arguments. Time would fail me to do so. I desire to call the attention of the House more particularly to a branch of the first argument to which I have referred in this brief review of the debate on the other side of the House. I desire to say a few words in regard to the argument made yesterday by the gentleman from Ohio (Mr. Pendleton), concerning the lack of power to pass the resolution which is now before the House. The words of the fifth article of the Constitution on this subject are very express and clear. It confers upon Congress the right to propose amendments to be adopted by the States or the people of the several States. It confers that power in language too plain to be misunderstood. It is a direct grant of power. But the article that contains that grant excepts from that power three particular subjects; and in relation to those subjects it denies the power. The grant of power contains three exceptions: first, no amendment shall be adopted prohibiting the emigration or importation of slaves prior to the year 1808; second, no direct tax shall be laid except in proportion to the enumeration of the census; and third, no State shall be deprived of its equal suffrage in the Senate. Here, sir, you have the whole article of the Constitution. You have in the first place an explicit grant of power, and you have in the second place the specified subjects which are excepted from that grant of power.

"Now, sir, I have no doubt the gentleman from Ohio is a very good lawyer, and is perfectly familiar with the maxim, *expressio unius est exclusio alterius*. I am sure that no lawyer

understands better the operation of that familiar maxim than the gentleman from Ohio. Will the gentleman therefore tell me, with this maxim before his eyes, what the framers of the Constitution meant by putting in it this grant of power, and coupling with it three exceptions from that grant? I ask him if they did not mean by that general grant to give it without limitation except in so far as it is limited by the specified exceptions? Will the gentleman tell me why they enumerated the three subjects which were excepted from the operations of this power? Sir, the position upon the part of those of us who contend for the undoubted existence of the power to adopt this resolution rests upon this immovable base, that the powers which are granted by the Constitution of the United States are plenary, and that they have no limits except in the rescriptions which the Constitution itself contains. I deny the premise upon which the whole argument of the gentleman from Ohio is founded, to wit, that the grant of this power of amendment is a limited power. I contend, on the contrary, that it is an unlimited power in common with all other powers which are expressly granted in the Constitution, except in so far as you find a limitation of them in the Constitution itself.

"The point that I make is that every power granted by the Constitution is complete in itself; may be exerted to its utmost extent, and acknowledges no limitation except that which is written in the Constitution. Now, sir, that announcement of a principle contains nothing new. That is a principle with which the gentleman from Ohio (Mr. Pendleton) cannot possibly be unfamiliar, because it has been for years the doctrine, the solemnly adjudged doctrine, of the highest judicial tribunal of this country in expounding the Constitution. It is the doctrine laid down by Chief-Justice Marshall in *Gibbons and Ogden*. It is a doctrine which has never been departed from by that august tribunal from the day on which Marshall and his illustrious associates gave it utterance and authority in the Supreme Court of the United States. If it be said, as was said by the gentleman from Ohio and others, that that embraces an absurdity, that if the power is unlimited, any thing, no matter how much opposed to the moral law, no matter how subversive of civil government, may be tolerated under such a construction of the Constitution, I answer, not, sir, in my own language, but in the language of that illustrious judge to whom I have already referred:

The wisdom and the discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are in this as in many other instances, as that, for example, of declaring war, the sole restraints on which they [the people] have relied to secure them from its abuse. They are the restraints on which the people must often rely solely in all representative Governments.

"When you ask me, therefore, whether, if the people of the United States were so to amend

the Constitution as to enable them to enslave the white freemen of the North, that would be binding, I answer you by asking you what, in your opinion, would be the effect of a law legalizing the crime of murder, whether, in your opinion, you would be bound to obey such a law, whether you would be bound to obey any law that contravenes the moral law established by the Creator? Sir, there is no sound argument to be founded on the putting of such extreme cases. The people of the United States hold their liberties under their own protection and in their own keeping. If the men they send to the halls of legislation abuse the trust reposed in them, if they enact immoral laws, unjust laws, laws that subvert the very foundations of human society, the remedy is with the people. The people would, in that event, clear these halls of the men who made them, and would send here men who would enact laws in accordance with their welfare, with justice, with morality, and with free and equal government.

"Sir, when the gentleman from Ohio puts an extreme case in order to overthrow the settled principles which I have stated, namely, that wherever you find a grant of power in the Constitution that grant is unlimited, except it be limited by the Constitution itself, he relies (he will allow me to say, with the utmost respect for him) on what can be shown to be a very shallow fallacy. In the first place, there is no danger of the Representatives of the people enacting such laws; and in the second place, if they were to enact such laws they would be whipped from these halls by the people whose liberties and whose rights they had outraged; and the people would send here men who would repeal such laws, and punish those who made them."

Mr. Kalbfleisch, in opposition to the measure, said: "Mr. Speaker, I desire to save the party in power from itself, and I tell its leaders here that they had better never have been born, than live to see the day when their experiments in legislation, of which this amendment is one, may be the chief obstacle in the way of the realization of that most dear to the truly loyal American heart—the restoration of the Union."

"While I have argued, sir, against this measure as if it were in truth an 'amendment' to the Constitution, I regard it as subversive of the entire spirit of that instrument. We have been warned by the 'Father of his country' to discountenance irregular opposition to the Constitution, 'and at the same time to resist with care the spirit of innovation upon its principles, however specious the pretexts.' One method of assault, he tells us, sir, 'may be to effect in the forms of the Constitution alterations which will impair the energy of the system, and thus to undermine what cannot be directly overthrown.' These, sir, are words of prophetic warning. Under 'SPECIOUS PRETEXTS' of amending the Constitution, you desire to make it the instrument of depriving men of vested rights, and to leave behind you a precedent which, if followed,

will leave every right, civil or religious, which the minority possesses at the will of the majority. When the Constitution went into operation, there were twelve slave States and but one free State. It was within the power of the twelve slave States to force slavery on Massachusetts, in the same way that you propose to force abolition on the South. Would Massachusetts, think you, have submitted to so gross a perversion of the compact she had just entered into? Did she fight against England for seven years for the right to manage her own affairs only to transfer that right to another authority against which she had no legal safeguard? Sir, Massachusetts might have been left a wilderness, but this right could not have been wrested from her people. Do you propose to force from South Carolina, men of Massachusetts, what you would have yielded yourselves only with your lives?"

The question was then taken on the motion to reconsider the vote by which the House on June 15, 1864, rejected a joint resolution submitting to the Legislatures of the several States a proposition to amend the Constitution, and agreed to. The question then came up on the adoption of the joint resolution, when the two-thirds required by the Constitution voted in favor of it, and it passed as follows:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Arnold, Ashley, Bailey, Augustus C. Baldwin, John D. Baldwin, Barter, Beaman, Blaine, Blair, Blow, Boutwell, Boyd, Brandegee, Broomall, William G. Brown, Ambrose W. Clark, Freeman Clark, Cobb, Coffroth, Cole, Colfax, Creswell, Henry Winter Davis, Thomas T. Davis, Dawes, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, English, Farnsworth, Frank, Ganson, Garfield, Gooch, Grinnell, Griswold, Hale, Herrick, Higby, Hooper, Hotchkiss, Asahel W. Hubbard, John H. Hubbard, Hulburd, Hutchins, Ingersoll, Jenckes, Julian, Kasson, Kelley, Francis W. Kellogg, Orlando Kellogg, King, Knox, Littlejohn, Loan, Longyear, Marvin, McAllister, McBride, McClurg, McIndoe, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Nelson, Norton, Odell, Charles O'Neill, Orth, Patterson, Perham, Pike, Pomeroy, Price, Radford, William H. Randall, Alexander H. Rice, John H. Rice, Edward H. Rollins, James S. Rollins, Schenck, Scofield, Shannon, Sloan, Smith, Smithers, Spalding, Starr, John B. Steele, Stevens, Thayer, Thomas, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburne, Webster, Whaley, Wheeler, Williams, Wilder, Wilson, Windom, Woodbridge, Worthington, and Yeaman—119.

NAYS—Messrs. James C. Allen, William J. Allen, Ancona, Bliss, Brooks, James S. Brown, Chanler, Clay, Cox, Cravens, Dawson, Denison, Eden, Edger-ton, Eldridge, Finck, Grider, Hall, Harding, Harrington, Benjamin G. Harris, Charles M. Harris, Holman, Philip Johnson, William Johnson, Kalbfleisch, Kernan, Knapp, Law, Long, Mallory, William H. Miller, James R. Morris, Morrison, Noble, John O'Neill, Pendleton, Perry, Prayn, Samuel J. Randall, Robinson, Ross, Scott, William G. Steele, Stiles, Strouse, Stuart, Sweat, Townsend, Wadsworth, Ward, Chilton A. White, Joseph W. White, Winfield, Benjamin Wood, and Fernando Wood—56.

NOT VOTING—Messrs. Lazear, LeBlond, Marcy, McDowell, McKinney, Middleton, Rogers, and Voorhees—8.

The official report states as follows:

"The SPEAKER: The constitutional majority of

two-thirds having voted in the affirmative, the joint resolution is passed."

[The announcement was received by the House and by the spectators with an outburst of enthusiasm. The members on the Republican side of the House instantly sprang to their feet, and, regardless of parliamentary rules, applauded with cheers and clapping of hands. The example was followed by the male spectators in the galleries, which were crowded to excess, who waved their hats and cheered loud and long, while the ladies, hundreds of whom were present, rose in their seats and waved their handkerchiefs, participating in and adding to the general excitement and intense interest of the scene. This lasted for several minutes.]

Mr. Ingersoll: "Mr. Speaker, in honor of this immortal and sublime event, I move that the House do now adjourn."

The Speaker declared the motion carried, and again the cheering and demonstrations of applause were renewed.

Mr. Harris, of Maryland: "I demand the yeas and nays on the motion to adjourn."

The yeas and nays were ordered.

The question was taken; and it was decided in the affirmative—yeas 121, nays 24; not voting 37.

In the Senate, on Dec. 19th, the following bill was reported as from the Committee of the Whole, without amendment.

Be it enacted, &c., That from and after the passage of this act, no person, by reason of color, shall be disqualified from employment in carrying the mails; and all acts and parts of acts establishing such disqualification, including especially the seventh section of the act of March 3, 1825, are hereby repealed.

It was passed by the following vote:

YEAS—Messrs. Anthony, Brown, Clark, Conness, Dixon, Doolittle, Farwell, Foot, Foster, Grimes, Harlan, Harris, Henderson, Howe, Lane of Indiana, Lane of Kansas, Morgan, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Van Winkle, Wilkinson, Willey, and Wilson—28.

NAYS—Messrs. Davis, Powell, Richardson, Riddle, and Wright—5.

ABSENT—Messrs. Buckalew, Carlile, Chandler, Collier, Cowan, Hale, Harding, Hendricks, Hicks, Howard, Johnson, McDougall, Morrill, Nesmith, Sanlbury, Ten Eyck, Trumbull, and Wade—18.

It passed in the House without a division.

On the same day, Mr. Wilson, of Mass., moved to take up a joint resolution, from the Committee on Military Affairs, granting freedom to the families of colored soldiers.

"Mr. Davis, of Kentucky, moved to refer the resolution to the Committee on the Judiciary.

Mr. Wilson opposed the motion, saying: "The Committee on Military Affairs have three times reported the substance of this resolution in other bills. It simply provides that the wives and children of soldiers of the Republic shall be made free. The needs of the country, more than justice or humanity, have weaponed the hand of the slave. We have enlisted many thousands of them. They are to-day in the trenches before Richmond and Petersburg, and on the shores of the Carolinas; and they keep watch and ward over the Mississippi from Cairo to the gulf. They are everywhere doing their duty, and their whole duty, bravely and well. Butler and Banks, Meade and Burnside, Warren and Hancock, and Lieutenant-General Grant,

have all borne testimony to their fidelity, their courage, and their services. Officers who have served with the best regiments of the armies of the East and of the West, officers who have fought in many battles, say that these colored troops, for industry, obedience, courage, and conduct, are surpassed by no troops in the service of the country. The Government could not dispense with their services without perilling the cause of the country.

"It is estimated that from seventy-five to one hundred thousand wives and children of these soldiers are now held in slavery. It is a burning shame to this country; it is an indecency for the American people to hold the wives and the children in slavery of men who are perilling their lives before the rebel legions. This measure of patriotism, justice, and humanity ought to have been passed many months ago; it surely ought to have been passed early in the last session. We have made the slave free when he becomes a soldier. Whenever the slave enlists, he is a freeman forever more; and thousands of them have enlisted since we passed that beneficent act. At least twenty thousand slaves have enlisted since that act was passed giving personal freedom to the slave who enrolls his name on the muster-rolls of the country's defenders.

"The nation now needs defenders. For the purpose of encouraging enlistments it is proposed that the wife and the child of the slave who will fight the battles of the country, shall, like himself, be free. Heart, reason, and conscience demand it. Self-respect and decency require it. The right to do it is unquestionable. There is no doubt, there can be no doubt, of the right of the Government of the country to give freedom to the man who will fight its battles, or to give freedom to his wife and child to encourage him to fight. There is no doubt, there can be no doubt, that the nation has the right to encourage the slave to enlist, or to inspire him to deeds of heroic daring for his country, by making the wife he loves, and the children who bear his name and inherit his blood, free evermore. That the freedom of wife and child will encourage the husband and father to enlist none can doubt; that it will inspire the soldier to the performance of duty, to deeds of heroism, none can question. Wasting diseases, weary marches, and bloody battles are decimating our armies. The country needs soldiers, must have soldiers. Let the Senate then act now. Let us hasten the enactment of this beneficent measure, inspired by patriotism and hallowed by justice and humanity, so that ere merry Christmas shall come the intelligence shall be flashed over the land, to cheer the hearts of the nation's defenders, and arouse the manhood of the bondman, that on the forehead of the soldier's wife and the soldier's child no man can write slave."

Mr. Hendricks, of Indiana, replied: "I do not understand that upon this motion of reference the merits of the measure come up, nor am I able to see the force of the argument of

the Senator from Massachusetts which he draws from the fact, as he alleges it to be, that the negroes have proved themselves to be good soldiers in the field; nor do I think the question of humanity toward the family arises upon this particular motion.

"The question is, ought this resolution to be referred to the Committee on the Judiciary? I think it should go there. I am not able to see how, under the Constitution of the United States, Congress can free the servant who is held to servitude by the laws of a State. I do not understand that Congress has ever done that, and in former days it was not claimed by any of the statesmen who peculiarly held the confidence of the country. This particular question, whether we have the constitutional power to pass the resolution ought not to be considered by the Military Committee. The Senator says this measure has been considered by that committee some three times. That committee is not the organ of this body to bring before the body information upon a question of constitutional power. That information we expect to derive through the labors of the Judiciary Committee."

Mr. Powell, of Kentucky, followed in favor of the reference. He said: "The Senator, by this resolution, proposes to free the wives and children of those who have enlisted in the army heretofore, as well as those who may hereafter enlist in the army, and he has entitled the resolution 'A resolution to encourage enlistments.' You certainly would not encourage enlistments so far as those persons are in the army of the United States, and the larger portion of the negroes in the border States able to bear arms are already in the army. The passage of this resolution could not encourage those persons to go into the army. But it proceeds to emancipate and set free the wives and the children of those who are already in the army. Where is the power, under the Constitution, to do that? You admit that in those States where they are they are property. Has this Congress any power by a legislative enactment to divest a citizen of any State of this Union of his property? Certainly not, except upon one contingency, and that is when it is required for the public use, and making compensation for it. If you take private property for public use, you must make compensation for it first. That is the Constitution of your country. When Congress passed the bill to enlist those persons in the army, the bill was accompanied with a provision pretending to make some compensation, indicating a commission that should give to their masters, in certain cases, not over \$300, and \$100 in other cases. Meagre and insignificant as was the compensation held out to the country in that bill, no compensation has ever yet been made.

"But, sir, this proposition does not provide for any compensation at all. The other, I admit, was a mere bagatelle, providing for the payment of an insignificant amount (which the Government has never paid, within my knowl-

edge), for the purpose of quieting the consciences of Senators who might vote for it. But I ask Senators if there is any power in this Congress to take private property without making just compensation therefor? There certainly is not, unless your Constitution is a dead letter; and, Senators, if you pass this measure, you will have to do it by walking over the plain provisions of the Constitution of your country.

"The Senator from Massachusetts cannot say that so far as these persons are in the service this is a measure encouraging enlistments, because they are already in the service; and in my State the husbands and fathers of four-fifths of those whom it is proposed to emancipate by this resolution are already in the army. You do not propose to give one shilling of compensation. Senators, if you pass this resolution, in my humble judgment those who vote for it will be faithless to the Constitution of their country. I verily believe that all the woes that are now upon us have arisen because the people and the politicians have been faithless to the fundamental law of the land."

Mr. Davis, of Kentucky, followed on the same side, saying: "The great and principal effect of this resolution would be in Kentucky, and upon her people I presume it is so intended. In 1860 we had two hundred and twenty-five thousand four hundred and eighty-three slaves in that State. In my own county we had six thousand seven hundred and sixty-seven. I have no doubt from the number of enlistments that have been made from the slaves of Kentucky that three-fourths of that population fit for military service are now in the army or some employment of the United States. That such is the proportion in my own county I do not entertain a doubt. The military portion of that population in the county of Bourbon was something the rise of six hundred before any of them were recruited. By actual enumeration about six hundred of her slaves have already attached themselves to the army. They were recruited without any regard to order, form, or principle. The whole object seemed to be to demoralize the institution, and to get every slave man who could be seduced to join the service by any mode of operation whatever, to do so. They sent their recruiting agents, foreigners principally, mostly Dutchmen, all over the county, and pretty well over the State. They received and enrolled every slave negro who could be inveigled to give his consent. Some that were over age and some that were not proper military material because of disease, and females disguised in male clothes, were admitted. At least three-fourths of the slaves suited for military service in that county have already attached themselves to the army. They have enlisted, and they now belong to the armies of the United States, as much so as if their wives and children were declared to be free. Pass this measure, and its application would not be to one-fourth of the male slave population of Bourbon, or, I believe, of the State of Kentucky

to be enlisted, but would be mainly upon those that are now in the military service by freeing their wives and children.

"What, then, is the object of the measure? It is not much to encourage enlistments. We have already sent more than our proportion of negroes to the field. We have but a small remnant yet remaining. The measure does not propose to be limited to those who have not enlisted and who may yet be enlisted, but it proposes to comprehend those who have enlisted as well as those who may hereafter enlist. The object is to deprive slave owners of their property; it is still further to demoralize the institution; it is to break it up *per fas aut nefas*; it is utterly to disregard the Constitution and the laws which secure equally with every other this description of property to their owners, and trample them under foot, lawlessly, unjustly, without answering any wise policy of the Government, and utterly to destroy slave property.

"Is the Senate going to lend itself to the passage of such a measure? Before doing so, ought it not to ask seriously and gravely whence is its power to pass so extraordinary a measure?"

The subject was again considered in the Senate on Jan. 5th, when Mr. Doolittle, of Wisconsin, said: "The Senate has already passed a proposition to amend the Constitution of the United States, so as to put an end to the slavery question, in all its forms, by an amendment of the fundamental law of the land, which is above Congress, above the Supreme Court, and above the President; and which, when once established, no change of Presidents, no change of the decisions of the Supreme Court, and no change of the legislation of Congress, can affect at all. That measure, sir, which passed the Senate at the last session, is now pending in the House of Representatives. It will at once, if adopted by the House, be submitted to the Legislatures of the several States, and passed upon undoubtedly during the present winter, before the adjournment of the Legislatures in the spring; and thus the vexed question, and the whole of it, will be disposed of and put outside of Congress, and outside of its power or control, and there will be an end to the agitation of the question.

"Mr. President, there is one other suggestion I wish to make. There are those who seriously doubt whether we have the constitutional power to do what is now proposed by this measure. Among our friends—just as earnest friends of our cause, and opposed to slavery as much as my friend from Massachusetts—there are those who seriously doubt whether you have the constitutional power to pass this resolution in the form in which it is placed; but no one can have any doubt that it is constitutional to amend the Constitution. All can agree in that, when perhaps this, pressed to a vote, might produce a division among the real friends of freedom in the country."

Mr. Wilson, of Massachusetts, said: "Of

the power to do this I do not entertain a doubt, and the most eminent lawyers of this country concur in this opinion. We may and probably shall have to pay for them. The masters may have a claim against the Government. They will no doubt come here with the claim, and it may be that the claim will be fully allowed, though of course I cannot say how that will be; the claim is an open one; but I have no doubt of our power to pass this resolution, and I think we should not hesitate a moment in doing so at a time when we want soldiers, when we are calling for men to join the army, when we are pressing the want of men upon the country."

Mr. Saulsbury, of Del., in opposition, said: "I should like the advocates of this measure to present arguments to the Senate to convince them, if possible, that it is within their power, as the legislators of the country, to pass a measure of this kind. I do not wish to hear, if I may be pardoned the remark, speeches upon the evils of slavery, upon the wickedness of slavery; but I wish the question to be met in this light: have we the power, have we the authority, under the Constitution of the United States, to enact a law of this kind? Has the Congress of the United States the constitutional authority to enter within the limits of the respective States, and to declare that any person who is held in slavery under the constitution and laws of that particular State shall be free? Has the modern doctrine of 'military necessity' gone so far that when we are in a state of war, whatever the Congress of the United States shall decree is constitutionally decreed? When this question shall legitimately come before the Senate for full discussion, I shall maintain the doctrine that not only have you not the power to decree the freedom of the wife and the children of the negroes who volunteer in your army, if they are from States where slavery is recognized, but you cannot give permanent freedom to the negro volunteer himself if he be a slave. There is no principle more clearly recognized in international law than this, that if a slave be captured from his lawful owner by one belligerent, and he afterwards comes back into the possession of the other belligerent by recapture, he reverts, according to the doctrine of the *jus postliminii*, not to the belligerent power, but to his original owner. So, sir, I say to-day that if you go into a State of the Southern Confederacy and dress up a slave in your uniform and put him in your army, although you may by all the solemnity of an act of Congress say that he shall be forever free, yet if he be recaptured, when recaptured he is no longer a free man; he does not belong to the Southern Confederacy; but the Southern Confederacy is bound to deliver him to his original owner.

"That, sir, is the international law. It is the law which a great and distinguished statesman from the honorable Senator's own State maintained when he was a member of the Cabinet;

it is the doctrine which he maintained when he was minister abroad."

Mr. Sumner, of Mass., thus replied: "Mr. President, there was a call only a few days ago for three hundred thousand more troops. The country needs them, and it is the duty of Congress to help supply them. To this end there must be no difficulty, impediment, or embarrassment in the way. All these must be removed. But this is not all. There must be encouragement of every kind; and such is the character of the present proposition.

"There can be no delay. The country cannot wait the slow action of a constitutional amendment, as has been proposed by the Senator from Wisconsin (Mr. Doolittle). The Congress must act to the extent of its power, and any abdication of its power on this question will be injurious to the public interests.

"All must confess the humanity of the proposition to enfranchise the families of colored persons who have borne arms for their country. All must confess the hardship of continuing them in slavery.

"But the question is asked by many, what power has Congress to set the families free?

"My answer is that Congress has precisely the same power to enfranchise the families that it has to enfranchise the colored soldier. The two powers are coincident and from the same source. It has been already assumed that Congress may enfranchise the colored soldier. This has been done by solemn statute, without any reference to the conduct of his pretended owner. If we were asked the reason for such enfranchisement, it must be found, first, in its practical necessity, that we may secure the best services of the slaves; and secondly, in its intrinsic justice and humanity. In brief, Government cannot be so improvident and so foolish as to attempt to obtain the services of the slave at the hazard of life, without securing to him the boon of freedom. Now, if Government were so bereft of common sense as to forego this temptation to enlistment and efficient service, could it be guilty of the unutterable meanness of using the slave in the national defence and then returning him to bondage? Therefore the slave who fights is enfranchised.

"But every argument, every consideration, which pleads for the enfranchisement of the slave, pleads also for the enfranchisement of the family. There is the same practical necessity for doing it, and the same unutterable shabbiness in not doing it.

"There is no principle of law better established than the rule that any acknowledged right carries with it all incidents essential to its exercise. I do not employ technical language; but I give the idea, which is founded in reason, and the nature of things. It would be vain to confer a right, or a power, if the means for its enjoyment were denied. From this simple statement the conclusion is irresistible.

"In conferring upon Congress the power to create an army, the Constitution conferred

therewith all the powers essential to the exercise of the principal power. If Congress can authorize the enlistment of slaves, as it unquestionably can, it may at the same time authorize their enfranchisement, and by the same reason it may authorize the enfranchisement of their families; and all this from the necessity of the case, and to prevent an intolerable meanness."

The motion to refer to the Judiciary Committee was lost by the following vote:

YEAS—Messrs. Buckalew, Cowan, Davis, Doolittle, Harris, Henderson, Hendricks, Hicks, Nesmith, Powell, Richardson, Saulsbury, Trumbull, Van Winkle, and Willey—15.

NAYS — Messrs. Brown, Clark, Conness, Dixon, Farwell, Foot, Foster, Grimes, Harlan, Johnson, Lane of Indiana, Morgan, Morrill, Pomeroy, Ramsey, Sherman, Sumner, Wade, and Wilson—19.

ABSENT—Messrs. Anthony, Carlile, Chandler, Colamer, Hale, Harding, Howard, Howe, Lane of Kansas, McDougall, Riddle, Sprague, Ten Eyck, Wilkinson, and Wright—15.

On January 9th the subject was again considered in the Senate, when Mr. Saulsbury, of Delaware, said: "What right has the Congress of the United States to declare a slave in my State or a slave in any other slaveholding State free? It has been said that it derived the power from the absolute necessity of the case in the first instance; and secondly, from intrinsic justice and humanity; and we, in the midst of a gigantic civil war, are to determine our power, not from the written Constitution of the land, but from intrinsic humanity and from absolute necessity, and every individual member of either House of Congress is to vote, not according to the Constitution which he has sworn to support, but according to his vague ideas of intrinsic humanity and absolute necessity. Where are you when you attempt legislation of this kind? Who defines the limit of legislative authority? Who can accurately tell me what is 'intrinsic humanity' and what is 'absolute necessity'? Why, sir, a measure of this kind, when viewed in the light of intrinsic humanity, is, and will be, one of the most inhumane measures that could be adopted by the Congress of the United States.

"Why do I say so? I prefer to look at a question of this kind in the light of ascertained facts. Fortunately I have handed to me by a distinguished gentleman of this city a letter addressed to a warm bosom and political friend of the President of the United States, showing the character of a proposition of this kind, and the results to which it has led where the humanity of persons who have never been in the midst of slavery is invoked in behalf of the slave. Sir, you unmake and destroy by hundreds and thousands those whom by your legislation you profess to serve. Listen to an extract from the letter of a distinguished gentleman in New Orleans to a personal and political friend of the President in reference to this matter:

A few days ago I was shown an official report to the military head of this department, General Banks, exhibiting the ghastly return of eighty thousand

slaves having perished since the Federal occupation of the smaller moiety of this Commonwealth. This is equal to fifty per cent. of the entire slave population of the section of country embraced in the return.

"Sir, that is the blessing which your legislation brings, or proposes to bring. That is the kind of blessings which a proclamation of universal freedom brings to the slave. You take him from a happy and contented home, enjoying all the necessities of life, and you invoke the 'pestilence that walketh in darkness, and the destruction that wasteth at noonday,' to deprive him of existence.

"But, sir, it has been said, in reference to the question of power, that the Congress of the United States have the same authority to declare the wives and children of negro soldiers free that they had to declare the enfranchisement of the negro soldier. The power to declare even the enfranchisement of the negro soldier has not, so far as this debate is concerned, been attempted to be shown; but the remark has been made that Congress has assumed to do it, and I presume, having assumed to set the negro soldier free, they may justly assume to set free the family of the negro soldier. That, Mr. President, is a mode of argument that never satisfies my mind; because a thing has been assumed to be done, therefore it has rightly been assumed. What I would like is for some friend of this measure, before it passes this body, to show me upon what principle the Congress of the United States have the authority to pass the measure, where they derive that authority. Do not tell me that it is absolutely necessary, because there are as many and perhaps more men in this country who believe that it is not necessary as there are who believe it is. Do not tell me that humanity demands it, because, perhaps, there are more men in this country who believe that your policy is injurious and ruinous to the negro race than believe it to be advantageous.

"I deny, Mr. President, that the Congress of the United States has the power to give freedom either to the negro soldier or to the family of the negro soldier. I say that we have not the power, and no nation has the power, as an act of war, to capture slaves. If they do capture them, and put their own uniform upon them, I deny that it is a rightful capture, or that the right is sustained by international law."

Mr. Davis of Kentucky, moved to amend the resolution so as to make it read:

The wife and children, if any he have, of any person who may be hereafter mustered into the military or naval service of the United States, shall, from and after the passage of this act, be forever free.

"I regard the resolution as unconstitutional, and that it will be utterly null and void if passed. In my opinion, it will not be worth the paper upon which it is printed. I do not hesitate to express my opinion that any court of any intelligence or independence of principle and action would declare it unconstitutional and imperoperative nevertheless I propose this

amendment, that the resolution may be in harmony with its professed object. That object is to promote enlistments. Of course, to make it operate on enlistments that have heretofore taken place cannot give it any effect to promote enlistments."

Mr. Clark, of New Hampshire, opposed the amendment, saying:

"I do not propose to detain the Senate for more than a moment; but it is well known that we now have in our army many of these soldiers, black men who were slaves, who have been brought into the armies of the United States, and who have proved themselves very efficient soldiers generally. These men are annoyed continually by the reports and by the knowledge that they have left their wives and children at home slaves subject to the control of masters. If we set free the wives and children of these soldiers, as is proposed by this resolution, we leave them more free to fight the battles of the country, and without much concern for their wives and children they have left behind them.

"The resolution is for the purpose of promoting the efficiency of the army, not entirely for bringing new soldiers into the army, but for the purpose of promoting the efficiency of the soldiers already in the army."

Mr. Wade, of Ohio, followed in favor of the resolution. He said:

"It is unnecessary, I think, at this stage of our proceedings, to argue in the Senate the constitutional question, because we have already passed upon our right to conscript and enlist the slave. We have already passed laws on that subject, and I suppose no one proposes now to back out of them. What gave us the right to do so, unless it was a military necessity? I believe we placed it on that ground, and I think it will stand upon that in a great revolution like this, and stand the test of the judgment of the world. Of course there was no Senator here, and there was no individual anywhere in the State that I ever knew any thing about, who claimed that in time of peace the General Government had a right to manumit slaves in the States. I know very well that the party with whom I have long acted were charged with such designs, but it was always denied; and any such notion was never attempted to be carried out, was never pretended to be acted upon. But, sir, all that is changed in time of war when the Government itself is put in jeopardy. When that is the case, and we are endeavoring to defend the Government from dissolution and destruction, the necessity of the case, in my judgment, must be the measure of our constitutional right to proceed.

"The expediency of this measure, conceding that we have the right to pass it, must be obvious to everybody. Do gentlemen suppose that you can enlist in the service of the United States negroes who are slaves, that have any regard for their wives and their children, when they leave those wives and children in the hands

of their infuriated masters to wreak on them their vengeance and cruelty? Sir, they will not do it."

Mr. Johnson, of Maryland, followed in opposition to the resolution, saying: "I rise now very briefly to state why it is that I am unable to vote for this resolution. It is not because—perhaps no member of the Senate feels more strongly in that regard than I do—it is not because I desire to see the wives and children, where there are wives and children, of the black men who have enlisted in the army remain in the condition of slavery, but because I am fully under the impression (and an impression so strongly felt that I am sure no argument will be sufficient to induce me to change it) that we have no authority to pass a resolution of this nature.

"The honorable member from Massachusetts, in his speech a day or two ago, placed it upon the ground of necessity. The rebellion, he said, was to be suppressed. In that, I believe, we are all agreed. It became necessary for that purpose to call into the armies of the United States the negroes. As to the power to call them into the military service of the United States I never had any doubt; and I endeavored to lay before the Senate on a former occasion the reason why I supposed there existed no doubt of the authority of Congress to use these men as a means of warfare. But I found it in the authority to raise armies, and in the double character in which, under the Constitution, the negro slave, or the negro man who is not a slave, stands toward the United States. According to my view, whether he was slave or free he held the relation of citizen, owing an allegiance to the United States; and owing an allegiance to the United States, was subject to the call of the United States when the United States should think proper to call him to their defence, either in time of foreign war or in time of civil war; that in relation to the negro slave, although he stood in the condition of property, and was, in the view of the Constitution of the United States, and of the States where the institution exists, property, to the extent that it was made property by the laws of the State in which he might be, yet he also stood in the relation of person, and was liable to be called upon to constitute a part of the army of the United States.

"The honorable member from Massachusetts, however, said that we are all agreed in thinking that when a negro slave was called into the service of the United States he became thereby free. If he is under the impression that I concur in that opinion he is mistaken. What I said was that, having called him into the service of the United States, as I supposed we had a right to do, it would become the duty of the United States to have him free, but to have him free in a constitutional and legal way; to pay for him whatever his services might be worth; to pay for him for those services to the master; or to pass an amendment to the Constitution declaring him free.

"But even if it was true, Mr. President, that the power under the Constitution exists to make a negro slave a free man by calling him into the armies of the United States, it would be a very illogical inference, in my view, to suppose that thereby his wife and his children became free, or that thereby his wife and his children could be declared free by a simple act of Congress; and I was about to say that I was a little amused, considering what we have heard in the past, at the grounds upon which the opposite view is placed by some of the Senators of the other side. One of them says, and the resolution upon its face goes to that extent in part, that it will encourage enlistments. Another, the honorable member from New Hampshire, has told us that it will wonderfully increase the efficiency of this description of force. Now in relation to the first, I think I cannot be mistaken in saying that those who advocated the bringing into the military service the negro slave said, that once authorize it, and not only would all the slaves be willing to come to the standard of the United States, but that thousands and thousands and hundreds of thousands of white men in the Eastern States would be seen flocking the highways, rushing to the capital of the United States for that purpose. In the language of an editor who possesses, and justly possesses, as I think, such a controlling influence over the party to which he belongs, three hundred thousand men would at once be seen coming to the standard of the United States, and the rebellion would at once be put down. But I have not heard from the War Department, the Senate certainly has not heard officially, that there has been any difficulty in getting black soldiers. Certainly there was none in my State. There was none in my State, because two modes were resorted to. I will not stop to inquire whether both were constitutional or legal. The one was voluntary enlistment, and as that was supposed to fail to a certain extent, it was virtually compulsory enlistment; and they got just as many as they wanted. There is hardly a black man now who was a slave at the breaking out of this war, who was living in Maryland at the time when you authorized the enlistment of black soldiers, capable of bearing arms, who has not been placed in the army of the United States either by voluntary enlistment or by compulsory enlistment.

"Then, as to their efficiency, I have heard some of my friends on this floor say—I hoped then that they were right, and I hope still that they are right, and the whole press that has been advocating the employment of this class of persons in the army of the United States have said the same thing—that among the most gallant in the army during the battles in which they were engaged were black soldiers; and yet their wives and their children were not free by any law then passed. Does my honorable friend from New Hampshire wish to make them more gallant than gallant, more efficient than

efficient? Does he want to make them more gallant and efficient than the white soldiers?

"Now, Mr. President, if there was any thing settled when the Constitution was adopted, if any thing has been settled since by judicial authority, if any thing has been settled by political parties in the enunciation of their principles in their conventions from time to time since the existence of this institution became a subject of party politics, I suppose it to be this: that the Congress of the United States in the exercise of its legislative authority has no power to abolish slavery in the States."

The amendment was lost. Mr. Trumbull, of Illinois, in opposition to the resolution, said:

"Believing, however, that we have not the power to pass such a law; with the greatest desire on my part to pass it if we had the power; holding myself bound by the Constitution which I have sworn to support; believing that there can be no genuine liberty except liberty regulated by law; believing that we have no Government worth preserving unless we stand by the Constitution as it is till we change it in a constitutional mode, I must vote against the passage of this joint resolution."

The resolution was then adopted by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Dixon, Farwell, Foot, Foster, Grimes, Hale, Harlan, Harris, Hicks, Howe, Lane of Indiana, Morgan, Morrill, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Van Winkle, Wade, Willey, and Wilson—27.

NAYS—Messrs. Buckalew, Carlile, Cowan, Davis, Hendricks, Johnson, Nesmith, Powell, Salisbury, and Trumbull—10.

ABSENT—Messrs. Collamer, Doolittle, Harding, Henderson, Howard, Lane of Kansas, McDougall, Richardson, Riddle, Ten Eyck, Wilkinson, and Wright—12.

In the House, on February 22d, Mr. Wilson, of Iowa, reported back the Senate joint resolution to encourage enlistments, &c., &c.

Mr. Harris, of Maryland, said: "I do not believe that it is for the purpose of supplying soldiers to the United States that measures such as this are introduced. I am fully convinced that it is for the purpose, and that only, of interfering with and abolishing the institution called slavery in those States where it is legalized and maintained, and which you are determined to abolish by the most underhand and unconstitutional means, even though the other great reserved rights of the States may be involved in its ruin. Where was the necessity of submitting the question of slavery to the States for their decision under the provision for amending the Constitution, if Congress itself by a majority of its two branches can constitutionally pass a bill to effect the same object?"

"If you can abolish slavery so far as it relates to the wives and children of negroes who are or are to be your soldiers, why can you not abolish the entire institution by act of Congress? The very fact that you have submitted the question to another tribunal, to three-fourths of all the States, under the clause of amendment in

the Constitution, shows that you yourselves believe you are violating the provisions of that instrument and its true construction by adopting this measure. You are fearful that the amendment may not be adopted by the States, and you are determined to break through all legal and moral obligations in order to carry out your determination to destroy this institution. I deny your right to touch it in any way with a view to its injury. Your resolution submitting the question of abolishing slavery to the States, which was passed a short time since, and the pretended amendment, when it shall be adopted by three-fourths of the States, cannot be made a part of the Constitution which our forefathers have handed down to us for the protection of our rights and liberties, and it will be so decided by any honest judiciary that will ever occupy the bench of the Supreme Court or any other court. The idea that a set of men (and great men, such as the framers of our Constitution were) should allow the unrepealable privilege to the States to carry on the foreign slave trade itself for twenty years, and to import from Africa an unlimited number of slaves into this country, and at the same time intend that the United States in any way should during the same period or at any time have the constitutional right and power to destroy slavery when they are brought in, is too absurd for belief. It certainly would not have been sensible or honest for them to have given this inducement to their citizens to press all sail so as to obtain all advantages of the slave trade in the year 1807, and then in 1808 (at which time the privilege of importing slaves ceased) to turn about and abolish all the effect and advantages resulting from that trade. And if not in 1808, why should they intend that the General Government, or the States not interested in the institution, should have that power at any time thereafter? Sir, they never did intend to claim for Congress or for any number of States such a power; on the contrary, the institution was left by them under the exclusive control of the individual States in which it existed.

"Sir, that slaves are property in this country is a doctrine that has been recognized by every authority, political and judicial, for centuries. Your highest tribunals have so recognized it, and have declared that it was the duty of Congress to protect this property—not to destroy it. This was the uniform judgment of your courts up to and including the judgment and opinion of the Supreme Court in the Dred Scott case, a case so thoroughly braced by law and reason that I will defy all the ingenuity of the chairman of the Judiciary Committee, and all the legal aid he can bring from the ranks of his party, to refute, and especially in regard to the condition of the negro, whether slave or free.

Mr. Wilson: "We were formerly accustomed to hear such arguments in this hall, but I am happy to know that the time is rapidly passing away when any man will rise before the American people in the Congress of the United States,

or elsewhere, and submit such arguments as the gentleman has just drawn from the *late* Dred Scott decision.

"Now, sir, the gentleman wants to know the purpose of this act. I can tell him. To-day, in the forefront of your army, are hundreds and thousands of colored men risking every thing for the salvation of this Republic. Upon the fields once cursed by slavery, resounding with the clank of the slave's chains and the crack of the overseer's whip, now tread the colored soldiers of the Republic, under the ensign of the nation, striking sturdy blows for freedom and free government.

"And, sir, this Republic cannot afford to disgrace itself in the eyes of the civilized world by sending these men out to fight its battles, and chaining at home their wives and children in that bondage which is worse than death. It would be a disgrace never to be wiped from the face of this nation if we should permit this wrong to continue beyond the present time, when to us is afforded an opportunity to stop it at once and forever. It is a duty which we owe not only to these men who are fighting our battles, but it is a duty we owe, under the powers which we possess, to the great and eternal principles of God's justice, to see that a full meed of equity and right is meted out to these men who are risking all for our sakes and for the sake of this nation. It is no time to talk about this 'property tenure,' which, I insist, has not been recognized by the Congress of the United States and cannot be recognized by the people of the United States. States have acted on this property basis in regard to these people, but we, acting for the nation, must treat them as persons; they are a part of our population. We are in time of war, with supreme power to deal with the people of this nation in such manner as to render our population most effective in the service of the nation in passing through this great trial of the rebellion.

"If, sir, we can strengthen the hearts and arms of these soldiers of the Republic by causing to be conveyed to them the joyous intelligence that their wives and little ones at home are free, and no longer subject to the cruelty of unfeeling masters, we shall not only be doing our duty to them and to our God, but exercising the power resting with us as the Representatives of the people in determining measures to render our population most effective in carrying us successfully through the present trial by battle. We are not bound up by any 'property tenure.' We do not deal with these people upon any such basis. We deal with them as part of the people of the United States. We have a right to determine, in providing for the general welfare, whether these people, as a free people, shall aid us in maintaining the sovereignty of the Government or not; and it is upon this broad basis that I place the right and power of Congress to declare that the wives and children of these brave men who are fighting the battles of those who have so long oppressed them, shall

be free. On this very day many colored soldiers may be yielding up their lives amid the din and smoke of battle to restore the authority of this nation throughout all its borders. Let us not determine by a refusal to pass this bill that the wives and children shall survive them as slaves."

The previous question was seconded, and the main question ordered.

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Allison, Ames, Anderson, Arnold, Ashley, Baily, John D. Baldwin, Baxter, Beaman, Blaine, Blow, Boutwell, Boyd, Bromall, Ambrose W. Clark, Cobb, Cole, Daves, Dixon, Donnelly, Driggs, Dumont, Eckley, Elicot, Garfield, Gooch, Grinnell, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Hulburd, Ingersoll, Jenckes, Kasson, Kelley, Orlando Kellogg, Knox, Littlejohn, Loan, Longyear, Marvin, McClurg, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Charles O'Neill, Orth, Perham, Pike, Pomeroy, Price, Alexander H. Rice, John H. Rice, Edward H. Rollins, Schenck, Scofield, Shannon, Sloan, Stevens, Thayer, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Williams, Wilder, Wilson, and Worthington—74.

NAYS—Messrs. James C. Allen, Ancona, Augustus C. Baldwin, Bliss, Brooks, Chanler, Clay, Coffroth, Cox, Cravens, Henry Winter Davis, Dawson, Denison, Eden, Edgerton, Eldridge, Finck, Ganson, Grider, Griswold, Hale, Hall, Harding, Harrington, Charles M. Harris, Herrick, Kalbfleisch, Kernan, Knapp, Law, Le Blond, Long, Mallory, McBride, McKinney, William H. Miller, James R. Morris, Morrison, Nelson, Noble, Odell, Pendleton, Perry, Pruyn, Radford, Samuel J. Randall, William H. Randall, Ross, Smith, Smithers, John B. Steele, William G. Steele, Stiles, Strouse, Stuart, Sweat, Townsend, Voorhees, Wadsworth, Whaley, Winfield, Benjamin Wood, Fernando Wood, and Yeaman—68.

NOR VOTING—Messrs. William J. Allen, Alley, Blair, Brandegee, James S. Brown, William G. Brown, Freeman Clark, Creswell, Thomas T. Davis, Deming, English, Farnsworth, Frank, Benjamin G. Harris, Holman, Hotchkiss, Hutchins, Philip Johnson, William Johnson, Julian, Francis W. Kellogg, King, Lazear, Marcy, McAllister, McDowall, McIndoe, Middleton, John O'Neill, Patterson, Robinson, Rogers, James S. Rollins, Scott, Spalding, Starr, Thomas, Ward, Webster, Wheeler, Chilton A. White, Joseph W. White, Windom, and Woodbridge—45.

So the resolution was passed.

In the House, on December 20th, the following resolution was offered by Mr. Rollins, of New Hampshire, and adopted:

Whereas, the Government of the United States has treated rebel prisoners of war with the utmost care, retaining them in suitable and healthy places of confinement, supplying them with ample rations of the best and most nutritious quality, attending them with skilful medical treatment and care in cases of sickness and wounds, and affording them every proper facility for improving their condition and alleviating their imprisonment; and whereas the rebel authorities have confined Union prisoners in unhealthy and loathsome prisons, and in pestilential camps without shelter; have furnished rations scanty and unwholesome; have neglected to furnish suitable medical attendance; have withheld from them clothing, provisions, and money sent to them from their friends at home, so that thousands have died from starvation, and contagious and other diseases caused by such barbarous neglect and maltreatment; and this notwithstanding the continuous and earnest efforts of th

Government of the United States to procure an alleviation of their sufferings while in imprisonment, or a just and equitable exchange: Therefore,

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing by law, if such treatment of Union prisoners is persisted in, for confining rebel prisoners in our hands in such prisons, and allowing them such kind and quality of rations, as may be adopted by the rebel government, to the end that the rebel authorities may be thereby compelled to treat the Union prisoners in their hands according to the rules and usages of civilized warfare.

On the next day, the following resolution, previously offered by Mr. Ingersoll, of Illinois, was considered:

Resolved, That the Secretary of War is hereby directed to report to this House what obstacles, if any, now interpose to prevent an early and full exchange of prisoners of war now held by the rebels.

To which Mr. Cox, of Ohio, offered the following amendment as a substitute:

That, if not incompatible with the public interest, all communications in reference to the exchange of prisoners, not heretofore published, be communicated to this House by the Secretary of War.

He said: "My object in offering this amendment is, not that we may have the suppositions or inferences of the Secretary of War as to obstacles in reference to an exchange of prisoners, but that we may have all the facts and correspondence in his possession relating to this matter.

"As the House is aware, there is a long history connected with this subject. Soon after the beginning of the war we adopted, in the interest of decency and humanity, a joint resolution recognizing a full, fair exchange of prisoners; and a cartel was made for that purpose. I am not now here to inquire what obstructions have been supposed to impede this exchange. It has been stated that difficulties have occurred on account of the negro soldiers. Perhaps that is to some extent true. There may be other reasons why the rebels have not been prompt, or why our Government has not been prompt, to exchange prisoners. We ought to have all the correspondence on this subject, and not merely the ideas of the Secretary of War as to what may be an impediment or obstruction to the making of exchanges."

Mr. Stevens, of Pennsylvania, said: "This resolution seems to imply, by its being offered, that the War Department has been remiss. Now, sir, unless I have some such suspicion, I do not know why I should interfere with them. If I believed they were derelict in their duty, if I thought they were not doing all that under the laws of war, and the laws of humanity, they ought to do, I would pass some censure upon them. But I have not yet seen any thing to induce me to believe that. I therefore move to refer the resolution to the Committee on Military Affairs."

Mr. Pendleton, of Ohio, in reply, said: "I hope that course will not be adopted, and I hope this resolution will be passed. There is one fact I suppose well known to every gentle-

man upon this floor, and that is that great discontent prevails in relation to this exchange. A deep impression has been produced upon the people of the country, and these accounts of barbarities inflicted upon Union prisoners by the South have filled the country with horror. They are discontented with the condition of affairs. They think it ought not so to continue, and they believe it is not necessary that it should continue. I am not prepared to say that anybody is at fault; but I am prepared to say that the people believe somebody is at fault; and if nobody is at fault the War Department should be prepared to show to the country that every thing has been done that can be done to relieve the people from their suspicions that our citizens who are captured are needlessly suffering."

Mr. Thayer, of Pennsylvania, followed in favor of the resolution, saying: "With reference to the resolution which is now before the House, I desire to say that it is a resolution which, in my opinion, is demanded by the public sentiment of the country. There is hardly a fireside, sir, in the land, which is not painfully interested, immediately or remotely, in the question raised by this resolution—the question of a speedy and general exchange of prisoners. I do not regard the resolution or the amendment of the gentleman from Ohio (Mr. Cox) as containing any imputation either on the Administration or on the War Department of the Administration. It conveys no such imputation. It simply calls for information with reference to that in which the people of the country feel a very deep and earnest interest. I have never yet seen the man who has been able to give me an intelligible account of what has occurred with reference to the negotiations that have taken place in regard to the exchange of prisoners, or what have been precisely the obstacles in the way of a general exchange of prisoners. The people of the country desire information upon this subject—nay, I may use a stronger term—they demand information on this subject; and the resolution being properly guarded so as not to require the Secretary of War to impart any information that may be detrimental to the public interests, I am in favor of the resolution of the gentleman from Ohio."

The amendment was adopted, and the resolution agreed to.

In the Senate, on January 16th, Mr. Wade, of Ohio, offered the following resolution relative to an exchange of prisoners:

Resolved by the Senate and House of Representatives in Congress assembled, That from and after the passage of these resolutions, all prisoners, both officers and soldiers, of the Confederacy, so called, who are now or shall be in the power, control, and keeping of the Federal Government, shall receive the same rations, the same amount of clothing, and be subject to the same treatment in every respect, as Federal prisoners of war, both officers and soldiers, who are now or have been in the power, control, and keeping

of the Confederate government, so called, have received.

SEC. 2. *And be it further resolved*, That when it shall be proved to the satisfaction of the President of the United States that the Confederacy have changed their treatment of Federal prisoners for better or for worse, it shall be his duty to change the treatment of Confederate prisoners in like manner.

SEC. 3. *And be it further resolved*, That if any officer or officers having such prisoner or prisoners in charge shall fail to comply with and rigidly carry out the provisions of the foregoing resolutions, such officer or officers so offending shall be immediately dismissed the service, and subject to such further punishment as a court-martial shall in their discretion see fit to inflict.

Mr. Lane, of Indiana, said: "There are now about forty-five thousand Union prisoners in rebel prisons. We have about double that number of rebel prisoners in our hands. Those forty-five thousand men, a great army of themselves, are reduced by starvation to a state of utter helplessness, and if they remain in those prisons can never render active service again in our armies. Those of them who escape the slow tortures of death by starvation, return emaciated and feeble, and unfit for service. Our system is, as Christian men should do, to feed, and clothe, and provide for their men when prisoners in our hands. Every one we send back to them is in a condition of efficiency far greater than he was when he entered our prisons. Then you see the effect. We returned last month some fifteen thousand rebel prisoners in excellent condition, having been fed and fattened upon Government rations; and we received wrecks, skeletons in their stead, shocking to our common humanity. Measures of mercy having failed, it is time we resorted to a different system—a system of strict retaliation marked by justice in every feature. I think the people demand it. They have with great patience borne all these things in the hope that by merciful treatment we still might bring these felons and traitors to their senses; but all these measures have failed. Now I propose, first, that all the camps of rebel prisoners shall be placed under the command of officers who have endured the hardships of Southern captivity, who know what the Southern rations have been; and, second, that we shall mete out to them the same treatment meted out to us."

Mr. Wade, of Ohio, followed, saying: "Nearly a year ago the committee on the conduct of the war were instructed to inquire into the condition of our prisoners as they returned from Southern prisons. The committee immediately entered upon that work. We took somewhere about a hundred depositions of the victims of this inhumanity from the rebel States. We also took the testimony of a great many surgeons and medical men who testified as to what their treatment had been; and showed beyond a possible doubt, that thousands of our men had suffered the most lingering and inhuman death by means of starvation and exposure. The specimens that were returned whom we saw, and whose testimony we took, were on the verge

of the grave, and some of them dying as we took their testimony. We embodied our observations in a report, a report that has not been pretended to be gainsaid or denied by anybody.

"I understood, when we went forth to take that testimony, that it was to enlighten the Executive as to the exact facts in regard to this matter; that the inhumanity was so great, it shocked the sense of mankind to such a degree, that the Executive, like everybody else, was unwilling to believe that such a thing could exist at this age of the world; and I understood also, that if the testimony proved the facts to be as alleged, the Executive had promised us that he would take the most energetic means of retaliation, and endeavor in that way to prevent it. It has run on from that day to this. I have constantly hoped and wished and believed that as this reiterated evidence came to our knowledge day after day, and month after month, it would stir those in authority to do something. But, sir, all is silent; I see no movement anywhere. I felt it, therefore, incumbent upon me even to endeavor to wake up the country to a sense of our responsibility, to endeavor to do something in behalf of these brave suffering men who have gone forth with a spirit of patriotism and self-denial unparalleled, and have been too long overlooked.

"I was still further impelled to do this when I saw how easily the sympathies of our people were aroused in behalf of these accursed rebels, unrepentant, so far as I know, living in cities we have lately conquered. The hearts of our population seem moved in their behalf. I do not object to it. They are sending provisions by the ship-load to relieve these rebels who have caused all this misery to our men, and who, if they are suffering, are suffering justly, in consequence of their own crimes. Near by these very cities are now lingering in these infernal dens our brave men starving to death, tortured to death by exposure and ill treatment; and yet I do not hear of ship-loads of provisions and comforts going to them. Yes, sir, perhaps within ten miles of the very place where these things are to be distributed lie our poor, brave men, suffering all that malignity, barbarity, and brutality can inflict upon men; and yet we find our people moving in behalf of those who have brought this misery on the country, and compelled us to sacrifice the best of our men in such a cause."

Mr. Howard, of Michigan, said: "During the last session, when it was before us in some form—I do not now recollect what—I expressed a disposition myself to bring in a measure the object of which was to resort to the rule of retaliation for the purpose of restraining the insurgents henceforth from the practise of such barbarities upon our prisoners in their hands; but on further consideration of the subject, and on consulting with my friends about it, I thought it best to let it pass by for the present, but always in the hope that the Executive of

the United States, as the head of the military authority of the United States, would take it into his hands promptly, and apply such remedy as the rules of war suggest. I have always entertained that hope, and I have not dismissed it yet, although I confess that I do feel a little disappointed that no step whatever has been taken to punish the atrocious violations of the laws of war practised upon our prisoners in the hands of the insurgents."

The resolutions were referred to the Committee on Military Affairs.

On January 23d a joint resolution advising retaliation for the cruel treatment of prisoners, was considered. The resolution was thus explained in the official report: "As it has come to the knowledge of Congress that great numbers of our soldiers who have fallen as prisoners of war into the hands of the insurgents have been subjected to treatment unexampled for cruelty in the history of civilized war, and finding its parallels only in the conduct of savage tribes—a treatment resulting in the death of multitudes by the slow but designed process of starvation, and by mortal diseases occasioned by insufficient and unhealthy food, by wanton exposure of their persons to the inclemency of the weather, and by deliberate assassination of innocent and unoffending men, and the murder in cold blood of prisoners after surrender; and as a continuance of these barbarities, in contempt of the laws of war and in disregard of the remonstrances of the national authorities, has presented the alternative of suffering our brave soldiers thus to be destroyed, or to apply the principle of retaliation for their protection; the resolution declares that, in the judgment of Congress, it has become justifiable and necessary that the President should, in order to prevent the continuance and recurrence of such barbarities, and to insure the observance by the insurgents of the laws of civilized war, resort at once to measures of retaliation; that, in the opinion of Congress, such retaliation ought to be inflicted upon the insurgent officers now in our hands, or hereafter to fall into our hands as prisoners; that such officers ought to be subjected to like treatment practised toward our officers or soldiers in the hands of the insurgents, in respect to quantity and quality of food, clothing, fuel, medicine, medical attendance, personal exposure, or other mode of dealing with them; that, with a view to the same ends, the insurgent prisoners in our hands ought to be placed under the control and in the keeping of officers and men who have themselves been prisoners in the hands of the insurgents, and have thus acquired a knowledge of their mode of treating Union prisoners; that explicit instructions ought to be given to the forces having the charge of such insurgent prisoners, requiring them to carry out strictly and promptly the principles of this resolution in every case, until the President, having received satisfactory information of the abandon-

ment by the insurgents of such barbarous practices, shall revoke or modify those instructions. Congress do not, however, intend by this resolution to limit or restrict the power of the President to the modes or principles of retaliation herein mentioned, but only to advise a resort to them as demanded by the occasion."

Mr. Hendricks, of Indiana, said: "I am very free to say, without fully examining this subject, that the remedy for the unfortunate condition of the prisoners, suggested by the Senator from Ohio in this joint resolution, is not such a one as I had hoped to see come from him, and especially from the Administration. I think there is another remedy, and that is the exchange of our prisoners. We have nearly two to their one. I believe it is in the power of the Administration to bring our imprisoned soldiers home again, and in a very short time restore them to their friends and families.

"I am free to say I do not feel that the condition of my friends in the Southern prisons will be made any better, and they made any happier, by seeing some men in our prisons here in the North starved to death. If we could inflict the punishment that is suggested by the Senator upon the officers in the Southern army who have contributed to the misfortunes of which he complains, I would agree with him; but here in our Northern prisons are many men who entered into this war in the Southern army against their wish, conscripted, compelled to obey the demands of a government *de facto*, having no part nor lot, no connection whatever with the wrongs that are inflicted upon our soldiers in the Southern prisons; and now we propose to retaliate upon them, individually, and starve them to death, because the Senator says some of our friends in Southern prisons have been starved! Reach the men that are in fault; strike them if we can; but where is the propriety, where is the Christianity of starving a man to death against whom we can lay no fault, except that perhaps he has been compelled to obey the demands of the rebel government—a government, as was illustrated with great power by the Senator from Vermont, not now in his seat, (Mr. Collamer), *de facto*, which the people down there for the time being had to obey?"

Mr. Wade, of Ohio, followed, urging the resolution, and said: "If this resolution will not tend to effect the purpose designed by us, it should not pass. No one is more sensible than I am that for mere vindictive purposes we ought not to pass a measure like this. My impression, however, is that it will have a very useful effect; it will have the effect to relieve thousands upon thousands who are now in Southern prisons, and treated with such hardship that they are dying all over the Southern country.

"Retaliation has, in all ages of the world, been a means of bringing inhuman and savage foes to a sense of their duty, and has frequently had the effect to promote the objects of justice.

It has been so in this war; we have tried it already successfully. There was a time when the enemy took our officers and placed them as a kind of protection against our assault on their fortifications. They placed our officers within the range of our guns, hoping thereby to protect themselves against our assaults. In order to prevent that we were compelled to retaliate in kind, and we selected a like number of their officers and placed them in like jeopardy; and the moment they saw that we sternly intended to do that, they did not persist in their barbarous course any longer; when they found that we were inexorable upon that subject, and that we would place their officers in like jeopardy, the effect was very soon manifest; our officers were immediately released from their position, and the rebels sought to make peace upon that subject. So they would upon this.

"Sir, I have no doubt, on investigation of this subject, that it is a deliberate purpose of theirs to destroy every prisoner that comes into their hands. They do not intend that he shall be returned to us in such a condition that he can ever again take the field. Their inhuman treatment is probably owing more to this consideration than to mere feelings of malice. It is a system of savage policy, and it has had a most powerful effect on our army. Of the thousands of prisoners we have had in their hands, scarcely one of them is ever returned to us in such a condition that he can take the field again; while on the other side the prisoners that come into our possession are treated precisely the same as our own soldiers are, and they go back refreshed, recuperated, and ready to take the field against us, every man of them. I have no doubt that a prompt and stern resort to this measure of retaliation will have as beneficial an effect as the measure to which I have referred had in the case to which it was applied.

"I have always understood that there was something in the way of the fair exchange of prisoners; and I have never been able exactly to understand what it was. It may be that the Government here is greatly to blame. The Senator says there are no reasons against it. I do not know that there are, but I have always supposed that there was reason——"

Mr. Hendricks said: "I did not express any opinion myself upon that question, but I read the statement of the fact, delivered under very responsible circumstances, that exchanges could have been made for months past upon terms consistent with the usages of nations."

Mr. Howard, of Michigan, explained: "There was referred to the Committee on Military Affairs a resolution which was presented by the honorable Senator from Ohio (Mr. Wade), also a memorial which was presented by the honorable Senator from Indiana (Mr. Lane); the Committee on Military Affairs took these measures into consideration, and instructed me to report a joint resolution to the Senate, which I did. It is this joint resolution."

Mr. Harlan, of Iowa, urged the resolution, saying: "The rebels are no longer able to meet us in the open field. Their armed soldiers fight us now almost exclusively behind their works and in strong fortifications. Military men tell us that it requires at least four men outside to take one inside of a fort. We have been expressing our thanks as a Congress to the commanders of the army and navy who have taken a fort containing a garrison of about twenty-three hundred men. The navy, I think, floated between six and seven hundred heavy guns; there was an army landed, we are told, of something like eight thousand men; it required the united strength of this immense naval power and eight thousand troops to take a fort defended by but twenty-three hundred men. Now the Senator from Indiana demands that we shall exchange a rebel prisoner held by us for each one of the prisoners of ours held by them. Suppose they hold thirty thousand Union prisoners of war, and we exchange for them at once thirty thousand rebel soldiers. These thirty thousand rebel soldiers will be thrown into strong works like Fort Fisher, and then you will be compelled to marshal an army of one hundred and twenty thousand strong to be able to meet that thirty thousand sent there by you. The thirty thousand Union soldiers you receive, and ninety thousand additional troops will be required to recapture them.

"This is the present condition of the contest. The rebellion has been so far suppressed that they are no longer able to meet us in the open field; they are now ensconced behind the strongest works that human skill and energy can produce; we are the assailing party; we are compelled to fight them in those works, and to capture those garrisons by assault, or the tedious process of a siege in order to secure complete success. I think, therefore, it is very doubtful whether we are damaged by the refusal of the rebels to make a fair exchange; an exchange man for man will make the rebels relatively stronger. It is therefore doubtful, to say the least, whether a far-seeing, sagacious humanity would not induce this Government to refuse to exchange prisoners from this time forward. If this course should be adopted, then of course if the rebels treat Union troops held by them as prisoners of war with premeditated cruelty and inhumanity, it will furnish a just occasion for retaliation."

Mr. Sumner, of Massachusetts, moved to strike out all after the resolving clause, and insert the following:

"That retaliation is harsh always, even in the simplest cases, and is permissible only where, in the first place, it may reasonably be expected to effect its object, and where, in the second place, it is consistent with the usages of civilized society; and that, in the absence of these essential conditions, it is a useless barbarism, having no other end than vengeance, which is forbidden alike to nations and to men.

And be it further resolved, That the treatment of our officers and soldiers in rebel prisons is cruel, savage, and heart-rending, beyond all precedent; that it is

shocking to morals; that it is an offence against human nature itself; that it adds new guilt to the great crime of the rebellion, and constitutes an example from which history will turn with sorrow and disgust.

And be it further resolved, That any attempted imitation of rebel barbarism in the treatment of prisoners would be plainly impracticable, on account of its inconsistency with the prevailing sentiments of humanity among us; that it would be injurious at home, for it would barbarize the whole community; that it would be utterly useless, for it could not affect the cruel authors of the revolting conduct which we seek to overcome; that it would be immoral, inasmuch as it proceeded from vengeance alone; that it could have no other result than to degrade the national character and the national name, and to bring down upon our country the reprobation of history; and that being thus impracticable, useless, immoral, and degrading, it must be rejected as a measure of retaliation, precisely as the barbarism of roasting or eating prisoners is always rejected by civilized powers.

And be it further resolved, That the United States, filled with grief and sympathy for cherished citizens who, as officers and soldiers, have become the victims of Heaven-defying outrage, hereby declare their solemn determination to put an end to this great iniquity by putting an end to the rebellion of which it is the natural fruit; that to secure this humane and righteous consummation, they pledge anew their best energies and all the resources of the whole people, and they call upon all to bear witness that in this necessary warfare with barbarism they renounce all vengeance and every evil example, and plant themselves firmly on the sacred landmarks of civilization, under the protection of that God who is present with every prisoner and enables heroic souls to suffer for their country.

He said: "Now, sir, I believe that the Senate will not undertake in this age of Christian light, under any inducement, under any provocation, to counsel the Executive Government to enter into any such competition with barbarism. Sir, the thing is impossible; it cannot be entertained; we cannot be cruel, or barbarous, or savage, because the rebels whom we are now meeting in warfare are cruel, barbarous, and savage. We cannot imitate that detested example. Sir, we find no precedent for it in our own history nor in the history of other nations."

Mr. Wade, of Ohio, replied: "The Senator from Massachusetts has proved, in the course of his argument, what I supposed was well-settled international law, that the principle of retaliation is part and parcel of the law of war. It has been practised by all civilized nations, as often as there have been occasions for it. The first example that the Senator read was that of the Father of his country in the revolutionary war. Very early in the struggle, at the very outset of the war, as soon as it came to his ears that the British were maltreating our men who were prisoners in their hands, he gave them to understand that their treatment of our prisoners in their hands would be the measure that he would award to their prisoners in our hands. That he lays down clearly as a principle, and he deduced it from the well-settled laws of nations. He did not lay down any limitation of it. He simply went on to sum up what he understood to be their treatment, and said that he should observe the same toward them. Does the Senator believe that if their treatment had been infinitely more inhuman than it was, that

fact would have induced Washington to drop the principle altogether? Would it not rather have been a seven-fold reason why he should enforce it with greater vigor? He did not lay it down as a limitation, but as a settled principle of law which he would adhere to, that his treatment of prisoners in his hands should be precisely the same with the treatment by the enemy of the prisoners in their hands."

Mr. Cowan, of Pennsylvania, followed, saying: "Mr. President, I am one of those, unfortunately, perhaps, who differ with a great many Senators on this side of the chamber, in believing that in the distribution of powers and authorities under this Government this is a question which does not belong to this Senate to consider. I have understood it to be admitted in the course of this debate by the honorable Senator from Ohio, as it must be admitted by all men who know of our Constitution and the peculiar organization of our Government, that if we retaliate at all we retaliate according to a law already in existence, not one which is to be made. What is meant when it is said to us that we are to retaliate according to the law of nations? Is that a law in existence, or is it a law to be enacted? If it is a law in existence, this not being an executive body, but legislative, there must be some other power, and some other authority in this Government to exercise it. As I understand this question, it is a question for the Commander-in-chief of our armies and his subordinates. It is an authority to be exercised by them according to the exigencies which arise, and to be abandoned by them as the exigencies fail to happen."

Mr. Wade said: "Do I understand the Senator to lay it down that Congress has no power to prescribe the principles upon which the war should be conducted?"

Mr. Cowan answered: "I have repeatedly upon this floor given my opinion distinctly upon that subject. So far as all foreign Powers are concerned, and so far as all belligerent Powers are concerned, at war with this Government, our only point of contact with them is in the Executive. We are a part of the legislature of the country; we are a part of the law-making power. Our powers and authorities are municipal. Our enactments reach those against whom we can enforce them, and those against whom we can enforce them are, of course, those who owe us allegiance and are citizens; but as against belligerents and as against foreign Powers they can have no possible operation whatever. But I answer the question sufficiently when I say that the honorable Senator from Ohio himself has repeatedly said that we do this thing because we have a right to do it, by a law preëxisting, heretofore made, and that is the law of nations. Then, if we have a right to do it by the law of nations, we need no additional law to do it. We make laws; we do not execute laws.

"I say that as the matter now stands I cannot believe that the President has in his posses-

sion the evidence of this barbarous treatment, or of its persistent continuance, which is asserted on the part of the honorable Senator from Ohio, or I think he would have corrected it already by retaliation. I would be glad to know if this evidence is in the possession of this body; if they have it, whether they have communicated it to the President, whether he is cognizant of it, whether the commander-in-chief of our armies under him is cognizant of it, whether the several commanders are cognizant of it, whether they stand by with folded arms and see our men tortured by a slow death in this way without doing something in order to prevent it. As I have said, I have no disposition to quarrel with the Executive in any thing which he does do, provided it is consistent with the humanity of the age. I am willing that he shall resort to any mode of retaliation which he deems proper, provided it be such a mode as will not disgrace our own officers and soldiers in the execution of his plan."

Mr. Howard, of Michigan, in reply, said: "It is unnecessary to argue this question of the right of retaliation. It has ever existed since the commencement of civilized society. It is as old a practice as war itself, and so long ago as you read of hostages in ancient history, so long is it since the principle and practice of retaliation have been observed between nations at war.

"But, sir, the question arises more particularly whether the Senate have before them evidence sufficient to justify us in resorting to the principle of retaliation. Judging from some remarks that fell from the Senator from Pennsylvania, I was led to suppose that he was still in doubt upon the question whether the provocations given us by the rebels have been of such a character as to justify the measure. On this subject I beg to lay before the Senate and before the country a few extracts from a document I now hold in my hand. It is a report made by a committee appointed by the United States Sanitary Commission at New York, on the 19th of May, 1864.

"Sir, the barbarities committed upon our men at Andersonville are absolutely indescribable. Human language is impotent to bring home to the heart and the soul of a man the horrors of those scenes. Artists have been compelled to resort to something more expressive than human language, and painting and engraving have been called in to aid in conveying to the mind the full idea of the brutalities practised by the rebel authorities upon our soldiers. Out of those thirty-five thousand, I presume not more than one-half, if as many, still survive to tell the tale of their sufferings; and the testimony is as clear as the noonday sun that these barbarities were deliberately practised upon our men for the double purpose of crippling and reducing our armed force and of striking terror into the Northern population in order to prevent enlistments. There does not remain ground for a doubt that the rebel government designedly resorted to the slow process of torture and death

by starvation, and to freezing and starving united, operating minute by minute, hour by hour, day by day, week by week, and month by month, until the man became a living skeleton and an idiot, no longer able to recognize his wife, his children, or his friends; no longer of any value either to himself or his country; and this for the purpose of weakening our military arm and deterring our people from prosecuting the war.

Mr. Hendricks, of Indiana, said: "But the Senator from Iowa (Mr. Harlan)—and even with the high respect I entertain for that Senator, I am glad that no other Senator has adopted his sentiments on this subject—has said to the Senate, in the course of this debate, that it was right for the Administration thus for months to have refused to exchange prisoners when it might have been done. Why so? For the reason that we can better afford to leave men in prison than they; that we have more men; that we may bring additional hundreds of thousands into the field and not fee the burden very much, because our population is so large, while the South is exhausted in its fighting force. That is the argument of the Senator."

Mr. Harlan: "Is the Senator professing to quote from my remarks?"

Mr. Hendricks: "No, sir; I am not. I am attempting to give the argument of the Senator. If he prefers that I should read his words, of course I can do so. His argument went further. He said that we were now fighting the enemy within works; and that one man to the enemy was worth three or four to us. I think I give the argument of the Senator correctly. The whole of it amounts to just this: that we can afford, in a military point of view, to leave our soldiers suffering in Southern prisons, dying under the influence of a Southern climate, and under Southern diseases, as well as (if I may admit the fact) by starvation: that we can afford to do this, and make in a military point of view, and therefore we will do it.

"Again, the Senator said that the term of service of the greater portion of these prisoners of ours in Southern prisons has now expired, and that if we bring them home again, we simply lose that number of men, and send to the South men who are yet bound to do military service to the Southern government, and therefore they would make in the swap. These considerations I could understand in the exchange of property between man and man, but when the appeal comes to us in the name of humanity on behalf of our suffering friends in the South, I cannot appreciate the sentiment of the Senator from Iowa. We are not bound to exchange prisoners. We are not bound by the laws and usages of war to parole prisoners. It is not a question between us and the belligerents opposed to us whether we shall exchange prisoners. The South as a belligerent cannot demand it of us as a right.

"The question is between us and the men

who have fought for the Government and who have fallen into this misfortune because they were engaged in the public service; and the Senator from Iowa says we shall not consider this obligation which we owe to the soldier who has fallen into this misfortune, because we can make a military profit by leaving him to die in a Southern prison. I am glad that sentiment has found no response from any other Senator in this body."

Mr. Henderson, of Missouri, in relation to the exchange of prisoners, said: "While upon this subject, Mr. President, I may refer to the matter of the exchange of prisoners, which is also embraced in the amendment which I propose to offer. I do not desire to reflect on the War Department, because perhaps the War Department has done all within its power to release our prisoners and ameliorate their condition; but it seems to me that it is high time the Congress of the United States should look into the matter. According to reports, there are some fifty or fifty-five thousand soldiers of ours who are prisoners in Southern prisons. What has been of late years the course of civilized nations in relation to prisoners taken in battle? Has it not been immediately to exchange or parole them? It unquestionably has been. I know that the English Government, in the war of the Revolution, said that prisoners could not be exchanged with rebels; but the British authorities soon got over that. They found that it was necessary to make exchanges. Why not let us come boldly to the proposition, and make these exchanges at once? During that war our privateersmen were seized, and the English authorities declared that they were guilty of piracy, and should not be exchanged. Have we not done the same thing during this war? In the early part of the war we convicted rebel privateersmen in Philadelphia of piracy; but we were compelled afterward to abandon that policy and to exchange them. Then, if we ourselves have yielded the proposition that the rebels are belligerents—and we ought certainly to yield it at once, magnanimously, as becomes a great nation—why shall we not proceed to exchange? In 1862, I find that a cartel was agreed upon, which used this language:

The stipulations and provisions to be of binding obligation during the continuance of the war, it matters not which party may have the surplus of prisoners, the great principles involved being, first, an equitable exchange of prisoners man for man, officer for officer, or officers of higher grade exchanged for officers of lower grade, or for privates, according to the scale of equivalents; second, that privateersmen and officers and men of the different services may be exchanged according to the same scale of equivalents; third, that all prisoners, of whatever arm of the service, are to be exchanged or paroled in ten days from the time of their capture, if it be practicable to transfer them to their own lines in that time; if not, as soon thereafter as practicable;

"Remember, this is the agreement we ourselves entered into with the rebel authorities in 1862.

fourth, that no officer, soldier, or employé in the

service of either party is to be considered as exchanged and absolved from his parole until his equivalent has actually reached the lines of his friends; fifth, that the parole forbids the performance of field, garrison, police, guard, or constabulary duty.

"I am told that some misunderstanding on this subject has arisen between our Government and the Confederate authorities; but even in that agreement there was a provision of this character:

And in case any misunderstanding shall arise in regard to any clause or stipulation in the foregoing articles, it is mutually agreed that such misunderstanding shall not interrupt the release of prisoners on parole as herein provided, but shall be made the subject of friendly explanations, in order that the object of this agreement may neither be defeated nor postponed.

"Why has not this cartel been carried out? Why is it that our prisoners have not been exchanged within the ten days, or as soon thereafter as practicable, as required by the cartel? Can exchanges not be effected now? I do not know. I confess that I am not familiar with the conduct of the War Department on the subject, and therefore I am not qualified to speak; but it seems to me that it is worthy of investigation on the part of the Senate to ascertain why these exchanges have not been made. There are thousands of our men dying in prisons, I care not how well the rebel authorities may treat them. And I care not how well we may treat prisoners in our hands, we know that thousands of them must die. We cannot give them the comforts that we ought to do; it is utterly impossible. How many rebel prisoners have we now? Perhaps sixty or seventy thousand. Why not, then, proceed to exchange?

"It was stated some time ago that an objection was presented on the part of the rebels to exchanging, in consequence of the fact that they declined to exchange negro troops. Why not proceed with the exchanges until we come to that difficult question? And now I submit to the Senate that whenever we arrive at that point in exchange, how is it possible that the rebels can refuse to exchange? They will not do it."

Mr. Davis, of Kentucky, said: "I ask you, sir, and I ask the Senate, if the refusal of the rebel authorities to exchange for a few hundred negroes was any justification, any excuse, any palliation even, for our military authorities in not exhausting every means of exchange or parole and any other mode whatever by which these brave and perishing men might be delivered from their horrible captivity and its inevitable death. I say to-day that if the subject of exchanges had been taken up honestly, earnestly, and in good faith by our Government and our military authorities eighteen months ago, more than twenty thousand gallant and true men who have died in these dreary prisons would have been restored to their country, their friends, their families; and with all the comforts of home, and all the attentions of mother, wife, and daughter, which they would have received.

they might ere this have been restored to health, so that now, instead of filling an unknown grave in a distant land, they would be cheering and sustaining and blessing their own homesteads and their own families.

Sir, I view with horror the conduct of the rebel authorities to these prisoners, and second, even if second to that, I view with repugnance, condemnation, and execration, the heartless, cruel, and unjust indifference of our own authorities toward the fate of these perishing brave men.

I never heard it controverted before this occasion that the great difficulty in the way of exchanging white prisoners with the rebel authorities was their refusal to exchange for negro prisoners. On this point I will read again a single clause from General Butler's letter:

The wrongs, indignities, and privations suffered by our soldiers would move me to consent to any thing to procure their exchange, except to barter away the honor and faith of the Government of the United States which has been so solemnly pledged to the colored soldiers in its ranks.

"What was that faith? What was that pledge? What was it but simply this, that exchanges would not be entered upon by our Government unless they were treated as prisoners of war with our white soldiers, and unless the exchanges should extend to and include negro soldiers as well as white men? I dissent entirely from the position that the refusal of the rebel authorities to exchange a few thousand, yea, all the negroes in America, if they had been in captivity, should make one moment's delay or obstacle in the exchange of our white prisoners. The refusal to exchange negro prisoners did not mitigate the sufferings of those negroes. It made their condition no better. It gave them no additional comforts. It offered them no speedier or earlier deliverance from captivity. Then, when it produced no good fruits to the negro, and resulted in the wasting, torturing, starving to death of our white citizens in captivity, why should the latter dread consequence be looked upon calmly, with cold indifference and apathy, in its terrible consummation, by our military authorities, and they not waive the condition of negro prisoners being also exchanged?"

Mr. Howard, of Michigan, in reply, said: "Mr. President, it seems to have been the effort of the Opposition, in the comments which they have made upon the resolution now before the Senate, to make the Administration odious for not having perfected and carried out a system of exchange of prisoners with the rebels, and in that manner to have liberated our countrymen in their hands as prisoners of war. Instead of meeting the question fairly, upon its own merits, and upon the facts clearly in proof in the case, it seems to me they rather attempt to use the occasion as one for the promotion of party purposes, and for the purpose of assailing the Administration.

"I do not wish, upon such an occasion as

this, to imitate their example. I shall take it for granted that the Administration have done all in their power, all that could be required of them by the laws of war and by their duty to their country, to establish and carry out a system of exchange for the purpose of such liberation. I will not stand here to accuse them of the atrocious crime (for it would be a crime if they had committed it, or if it had been committed) of permitting our soldiers to remain in the cruel custody of the rebels for some purpose other than the public good, for some purpose not authorized by their duty to their country. I shall presume in this discussion that the executive branch of the Government have at least tried faithfully to do their duty to the country, and that if they have failed in bringing about this exchange and the liberation of our prisoners in rebel hands, they have innocently failed, and failed upon such principles as justify their conduct before their country and before the world."

Mr. Johnson, of Maryland, followed, saying: "Mr. President, at the adjournment of the Senate yesterday, I was referring to the fact, as far as I was then advised, or, indeed, as I am now advised, there is not before us any official evidence that the cruelties practised upon our prisoners which are mentioned in the report of the 5th of May, 1864, have been continued since. I was told by the honorable member from Connecticut (Mr. Foster), that he had it from one who had belonged to the army, and who was unfortunate enough to be captured and imprisoned in one of the prisons in South Carolina, that there was, to a certain extent, at least, cruelty as far as cruelty consists in failing to give the prisoners a sufficient ration. What I meant, however, was that we have no official evidence other than what is contained in the report of May 5, 1864, that the outrages which are hypothetically stated, though stated as facts in the resolution reported by the committee, have been perpetrated since that report.

"The honorable member from Ohio (Mr. Wade), who was one of the committee by whom the report of May 5, 1864, was made, interrupted me yesterday by saying that there had been an antecedent report in which evidence was presented to the Senate of other outrages of the same description. The purpose for which I referred to the report of May 5, 1864, is rather strengthened than weakened by that fact, because it appears that even prior to the 5th of May, 1864, the Senate, and of course the committee, whose business it had been to examine into the facts, were advised that these cruelties had been practised; and yet from that time until a few days since, I am not aware that any measures have been recommended by the committee or any member of the Senate, looking to a resort to such a system as is proposed either by the resolution introduced by the honorable member himself, or by the report made by the committee to whom that resolution was referred. I suppose, Mr. President--and they had

a right to rely upon it—that the members of the committee, including my friend from Ohio, were under the impression that the President of the United States would take all proper steps to arrest these barbarous acts as against our own men.

“Now, assuming as I do, notwithstanding what has fallen from the Senator from Connecticut, that the barbarities spoken of in the resolution now before the Senate were practised some time ago, that we have no evidence that they are now being repeated, I submit as a clear proposition of national law that whatever may be the extent of the right to retaliate in order to prevent continuing outrages, it does not apply to a case of antecedent outrages, because so to apply it is to punish what is past and not for the purpose of preventing the recurrence of the same things in the future. It is (if the honorable member will permit me so to say) revenge, and not retaliation. Conceding for argument's sake, and I make the concession only for that purpose, that there exists a right under the laws of nations to starve the prisoners who are in our hands, to torture them short of starvation, to subject them to the inclemency of the weather and to kill them by force of the elements, or to use as against them every possible mode of human torture to which the ingenuity of man may resort; assuming that such power exists under the laws of nations, I think I am safe in saying that that power has never been exerted for the purpose merely of punishing prior outrages of the same description.

“I come to the proposition as reported from the committee, which is almost precisely the same in words, and is substantially identical with the original resolution offered by the member from Ohio, except that it omits the provision that the officer is to be dismissed if he does not perform his duty, and announces to the President that it is not the purpose of Congress in passing the resolution to make it obligatory upon him; but we are asked to say to him that it is his duty to resort to this measure. We are to tell him that a resort to this measure is absolutely necessary in order to put an end to the barbarities being practised upon our own prisoners; and under some doubt—I do not stop to inquire whether it was well founded or not—of the authority of Congress by legislation to interfere with the President at all in relation to such duties as are stated in this resolution, it concludes with saying that it is to be understood merely as advising the President, and not as controlling him. Advising him to do what? The honorable member from Missouri (Mr. Brown), whom I do not now see in his seat, the other day said that it was not the purpose of the committee to suggest to the President the propriety of proceeding at once to the execution of this duty of retaliation; and he found, as he supposed, a reason for that construction in the latter clause of the resolution, which declares that the resolution itself is designed to be merely advisory to the President. That is true; but

what is the advice? What are we asked to do? What is every individual Senator asked to do? To advise the President that in our opinion he should proceed at once to starve, to torture, to assassinate, to freeze to death the prisoners who are in our hands; and every other mode of dealing such as our prisoners have been treated with in the hands of the insurgents. The President is advised to do that at once.

“Now, is it expedient to exert it even if we have the legal power to exert it? The honorable member assumes that the starvation of the four or five thousand, or the twenty or thirty thousand, or whatever may be the number of prisoners now in our hands, will prevent the starvation of the thousands who are in the hands of the enemy or may hereafter come into the hands of the rebel enemy. Does he know it? Who can? If the rebel government was privy to the enormities practised upon our prisoners, they are to be restrained by no moral restraint. Everybody will concede that. They are brutes in the form of man; they are savages worse than the wildest Indian that ever ran loose on the prairies; and nothing like moral restraint will prevent their continuing these barbarities. Suppose they do; are we to continue them? Then what will the world say? What would any man say if he had the power in his own hands? What will the voice of Christian civilization say? That such barbarities must be arrested. Other nations have an interest in it. They cannot stand by and see the people of the United States become a band of savages, not fighting in honorable warfare, meeting the foe face to face, but after he has succumbed and yielded to the power exerted against him by either side and gets into the hands of either party, the work of extermination is to begin in the most odious and disgusting form ever known to civilized man. Would not one man, if a Christian, having the power, arrest it? Who can doubt that? Will not the nations of Christendom be called upon to arrest it? Will the God of justice fail to proclaim that it is their duty to arrest it?

“But then what is to become of the Union? Where is the struggle to end? From the first I never doubted how it would end if conducted upon high, elevated principle. I never for a moment questioned that the time would come, and as I think it should have come before, and would have come before if the armies of the United States had been properly used, but that the time was sure to come when the rebellion would be frustrated and the authority of the Government reinstated; and no matter what may happen, no matter what course from time to time the United States or the rebels may adopt, I shall continue to entertain the same expectation, and shall continue till the last ray of hope is extinguished in the darkness of perpetual night. But let us turn as against each other the arts of the savage; let us proclaim war to the knife, and, what is but little worse, a resort to such measures as are contemplated by this

resolution, and the other side continue to meet us in the same way—I speak it with due respect to those who entertain a different opinion about this resolution—we shall no longer have the support of the God of justice; the war ought to cease; the destruction of the Union, the end of the freest constitutional Government that ever existed will have come, and ought to come if it is to be supported only by a resort to savage methods.”

Mr. Sumner followed, in opposition to the measure, saying: “The committee, not content with what has been done—distrustful, perhaps, of the commanding general—have proposed that Congress shall instruct the President to enter upon a system of retaliation, where we shall imitate as precisely as possible rebel barbarism, and make our prisons the same scenes of torment which we denounce. Why, sir, to state the case is to answer it. The Senator from Michigan who advocates so eloquently this unprecedented retaliation attempted a description of the torments of the rebel prisons; but language failed him. After speaking of their ‘immeasurable criminality’ and ‘the horrors of these scenes,’ which he said were ‘absolutely indescribable,’ he proceeded to ask that we should do these same things; that we should take the lives of prisoners, even by freezing and starvation, or turn them into living skeletons—by act of Congress.

“Sir, the law of retaliation, which he invokes, has its limits, and these are found in the laws of civilized society. Admit the law of retaliation; but you cannot escape from its circumscription. As well undertake to escape from the planet on which we live. What civilization forbids cannot be done. Your enemy may be barbarous and cruel, but you cannot be barbarous and cruel. The rule is clear and unquestionable. Perhaps the true principle of law on this precise question was never better expressed than by one of our masters, Shakspeare, jurist as well as poet, when he makes Macbeth exclaim:

‘I dare do all that may become a man;
Who dares do more is none.’

So with us now. We are permitted to do all that may become a man; but nothing more.

Mr. Hale, of New Hampshire, followed, saying, relative to the exchange of colored troops: “The Senator from Kentucky, if I understood him, I will not undertake to give his words, but the idea, said, in substance, that if the only obstruction to the exchange of prisoners grows out of a refusal on the part of the rebels to exchange colored prisoners, the exchange ought to go on nevertheless, and the colored prisoners left in prison or in confinement; and I understood the Senator from Maryland to make substantially the same averment: that if the treatment of our colored prisoners was the only obstacle in the way of these exchanges, they ought to be left in prison.”

Mr. Davis: “The honorable Senator did not

state me exactly right. My position was this, that if any class of Union prisoners, without regard to color, could be exchanged by our Government, it was the duty of our Government to make the exchange, and not to permit the fact that another class of prisoners cannot be exchanged to be an obstacle to the exchange of those who can be exchanged, and that without regard to color.”

Mr. Hale: “That is a modified statement of the position, but the sentiment is the same. That statement, that opinion, and that position I deny utterly. If this Government, having called to its defence this most defenceless class, a class who are without rights, without the right to protect themselves or the right to seek protection under a Government of law—if this Government, in this gigantic struggle for its existence, has called upon that defenceless portion of its people to come into the ranks and fight its battles, if there is one duty on earth binding above all other duties upon this Government, it is to see that every protection consistent with the state of war and the laws of war and the rights of war are extended to that defenceless portion of our soldiery. Sir, look at them. What are they? The highest judicial tribunal of the land has said they were a class with no rights that white men were bound to respect; they were the outcasts and the down-trodden of earth; the common rights of humanity denied to them; holden, instead of being considered as men, like beasts of burden, and sold like them on the auction block. This country, in its hour of necessity and emergency, has called upon these men, and they have come forward; and the testimony of all your officers is that they have fought with a courage, a heroism, a bravery, and a devotion unsurpassed by any of your soldiers. The proposition that if they be captured and held by the rebels as prisoners they may be neglected and overlooked in any contingency, is to my mind monstrous, and would stamp this Government before all posterity and all time as guilty of the most infamous position they could take. When you called a black man into your army, when you gave him your uniform and made him a soldier, he became a soldier to all intents and purposes; and if there is one class more than another that has a right in the hour of its distress to appeal to the Government for protection, it is that most helpless and most defenceless class that you have put into your army. I say that if the Government, in its negotiations for exchanges, consents to the shadow of a shade of difference that shall operate to the disadvantage of the colored soldier, they are treacherous to the highest trusts that have been confided to them, and false and recreant to the first principles of duty which the position of these men imposes upon the Government.

“I desire to make these remarks in order that this sentiment might not go out unchallenged before the country. I repeat again that in proportion to their defenceless position they

have the higher claim upon the Government. What is the history of it? We began this war without their help. We were disposed to ignore them. We treated them in the manner in which the public policy of the General Government had treated them. But, sir, the God of nations and the God of justice taught us a terrible lesson. We were slow to learn it, but we learned it at last. We learned that in this gigantic strife it was necessary to our final success, to secure the blessing of the God of nations, that we should use for our defence in this struggle this very class of our population. We have called on them; we have called them into our service by hundreds and thousands, and by our legislation we are inviting them there again, and our armies in a great measure are filled up with them. What will be the effect, what will be the consequence, if it be proclaimed to-day that the Government of the United States have adopted a policy which looks to the exchange of their white prisoners, leaving the black prisoners to their fate?"

Mr. Johnson replied: "I put it to the Senator from New Hampshire whether, if this state of things shall exist, he would be willing that there should be no exchanges. We have of their prisoners, say thirty thousand; they have of ours thirty thousand; and of that thirty thousand ten thousand are colored soldiers. They are willing to exchange the twenty thousand that they have of white soldiers for the twenty thousand that we have of their white soldiers; but the United States say, No; we will do no such thing; we will leave in rebel imprisonment, subject to all the cruelties to which they are subjected, the entire white soldiery of the United States, because we are unable to get back more than a portion of our soldiers, the rebels having decided, or being supposed to have determined, that they would not release any of their black prisoners. Does the honorable member say that would be right? He feels for the black soldier not more strongly than I do. I have said before, upon this floor, at the last session, and, I believe, at the present session, that I would go as far as any Senator in protecting any black man who might be enlisted into the service of the United States, and shouldered his musket to protect the rights of the United States; but while I feel all the sympathy and all the obligation consequent upon the extent of that proper sympathy to the black prisoner, I cannot forget that there is sympathy due to the white soldier, and an obligation growing out of that sentiment."

Mr. Wilson, of Massachusetts, said: "Now, what was the simple proposition that I submitted? It was a proposition to send two commissioners, or commissaries, if you choose to call them so, to consult with the rebel authorities with a view to the better treatment of our prisoners, and to devise a practicable system for that purpose. That such a commission could do it, costing us, I admit, some money to carry it out, I do not entertain a doubt. In

fact, a few weeks ago a partial arrangement was made with the rebel authorities by which they sent cotton to New York, sold that cotton, and took the proceeds and invested it for the relief and benefit of their own prisoners in our hands. General Beale, of Arkansas, a prisoner in Boston harbor, is engaged to-day in carrying out that arrangement on their part. General Hays, of Boston, a prisoner captured on the Weldon Railroad, and a prisoner now, is engaged, I understand, on our part in doing something for the relief of our prisoners. This partial relief already secured has done more to alleviate the sufferings of our prisoners than all the talk and all the speeches that have been made in the Senate and the country; and I believe that if we addressed ourselves to that matter of humanity as we should, we could do a great deal to relieve the sufferings of our brave soldiers in rebel hands.

"There is nothing inconsistent with that proposition in passing the Senator's resolution for retaliation. I do not oppose that resolution if the words 'in kind' were stricken out of it. The resolution originally reported from the Committee on Military Affairs by the Senator from Michigan I could not vote for. That resolution, in its preamble, arraigns the rebels for barbarism and cruelty that would disgrace the devils in the bottomless pit, and then asks us to treat their men 'in kind.' I could not do it; I could not vote for it. I have not the nerve, and I thank God I have not the nerve, to carry that out upon any being that breathes God's air or walks His earth."

Mr. Sprague, of Rhode Island, said: "Sir, the cause of this treatment of our men by the rebels has not been so thoroughly understood as it might have been. The Senator from Iowa (Mr. Harlan) has suggested to you the good effects that have been produced by our retaining the rebel prisoners in our hands. I agree heartily with the suggestion that he made early in this debate. I know something of the disposition of our people early in this war to let their blows strike lightly upon the head of this rebellion. I know that the disposition of our soldiers was not to form their lines as steadily as they should, and to do the real, hard service that was demanded of them. This treatment has been practised by the rebels upon Union soldiers to bring about the very result that has been brought about, and that is, an exchange of prisoners. It was known that the exchange proposed between this Government and the authorities of Rebeldom was unfair; it was known that they captured private citizens and endeavored to offset them with our soldiers. We refused to agree to it; and these retaliatory measures on their part have been the means of producing the results which have come to us in the newspapers and otherwise.

"I do not mean to apologize in any way for these barbarities, but this much I will say: that the refusal of this Government to exchange has wrought up the soldiers of our armies and the

people to the prosecution of this war with an energy unknown to any other people; and the victories of Nashville, the campaign of Atlanta, the splendid success of Savannah, consummated by the capture of Fort Fisher, may be as much owing to the sacrifices and sufferings of our brave men in rebel prisons as to any other cause. While I will not for a moment on this floor apologize in the least for the barbarities of this cruel foe, I yet see something in the course they have pursued to the advantage of this country, and a greater reason not to imitate their example. Sir, there will be no individuals or families who will receive from the people of this country more real respect and adoration than will go forth from the whole people to these suffering heroes. I believe it has been their fortune, suffering as they have, to do more real service to their country in this, its greatest emergency, than ten thousand times the efforts of any other of our citizens. I believe that if you had put upon our advancing armies the strength that we have withheld in our prison camps, if you had put the thirty or forty thousand rebel troops whom we have held as prisoners again in arms against this Government and against our soldiers, the result of their efforts would have put back the success of this contest for years, and would have produced more suffering and more disastrous effects than the suffering that has been brought on our heroes and martyrs in Southern prisons."

Mr. Saulsbury, of Delaware, closed the debate, saying: "The question with me, however, is whether this measure as proposed, advising the President of the United States to resort to it now, would lead to any practical good. I doubt it.

"The question has been discussed in every possible form in which it could be presented except one; every suggestion possible to be made but one for the relief of the suffering Federal prisoners has been made. That one I propose to make; and whether it be popular or unpopular, whether it shall be heralded by the papers as patriotic or unpatriotic, is a matter of indifference to me. That measure is peace. If these acts of cruelty which are alleged to have been perpetrated have been perpetrated, it is only additional proof that this war ought never to have been begun; but having been begun, that it ought instantly to stop. If these allegations be true, these enormities disgrace man and reduce him to the level of the brute; ay, sir, reduce him to the level of the fiends.

"I am not ashamed to raise my humble voice in the Senate of the United States in behalf of peace. Peace descends from Heaven—war springs from hell; and when hell's agency is at work, you cannot expect the blessings of Heaven. It is seldom, sir, that I can approve of any act of the President of the United States; but if the rumor be true which is current to-day that commissioners are on their way from the South to this capital to treat for

peace, and that that is the result of an informal message from the President of the United States, I will take occasion here, while approving but little that he has done before, to approve his action in that respect. Sooner than resort to the bloody scenes which may result from a system of retaliation, if it be true that commissioners are to meet to discuss the terms of peace, instead of invoking starvation and death upon any set of men, any set of prisoners, either Federal or Confederate, I would, if it were in my power, cause the thunderbolts of the Almighty to roll and the lightnings of heaven to flash one continued flame between the contending armies, until these commissioners meet to consult in reference to the great boon of peace.

"It is peace, sir, that this country wants. Give us peace, and no Federal soldiers will ever again rot in Confederate bastilles or prisons, or starve in Confederate pens. Give us peace, and the mother whose aching heart and streaming eyes you now witness, will bless you for your deed. Give us peace, and instead of these acts of barbarism of which we hear, your land shall again bloom and blossom as the rose. Sir, in the place of retaliatory measures, in the stead of resorting to acts of cruelty to meet acts of cruelty, and to prevent them in the future, I propose that your commissioners meet, and I invoke you, if this be the honest aim of the President of the United States, lend him your willing and cordial aid; and then, sir, you will have no need for retaliation; then, sir, your soldiers no longer will be starved or murdered or ill treated, but they shall return to their homes long left, to cheer their families, to rejoice again that peace blesses the land, and that their country does not require any further sacrifice of life or blood upon their part."

The motion to recommit the resolution was lost—ayes, 10; noes, 26.

The question was then taken, on agreeing to the amendment of the Senator from Massachusetts to the Senator from Ohio. It was adopted by the following vote:

YEAS—Messrs. Carlile, Cowan, Davis, Doolittle, Foot, Foster, Harlan, Harris, Henderson, Hendricks, Johnson, Lane of Indiana, McDougall, Morgan, Nesmith, Pomeroy, Powell, Richardson, Riddle, Saulsbury, Sherman, Sumner, Ten Eyck, Van Winkle, Willey, Wilson, and Wright—27.

NAYS—Messrs. Chandler, Clark, Collamer, Conness, Dixon, Farwell, Hale, Howard, Howe, Ramsay, Trumbull, Wade, and Wilkinson—13.

ABSENT—Messrs. Anthony, Brown, Buckalew, Grimes, Harding, Hicks, Lane of Kansas, Morrill, and Sprague—9.

Several other amendments were made, and the resolution was agreed to in the Senate. It did not pass the House.

In the Senate, on December 21st, Mr. Harlan of Iowa, called up the following resolution:

Resolved, That the Committee on the District of Columbia be instructed to inquire into the expediency and propriety of requiring all residents of the

District of Columbia to take and file with the provost marshal of said District an oath of allegiance or fidelity to the Government of the United States similar to the oath required by law of Members and Senators in Congress and other officers of the Government; and also the expediency and propriety of prohibiting all persons from doing business in said District or with the several Departments of the Government who have not or may not take and file such oath; and that said committee have leave to report by bill or otherwise.

Mr. Sumner, of Massachusetts, said: "I wish to thank the Senator from Iowa for introducing this proposition, and at the same time to call the attention of the Senate to a bill which is on their calendar, which I had the honor of introducing at the last session, but which, for some unaccountable reason unknown to me, has been reported upon adversely by the Committee on the Judiciary, requiring that same oath to be taken by the practitioners in the courts of the United States. I am told that there are lawyers in the city of Washington who decline to practise in the courts here because they are unwilling to take the oath which you, sir, have taken, and which the Chief Justice of the United States only the other day took before he entered upon his functions; and yet these same lawyers flaunt in the Supreme Court of the United States. That ought to be stopped; and I give notice therefore that, carrying out the spirit of the resolution of the Senator from Iowa, I shall ask the attention of the Senate as soon as possible to that bill."

Mr. Saulsbury, of Delaware, followed in opposition, saying: "It is not my intention to discuss at any length this resolution, but simply to ask for the yeas and nays on its adoption. I would take that oath myself very willingly, although I believe, as far as relates to members of Congress, it is wholly unconstitutional. I do not object to it, as far as it could relate to myself, because of any thing other than its unconstitutionality contained in it; but I regard it, if it should pass, as one of those acts of unnecessary oppression on the part of the Government which in times like these ought to be avoided. Is there any evidence before this Senate that the old inhabitants of this city, those of them who are living here, have given any trouble to this Government, or even to this Administration?"

Mr. Harlan, of Iowa, in reply, said: "This is a resolution instructing the committee to make an inquiry on this subject. It is barely possible that the committee might report adversely to any legislation. I am frank to state, however, that I think some such legislation is necessary, and ought to be had. I did not suppose a resolution of this kind would implicate any member of this body. It is not intended to require opponents of the Administration *per se* to take an oath of fidelity to the Administration as a political organization, but an oath of fidelity to the Government itself during the existence of a gigantic rebellion. While, then, I maintain that in my opinion some such legislation may be necessary, and

I desire the inquiry to be made by one of the standing committees of this body, I do not think it can be properly denominated a measure of persecution against political opponents of the party in power; and I think the Senator does himself and his political friends gross injustice in throwing out such an intimation. He surely does not desire the mass of the people of this country to understand that he and his political associates are opponents of the Government of the United States and are in sympathy and alliance with the rebels."

Mr. Saulsbury, in reply, said: "Sir, those who choose to regard me and my political associates as in sympathy with the rebellion are welcome to the indulgence of their very charitable opinion. I shall do naught, as a member of this body or in private life, to remove any such suspicion from their minds. I know very well the distinction between the Government of the United States and the Administration at the present time. I know they are asunder as far as the poles; that they approach each other no nearer than heaven and earth approach each other; but I know the doctrine attempted to be inculcated at the present day by a large number of people in this country and by a very influential press, and that is, that the Government is the Administration, and the Administration is the Government. I see no objection on all proper occasions to any man and every man in the United States taking an oath to support the Government of the United States and the Constitution of the United States. But, sir, the honorable Senator does not live in the section that some of us do. He has not seen the progress that these measures have made. He has not heard it announced, perhaps, as we have, that it is traitorous to oppose the actions of the Administration in times like these. He has not heard voters at the polls questioned in reference to their fidelity to an Administration, not their fidelity to a Government or to a Constitution. Sir, had the honorable Senator lived in the section from which I come, had he lived in what was once the glorious and gallant State of Maryland—if the Senator from Maryland (Mr. Johnson) will pardon me—which is now the province of Maryland, under the acts of this Administration, he would have seen how the very inception of such measures as this worked injury, and how in their progress they work harder."

Mr. Hendricks, of Indiana, followed, saying: "I am opposed to a resolution that contemplates the increase of oaths in this country. Why does the Senator intimate by his resolution that it is necessary to pass a law to require the people to take an oath of this sort? Have these oaths been required of the people without authority of law all over the country? It has been done in Indiana, in Kentucky, and, I venture to say, in the Senator's own State, without authority of law. Then does the Senator by this inquiry intend to be understood as saying that the Administration has pursued a course not authorized by law in this respect? Very

many men, very many honest men, very many true citizens have been required to subscribe oaths to protect their persons and their property. The Senator by this resolution intimates that that is all wrong and illegal. I grant that it is. It is a shame that without authority of law any man has been required to take an oath which is not required of the rest of the people."

Mr. Harlan, of Iowa, further said: "The Senator desired me to state whether I knew of any facts that would justify the passage of any such law as the resolution contemplates. I am amazed that any one could ask such a question as that who has lived in this District for a single month. We all know that there are people living in this District who are not only in sympathy with the rebellion, but who embrace every available opportunity to aid the rebels in arms against their Government, who carry goods through the lines on every occasion that they can make available, and who send the proceeds of their trades and of their professions to their sons, and brothers, and husbands in the rebel army, so that we are, in harboring them in our midst, indirectly supporting the rebellion. In my opinion, we have a right to drive them from this community."

The resolution was adopted by the following vote:

YEAS—Messrs. Anthony, Clark, Collamer, Conness, Dixon, Farwell, Foot, Foster, Grimes, Hale, Harlan, Howard, Lane of Indiana, Lane of Kansas, Morgan, Pomeroy, Sherman, Sprague, Sumner, Ten Eyck, Trumbull, Van Winkle, Wilkinson, and Willey—24.

NAYS—Messrs. Brown, Buckalew, Cowan, Davis, Henderson, Hendricks, Johnson, Powell, Richardson, and Saulsbury—10.

ABSENT—Messrs. Carlile, Chandler, Doolittle, Harding, Harris, Hicks, Howe, McDougall, Morrill, Nesmith, Ramsey, Riddle, Wade, Wilson, and Wright—15.

On December 22d, on motion of Mr. Sumner, of Massachusetts, the Senate took up the bill supplementary to the act "prescribing an oath of office," &c., which had been reported upon adversely by the Committee on the Judiciary. It provided that no person, after the 4th of March next, should be admitted to the bar of the Supreme Court of the United States, or of any circuit or district court of the United States, or of the Court of Claims, as an attorney or counsellor of such court, or be allowed to appear and be heard in any such court, by virtue of any previous admission or any special power of attorney, unless he have first taken and subscribed the oath prescribed in "An act to prescribe an oath of office, and for other purposes," approved July 2, 1862, according to the forms and in the manner provided in that act; which oath so taken and subscribed is to be preserved among the files of such court; and any person who should falsely take the oath should be guilty of perjury, and, on conviction, be liable to the pains and penalties of perjury, and the additional pains and penalties in that act provided.

The bill was passed by the following vote:

YEAS—Messrs. Anthony, Brown, Clark, Collamer, Conness, Dixon, Doolittle, Farwell, Foot, Foster, Grimes, Harlan, Harris, Henderson, Johnson, Lane of Indiana, Lane of Kansas, Morgan, Pomeroy, Ramsey, Sherman, Sprague, Sumner, Ten Eyck, Van Winkle, Willey, and Wilson—27.

NAYS—Messrs. Buckalew, Davis, Richardson, and Saulsbury—4.

ABSENT—Messrs. Carlile, Chandler, Cowan, Hale, Harding, Hendricks, Hicks, Howard, Howe, McDougall, Morrill, Nesmith, Powell, Riddle, Trumbull, Wade, Wilkinson, and Wright—18.

This bill subsequently passed the House of Representatives.

In the House, on January 10th, Mr. Kernan, of New York, by unanimous consent, introduced the following resolution; which was read, considered, and agreed to:

Resolved, That the Committee on Military Affairs be, and the same is, directed to inquire and report to the House what legislation or action, if any, is necessary to secure to persons arrested and imprisoned by military authority a prompt examination into the cause of their arrest, and their discharge if there be no adequate cause for their detention, and a speedy trial where there is such cause.

In the House, on January 18th, Mr. Ganson, of New York, offered the following resolution, which was agreed to:

Resolved, That the Military Committee be, and they are hereby, directed to ascertain and report to this House as soon as possible the number of persons now confined in the Old Capitol and Carroll prisons; when such persons were respectively arrested and confined, and upon what charges their arrests were made; whether any of such persons are officers of the army, and have been confined without a trial beyond the time in that respect prescribed by law or by the regulations in the military service; and whether any persons so in prison are confined without any written charges made against them; and whether there are any persons now in said prisons who have not had any trial; if so, to report the names of such persons, the time when they were arrested, and the alleged cause of their arrest respectively; and that the said committee be, and they are hereby, authorized to send for persons and papers.

Mr. Stevens, of Pennsylvania, subsequently moved to reconsider the vote by which the resolution was agreed to. He said: "I thought that it was a resolution of inquiry, and I now find that it is absolute and directory."

Mr. Ganson, of New York, replied: "I know the case of one of my constituents, a captain, who has been confined in prison since the 27th of October last without charges being preferred against him, and after he had served three years and a half in the army. I called upon him on Saturday and was permitted to inquire into his case in the presence of a turnkey, who insisted upon sitting between him and myself and listening to our conversation. I felt it to be a personal indignity, and I am determined that the position of this prisoner shall be investigated if there is any power in this House to have it done."

Mr. Davis, of Maryland, followed, saying: "Mr. Speaker, I do not see why that resolution should not stand. I suppose it is the right of the House of Representatives, and more than

its right, its duty, to see that the liberty of the citizen is not unlawfully violated. If persons have been confined in these prisons beyond the period allowed by law, we are entitled to know it, that we may apply a remedy. If persons are there confined, under the discretionary order of the President, which discretion we have conferred upon him by the law suspending the writ of *habeas corpus*, that is an adequate and conclusive reply to any investigation. If any officer of the army has been arrested, not under the discretionary power conferred upon the President, but in the administration of the ordinary laws for the government of the army, there is a law that entitles him to trial or to his discharge at the expiration of a certain period of time if he be not tried; and I understand the gentleman from New York (Mr. Ganson) to have said that within his knowledge there is one case of that kind."

Mr. Ganson: "I know of two such cases."

Mr. Davis, of Maryland: "The honorable gentleman states that he knows of two such cases. My impression is that it is likely there are other cases of this kind; and one such case justifies and requires the adoption of the resolution."

"There is another ground upon which, in my judgment, it ought to stand. The law suspending the writ of *habeas corpus* in some respects, in my judgment, too much limited the discretion which ought to have been confided to the President when that writ was suspended; yet, being the law of the land, it must be obeyed, and I think—I had almost said with my knowledge—it has not been obeyed."

Mr. Cox, of Ohio, said: "I would like, Mr. Speaker, to have read for the information of the House the first and second sections of the law to which the gentleman from Maryland (Mr. Davis) has just referred; I mean the law which regulates the suspension of the writ of *habeas corpus*, which lays down expressly the effect of such suspension, and directs that the Secretary of State and the Secretary of War shall report to the judges of the circuit and district courts of the United States the names of prisoners. I should like also to enlarge the scope of this resolution so as to inquire why it is that that law has not been obeyed, and whether there has been any attempt made to carry out the law, by the indictment of the persons whose duty it is under that law to report the names of those who are in prison. I would like to know whether the district attorneys of the United States have done their duty; whether such lists have ever been furnished, or whether the law made by the American Congress is a dead letter; whether the executive department, even the legal portion of the executive department, can set aside our laws when they please for their own purposes."

"I do not make these remarks without having cases in my eye—not alone the distinguished case referred to by the gentleman from Maryland, and the case of Mr. Vallandigham. There are

other cases—cases in which the Secretary of the Treasury, under some peculiar 'higher law' unknown to our statutes, has, for purposes connected with the revenue, or to protect the issue of greenbacks or shinplasters against counterfeiting, caused persons to be arrested by the military power. And there are now men in the Capitol prison, almost within the sound of the voice of at least some of the members of this House, who are kept there month after month on the mere order of the Solicitor of the Treasury on the charge of forgery. Applications have been made by their friends again and again to have their persons removed to the proper jurisdictions in the States and districts where the law is unimpeded by the military authority, and no attention has been paid to the request. They still remain there. There is a case from my own district of an old man who has been suspected of counterfeiting. He could be released at any moment by the Solicitor of the Treasury, if he chose. Is there no relief for these abuses? Shall we not be permitted to inquire about them with a view to future legislation?"

Mr. Coffroth, of Pennsylvania, also said: "Mr. Speaker, I know that Lieutenant Nelson, a brave and gallant officer from my district, has been confined in the Capitol prison for four long months. By permission of the Secretary of War I went on Monday last to see him, and he told me that there had been no charges up to this time preferred against him, and that he did not know why he was imprisoned. He had served in the army two years; he had been wounded and had a limb amputated, and he was hobbling through that prison on crutches. In cases of this kind, I think it is right for this House to carry out this resolution, and make it compulsory upon the committee to examine into this matter and let the people of the country know why their friends are detained in these prisons."

Mr. Stevens, of Pennsylvania, said: "The whole resolution, as explained by the various speakers, and the gentleman from Maryland (Mr. Davis) especially, is censorious on the War Department. Now, if the Department deserve censure, I am willing that it shall have it. But there may be several things that are not expedient at this moment to disclose except it were in secret committee, as the gentleman has said. If the usual form be observed of directing the Military Committee to inquire into the expediency of investigating these matters, I shall have no objection to the inquiry. But no one can deny that the passage of the resolution is a direct censure on the Department. I do not say that it was so intended, but I do say that it has that effect. However, if the gentleman from New York has no objection to letting me look into it more carefully, I will move to postpone the further consideration of the matter."

Mr. Kasson, of Iowa, said: "I desire to add my testimony, so far as it may go—and will

give my reasons for it—to the propriety of the investigation proposed. It would constitute not the slightest objection with me, resting my opinion on facts within my own knowledge, that it may imply censure on one Department of the Government; for I believe that the time has arrived when it is due to the people of this country that Congress shall examine the extent and manner in which the power of the Secretary of War is exercised. I state it on my responsibility as a member of the House that an order taken from the President to the Secretary of War, for a certain object, has been met with the reply 'I shall not do it, sir;' and when an explanation has been asked it has been met by the reply, 'I do not propose to argue the question; I am responsible to the President, and to him alone, for my conduct.' When a Representative of the people is met by a responsible officer of the Government in that way, it constitutes with me no objection to a proposition that it may possibly imply censure on the head of an executive Department.

"One thing more: if he be the man he is charged with being, who could in June last have exchanged prisoners of war of the United States on terms recognized throughout all civilized nations, yet left ten or twenty thousand of our gallant men to perish in rebel pens during the last summer, again I find a reason why his administration of that Department should be investigated. I do not want the letters to increase on my table urging Congress to investigate some of these facts connected with the exchange of our soldiers in rebel hands. For the satisfaction of my own constituents, at least, I desire to have an investigation wherever the public interests may require it, and wherever the military rights of the soldiers or the personal rights of citizens are involved."

Mr. Davis, of Maryland, still further added: "I do not desire to be understood as saying that the law is violated under one Department of the Government more than under another. Nor must it be assumed that arrests are made only under the order of the President, or of the heads of Departments. Wherever the fault may lie, they are made by every lieutenant and every provost marshal, from one end of the country to the other, at discretion, and almost without complaint. I speak now directly of what I know to be the case in Maryland. These arrests are sometimes justifiable, and sometimes unjustifiable; sometimes made by a person calling himself a provost marshal, not known to the laws of the United States, acting absolutely without knowledge on the part of the Secretary of War that he held authority from him or from anybody else. And such is getting to be the habit of everybody in the country to act at the bidding of any provost marshal or military officer that the very independence of the American character is being broken down under the unchecked license of military arrests. The law, sir, is not so deficient; but the people have been educated with-

in the last three years in the belief that the existence of a state of war justifies any thing and every thing in the shape of discretionary and arbitrary authority on the part of military officers, high and low, until the very laws of the land intended for the protection of the citizen are not invoked by the people, because they fear that to invoke them will offend the military power and bring its irresponsible vengeance on their heads. When I say that, I say it on my personal knowledge.

"Gentlemen have appealed to me to redress, in the un-American mode of soliciting favor, some of the grievances suffered in Maryland by persons who are loyal citizens. I have pointed them to the law on the subject, and asked, 'Why do you not indict the wrong-doers? The law for the suspension of the *habeas corpus* is your adequate protection. Why do you not indict them?' 'We are afraid,' the reply has been, 'to incur the displeasure of the military authorities.' I wish it to be understood that there is a power higher than the military authority, whether that authority be lodged in the hands of a lieutenant, or of a provost marshal, or of the President of the United States, and that that power is here. I impeach nobody; I cast reflections upon nobody; I speak of things, not men; of grievances, not of the persons responsible for them; but I say abuses are committed by subordinates, if not by gentlemen in superior authority, that require our intervention, and I shall most cheerfully vote for this resolution."

Mr. Garfield, of Ohio, said: "Mr. Speaker, I will detain the House for a moment only. The resolution which passed the House yesterday I will say is now being executed by the Committee on Military Affairs. I have this moment arrived in the hall, after a visit of two hours to one of the prisons in this city in obedience to that resolution; I am not now at liberty to disclose the action of that committee, for the investigation is still pending. But I earnestly hope that the House will not reconsider the vote by which that resolution was adopted, and thus put a stop to the investigation."

The motion to reconsider was laid on the table—ayes, 136; nays, 5.

In the House, on February 20th, the following resolution was offered:

Resolved, That the President of the United States be respectfully requested, and that the Secretary of State and the Secretary of War be directed, to report and furnish to this House the names of all persons, if any there are, who have been arrested and are now held in imprisonment or confinement in any prison, fort, or other place whatsoever, for political offences or any other alleged offence against the Government or authority of the United States, by the order, command, consent, or knowledge of them, or either of them respectively, and who have not been charged, tried, or convicted before any civil or criminal, not military, court of the land, together with the charge against such person, or cause for such arrest and imprisonment, except only such persons who may at the time of their arrest have been in the military or naval service of the United States, together with the name of the prison, fort, or place

where they are severally kept or confined; also whether any person or persons, for any alleged like offence, have been banished or sent from the United States, or from the States not in rebellion to the rebellious States; and the names, times, alleged offences or cause thereof, and whether with or without trial; and if tried, before what court.

The motion to lay on the table was lost by the following vote:

YEs—Messrs. Ames, Ashley, Baxter, Beaman, Blair, Boutwell, Broomall, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Thomas T. Davis, Deming, Dixon, Dumont, Eckley, Eliot, Farnsworth, Grinnell, Higby, Hooper, John H. Hubbard, Hulburt, Julian, Kasson, Kelley, Francis W. It was subsequently referred to the Committee on Military Affairs.

In the Senate, on March 3d, the Civil Appropriation Bill being under consideration, Mr. Lane, of Indiana, moved to strike out the following section:

Sec. 18. *And be it further enacted,* That no person shall be tried by court-martial or military commission in any State or Territory where the courts of the United States are open, except persons actually mustered or commissioned or appointed in the military or naval service of the United States, or rebel enemies charged with being spies.

He said: "Mr. President, here is a regular appropriation bill, every item of which is to carry out an express provision of law or is recommended by one of the Departments of the Government; and upon that bill in the last hours of the session is introduced this provision calculated to revolutionize and change the whole military jurisprudence of the country for the last four years. What business has this proposition upon such an appropriation bill? What connection has it with an appropriation bill? I fail utterly to see that it has any connection with the bill before the Senate. You are told by this provision that no one, except those in the military or naval service of the United States or a spy within our lines, shall be tried by a court-martial. Is that the law? Has it been the law for the last sixty years, or from the very foundation of the Government? No such provision has been the law. I ask the Secretary to read the fifty-sixth and fifty-seventh Articles of War passed under the Ad-

ministration of Thomas Jefferson, who was a democrat when democracy was not an idle name; when it meant something; when it meant devotion to human rights; and there you will see the jurisdiction of military courts affirmed and confirmed. Those articles have been applied in military courts for the last sixty years; and yet we are now told that this whole jurisdiction shall be stricken down in this time of war and rebellion. I ask the Secretary to read those two sections to show the complete jurisdiction of military courts in all such cases."

The Secretary read as follows:

56. Whosoever shall relieve the enemy with money, victuals, or ammunition, or shall knowingly harbor or protect an enemy, shall suffer death, or such other punishment as shall be ordered by the sentence of a court-martial.

57. Whosoever shall be convicted of holding correspondence with, or giving intelligence to the enemy, either directly or indirectly, shall suffer death, or such other punishment as shall be ordered by the sentence of a court-martial.

Mr. Lane continued: "The Senate will perceive by reading the section immediately preceding these two sections that the punishment was confined to men enlisted in the military or naval service; but when it comes to these provisions, these two classes are expressly excluded, and it applies to every one in a time of war who shall give aid and comfort to the enemy. If you will read the four preceding sections you will find that they apply expressly to men in the naval or military service of the United States; but when it comes to these two sections, these classes are expressly excluded, and it applies universally to all people, and it should so apply. We are now in a state of civil war. The war rages South and the war rages North, and wheresoever aid and comfort are given to the enemy there the jurisdiction of a military court applies, and ought to apply.

"How was it last summer in my own State? A treasonable organization was gotten up to murder and assassinate our governor, to release the rebel prisoners, and to deluge in blood the fair plains of that great State from the lakes to the Ohio River, giving aid and comfort to the enemy. Military courts were organized to try the conspirators, and they may now be under sentence of death; but if you adopt this proposition, you rebuke the whole policy of the Government. A court is now organized in Ohio to try the Chicago conspirators, who were in complicity, as I verily believe, as much as I believe in my own existence, or in the God above me, with many of the leaders of the Chicago convention to revolutionize the Northwestern States, to release the rebel prisoners, and to burn the city of Chicago. They are now under trial; but if you adopt this proposition, they cannot be tried by a military court. They must be turned over to the civil tribunals. How are they constituted? By a jury to be called, with the right of challenge and the right of the 'Sons of Liberty' to sit upon the jury

and how will you get convictions? I believe that this bill had far better fail than to incorporate any such provision upon it. It is but a *réecho* of the old cry against arbitrary arrests that I first heard in this chamber from the mouth of John O. Breckinridge, now a rebel in arms against the Government. All that has been said against arbitrary arrests I heard more eloquently and more ably said by him than I have heard by any once since; and yet this is introduced here as a rebuke to the Administration, as a rebuke to all these military courts! Let me tell the Senate that when you put in operation all the machinery of criminal courts and all the machinery of civil courts, you will not punish the one-hundredth part of the rebels, North or South, who deserve to die a felon's death."

Mr. Johnson, of Maryland, said: "I never heard a different construction given to the Articles of War adopted by Congress in 1806, and certainly never heard it intimated that it was possible, by any interpretation of the fifth constitutional amendment, to authorize a man to be tried for a capital or other infamous offence except on an indictment and presentment, unless he was in the military or naval service of the United States or in the militia. But the practical construction that these military men have put upon that clause is that they have the power to try everybody who is charged with any offence that in their opinion remotely affects the military service, or remotely—no matter how remotely—has a tendency to aid the rebellion. I know the military prisons in Baltimore have been filled with citizens who have been charged with no offence that, except by a military sense, could be construed in any way as assisting the rebellion; and that is the case all over the country; and it is attended with enormous expense. There have been at times from one to two hundred men in Baltimore, citizens of Maryland or citizens who happened to be found there, imprisoned; not notified of what the offence for which they were imprisoned was until they were brought out before a military commission or military court-martial to be tried; and that was not done until they had been in prison for months and months. And when they are brought out, how are they tried? They are tried by a violation of the most ordinary and best-established rules of evidence. All the safeguards and rules of evidence, adopted after the experience of centuries and thrown around the citizen who is charged with an offence, have been disregarded. What is the operation upon the Government in a financial point of view? The honorable member from Ohio showed me a letter the other day stating that there was a trial going on in Cincinnati at that time that had cost or would cost the Government from one to two hundred thousand dollars. A trial down in Boston, the trial to which I believe the honorable member from New Hampshire (Mr. Hale) referred the other day, cost the Government I do not know how much more.

"But not only have these military gentlemen violated, and, I think, as I speak it with all proper respect for the opinion of my friend from Indiana, their duty in the particulars to which I have adverted, but the provisions of your own legislation on the subject have been disregarded by the Executive. Congress was aware—the wailings from every State brought the fact to your knowledge—that these outrages upon the liberty of the citizen were being perpetrated; that men were kept in prison, not for days, for weeks, or for months, but for years, without being advised of what the charge against them was, and you therefore, as far back as the 3d of March, 1863, said:

That the Secretary of State and the Secretary of War be, and they are hereby, directed, as soon as practicable, to furnish to the judges of the circuit and district courts of the United States, and of the District of Columbia, a list of the names of all persons, citizens of States in which the administration of the laws has continued unimpaired in the said Federal courts, who are now, or may hereafter be, held as prisoners of the United States, by order or authority of the President of the United States, or either of said Secretaries, in any fort, arsenal, or other place, as State or political prisoners, or otherwise than as prisoners of war.

"The list is to be sent to the courts, and if there was no presentment or indictment within a limited time the parties are to be discharged. That law has been utterly disregarded. An investigation made by a committee of the other House some weeks ago exhibited a state of things existing here, within the sound of our voices, shocking to every sense of freedom which ought to be entertained by the American citizen. More than a year ago the President of the United States constituted a commission to visit these several places and discharge persons against whom there was no ground of arrest in their opinion, and they found, as one of them told me, here in the Old Capitol prison, right before us, a man who had been there for five or six months; and when the person who had placed him there was called before the commission to state upon what grounds he was placed there, he said that he had made a mistake; he was not the man he intended to arrest; he was somebody else.

"To say now that every citizen of the United States is to be dragged before a military tribunal is to say that our fathers fought during the revolution in vain. We are now, as long as this state of things lasts, in no better condition than the subjects of the Turkish empire; not in as good a condition as the subjects of the Emperor of France, if any one can, at the instance of any detective of the Government, be cast into prison, and whenever he may think proper, or the military may think proper, brought out and tried by a military commission who do not know what the rules of evidence are, or who, if they do know, in general utterly disregard them. I have done, sir."

Mr. Stewart, of Nevada, said: "Mr. President, but for the suspension of the writ of *habeas corpus*, but for the strong arm of the

war power, but for the enforcement of that power in this country, there would be no country to-day. We should not be here to-night but for the exercise of the war powers. Before we deliberately come forward and, in the face of the verdict of the people, censure an Administration that has held the helm of the ship of State through this terrific storm, this great trial of republican institutions, which in the end promises so much for the cause of human liberty, and declare that the exercise of this military power for the preservation of the nation, for the preservation of the great Republic, has been wrong, violent, oppressive, and wicked, let us pause. I am not prepared to take such a step."

Mr. Trumbull, of Illinois, followed: "Nearly one-half the people of the North have been arrayed, not against the Government, but have been expressing dissatisfaction and weakening the arm of the Government by just such acts as this section seeks to avoid. From the beginning of this war I have believed that the true course to pursue was to preserve the Government and preserve liberty together. I believed that constitutional liberty, liberty regulated by law, could be preserved in this land. It is the liberty we are fighting for. And when gentlemen lay aside the law and the Constitution and say, 'There is no law, nothing but the strong arm,' how are you any better than the traitor you fight? What does he do but disregard the law and the Constitution? What is this rebellion but an armed resistance to constitutional and legal authority? If you would be strong, be strong under the banner of the law and the Constitution. Fight for liberty, fight for law, and then you will be strong."

"Now, sir, I have before me the report of the Secretary of War; and I wish to do an act of justice to that high officer on this occasion. I have often heard him denounced for these arbitrary arrests and for non-compliance with the act of Congress which made it his duty and the duty of other officers of the Government, whenever persons charged with political offences were arrested, to report their cases to the first term of the court which should be held in the proper district after the arrest took place. I am happy to know from this official report that in this respect the Secretary of War has endeavored to do his duty. The act of Congress making it the duty of the Secretaries to report to the judicial tribunals all cases of persons arrested in the loyal States charged with political offences was passed on the 3d day of March, 1863. Within twenty days from the time the act passed, and perhaps as soon as it came to the notice of the Secretary of War, he issued this order:

are observed in regard to all persons held in military custody.

Very respectfully, your obedient servant,
EDWIN M. STANTON, Secretary of War.
Hon. J. Holt, Judge-Advocate General.

"Here was an order of the War Department, made within twenty days of the passage of the act, charging a particular officer in his Department with the execution of this law, and enjoining upon him that he should see that the provisions of the act were observed in regard to all persons held in custody. What more could he do? The Secretary of War could not personally visit all the prisons in the land, to ascertain if persons were held in confinement. He had to intrust this duty to some one; and if you will look through this report you will find that at different times he appointed commissions to visit the different prisons throughout the country and ascertain if there were persons held there in confinement who ought not to be confined; and many have been released by these commissioners. I make this statement in justice to a public officer. I have had some conversation with the Secretary of War upon this subject, and I learned from him that these arrests which had been made in the different parts of the country by subordinate officers had given him more pain than almost any thing else that had occurred during the war; that he had been unable to sleep at night in consequence of its coming to his knowledge that persons had without cause been thus arrested and sometimes held for a considerable period of time before it came to his notice."

"I voted for the law authorizing the suspension of the *habeas corpus*. I did it because in a time of war like this, in a great emergency, I thought there might be occasions when it was proper that men should be arrested and held in confinement. I voted for that law which provided that they might be taken and so held, and should not be released by a court or anybody else until after there was an opportunity to present their case to a grand jury, and not then unless the judge was satisfied that it was proper to release them, and they gave bond for their good behavior and took an oath of fidelity to the Government. But, sir, when I voted for that law, I did not expect that the writ of *habeas corpus* was to be regarded as suspended by all the subordinate officers throughout the land. I did not suppose that every provost marshal in the land would be at liberty to arrest whom he pleased, and keep him in confinement. I thought that whenever an arrest was made, the fact would be immediately reported to headquarters, to the War Department, or to the President himself, and that action would be taken in regard to the case at the earliest possible period. It seems the Secretary of War has endeavored to take action. It seems by this report that he has endeavored to discharge his duty in that respect; and I am glad that he has; and I am glad that the fact turns out to be that persons who have been arrested have

WAR DEPARTMENT, WASHINGTON CITY, }
March 23, 1863.

COUNSEL: I beg you to direct your attention to the provision of the late act of Congress requiring prisoners held under military authority to be released within a certain time, and to ask that proceedings may be taken against such as are not proper to be released, and that you will see that the provisions of that law

had relief and been discharged where it did not appear on investigation that there were any charges against them sufficient to put them on trial.

"In regard to the section under consideration, I think it should be guarded; I think it should be so framed as not to impair the efficiency of the Government in carrying on this war, and not unnecessarily to infringe upon the right of the citizen. Sir, I have a great respect for law. I love the Constitution.

"I say to the Senators who are so zealous to-night in favor of military trials, who are in favor of trying the citizen by a military tribunal, that you are setting an example which is utterly subversive of the Constitution and regulated liberty; you are overturning all that the Anglo-Saxon race has contended for, for two hundred years, which is, the right of the citizen to be protected and regulated by law, and not to have his rights and his liberties dependent upon an officer, without law, and in disregard of it. There is no law regulating these trials of the citizen. Whenever an act is done—and I think that is the distinction—connected with the military service of the Government, there the military tribunals take hold of the party. Wherever the judicial tribunals of the country are overborne, of necessity the military tribunals must govern."

Mr. Howard, of Michigan, said: "Mr. President, I cannot listen to the remarks of the Senator from Illinois without attempting something in the shape of a reply. What does this section propose which is now moved to be stricken out? It proposes to release and liberate hundreds of rogues and conspirators now confined in prison awaiting trial, and some of them undergoing their sentences; to set them at liberty again to plot and conspire against the peace and safety of the United States.

"Had it not been for the salutary use of this restraining power on the part of the Executive as Commander-in-chief of the army, it is, I think, no news to say to the Senator from Illinois that the very city in which he resides would have been reduced to a mass of cinders and ashes during the sitting of the Chicago Convention; for it is perfectly well known, as well established as any fact can be, that on that occasion there were thousands of conspirators who came over from Canada, where they had been hatching their plots against the United States, and for the very purpose of firing that town, liberating the prisoners confined at Camp Douglas, and doing other acts of mischief and destruction. Had it not been for the same protective, the same tutelary power which the Senator now denounces so bitterly, and of which he has heretofore spoken in this body in terms of approbation and praise on more than one occasion, the very dwelling of that Senator would have been laid in ashes by the hands of just such wretches as these military courts and commissions are intended to punish. Now, sir, away with this mawkish, affected sensibility in regard to courts-

martial! If there be any fault connected with them, and connected with the Administration on account of them, it is that they have not been used with sufficient vigor and vigilance. That is my opinion. The rigors belonging to martial law are in a moment of war and public danger the only restraining power sufficient to compel obedience to law and order. I will not trespass on the time of the Senate longer. I am glad the motion has been made to strike out that section so anomalous in a statute making appropriations."

Mr. Conness, of California, said: "I will simply say that rather than allow this section to pass, rather than that the Congress of which I am a member should knowingly adopt this section, and plant the condemnation of its expression upon the best acts of our people for four years past, I would see this appropriation bill and all the others that you have passed sunk into perdition. You cannot taint the bill before you with this miserable and disgraceful attack upon the patriotism of the land, and get my vote for it. It is a poor compliment at this time for us law-makers to pay to the men who have been our agents, the men who have been the mediums through which we have acted in all this great contest, that we now turn about and definitively say to them, 'You have violated liberty, you have outraged law, you have pulled down the great edifice of civil liberty, and we reproach you thus for it.' Such an act, Mr. President, can have no vote of mine.

Mr. Hendricks, of Indiana, said: "From the argument which has been indulged in one would think this was the first time this subject had been spoken of in the Senate. I beg leave to call the attention of Senators to the very proposition that is now before us which has been denounced with quite as much passion as judgment. This section provides that hereafter no person shall be tried by court-martial or military commission in any State or Territory where the courts of the United States are open, except persons actually mustered or in commission in the service of the United States, or enemies charged with being spies, and a modification acceptable to myself is proposed by the Senator from Illinois. Just two years ago to-day the Senate of the United States agreed to quite this much, and prescribed a penalty for the violation of the very principles defined in this section. When the Senate of the United States, two years ago, agreed that the President might suspend the writ of *habeas corpus*, it was not unconditionally and without restrictions, but it was with such provisions as would yet secure the liberty of the citizen. This law, which will not allow the President to put any man on his trial before a military court unless he be properly answerable before such a court, has stood for two years without a word of complaint from my worthy and very able colleague. But to-night he says he would rather see any of these appropriation bills fall; he would see all the appropriations necessary for the sup-

port of what he regards, and what I regard, to be the best Government on earth, go down to perdition rather than he would sanction that which has been the law of the land well expressed for two years. The trouble is not in the law. Senators, the law is plain. When you said there should be no longer the writ of *habeas corpus* in the United States, you said that in its stead there should be this high and sure remedy, that a man should only be held for a time, but that when the court came round, if the grand jury did not indict him he should be discharged. You said it. The question is, Shall it be the law, or shall there be above the Senate and above the House of Representatives a higher power in the country, a power to place a man upon trial?

"My colleague says that some of our fellow-citizens in Indiana have been put upon trial before courts-martial for civil offences. I know what the offence charged was. It was a conspiracy to commit treason. That was the charge. And where do you find the offence described? You find it defined in the act of 1862, well defined, and the penalty prescribed—not the penalty of going before a military court, but the penalty is a trial before the United States district court, a civil court, upon an indictment, and the punishment is to follow the judgment of that court. The law is, as we declared it, that the President shall not try a man who is not connected with the army or the navy before a military court, but that he shall simply hold him in custody, and for that time the writ of *habeas corpus* is suspended, and shall then bring him before the court, and if he is not found guilty by a grand jury he shall go acquitted. We said that; but the military officers say no, and, as my colleague says, in the very eye of that law men have been sentenced to death in Indiana. That is true, as I understand. Men have been so sentenced to die, and if they die in violation of law who is the murderer? No man's life can be taken except by authority of law. If there is authority of law for it my colleague may sustain the shedding of the blood, he may say that the garments of the officers are yet white after it is done; but it has been long decided by the tribunals of our race that if it is against law it is a murder. That has been too long decided to be questioned now."

Mr. Cowan, of Pennsylvania, said: "I am willing to say that I have had great charity for many people who at first supposed it was necessary to resort to military tribunals to find a remedy for disloyalty. The thought that the Union would be destroyed and the nation divided was so shocking to the minds of loyal men that they were not likely to stop at any means to prevent a consummation so much dreaded; but after the experience we have had of the mischievous working of unconstitutional measures, we ought not only to stop them for the future, but we ought to congratulate ourselves that the Constitution itself is again vindicated

in the fact that it contains the true rules for our guidance even in times of civil war. I hope, too, that when it is again established as the supreme law of the Union, it will only have a firmer hold on our affections, because its wisdom has been demonstrated by the consequences of disregarding it.

"Now, let us contrast the course of the law as I have described it with the course adopted since the commencement of the war, of subjecting citizens not in the land or naval forces to trial by courts-martial, and we will soon see the difference. In the one we will find the utmost care and tenderness for the life, liberty, and character of the citizen, while in the other there is no security whatever for any of them. The innocent are in quite as much danger as the guilty, and not generally as well qualified to make defence.

"And first: the charges are half the time of that vague, indefinite character, that it is not possible to reduce them with any degree of certainty to a definition, especially as there is no statute to furnish a guide. They are drawn up without any technical skill, and the record left of them would make but a sorry plea on a subsequent trial for either a former acquittal or conviction. A man might be put in peril on account of the same offence as often as it pleased his judges for aught they would serve him.

"The court-martial itself is not free; it is composed of officers themselves constantly seeking and constantly expecting promotion from their superiors; and they are of course not at liberty to do any thing which might interfere with their prospects in that respect. This is a prime mischief, as they only sit under special commissions, and for the trial of particular persons, whom it is the desire of the superiors to convict, or they would not have issued the commission. It would be singular, therefore, if the tribunal did not do the work it was set to do, and that with hearty good will, while they can have no sympathy with the accused, who belongs to a different class from themselves.

"These officers are chosen, too, by those who as a general rule are anxious to vindicate the administration of their own department, and divert the attention of the public from their own delinquencies, by exposing the spectacle of some inferior victim, the judge advocate, who is in reality a kind of anomalous cross between a prosecutor and judge, having the disposition of the one and the power of the other to bring about a conviction.

"The further mischief of these trials is that being utterly repugnant to the genius of our institutions and our laws, they command no respect and satisfy no demand of justice. Nobody ever acquiesces in the propriety of their findings, even while admitting them to be substantially correct, because, having no confidence in the machinery used, there is always a lingering suspicion that unfairness has existed in the proceedings.

"Again, these courts are directed to sit, often-

times, without any regard to the convenience of suitors or witnesses, in places remote from their homes and from the locality where the offence was alleged to have been committed. This is a great hardship, especially to the poor, who cannot afford to pay for the travel and wages of witnesses, who come from great distances, nor can the witnesses themselves afford to attend at their own expense, with but a doubtful chance that the bills of costs in the end will be paid. Those familiar with the practice in criminal courts will be able at once to feel the importance of this defect.

"On the trial, too, it is well known that most of the questions requiring the peculiar learning of the lawyer are those of evidence, such as the relevancy of the testimony.

"But, perhaps, after all the greatest and most serious objection to these courts lies in the fact that they are engines of tyranny, useful only to wreak out the vengeance of private malice or partisan fury. They are in their nature especially adapted to these ends, and in all ages and under all circumstances have been denounced for the facilities they afforded in the execution of such purposes. The slightest grounds are sufficient to give them authority, and when once in motion there is no force adequate to restrain them, and they usually go on till they are intolerable."

Mr. Trumbull, of Illinois, said: "It has been argued against as if it were something very different from what it is. The Senator from Michigan says in his argument that this is a proposition to let loose the criminals of the country. He says that men who are undergoing sentence will be discharged by it, and that those held for trial will be discharged, and that it is an assault upon the manner in which persons charged with the administration of the Government have discharged their duty. It is no such thing, sir. The proposition is that hereafter in the loyal States, where the courts are open, no person not in some way connected with the military service shall be tried by court-martial or military commission. That is the proposition. It does not propose to interfere in the least with anybody who has been tried. It is prospective in its operation. It does not propose to discharge anybody. There is no such word in it. Now, what becomes of all that the Senator from Michigan said? Then the Senator goes on to say that but for the exercise of this power to try persons by court-martial and military commission, the city of Chicago would have been burned, the dwelling in which I live would have been burned. I do not think any such thing. I have no such opinion. And the Senator from Nevada speaks of the issue in the last election, and says that what he had to meet upon the stump was a complaint about arbitrary arrests. That is not this question. This section does not say any thing about arbitrary arrests; this is a proposition that persons shall not be tried in a particular way. It has nothing to do with arrest-

ing them. It is not proposed to interfere with the power of arresting persons. That is given by another act by which the *habeas corpus* is suspended. This does not propose to repeal that act.

"But the Senator from Nevada says that something akin to this was a question in the last election. How came it to be a question? What was it that divided the North? There was a time in the early stages of this war when we were very much united in the North. Does not the Senator from Nevada wish that to be so again? I know he does. He would have every man in all these States united as one man to crush this rebellion and crush it at once. I think we should do nothing to divide the North if we can help it. It is not politic to do it. It is not wise to do it. What is it that has divided the North? He says himself that the very question he had to meet away out in Nevada was the question about arrests, not the question we are now considering, because this says nothing about arrests, but somehow akin to it. Does he not think it would have been better if those who are charged with the administration of the Government had so conducted themselves as, if possible, to have kept a united public sentiment?"

The question recurring on the motion of Mr. Lane, of Indiana, to strike out the section as amended, resulted as follows:

YEAS—Messrs. Anthony, Brown, Chandler, Clark, Conness, Farwell, Foster, Grimes, Harlan, Howard, Howe, Lane of Indiana, Morgan, Morrill, Nye, Ramsey, Stewart, Sumner, Wilkinson, and Wilson—20.

NAYS—Messrs. Buckalew, Cowan, Davis, Hale, Hendricks, Johnson, McDougall, Nesmith, Powell, Riddle, Sprague, Trumbull, Van Winkle, and Wade—14.

ABSENT—Messrs. Carlile, Collamer, Dixon, Doolittle, Foot, Harding, Harris, Henderson, Lane of Kansas, Pomeroy, Richardson, Saulsbury, Sherman, Ten Eyck, Willey, and Wright—16.

So the motion to strike out prevailed, and was approved by the House of Representatives.

In the House, on January 16th, a bill "to guarantee to certain States whose governments have been usurped or overthrown a republican form of Government," was taken up for consideration, when Mr. Ashley, of Ohio, offered the following substitute, with instructions from the Select Committee of the House on rebellious States, to ask that it might be substituted for the original bill. It was so ordered.

That in the States declared in rebellion against the United States, the President shall, by and with the advice and consent of the Senate, appoint for each a provisional governor, whose pay and emoluments shall not exceed that of a brigadier-general of volunteers, who shall be charged with the civil administration of such State until a State government therein shall be recognized as hereinafter provided.

SEC. 2. And be it further enacted, That until the United States shall have recognized a republican form of State government, the provisional governor in each of said States shall see that this act, and the laws of the United States, and the laws of the State in force when the State government was overthrown by the rebellion, are faithfully executed within the

State; but no law or usage whereby any person was heretofore held in involuntary servitude shall be recognized or enforced by any court or officer in such State; and the laws for the trial and punishment of white persons shall extend to all persons, and jurors shall have the qualifications of voters under this law for delegates to the convention. The President shall appoint such officers provided for by the laws of the State when its government was overthrown as he may find necessary to the civil administration of the State, all which officers shall be entitled to receive the fees and emoluments provided by the State laws for such officers.

Sec. 3. *And be it further enacted*, That until the recognition of a State government, as aforesaid, the provisional Governor shall, under such regulations as he may prescribe, cause to be assessed, levied, and collected, for the year 1865, and every year thereafter, the taxes prescribed by the laws of such State to be levied during the fiscal year preceding the overthrow of the State government thereof, in the manner prescribed by the laws of the State, as nearly as may be; and the officers appointed, as aforesaid, are vested with all powers of levying and collecting such taxes, by distress or sale, as were vested in any officers or tribunal of the State government aforesaid for those purposes. The proceeds of such taxes shall be accounted for to the provisional governor, and be by him applied to the expenses of the administration of the laws in such State, subject to the direction of the President, and the surplus shall be deposited in the Treasury of the United States to the credit of such State, to be paid to the State upon an appropriation therefor, to be made when a republican form of government shall be recognized therein by the United States.

Sec. 4. *And be it further enacted*, That all persons held to involuntary servitude or labor in the States or parts of States in which such persons have been declared free by any proclamation of the President, are hereby emancipated and discharged therefrom, and they and their posterity shall be forever free; and if any such person or their posterity shall be restrained of liberty, under pretence of any claim to such service or labor, the courts of the United States shall on *habeas corpus* discharge them.

Sec. 5. *And be it further enacted*, That if any person declared free by this act, or any law of the United States, or any proclamation of the President, be restrained of liberty, with intent to be held in or reduced to involuntary servitude or labor, the person convicted before a court of competent jurisdiction of such act shall be punished by fine of not less than \$1,500, and be imprisoned not less than five nor more than twenty years.

Sec. 6. *And be it further enacted*, That every person who shall hereafter hold or exercise any office, civil or military, except offices merely ministerial and military offices below the grade of colonel in the rebel service, State or confederate, is hereby declared not to be a citizen of the United States.

Sec. 7. *And be it further enacted*, That so soon as the military resistance to the United States shall have been suppressed in any State, and the people thereof shall have sufficiently returned to their obedience to the Constitution and the laws of the United States, the provisional governor shall direct the marshal of the United States, as speedily as may be, to name a sufficient number of deputies, and to enroll all white male citizens of the United States resident in the State in their respective counties, and to request each one to take the oath to support the Constitution of the United States, and in his enrolment to designate those who take and those who refuse to take that oath, which rolls shall be forthwith returned to the provisional governor; and if the persons taking that oath shall, together with the citizens of the United States from such State in the military or naval service of the United States, amount to a majority of the persons enrolled in the State, he

shall, by proclamation, invite the loyal people of the State to elect delegates to a convention charged to declare the will of the people of the State relative to the reestablishment of a State government, subject to and in conformity with the Constitution of the United States.

Sec. 8. *And be it further enacted*, That the convention shall consist of as many members as both houses of the last constitutional State Legislature, apportioned by the provisional governor among the counties, parishes, or districts of the State in proportion to the population enrolled by the marshal, in compliance with the provisions of this act, or in the military or naval service of the United States, as aforesaid. The provisional governor shall, by proclamation, declare the number of delegates to be elected by each county, parish, or election district; name a day of election, not less than thirty days thereafter; designate the places of voting in each county, parish, or district, conforming as nearly as may be convenient to the places used in the State elections next preceding the rebellion; appoint one or more commissioners to hold the election at each place of voting, and provide an adequate force to keep the peace during the election.

Sec. 9. *And be it further enacted*, That the delegates shall be elected by the loyal male citizens aforesaid of the United States of the age of twenty-one years, and resident in the county, parish, or district in which they shall offer to vote, or in the military or naval service of the United States, and who shall take and subscribe the oath of allegiance to the United States in the form contained in the act of Congress of July 2, 1862; and all citizens of the United States who are in the military or naval service of the United States shall vote at the headquarters of their respective commands, under such regulations as may be prescribed by the provisional governor for the taking and return of their votes; but no person who has held or exercised any office, civil or military, State or confederate, under the rebel usurpation, or who has voluntarily borne arms against the United States, shall vote or be eligible to be elected as delegate at such election.

Sec. 10. *And be it further enacted*, That the said commissioners, or either of them, shall hold the election in conformity with this act, and, so far as may be consistent therewith, shall proceed in the manner used in the State prior to the rebellion. The oath of allegiance shall be taken and subscribed on the poll-book by every voter in the form above prescribed, but every person known by or proved to the commissioners to have held or exercised any office, civil or military, State or confederate, under the rebel usurpation, or to have voluntarily borne arms against the United States, shall be excluded, though he offer to take the oath; and in case any person who shall have borne arms against the United States shall offer to vote, he shall be deemed to have borne arms voluntarily unless he shall prove the contrary by the testimony of a qualified voter. The poll-book, showing the name and oath of each voter, shall be returned to the provisional governor by the commissioners of election or the one acting, and the provisional governor shall canvass such returns, and declare the person having the highest number of votes elected.

Sec. 11. *And be it further enacted*, That the provisional governor shall, by proclamation, convene the delegates elected as aforesaid, at the capital of the State, on a day not more than three months after the election, giving at least thirty days' notice of such day. In case the said capital shall in his judgment be unfit, he shall in his proclamation appoint another place. He shall preside over the deliberations of the convention, and administer to each delegate, before taking his seat in the convention, the oath of allegiance to the United States in the form hereinbefore prescribed.

Sec. 12. *And be it further enacted*, That the convention shall declare, on behalf of the people of the

State, their submission to the Constitution and laws of the United States, and shall adopt the following provisions, hereby prescribed by the United States in the execution of the constitutional duty to guarantee a republican form of government to every State, and incorporate them in the constitution of the State, that is to say:

First. No person who has held or exercised any office, civil or military, except civil offices merely ministerial and military offices below the grade of colonel, State or confederate, under the usurping power, shall vote for or be a member of the Legislature, or Governor.

Second. Involuntary servitude is forever prohibited, and freedom and equality of civil rights before the law are guaranteed to all persons in said State.

Third. No debt, State or confederate, created by or under the sanction of the usurping power, or in any manner in aid thereof, shall be recognized or paid by the State; and all acts, judicial or legislative, for the confiscation or forfeiture of any debt, property, or franchise, of any loyal citizen of the United States, are hereby declared null and void.

Sec. 13. *And be it further enacted*, That when the convention shall have adopted those provisions it shall proceed to reestablish a republican form of government, and ordain a constitution containing those provisions, which, when adopted, the convention shall by ordinance provide for submitting to the people of the State entitled to vote under this law, at an election to be held in the manner prescribed by the act for the election of delegates, but at a time and place named by the convention, at which election the said electors, and none other, shall vote directly for or against such constitution and form of State government. And the returns of said election shall be made to the provisional governor, who shall canvass the same in the presence of the electors, and if a majority of the votes cast shall be for the constitution and form of government, he shall certify the same with a copy thereof, to the President of the United States, who, after obtaining the assent of Congress, by act or joint resolution, shall, by proclamation, recognize the Government so established, and none other, as the constitutional Government of the State; and from the date of such recognition, and not before, Senators and Representatives and electors for President and Vice-President may be elected in such State, according to the laws of the State and of the United States.

Sec. 14. *And be it further enacted*, That if the convention shall refuse to reestablish the State Government on the conditions aforesaid, the provisional governor shall declare it dissolved; but it shall be the duty of the President, whenever he shall have reason to believe that a sufficient number of the people of the State entitled to vote under this act, in number not less than a majority of those enrolled as aforesaid, are willing to reestablish a State government on the conditions aforesaid, to direct the provisional governor to order another election of delegates to a convention for the purpose and in the manner prescribed in this act, and to proceed in all respects as hereinbefore provided, either to dissolve the convention or to certify the State Government reestablished by it to the President.

Sec. 15. *And be it further enacted*, That the United States, in Congress assembled, do hereby recognize the Government of the State of Louisiana, inaugurated under and by the convention which assembled on the 6th day of April, A. D. 1864, at the city of New Orleans, and the Government of the State of Arkansas, inaugurated under and by the convention which assembled on the 8th day of January, 1864, at the city of Little Rock: *Provided*, That the same or other conventions, duly assembled, shall first have incorporated into the constitutions of those States, respectively, the conditions prescribed in the twelfth section of this act, and the marshal of the United States shall have returned to the President of the United

States the enrolment directed by the seventh section to be made and returned to the provisional governor and it shall appear thereby that the persons taking the oath to support the Constitution of the United States, together with the citizens of the United States from such State in the military or naval service of the United States, amount to a majority of the persons enrolled in the State. And the President shall, thereupon, by proclamation, declare the recognition by the United States, in Congress assembled, of the said Government of such State; and from the date of such proclamation the said Government shall be entitled to the guarantee and all other rights of a State government under the Constitution of the United States; but this act shall not operate a recognition of a State government in either of said States till the conditions aforesaid are complied with, and till that time those States shall be subject to this law.

Mr. Kelley, of Pennsylvania, moved to amend by insisting after the words "to enroll all the white male citizens of the United States," the words "and all other male citizens of the United States who may be able to read the Constitution thereof." In support of his motion he said: "At the close of an international war, the wronged but victorious party may justly make two claims: indemnity for the past, and security for the future; indemnity for the past in money or in territory; security for the future by new treaties, the establishment of new boundaries, or the cession of military power and the territory upon which it dwells. Indemnity for the past we cannot hope to obtain. When we shall have punished the conspirators who involved the country in this sanguinary war, and pardoned the dupes and victims who have arrayed themselves or been forced to do battle under their flag, we shall but have repossessed our ancient territory, reestablished the boundaries of our country, restored to our flag and Constitution their supremacy over territory which was ours, but which the insurgents meant to dismember and possess. The other demand we may and must successfully make. Security for the future is accessible to us, and we must demand it; and to obtain it with amplest guarantees requires the adoption of no new idea, the making of no experiment, the entering upon no sea of political speculation.

"In announcing the reasons which impelled the colonies to a separation from the mother country, the American people declared that 'a decent respect to the opinions of mankind' required 'a declaration of the causes which impelled them to the separation;' and in assigning those causes announced a few general propositions, embodying eternal and ever-operating principles, among which were,

"First, that 'all men are created equal, are endowed with certain inalienable rights,' and that 'among these are life, liberty, and the pursuit of happiness.'

"Second, that 'to insure these rights, Governments are instituted among men.'

"Third, that 'Governments derive their just powers from the consent of the governed.'

"Fourth, that 'whenever any form of government becomes destructive of these ends, it is the

right of the people to alter or to abolish it, and to institute a new Government, laying its foundations on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.' And in these four propositions we have an all-sufficient guide to enduring peace and prosperity. If in the legislation we propose, we regard these self-evident truths, our posterity shall not only enjoy peace, but teach the world the way to universal freedom; but if we fail to regard them, God alone in His infinite wisdom knows what years of agitation, war, and misery we may entail on posterity, and whether the overthrow of our Government, the division of our country, and all the ills thus entailed on mankind, may not be justly chargeable to us.

"My proposition is, that the Government of the United States was instituted to secure the rights of all the citizens of the country, and not for the benefit of men of one race only; and I know not where to look for evidence that would strengthen the conclusiveness of the mass of proof I have thus adduced, embracing as it does the action of the framers of all the State constitutions but one, of the Congress for framing Articles of Confederation, of the Convention for framing the Constitution of the United States, the acts of Congress in unbroken series throughout the active life of a generation, and the solemn obligations assumed by the executive department of the national Government in the exercise of the treaty-making power. If other source of proof there be, it can only serve to make assurance doubly sure.

"Mr. Speaker, it is safe to assert that in every State, save South Carolina, and possibly Virginia and Delaware—in which two States the question of suffrage was regulated by statute and not by constitutional provision—negroes participated in constituting the Convention which framed the Constitution of the United States, and voted for members of the State conventions to which the question of its ratification was submitted; and as that Constitution contains no clause which expressly or by implication deprives them of the protecting power and influence of the instrument they participated in creating, I may well say that to secure internal peace by the establishment of political homogeneity, and perpetuate it by the abolition of political classes and castes whose conflicting rights and interests will provoke incessant agitation, and ever and anon, as the oppressed may be inspired by the fundamental principles of our Government, or goaded by wrongs excite armed insurrection, we need adopt no new theory, but accept the principles of our fathers, and administer in good faith to all men, the institutions they founded on them.

"As a step to this, my amendment proposes, not that the entire mass of people of African descent, whom our laws and customs have degraded and brutalized, shall be immediately clothed with all the rights of citizenship. It proposes only to grant the right of suffrage, inestimable to all men, to those who may be so far fitted by education

for its judicious exercise as to be able to read the Constitution and laws of the country, in addition to the brave men, who, in the name of law and liberty, and in the hope of leaving their children heirs to both, have welcomed the baptism of battle in the naval and military service of the United States, and who are embraced by the amendment reported by the committee. This, I admit, will be an entering wedge, by the aid of which, in a brief time, the whole mass improved, enriched, and enlightened by the fast-coming and beneficent providences of God, will be qualified for and permitted to enjoy those rights by which they may protect themselves, and aid in giving to all others that near approach to exact justice which we hope to attain from the intelligent exercise of universal suffrage and the submission of all trials of law in which a citizen may be interested to the decision of his peers as jurors.

"Let us frankly accept Jefferson's test as to the right of suffrage, and give it practical effect. In a letter dated July 12, 1816, in discussing a proposed amendment to the constitution of Virginia, Mr. Jefferson said:

"The true foundation of republican government is the equal right of every citizen in his person and property, and in their management. Try by this as a tally, every provision of our constitution, and see if it hangs directly on the will of the people. Reduce your Legislature to a convenient number for full but orderly discussion. Let every man who fights or pays, exercise his just and equal right in their election."—*Jefferson's Works*, vol. vii., p. 11.

"By adopting this sound test, which, be it remembered, was the only one recognized by the fathers, and adhering to it, our practice will harmonize with our theories, and the repugnance between the races will gradually disappear. Wealth and power conceal many deformities, and will make the black man less odious to all than he now seems. Thus will consistent adherence to principle give strength and peace to our country.

"But if, on the other hand, we ignore the rights of these four million people and their posterity, the demon of agitation will haunt us in the future fearfully as it has in the past. The appeals of these millions for justice will not go forth in vain; and the liberal, the conscientious, the philanthropic, the religious, now that our Christian church recognizes her long off-cast child philanthropy, will be found in hostile array against what the commercial and planting interests will regard as the conservatism of the day; and though we find that we have buried the slavery question, our peace will be disturbed by the negro question constantly, and fearfully as it has been by the struggle between slavery and free labor. To which party ultimate victory would be vouchsafed in such a controversy I need not ask, as the nation acknowledges that God still lives and is omnipotent.

Mr. Eliot, of Massachusetts, offered the following substitute to the bill:

Strike out all after the enacting clause and insert: That the States declared to be in rebellion against

the United States, and within which the authority of the Constitution and laws of the United States has been overthrown, shall not be permitted to resume their political relations with the Government of the United States until, by action of the loyal citizens within such States respectively, a State constitution shall be ordained and established, republican in form, forever prohibiting involuntary servitude within such State, and guaranteeing to all persons freedom and equality of rights before the law.

Sec. 2. *And be it further enacted*, That the State of Louisiana is hereby permitted to resume its political relations with the Government of the United States under the constitution adopted by the convention which assembled on the 6th day of April, A.D. 1864, at New Orleans.

To this substitute Mr. Arnold, of Illinois, offered the following amendment, which was accepted by Mr. Eliot:

Sec. —. *And be it further enacted*, That in all that portion of the United States heretofore declared to be in rebellion against the United States, and enumerated in the President's proclamation of January 1, 1863, slavery and involuntary servitude, otherwise than in the punishment of crime whereof the accused shall have been duly convicted, shall be, and the same hereby is, abolished and prohibited forever, and the reenslavement, or holding, or attempting to hold in slavery or involuntary servitude, any person within such State made free by this act, or declared to be free by the proclamation of the President of the United States, dated Jan. 1, 1863, or of any of their descendants, otherwise than in the punishment of crime, whereof the accused shall have been duly convicted, is and shall be forever prohibited, any law or regulation of either of said States to the contrary notwithstanding.

Mr. Wilson, of Iowa, offered the following amendment to the substitute of Mr. Eliot:

Senators and Representatives shall not be received from any State heretofore declared in rebellion against the United States until by an act or joint resolution of Congress, approved by the President, or passed notwithstanding his objections, such State shall have been first declared to have organized a just local government, republican in form, and to be entitled to representation in the respective Houses of Congress.

Mr. Eliot, in support of his substitute, said: "What is the need of any general bill? We passed one last session, I know, containing provisions, many of them like the provisions of this bill. There appeared to be reason to act then. But can we undertake in one bill to state what shall be applicable in detail in all these rebel States? Why is it not more wise to take the States as they shall present themselves for admission? We may, to be sure, agree upon certain principles. We ought to agree upon certain provisions which must be contained within the constitutions of the States before those States shall be recognized and permitted to act under the Government of the United States.

"Mr. Speaker, there is no work imposed upon us by the people of the nation more full of consequences that reach into the far future than that of bringing back into the Union the States whose governments have been overthrown by traitors in arms against their country. As we discharge that duty rightfully and without fear, grounding our action on principle, or wrongfully, by enactments which compromise with principle, endeavor to evade the great and fun-

damental doctrines of freedom and equal rights before the law, so shall we be judged as true or as false in the years that are to come. We may not be able to construct at this time a plan by which, and by which alone, all the States in rebellion shall be admitted again to their political rights under our Government; but we can declare, and we ought by solemn enactment to declare, that no rebel State shall be received until it shall come with a free constitution, prohibiting slavery forever within her borders, and containing provisions under which equal rights before the law may be secured."

Mr. Dawes, of Massachusetts, in opposition to the bill, said: "The bill is divided into two distinct parts: first, that which endeavors to provide a present, temporary municipal government; and, second, that which seeks to prescribe the rule and method to which all efforts at any future period for the adoption of a constitution must conform. And, first, let us look at its provisions for a local government. What are the principles upon which this part of the bill is based? Not on the old theory of a colonial government, treating and subjecting them, according to that old policy of the colonies, to the will, the ownership, and the proprietorship, as well of the soil as the franchise; nor indeed on that later and more modern policy of treating each State in the condition of a Territory having power to form and frame their own government with a supervisory power still residing here and retained by this Government; but, sir, the bill proceeds upon the supposition not only that there are States still existing, but that their old constitutions and laws are still in full force and operation; for, sir, the first duty imposed upon the provisional governor in these several administrations of government is this: 'That until the United States shall have recognized a republican form of State government the provisional government of said States shall see that this act, and the laws of the United States, and the laws of the State in force when the State government was overthrown by the rebellion, are faithfully executed,' saving and excepting the single provision touching the enforcement of the laws against slavery and the mode of trial and punishment of colored people. In all other matters and things this bill takes up the condition of those States, and declares it to be this: that they still exist within the Union, with their old boundaries, and constitutions, and laws still in force, but without officers to enforce them. And the proposition of the bill is to fill those offices by executive appointment here. This, sir, is the first attempt of the bill. It is for the Executive in Washington to supply that deficiency, namely, to fill the State offices in every one of those States, by the advice and with the consent, it may be, of the Senate of the United States.

"Although the provisions of the State constitution and of the laws recognized by this bill to be in full force may provide for another method of appointment or election for these

officials, from the highest judicial officer to the lowest constable in a parish, town, or county; the President may appoint just as many of them as he pleases, and from what part of the country he pleases. There is no provision in this bill that they shall even be residents of the State over which they are, by this bill, to administer its provisions and to execute the laws of the State. An army of officers, in one paragraph of four lines, is here created, subject to the sole authority and control of the President of the United States.

"Sir, this bill authorizes and requires the provisional governor to levy the whole body of the taxes, in sum total assessed and provided by law, in the year next preceding the rebellion, on these people. And, sir, upon what sort of people? Upon a people, to begin with, that are beggars and seekers of alms at this day, dependent upon the charity, the noble and boundless charity of the North, to keep them from starvation. Their houses have been burned, their lands have been laid desolate, the sources of their industry have been destroyed or dried up. They are wanderers in their own land, homeless and houseless. And upon such a people, with all the new circumstances that rebellion and its effects, and the march of armies, fire, and plunder, have visited upon it, it is proposed to levy—yes, sir, levy—in this year of our Lord 1865, and every succeeding year thereafter, the precise sum which constituted the whole body of the taxes assessed upon them for all purposes whatever the last year before they went into rebellion. Sir, the condition of these people, upon whom this gross sum is to be assessed, for wretchedness and for inability to sustain even their lives, much less pay taxes, passes all description. I know nothing that more nearly comes up to a just description of that condition than Burke's glowing and inimitable description of the awful devastation which followed when Hyder Ali marched his conquering army over the Carnatic. Upon this people, as unlike in every thing that constitutes a people capable of paying taxes, that people which they were when the taxes were originally imposed upon them as a beggar is unlike a prince, it is proposed nevertheless to impose and levy these taxes, and call upon this innumerable army of imported officeholders to collect and wrench them as the last drop of life-blood from shrivelled bodies.

"I have thus far considered one of the two branches into which this bill is divided—that which proposes to establish over them a present system of government. How long does this bill propose to continue that system over them? In the first place, just so long as the provisional governor shall see fit to have it maintained. It is left by this bill itself discretionary with the provisional governor himself to determine when he will institute the first initiatory steps of measures calculated to bring out of this state of things a new form of government. The bill says that when the people of any State 'shall have sufficiently returned to their obedience' this

provisional governor shall institute steps for a State government, making no provision except his own opinion for determining this point. Before he will institute the first step, it is in his discretion to say whether the people 'shall have sufficiently returned to their obedience.' With his place and the places of the whole army of office-holders under him at stake, it will not be soon, I think, were there no other obstacle in the way; it will be no immediate period that this governor will come to the conclusion that the people have been sufficiently subdued for him to take the initiatory steps to form a State government.

"But there is another limitation upon the proceeding. Even if the provisional governor should come to be willing in the course of events, to take these initiatory steps, this bill goes on to say that those proceedings shall depend upon another question, that is, whether a majority of the people in the State have of their own choice signified their loyalty by taking the oath of allegiance. Under this bill, it does not depend upon the wish of the loyal people to have a government of their own; it depends upon the wish of the disloyal people. So long as the disloyal people can keep a majority on their side, they can dictate what sort of a government they shall have. In the early part of this rebellion there was no uncertain voice on this side of the House. It was held that upon the loyal people, and upon the loyal people alone, were to be reposed the functions of government; that they were to hold the elective franchise; they to determine the character of the government; and that rebels were only to be 'counted' that we might know what force may be necessary for their subjection. But, sir, under the administration of these men—this army of foreign officers, from him who sits in the high court of judicature, passing upon the rights of the people, down to the most insignificant official—how long, under such instruction as that, I submit to my distinguished friend, will it be before that majority are won back to signify their desire to exchange this form of government which he imposes for one of their own making?

Mr. Edgerton, of Indiana, in opposition to the bill, said: "Before considering the leading provisions and character of this bill I propose to look briefly at its history. The forerunner of this measure of legislation, so far as this House is concerned, may be found in the territorial bill reported by the gentleman from Ohio (Mr. Ashley) from the Committee on Territories in the Thirty-seventh Congress, in March, 1862. It was aptly termed at the time by the gentleman's colleague from the Cincinnati district of Ohio (Mr. Pendleton), 'A bill to dissolve the Union and abolish the Constitution of the United States.' The bill was summarily, if not indignantly, rejected by the House without a second reading. But, sir, men and events have since changed, if the Constitution of the United States has not changed, and the stone of revolutionary reconstruction then rejected by the

master-builders in this House bids fair to become the head of the corner. Then the Constitution was not altogether repudiated as the foundation of our legislation; now revolutionary opinions and plans override it as a thing of the past. Not many are there in this Congress, and fewer there will be in the next, I fear, to do reverence to the Constitution and obey its commands.

"Early in the last session of Congress this House, on a resolution of the gentleman from Maryland (Mr. Henry Winter Davis), authorized the appointment of a special committee of nine, called the committee on the rebellious States, to consider and report by bill upon the subject of the reconstruction of States. The ostensible or declared purpose of the committee was to carry out the constitutional guarantee of republican government to States in which such governments had been usurped or overthrown.

"The President, by his amnesty proclamation of December 8, 1863, accompanying his annual message to Congress of that date, with characteristic oblivion of the true character and limitations of his executive powers, had assumed to take the subject of reconstruction pretty much into his own hands. He had assumed to amplify the power to pardon offenders against the laws into a power to reconstruct States, to dictate State constitutions, and to determine the conditions upon which a sovereign State of the Union should or should not be recognized and protected as a State in the Union. This portion of the President's message was referred to the special committee I have alluded to. The amnesty proclamation, like its forerunners, the proclamation of September 22, 1862, and January 1, 1863, was an unprecedented and startling assertion of executive power, and I feel well assured, sir, for I have too high an opinion of their intelligence and patriotism to believe otherwise, that it did not meet the approval of the leading minds of the friends of the Administration in this House. The gentleman from Pennsylvania (Mr. Stevens), whose ability and experience entitle him to speak as an oracle of his party on this floor, declared in his speech of 22d January, 1864, that the President's plan of reconstruction, as stated in the amnesty proclamation, 'is wholly outside of and unknown to the Constitution,' and found its justification only in the war power and in the theory of military conquest. 'It proposed to treat the rebel territory as a conqueror alone would treat it.' To the principle of the plan, that is, the right to treat the Southern people as a foreign and conquered people, the gentleman from Pennsylvania assented (for that was a favorite theory of his own), but to the details he did not agree; and I doubt not that one object of the gentleman from Pennsylvania, as well as the gentleman from Maryland (Mr. Davis), in conjointly moving the resolution for a special committee, was to take from the usurping hand of the Executive and to exercise through Congress

the legislation that might be deemed necessary to restore the relations of the Southern States to the Federal Government.

"Mr. Speaker, the love of power, like the love of fame,

"Howe'er concealed by art,
Reigns more or less in every human heart."

"It is not an idle passion in the breast of the constitutional President of the United States. It is there, restless, active, aggressive, and grows by what it feeds on.

"The President as the author of the emancipation proclamation, on which (though not original with him and forced on him by pressure) he had planted his hope of historic fame, was determined by the work of his own hand to carry it out to its logical results. He had formed his plan of reconstruction, he had proclaimed it to the world, and in the same spirit in which he adhered to his plans of military campaigns, though baffled and butchered Union armies, 'driven like bullocks into the slaughter-pen,' attested his unwisdom, he would admit no rival near his throne to share his honors as the great emancipator. Therefore without waiting for the legislative action of Congress, which was clearly contemplated by the terms of the resolution appointing the special committee of nine, the President moved straight forward to his purpose of reorganizing Louisiana, Arkansas, and I may say Florida, in his own way. Whether the sagacious mind of the President was even at that early period of the Presidential campaign looking forward to the possible contingency of the need of electoral votes from those three States and others he might reconstruct, I will not undertake to say. I leave that question to gentlemen who know the President better than I do; but, sir, my charities are not large for a public magistrate whose public career has been marked by the grossest inconsistencies of principle, and by usurpations of power that have time and again remorselessly and without apology or atonement stricken down the liberties of innocent men, and almost blotted out constitutional limitations so plain that he who runs might read and understand."

"Pending the progress of the military manipulation of a portion of Louisiana, comprising mainly, in votes if not in territorial area, the city of New Orleans, into a reconstructed State according to the President's plan, the bill of the last session, commonly known as the reconstruction bill, and identical in title and similar in its general purposes to the bill now before the House, was reported from the committee on the rebellious States, debated, passed on the 4th day of May last, sent to the Senate, debated and amended there, and finally adopted as it passed the House on the 2d July last, and sent to the President for approval. It was not approved by him, for the reasons stated in his proclamation of the 8th July last.

"The President's objections to the bill may be summed up in three points: First. His unwillingness 'to be inflexibly committed to any

single plan of reconstruction.' Second. That the effect of the bill would be to set aside and hold for naught the free State constitutions of Louisiana and Arkansas, adopted under his proclamation of 8th December. Third. That he was unprepared to declare by an approval of the bill 'a constitutional competency in Congress to abolish slavery in States.'

"The sufficiency of the President's reasons for virtually vetoing the reconstruction bill were, soon after the publication of his proclamation, considered in an able paper made public by a distinguished Senator from Ohio (Mr. Wade) and an equally distinguished member of this House (Mr. Henry Winter Davis). The tenor of their masterly and conclusive argument against the President is best stated in their own words, when they say of the President's anomalous proclamation :

A more studied outrage on the legislative authorities of the people has never been perpetrated.

"And further :

It is a blow at the friends of his Administration, at the rights of humanity, and the principles of republican government.

"These assertions, sir, answer, so far as their authors are concerned, my question as to the honesty of the President's constitutional doubt. A studied outrage, sir, is not the fruit of an honest doubt.

"The President's will undid the work of his friends in the last Congress in their efforts to reconstruct States. The Executive triumphed over the legislative power, and notwithstanding his 'studied outrage on the legislative authorities of the people,' the majority in Congress kissed the hand that smote them, and in spite of the reconstruction bill, in defiance of its well-matured provisions, Louisiana and Arkansas, States reared and reconstructed under the President's hand and plan, upon the basis of martial law, now knock confidently at our doors for recognition.

"The crisis of the election being past, a renewed effort is made by the committee on rebellious States to carry out their plan of reconstruction.

"The various forms in which the subject-matter before the House has been presented, the conflicting arguments which have been urged in its support, all indicate that division of counsel exists among those controlling legislation here, and who, having a common purpose, should have a common plan for its success.

"The reconstruction bill of this session as originally reported, contained a section (the seventh) directly and without conditions recognizing the government and constitution of Louisiana as organized under General Banks' proclamation. Why Arkansas was not included I do not know; but the provision as to Louisiana was evidently intended to propitiate the President to approve the bill. It seemed to be a compromise between the House and the President, saying to him, 'You may take Louisiana

by executive reconstruction, and we will re-make Arkansas by congressional reconstruction.' For some reason this proposition has been withdrawn from the committee's bill reported by the gentleman from Ohio (Mr. Ashley), but it stands in the substitute of the gentleman from Massachusetts (Mr. Eliot), accompanied by the further offering to the President by the gentleman from Illinois (Mr. Arnold) of a proposition virtually to confirm the emancipation proclamation of January 1, 1863. The committee's bill, as modified, now proposes to recognize Louisiana and Arkansas under their new constitutions, provided conventions of those States shall incorporate into their constitutions the conditions prescribed in the twelfth section of the bill: and provided further that it shall appear by the United States marshal's enrolment that the persons who had taken the oath to support the Constitution of the United States, together with the citizens of the United States from such States in the military or naval service, amounted to a majority of the persons enrolled in the State.

"As there is therefore a direct proposition before the House to recognize unconditionally the new government of Louisiana, I shall here say what further I have to say on that subject. The case of Arkansas I shall not specially discuss, for the principle of both cases is the same; both rest on the amnesty oath as a condition of suffrage, and if Louisiana is not entitled to recognition, neither is Arkansas.

"On these grounds, then, sir: first, because it was initiated and built up by Federal military power, exacting an unconstitutional and oppressive test oath as a basis or condition of suffrage, and creating a quasi dress over the people of Louisiana; and, secondly, because I have no evidence that it is the act of the people of Louisiana in any proper legal sense of the word, I am opposed to recognizing the new government and constitution of Louisiana as proposed in this bill; and I apply the same points of objection to the case of Arkansas.

"Passing from the case of Louisiana I shall consider with as little of detail as possible, for I do not wish to weary the House, the prominent features of the bill and amendments before us.

"Ostensibly and by its title the bill is one 'to guarantee to certain States whose governments have been usurped or overthrown a republican form of government;' but the title is a misnomer. The mask of the Constitution is on the face of the bill; but usurpation and despotism are in its heart. The bill in fact is, as it is commonly called and known, a reconstruction bill. What, in brief, does it contemplate and propose?

"1. A temporary, provisional, civil government by Federal officers, appointees of the President, over the States in rebellion, as Territories or military provinces—for that is the effect of the bill—which shall disregard all laws and usages of the State in favor of slavery, and shall extend to negroes as to white men

the criminal laws of the State, and the qualifications of jurors.

"2. Confirmation of emancipation to all persons and their posterity in all the States and parts of States covered by the President's emancipation proclamations, and the extension of the writ of *habeas corpus* by United States courts to discharge such persons when claimed and held as slaves, and making it a crime to attempt to enslave any person thus declared free, punishable by a fine not less than \$1,500 and imprisonment for not less than five years.

"For a slaveholder, therefore, to doubt the infallibility of the President and Congress, and to attempt to hold his slaves against their acts, is a high crime by this proposed law.

"8. Disfranchisement as citizens of the United States of all persons who, after this act, shall hold military office under the confederacy from the rank of colonel upward, or any civil office not merely ministerial.

"4. The formation of a new State constitution and government 'so soon as the military resistance to the United States shall have been suppressed in any State, and the people thereof shall have sufficiently returned to their obedience to the Constitution and laws of the United States.' The proceedings initiative of such government are to be taken by the Federal governor, aided by a State convention over which he shall preside; in the election of delegates to which convention the right of suffrage is to be extended to negro citizens who can read the Constitution of the United States, as proposed by the amendment of the gentleman from Pennsylvania (Mr. Kelley), and to white citizens, and to all citizens of the United States, irrespective of color, who are in the military or naval service of the United States, all first having taken the oath of allegiance under the act of July 2, 1862. All persons who have held any office, State or Federal, under the rebel usurpation, or borne arms voluntarily against the United States, are to be excluded from voting for or being elected as delegates, even if they offer to take the oath of allegiance.

"In regard to the right of suffrage, and the right to be delegates to the constitutional convention, the last amendment proposed by the gentleman from Ohio (Mr. Ashley) in the nature of a substitute for the whole bill and amendments (but which I have not had time fully to examine), goes beyond any previous proposition, and virtually would give to the freed negroes the right both to vote for and be delegates to the constitutional convention. I refer to sections three and five of the last amendment or substitute. In the phrases 'all male citizens of the United States,' in section three, and 'all citizens of the United States,' in section five, are wrapped up the two cardinal ideas of the party in power—negro suffrage and negro equality.

"5. The bill makes it the duty of the constitutional convention not only to declare submission to the Constitution and laws of the United

States, but to incorporate into the State constitution these conditions:

SEC. 12. *And be it further enacted*, That the convention shall declare, on behalf of the people of the State, their submission to the Constitution and laws of the United States, and shall adopt the following provisions, hereby prescribed by the United States in the execution of the constitutional duty to guarantee a republican form of government to every State, and incorporate them in the constitution of the State, that is to say:

First. No person who has held or exercised any office, civil or military, except civil offices merely ministerial and military offices below the grade of colonel, State or confederate, under the usurping power, shall vote for or be a member of the Legislature, or Governor.

Second. Involuntary servitude is forever prohibited, and freedom and equality of civil rights before the law are guaranteed to all persons in said State.

Third. No debt, State or confederate, created by or under the sanction of the usurping power, or in any manner in aid thereof, shall be recognized or paid by the State; and all acts, judicial or legislative, for the confiscation or forfeiture of any debt, property, or franchise, of any loyal citizen of the United States, are hereby declared null and void.

"The constitution thus formed, to be submitted to a vote of the people of the State entitled to vote for delegates to the convention, and, if approved, certified to the President, who, after obtaining the consent of Congress, is by proclamation to recognize the State government thus established; and thereafter, and not before, Senators, Representatives, and presidential electors may be chosen in such State.

"6. If the convention refuse to reestablish the State government on the conditions prescribed, the provisional governor is to dissolve the convention, and the State remains in its territorial or provincial condition, under military durance, until the President shall see fit to direct the provisional governor to order a new election, when the same process shall be gone through with until a government to suit the prescribed terms shall be accepted by the people.

"The effect of all this is—

"1. To take from the people of the State all power to initiate proceedings to reorganize their own State government in harmony with the Constitution of the United States, or even to prescribe the qualifications of suffrage. The bill ignores the idea that there is any vital power in the people to restore their State government—not only taken from them by rebellion but kept from them by Federal power—until the Federal authority awakens the latent power of the people, puts it in motion, gives it direction, prescribes its mode and instruments of action, and defines and limits its results.

"2. The effect is to exclude from the reorganization the entire white population of the State who shall have held office or voluntarily borne arms against the United States, or who shall not take the oath of July 2, 1862.

"3. To confine the right of suffrage and power of reorganization to enrolled men and Federal soldiers taking the oath; and the law affords no guarantee that even the enrolment shall embrace a majority of males over twenty-one years

of age. The majority required as a basis of action is so many of enrolled persons taking the oath as, with the soldiers, shall constitute a majority of the persons enrolled; that majority, through defect or fraud in enrolment, may be not even one-tenth of the males of the State over twenty-one years of age.

"4. The effect is the absolute disfranchisement of eleven States and their continuance in a state of war until they accept 'the abandonment of slavery,' as dictated to them by the United States, and until by organic law they declare that all persons shall have 'equality of civil rights before the law' of the State; a well-seeming phrase of broad import, the precise meaning of which I do not understand. A woman is a person, a negro is a person, an alien is a person, and the right of suffrage is a civil right. Does this high-sounding phrase of the bill mean that women, negroes, and aliens shall all have equal right to vote in a regenerated State with white male citizens? What does 'equality of civil rights before the law for all persons' mean?

"Now, it is to be borne in mind that these will be the effects of the proposed bill upon States in which the bill itself assumes as a condition precedent of this Federal dictation that 'military resistance to the United States has been suppressed, and the people have sufficiently returned to their allegiance to the Constitution and laws of the United States.' If so, why treat them as aliens and enemies, conquered subjects of an imperial power?

"In fact and in purpose, then, the bill before the House is one to abolish slavery in the United States, and to enfranchise and elevate negroes, and to disfranchise and degrade white men; a bill to change the social and industrial systems and internal policy of eleven States; a bill to take from those States their inherent reserved constitutional right to regulate in their own way their internal policy, not inconsistent with the Constitution of the United States. It is a bill to punish treason without trial or conviction; a bill to confiscate private property without adequate compensation; in short, a bill to reconstruct States and make State constitutions, when in truth no States or their constitutions have been destroyed, or need reconstruction, unless by the voluntary action of their own people.

"Where, sir, is the power in the Federal Government to do all these things? Where the power to make a State, known as such to the Constitution and laws of the United States, a province or Territory of the United States, and to govern it as such, in defiance of the laws of such State not inconsistent with the Constitution of the United States? Where the power to put a State, not in rebellion or disobedient to the Constitution, under military duress for indefinite years, until you force its people to remodel their constitution, not in itself anti-republican nor in any sense unconstitutional, and make it conform to the changeful will of a Fed-

eral Congress? Sir, there is no such power but in usurpation and physical force. This bill is in every element revolutionary, and had the issue now made by it with the slaveholding States been made with them on the 4th of March, 1861, and an attempt made then, as now, to enforce it by war, no man who is capable of distinguishing between the rhapsodies of fanatical abolitionists and the plain provisions of the Federal Constitution would hesitate to say that the people of the Southern States whose rights were thus assailed would have been justified in resisting such conditions to the extremity of revolution."

Mr. Ashley, of Ohio, followed, withdrawing a motion to recommit the bill, and also withdrawing, by authority of the committee, the bill which was the original text, and introducing another. He made the following explanation: "At the last session of Congress, the committee of which I am a member reported a bill which received the sanction of this body and of the Senate, but failed to receive the approval of the President. Since that time, and during this session, it has been my earnest desire to conciliate all gentlemen on this side of the House who had scruples in regard to the bill as it originally passed, and, if possible, to secure a united vote in its favor. For that purpose I consented to what might properly be termed a compromise, in providing for the readmission or recognition of the new governments of Louisiana, Arkansas, and Tennessee. The conditions were not such as I would prescribe if those States stood separately and alone. But in order to secure what I thought of paramount importance—universal suffrage to the liberated black men of the South—I consented to ingraft in the bill which I had the honor of proposing the other day a conditional recognition of the existing governments of the States of Louisiana and Arkansas, and the government now being organized in Tennessee.

"Disappointed in my efforts to secure the coöperation of gentlemen who profess to entertain, and who I am willing to concede do entertain, practically the same opinions which I do in favor of securing universal suffrage to the colored man, and in favor of the early recognition of every rebel State which has a population sufficient to sustain and maintain a government; failing in that, I now decline to offer my substitute, and at the request and with the concurrence of the committee we have offered the bill of the last session, with the modifications which members will notice when the bill is read. Those modifications are to strike out all the bill contains to which gentlemen have raised objection, in that it seemingly authorized the execution of the State laws as they existed at the time of the rebellion. In order to make perfectly clear what the committee meant, they have inserted a provision that the provisional governor shall execute only such laws as relate to the protection of persons and property; and that all laws inconsistent with this bill, and all

laws recognizing the relation of master and slave, shall not be enforced.

"The committee have also in this bill omitted the section which authorized the collection of taxes in the State, thus leaving the original bill of last session to stand with those modifications, and with the addition of the thirteenth section of the amendment which I offered yesterday.

"I prefer to stand there. I prefer not to offer my substitute, and thus commit myself to a recognition of the governments of Louisiana and Arkansas, unless I can secure that which I think of paramount importance in the reorganization of the other States, and which I felt confident would follow in these States if they were recognized even with their present form of government."

Mr. Davis, of Maryland, followed in explanation of the bill, saying: "The bill which is now the test, to which amendments are pending, is the same bill which received the assent of both Houses of Congress at the last session, with the following modifications to suit the tender susceptibilities of gentlemen from Massachusetts: first, the sixth section, declaring rebel officers not citizens of the United States, has been stricken out; second, the taxation clause has been stricken out; third, the word 'government' has been inserted before 'trial and punishment,' to meet the refined criticisms of the two gentlemen from Massachusetts, who suppose that penal laws would be in force and operative when the penalties were forbidden to be enforced; that discriminating laws could survive the declaration that there should be no discrimination between different persons in trial or punishment. There has been one section added to meet the present aspect of public affairs; that section authorizes the President, instead of pursuing the method prescribed in the bill in reference to the States where military resistance shall have been suppressed, in the event of the legislative authority under the rebellion in any rebel State taking the oath to support the Constitution of the United States, annulling their confiscation laws and ratifying the amendment proposed by this Congress to the Constitution of the United States, before military resistance shall be suppressed in such State, to recognize them as constituting the legal authority of the State, and directing him to report those facts to Congress for its assent and ratification. With these modifications, the bill which is now the test for amendment, is the bill which was adopted by this House at the last session.

"All I desire now to do, is to state the case and predict results from one course or the other. The course of military events seems to indicate that possibly by the 4th of next July, probably by next December, organized, armed rebellion will cease to lift its brazen front in the land. But whether sooner or later, whenever it comes, there is one thing that will assuredly accompany it. If this bill do not become a law, when Congress again meets, at our doors, clamorous and

dictatorial, will be sixty-five Representatives from the States now in rebellion, and twenty-two Senators, claiming admission, and, upon the theory of the honorable gentleman, entitled to admission beyond the power of argument to resist it; for peace will have been restored, there will be no armed power but that of the United States; there will be quiet, and votes will be polled under the existing laws of the State, in the gentleman's view. Are you ready to accept that consequence? For if they come to the door of the House they will cross the threshold of the House, and any gentleman who does not know that, or who is so weak or so wild as to suppose that any declaratory resolution adopted by both Houses as a condition precedent can stop that flood, had better put his puny hands across the flood of the flowing Mississippi and say that it shall not enter the Gulf of Mexico.

"There are things, gentlemen, that are possible at one time and not possible at another. You can now prevent the rise of the flood, but when it is up you cannot stop it. If gentlemen are in favor of meeting that state of things, then do as has been already so distinctly intimated in the course of this debate, vote against this bill in all its aspects; leave the door wide open; let 'our brethren of the South,' whose bayonets are now pointed at our brothers' hearts, drop their arms, put on the seemingly garb of peace, go through the forms of an election, and assert the triumph of their beaten faction under the forms of political authority after the sword has decided against them. I am no prophet, but that is the history of next December if this bill be defeated; and I expect it not to become a law.

"But suppose the other course to be pursued; suppose the President sees fit to do what there is not the least reason to suppose that he desires to do; suppose that after he has destroyed the armies in the field he should go further, and do, as I think he ought to do, what the judgment of this country dictates, treat those who hold power in the South as rebels, and not as governors or legislators; disperse them from the halls of legislation, expel them from executive mansions, strip them of the emblems of authority, and set to work to hunt out the pliant and supple 'Union men,' so called, who have cringed before the storm, but who will be willing to govern their fellow-citizens under the protection of United States bayonets; suppose that the fruitful example of Louisiana shall spread like a mist over all the rest of the Southern country, and that Representatives like what Louisiana has sent here, with such a backing of votes as she has given, shall appear here at the doors of this Hall; whose representatives are they? I do not mean to speak of the gentlemen now here from Louisiana in their individual character, but in their political relations to their constituency. Whose representatives are they? In Louisiana they are the representatives of the bayonets of General Banks and the will of the President, as expressed in his secret letter to General Banks. If you admit such representatives, you must

admit, on the same basis and under the same influences, Representatives from every State from Texas to Virginia; the common council at Alexandria—which has just sent two Senators to the other House and has ratified the amendment to the Constitution abolishing slavery in all the rest of Virginia, where none of them dare put his portly person—would be entitled to send ten Representatives here and two Senators to speak for the indomitable 'Old Dominion.' If the rebel representatives are not here in December next, you will have here servile tools of the Executive who will embarrass your legislation, humble your Congress, degrade the name of republican government for two years, and then the natural majority of the South, rising indignantly against that humiliating insult, will swamp you here with rebel representatives and be your masters. These are their alternatives, and there is no middle ground.

"To meet that state of the case, the honorable gentleman, who so ably heads the Judiciary Committee (Mr. Wilson), has proposed a declaratory resolution, and that is all—a declaratory resolution, with no provisions of law to execute it, with no power to arrest the flood at our door, a very bubble born amid the hubbub of the waters and floating with the flood—that Senators and Representatives shall not be received from any State heretofore declared in rebellion until a joint act or resolution of Congress shall have declared that they have organized a new government."

The motion was then made to lay the bill and amendments on the table, which passed by the following vote:

YEAS—Messrs. James C. Allen, Ancona, Anderson, Baily, Augustus C. Baldwin, Blair, Bliss, Boyd, William G. Brown, Clay, Cobb, Coffroth, Cox, Cravens, Thomas T. Davis, Dawes, Dawson, Denison, Eckley, Eden, Edgerton, Eldridge, English, Finck, Ganson, Gooch, Grider, Griswold, Hale, Hall, Harding, Harrington, Benjamin G. Harris, Charles M. Harris, Herick, Holman, Hulburt, Hutchins, Julian, Kalbfleisch, Keruan, King, Knapp, Law, Lazear, Le Blond, Littlejohn, Long, Mallory, Marcy, Marvin, McAllister, McKinney, William H. Miller, James R. Morris, Morrison, Nelson, Noble, Odell, Pendleton, Pike, Pomroy, Pruyn, Radford, Samuel J. Randall, William H. Randall, Alexander H. Rice, Rogers, James S. Rollins, Roas, Smith, John B. Steele, William G. Steele, Stevens, Stiles, Strouse, Stuart, Sweat, Thomas, Townsend, Tracy, Van Valkenburgh, Wade, Worth, William B. Washburn, Webster, Whaley, Wheeler, Joseph W. White, Winfield, Fernando Wood, and Yeaman—91.

NAYS—Messrs. Allison, Ames, Arnold, Ashley, John D. Baldwin, Baxter, Beaman, Blaine, Blow, Boutwell, Brandegee, Broomall, Ambrose W. Clark, Cole, Henry Winter Davis, Deming, Dixon, Donnelly, Driggs, Dumont, Eliot, Farnsworth, Garfield, Grinnell, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Ingalls, Jenckes, Kelley, Francis W. Kellogg, Orlando Kellogg, Knox, Loan, Longyear, McBride, McClurg, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Charles O'Neill, Orth, Patterson, Perham, Price, John H. Rice, Edward H. Rollins, Schenck, Scofield, Shannon, Sloan, Smithers, Starr, Thayer, Upson, Williams, Wilson, Woodbridge and Worthington—64.

NOT VOTING—Messrs. William J. Allen, Alley, Brooks, James S. Brown, Chanler, Freeman Clark,

Creswell, Frank, Hotchkiss, Philip Johnson, William Johnson, Kasson, McDowall, McDoe, Middleton, John O'Neill, Perry, Robinson, Scott, Spalding, Voorhees, Ward, Elihu B. Washburne, Chilton A. White, Wilder, Windom, and Benjamin Wood—27.

On Feb. 22d, Mr. Wilson, from the Committee on the Judiciary, reported back the House bill to establish the supremacy of the Constitution in the insurrectionary States, with the following substitute:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That neither the people nor the Legislature of any State, the people of which were declared to be in insurrection against the United States by the proclamation of the President, dated August 16, 1861, shall hereafter elect Representatives or Senators to the Congress of the United States until the President, by proclamation, shall have declared that armed hostility to the Government of the United States within such State has ceased; nor until the people of such State shall have adopted a constitution of government not repugnant to the Constitution and laws of the United States; nor until, by a law of Congress, such State shall have been declared to be entitled to representation in the Congress of the United States of America.

Mr. Ashley, of Ohio, moved an amendment, consisting of the bill previously laid on the table, with a few alterations. He said:

"I want a record made on this question. I do not expect to pass this bill now. At the next session, when a new Congress fresh from the people shall have assembled, with the nation and its Representatives far in advance of the present Congress, I hope to pass even a better bill. Sir, I know that the loyal people of this country will never be guilty of the infamy of inciting the loyal blacks to unite with them in fighting our battles, and after our triumph—a triumph which we never could have achieved but for their generous cooperation and aid—deny these loyal blacks political rights while consenting that pardoned but unrepentant white rebels shall again be clothed with the entire political power of these States.

"Failing to secure the adoption of the amendment as printed, I desire, as a practical man, to secure the next best thing, and that is, the declaration here, on the part of the Congress of the United States, that the people of no rebel State shall hold a convention and frame a constitution which does not contain in it a provision securing the civil rights of these people. And even if the word 'white' is not stricken out of the fifth section I secure by the provision of the seventh section to every colored citizen of the United States, who now is or who has been in the military or naval service of the United States, the right to vote first for delegates to a convention, and then upon the constitution which that convention may adopt and submit to the people for their ratification or rejection.

The bill and amendments were then laid on the table, by the following vote:

YEAS—Messrs. James C. Allen, Ancona, Anderson, Baily, Blair, Bliss, Brooks, William G. Brown, Chanler, Clay, Cobb, Cox, Cravens, Dawes, Dawson, Denison, Eden, Edgerton, Eldridge, English, Finck, Gan-

son, Gooch, Grider, Griswold, Hall, Harding, Harrington, Benjamin G. Harris, Charles M. Harris, Herrick, Holman, Hutchins, Kalbfleisch, Kasson, Kernan, Knapp, Law, Lazear, LeBlond, Long, Mallory, Marcy, Marvin, McAllister, McKinney, William H. Miller, James R. Morris, Morrison, Nelson, Noble, Odell, Pendleton, Perry, Pike, Pomeroy, Pruyn, Radford, Samuel J. Randall, William H. Randall, Alexander H. Rice, Rogers, James S. Rollins, Ross, Smith, John B. Steele, William G. Steele, Stiles, Strouse, Stuart, Townsend, Tracy, Voorhees, Wadsworth, William B. Washburn, Whaley, Wheeler, Winfield, Fernando Wood, and Yeaman—80.

YEAS—Messrs. Allison, Ames, Ashley, John D. Baldwin, Baxter, Beaman, Blow, Boutwell, Boyd, Brandegee, Broomall, Ambrose W. Clark, Cole, Henry Winter Davis, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, Garfield, Grinnell, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Hulburt, Ingersoll, Jenckes, Kelley, Orlando Kellogg, Knox, Littlejohn, Loan, Longyear, McBride, McClurg, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Charles O'Neill, Orth, Perham, Price, John H. Rice, Edward H. Rollins, Schenck, Scofield, Shannon, Sloan, Smithers, Starr, Stevens, Thayer, Upson, Van Valkenburgh, Elihu B. Washburne, Williams, Wilder, Wilson, and Woodbridge—65.

In the House, a joint resolution was adopted to amend a joint resolution explanatory of "An act to suppress insurrection, to punish treason and rebellion, to seize and confiscate the property of rebels, and for other purposes." This measure of the House was in the Senate incorporated in the bill to organize a Freedman's Bureau. Subsequently, on Feb. 20, a bill providing for the forfeiture of the fee of insurgent landholders, was reported to the House and passed by the following vote:

YEAS—Messrs. Allison, Ames, Ashley, John D. Baldwin, Baxter, Beaman, Blaine, Boutwell, Boyd, Brandegee, Broomall, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Thomas T. Davis, Dawes, Deming, Dixon, Donnelly, Driggs, Dumont, Eckley, Eliot, Frank, Garfield, Gooch, Grinnell, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Hulburt, Ingersoll, Jenckes, Kelley, Orlando Kellogg, Knox, Littlejohn, Longyear, Marvin, McBride, McClurg, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Leonard Myers, Norton, Orth, Patterson, Pike, Pomeroy, Price, Alexander H. Rice, John H. Rice, Edward H. Rollins, Schenck, Shannon, Sloan, Smithers, Starr, Stevens, Thayer, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Wilder, Wilson, Woodbridge, and Worthington—72.

YEAS—Messrs. James C. Allen, Ancona, Bailly, Augustus C. Baldwin, Blair, Bliss, Brooks, James S. Brown, Chanler, Clay, Coffroth, Cox, Cravens, Dawson, Denison, Eden, Edgerton, Eldridge, English, Finck, Ganson, Griswold, Hale, Hall, Benjamin G. Harris, Holman, Hutchins, Philip Johnson, Kalbfleisch, Kernan, King, Law, Lazear, LeBlond, Long, Mallory, Marcy, McAllister, William H. Miller, James R. Morris, Morrison, Nelson, Noble, Odell, John O'Neill, Pendleton, Perry, Pruyn, Radford, Samuel J. Randall, William H. Randall, Rogers, James S. Rollins, Ross, John B. Steele, William G. Steele, Stiles, Strouse, Stuart, Sweat, Townsend, Tracy, Voorhees, Wadsworth, Webster, Whaley, Wheeler, Joseph W. White, Winfield, Fernando Wood, and Yeaman—71.

NOT VOTING—Messrs. William J. Allen, Alley, Anderson, Arnold, Blow, William G. Brown, Creswell, Henry Winter Davis, Farnsworth, Grider, Harding, Harrington, Charles M. Harris, Herrick, Hotchkiss, William Johnson, Julian, Kasson, Francis W. Kel-

logg, Knapp, Loan, McDowell, McIndoe, McKinney Middleton, Amos Myers, Charles O'Neill, Perham, Robinson, Scofield, Scott, Smith, Spalding, Thomas, Ward, Chilton A. White, Williams, Windom, and Benjamin Wood—39.

The measure failed to pass in the Senate.

In the Senate, on Feb. 1st, Mr. Trumbull, of Illinois, reported back, with amendment, from the Committee on the Judiciary, a joint resolution previously referred, as follows:

Whereas, the inhabitants and local authorities of the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, and Tennessee rebelled against the Government of the United States, and have continued in a state of armed rebellion for more than three years, and were in said state of armed rebellion on the 8th day of November, 1864: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the States mentioned in the preamble to this joint resolution are not entitled to representation in the Electoral College for the choice of President and Vice-President of the United States, for the term of office commencing on the 4th day of March, 1865; and no electoral votes shall be received or counted from said States concerning the choice of President and Vice-President for said term of office.

The amendment of the Committee on the Judiciary was to strike out of the preamble the following words:

And have continued in a state of armed rebellion for more than three years, and were in said state of armed rebellion on the 8th day of November, 1864.

And to insert the following in lieu thereof:

And were in such state of rebellion on the 8th day of November, 1864, that no valid election for President and Vice-President of the United States according to the Constitution and laws thereof was held therein on said day.

Mr. Ten Eyck, of New Jersey, said: "I move to strike out of the preamble the word 'Louisiana.' I will simply state that it is a matter of history that the State of Louisiana has reorganized, or at least attempted to do so, and in the opinion of many, and perhaps most, of the loyal citizens of that State, has reorganized as a State. It is a matter of history that they have elected State officers and a State Legislature; that they have elected members to a constitutional convention and framed a new constitution for that State; that that Legislature passed a law authorizing the election of electors for President and Vice-President of the United States in the last presidential election, and that such electors have met and cast their votes. Under these circumstances I think there is a striking distinction between the State of Virginia and the State of Louisiana. My object in moving this amendment is, under this state of facts, that some opportunity may be afforded to a loyal people who have suffered all the horrors of the rebellion, who have got the better of it, and put it under foot, of coming back and resuming their place in the councils of the nation."

Mr. Trumbull, of Illinois, opposed this motion, saying: "The Committee on the Judiciary, by the amendment they have reported, propose

to alter the preamble somewhat. The object of this alteration is to avoid as far as possible any committal upon the subject which the amendment of the Senator from New Jersey brings up. The object of the amendment of the committee is simply to put the preamble in such form that if it is adopted and the resolution passed, Congress will not have decided whether Louisiana is in the Union or out of the Union, whether she is a State or not a State. It will be time enough to decide that question when it is presented to us. If our amendment is adopted, we place the resolution upon the ground that the condition of things on the 8th day of November last, the day of the Presidential election, was such in all these States that no election was held according to the Constitution and laws of the United States.

"I trust that the State of Louisiana will not be stricken out. I think if we strike that out and decide to receive the electoral vote cast in that State on the 8th of November last, we do decide directly that there was a State government there, and that there was an election for electors for President and Vice-President in accordance with the Constitution and laws of the United States. Now, I do not believe that. I think such was not the fact. There could be no election according to the laws and Constitution of the United States in the State of Louisiana when a very considerable portion of that State was overrun by the enemy, and the legal voters had no opportunity to vote one way or the other. I am not advised how many votes were cast at the election on the 8th of November. No evidence has been submitted showing how many were cast.

"Again, sir, the President of the United States, in pursuance of an act of Congress, declared the inhabitants of the State of Louisiana to be in a state of insurrection against the Government of the United States. We passed a law authorizing him to issue the proclamation declaring that fact. In pursuance of the law the proclamation was issued. That proclamation has never been recalled. According to the law of the land, according to the proclamation of the President, the inhabitants of the State of Louisiana are to-day in a state of insurrection against the Government of the United States. Can you receive a vote cast by the inhabitants of a State for Chief Magistrate of the Union, when your own laws declare and your executive proclamation declares that they are in a state of insurrection against the Government of the United States? Sir, until there shall be some action by Congress recognizing the organization which has been set up in Louisiana, we ought not in my judgment to count electoral votes from that State. Whether we shall recognize that organization or not, I will not undertake to say. We have not done so yet; and until we do it we ought not to count the electoral vote."

Mr. Ten Eyck, of New Jersey, in reply, said: "I hold to the doctrine that none of these States can be out of the Union; that having

taken up their lot and part with their sister States at the time they were admitted into the Union, they are not now legally out of the Union; their governments have been in abeyance; they have been overrun by the feet of hostile armies, and many of their citizens have by usurpation and in violation of their duty to their fellow-men and to their God attempted to carry these States out of the Union.

"That being my opinion, whenever the testimony is furnished to my mind that these States thus in the Union have, by the aid of the General Government, or by the efforts of their own people, or by the act of both combined, reestablished themselves, so to speak, or set their State governments in action anew and have commenced again to revolve in their old orbits, I feel it shall be my duty, so far as I am concerned, to extend to them all the privileges and all the rights which the loyal people of a loyal State are entitled to at the hands of their sister States, whether upon this floor or anywhere else. It was simply in that view and aspect of the case that I made the motion to amend the preamble of this joint resolution, for the purpose of excluding from the operation and effect of the resolution the State of Louisiana, judging and believing from the testimony which is notorious throughout the country, and which has come to the knowledge, I apprehend, of the Senate through various channels, that the present condition of the State of Louisiana is such as I have just stated. I can well see that there is a propriety in passing some such joint resolution as this in relation to States that are manifestly in the condition alluded to in its preamble; States that are in rebellion or such a condition of rebellion as that no election could be held or was held for the purposes that are requisite to establish them as a State; States that are not in the exercise of the ordinary constitutional powers of a State.

"The chairman of the Committee on the Judiciary states that it was the desire of a majority of the committee to avoid a committal on this subject. It would not perhaps be amiss to insist that a committal shall not be had against the interest of the State any more than in its favor. The Senator says that the adoption of the amendment proposed by myself will be a declaration by Congress that the State of Louisiana was in a condition to perform all the functions of a State government and to appoint State officers and Senators and members of the national House of Representatives. I admit that that question is involved in this amendment; but the same question is involved in the resolution, and it will be determined against the State if this joint resolution passes as it stands, for you will then decide that this State is now, this day, in a state of rebellion such as to deprive it of all the powers, rights, and privileges of the State of Louisiana. I am not prepared to go to that extent."

Mr. Harris, of New York, followed in opposition to the resolution, saying: "I am op-

posed to the preamble to this resolution. I do not like it. In my judgment, it is not true. I admit that the rebel States have been declared to be in a state of insurrection, and the first clause of the preamble is true; the inhabitants and the local authorities of those States have been in a state of insurrection; but are the local authorities in Louisiana and Tennessee and Arkansas now in insurrection? I deny it. Who are the local authorities of Louisiana? I insist that they are those authorities that have been put in power by the proceedings under the Federal Government. I understand that Michael Hahn is the Governor of that State, and that they have a Legislature elected by the loyal people of that State; and if that be so, then it is not true that on the 8th of November last the local authorities of that State were in a state of armed rebellion.

"Since the discussion of this question in the committee, I have been led to doubt exceedingly whether it is competent for Congress to legislate at all in reference to the counting of the votes. The Constitution authorizes Congress to fix the time for choosing electors. It also empowers Congress to specify the time when those electors shall perform the functions of their office, when they shall vote; and, so far as I can find in perusing the Constitution, that is the extent of the power of Congress over the subject. It fixes the time when the votes shall be counted, and it declares that, in the presence of both Houses of Congress, the Vice-President shall open all the certificates returned—it is careful to specify that he shall open them all—and the votes shall be counted.

"I cannot find in the provisions of the Constitution any authority for Congress to pass a law (for this amounts to that) excluding any votes that shall have been returned to the Vice-President. I do not see how it is possible. I am not prepared to say that in case the rebel States had sent votes here which would be controlling in the election, that in such an extreme emergency as that Congress would not be called upon to do something—what, I am not prepared to say; but in this case I am clearly of opinion that even though Congress may possibly have the power, it is inexpedient for us by legislation to declare that these votes shall not be counted. I doubt the power very much; but of the inexpediency of exercising any such power, if it exists, I am very clear."

Mr. Hale, of New Hampshire, said: "Mr. President, it is refreshing at the present time to hear anybody urge any special measure in a contrary direction to the provisions of the Federal Constitution. It seems to me that upon this question, if upon no other—a question upon which depends the continuance of the Government—it is necessary to adhere to the Constitution, and to look for it and see if we have any guide or direction in that instrument. I foresaw this evil, and I introduced at the last session of Congress a joint resolution directing in advance what should be done; but, for some

reason or other (owing to the press of other business, probably, certainly not more important business), that resolution was not acted upon. It struck me at that time—and I have not lost any of the strength of that conviction now—that it was one of the most important measures that could possibly be presented to the consideration of Congress, and it was not then without the range of possibility or probability that on that question might depend the very continuance of this Government. No one could have known to the contrary of that at the last session; for let me suppose that the result of the presidential election might have been determined by the votes of these States who have now proposed to offer them. I think there are three of them, Tennessee, Louisiana, and Arkansas; let me suppose that, in November, the votes of these three States had decided which way the majority was, would the party against whom they have voted have submitted? I tell you nay, sir. If the counting of these votes had determined the result of the presidential election it would have deluged this land in blood, and another civil war would have followed, just as certain as that we have one now on hand. My friend from Michigan (Mr. Howard) shakes his head. Why, sir, what caused the present rebellion? Nothing at all in comparison with this.

"My friend from Wisconsin (Mr. Doolittle) says that Congress has no power over this subject. It would be one of the strangest things that ever occurred on earth if it had not the power. The provision of the Federal Constitution is that no member of Congress or any person holding an office of profit or trust under the Federal Government shall be an elector. Suppose when the two Houses meet in convention to count the votes it is palpable to them that the electoral votes of some States were given by members of Congress, has Congress no power to say that they shall not be counted?

"But, sir, the Constitution is not so silent on this subject as my friend from Wisconsin seems to imagine; for the election of President and the mode of counting the votes is one of the means and measures by which the national life is to be preserved. If this is not followed, carried out, and executed, there is an end to the Government; there is no President elected, and the whole fabric falls to chaos. Now, is it within the range of possibility or probability that the framers of the Constitution were so derelict, so blind, as not to have provided that there should be some mode of conducting, and conducting legally, the machinery of this great measure which is essential to the very life of the nation? No, sir. The Constitution would have been one of the most imperfect things that was ever created without some provision of this sort, and accordingly I find that the framers of the Constitution made the most ample provision for exactly this case. I find in the Constitution a clause declaring that Congress shall have power 'to make all laws which shall be necessary and

proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States.' Is not the power to choose a President one that is vested in the Government of the United States? It is the most essential power that there is; without it all the other powers are nothing; and the Constitution says that for carrying into execution this power thus granted Congress may make all laws which shall be necessary. It seems to me that it would be impossible to frame in broader or more comprehensive terms a provision which shall give Congress exclusive jurisdiction over this matter than that which I have just read, and it is found on the 10th page of Hickey's Constitution.

"Well, sir, what would be the common sense, and what the reason of the thing? What does Congress meet for when the votes are counted? Is it to see as a matter of curiosity how the thing is done? Is it to go there to see the Constitution trampled upon and not have the power to remedy it? Is it when they see that there is danger of the Constitution being violated, that they shall not provide by law against it? It seems to me that to say that Congress has no power, is to say that the Constitution itself is a dead letter, inoperative, and of no force.

"Now, I contend that it is the part of wisdom before the emergency comes to settle this question. There never was a more favorable time for its settlement than the election of 1856 presented, and there will be none more favorable than this election presents. It is the part of sagacity, of wisdom, and of patriotism, when we see that such a contingency as this may be fraught with the consequences of revolution, to provide beforehand against it. There never was a time when you could do it, when you would be less liable to the charge of any sinister influence, because it cannot change the result, it cannot determine any thing except to settle the principle: and then when an occasion occurs that evil consequences may follow from settling it one way or the other, here will be a precedent showing that Congress at a time when there was no inducement to any thing but an honest and straightforward decision of the case maturely settled it, and settled it in such a manner that the influence of the decision will be morally binding upon our successors, and will be preserved."

Mr. Trumbull, of Illinois, followed, saying: "But, sir, both the Senator from New York and the Senator from Wisconsin doubt the power of Congress to pass this resolution, and they place themselves upon the Constitution. The Senator from Wisconsin insists, as also does the Senator from New York, that the Vice-President, or the presiding officer of the Senate, is to determine this question in the first instance. The Constitution does not say that the presiding officer of the Senate shall count the votes even, and in the practice of the Government

since the days of Washington till this moment the Vice-President never has counted the vote. The Constitution says, 'The President of the Senate shall, in presence of the Senate and House of Representatives,' do what? 'Open all the certificates.' That is what he shall do. Then what follows? 'And the votes shall then be counted.' By whom? Another clause in the Constitution already referred to declares that Congress shall have authority to pass all laws necessary and proper to carry into effect every one of the granted powers. The power to count the votes is given by the Constitution; the mode of doing it is not prescribed by the Constitution; but another clause in the Constitution says that Congress shall have power to provide by law for carrying into effect every provision of this instrument; and here is a provision of this instrument that these votes shall be counted; the manner of doing it is now determined by the Constitution, and it is clearly constitutional and proper for Congress, in the exercise of its authority, to carry into effect the granted powers of the Constitution, to pass the necessary laws to count the votes, and Congress has done it from the beginning of the Government. If it were not so, we should have revolution at every Presidential election."

Mr. Oollamer, of Vermont, thus viewed the question: "In relation to this resolution, its preamble declares that certain States, naming them, or the inhabitants of those States, were in a condition of armed rebellion, and have continued in that condition for a certain time, and then the resolution legislates of and concerning those States. I think that is all wrong, all uncalled for. Let it be remembered that in 1861 Congress passed an act making a large body of provisions for the condition of things which had then arisen. It is an act entitled 'An act further to provide for the collection of duties on imports, and for other purposes,' which was approved July 13, 1861. In the fifth section of that act, drawn, as I know, with a great deal of thought and care, it was provided:

That whenever the President, in pursuance of the provisions of the second section of the act entitled "An act to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions, and to repeal the act now in force for that purpose," approved February 28, 1795, shall have called forth the militia to suppress combinations against the laws of the United States, and to cause the laws to be duly executed, and the insurgents shall have failed to disperse by the time directed by the President, and when said insurgents claim to act under the authority of any State or States, and such claim is not disclaimed or repudiated by the persons exercising the functions of government in such State or States, or in the part or parts thereof in which such combination exists, nor such insurrection suppressed by said State or States, then and in such case it may and shall be lawful for the President by proclamation to declare that the inhabitants of such State, or any section or part thereof, where such insurrection exists, are in a state of insurrection against the United States; and thereupon all commercial intercourse by and between the same and the citizens thereof and the citizens of the rest of the United States shall cease and be unlawful so long as

such condition of hostility shall continue; and all goods and chattels, wares and merchandise, coming from said State or section into the other parts of the United States, and all proceeding to such State or section, by land or water, shall, together with the vessel or vehicle conveying the same, or conveying persons to and from such State or section, be forfeited to the United States.

"In short, a state of war was declared to exist in that event. It will be observed that that statute did not make any law for the States which had attempted to secede and were in arms. It named no State whatever. It was a general law that when the people of a State are in insurrection and claim to act under the authority of the State, and the State authorities do not repudiate it and do not stop it, then the President may declare them to be in insurrection, and thereupon a state of war exists; and the Supreme Court of the United States, differing about the blockade question before that, all decided that after that act was passed the state of war was complete.

"Now, Mr. President, in order to conform our legislative acts to that law which we have already passed and that condition of things which exists, I propose to offer a substitute for this resolution, which I shall presently send to the desk. The President's proclamation declaring certain States to be in a state of rebellion and insurrection, was duly issued under the law of 1861, which I have just read. That is all matter of public record. We know what the proclamation is. We know that it was issued according to law. It declared a state of war. The proclamation is before me, but I need not read it. It declares under the act which I have read, that certain States are in a condition of war and insurrection. Has that ever been changed? Have any States declared by that law and proclamation to be in this condition, ever altered their condition? The state of war certainly still continues.

"In view of the statement which I have made, I propose in place of the resolution, which seems to me obnoxious to the objections I have made, to strike it all out, and also the preamble, and to insert simply this:

That the people of no State, the inhabitants whereof have been declared in a state of insurrection by virtue of the fifth section of the act entitled "An act further to provide for the collection of duties on imports, and for other purposes," approved July 13, 1861, shall be regarded as empowered to elect electors of President and Vice-President of the United States until said condition of insurrection shall cease and be so declared by virtue of a law of the United States.

"This is not a resolution declaring any State to be in this condition, and legislating for any State by name, or making any distinction between particular States. It is simply a law in pursuance of the act of 1861, declaring what shall be the effect which shall follow a certain condition of things into which any State may fall. For the reasons I have stated, I desire that this substitute shall be adopted in lieu of the resolution."

Mr. Johnson, of Maryland, followed, saying: "The question, Mr. President, is whether Congress have any authority to legislate at all on this subject. I agree with the chairman of the Judiciary Committee and my friend from Vermont that the authority exists; and I was somewhat surprised to find that it was disputed by gentlemen of such distinction every way, and particularly in their profession, as the honorable member from Wisconsin and the honorable member from New York. The Constitution of the United States does not provide in any way a mode by which a contested election growing out of an alleged informality in voting, or an alleged illegality upon the part of those who voted, or an alleged incapacity on the part of those voted for, is to be decided. The honorable member from Illinois is right in saying that if we are governed by the mere letter of the Constitution in this particular, there is no power existing by which any thing more can be done than to have the votes counted. He is right in saying that looking to the mere letter of the provision there is no authority given to the President of the Senate to count the votes. He is right, also, in saying that there is no provision in the Constitution which decides who shall declare the result of the voting after the votes shall have been counted. In relation to all these points the Constitution is silent; but the Constitution provides that certain persons shall not be voted for as President of the United States. No one who is not a native-born citizen of the United States, or who was not a citizen at the time of the adoption of the Constitution, can be voted for. Members of Congress and officers under the Government cannot be selected as electors. The States are only authorized to appoint through their Legislatures a number of electors equal to their number of Senators and Representatives. Now, if a person not a native citizen of the United States, or not a citizen in 1789, when the Constitution was adopted, is voted for as President, or if a member of Congress of either branch or an officer of the United States is voted for as an elector, or if more than the number of votes to which a State is entitled is cast, there is no clause in the Constitution which provides a mode by which these objections may be obviated. If the Vice-President is to count the vote, and he is to decide the result, and is merely to decide the result, according to the words of the instrument alone, then he may declare that A B is elected President of the United States, although the whole country knows that A B was not a native citizen of the United States. So he may count all the votes of any one State (for his function it is supposed is only to count), he may count all the votes cast by the State of New York when, in point of fact, New York has cast more votes than she is authorized to cast under the Constitution.

"How are these questions to be decided? As it is very clear that in the instances to which I have referred—and there are others—there is

an absence of any authority given to the Vice-President or to the two Houses when meeting in convention to decide them if they should arise, one would suppose—unless we are to remain without a President, or to have placed in the presidential office a man who is not eligible, or to have one placed there by votes which there was no constitutional right to cast—that there must be some mode by which those difficulties are to be obviated.

“Now, Mr. President, the honorable member from New York—I do not understand my friend from Wisconsin as going to the extent of that objection—says that he denies to Congress the power to declare that the votes of any State are not to be counted. Does he mean to say that the votes of the States in rebellion are to be counted? I do not speak of Louisiana, because he may perhaps be able to except Louisiana out of the category of rebel States; but assuming now that there are rebel States, and assuming that Louisiana is one of the rebel States, does my friend from New York say that the votes of those States are to be counted? I presume not; and yet if we do not legislate upon the subject, where is the power to exclude them? The Vice-President of the United States may think it his duty to count them; he may think it his duty, counting them, to declare the result of the election consequent upon that count; and it makes no difference that we know outside of the balloting that the result will be the same whether those votes are counted or excluded, the principle is the same. We are not to know, we do not officially know, what the result of the election has been. Who can know (officially, I mean) how the electors have voted?

“It is true that my honorable friends from New York and from Wisconsin, and that is my opinion as I am at present advised, think that the efforts of those rebellious citizens to take those several States out of the Union are legally imperfect; that is to say, in the contemplation of the Constitution they are still subject to the powers of the Constitution, and the war is being carried on for the purpose of making them yield obedience to the Constitution upon the hypothesis that they are responsible to all the obligations of allegiance. That is all true; but it is equally true that they are in a state of rebellion. The Supreme Court of the United States has decided unanimously that since the passage of the act to which my friend from Vermont has referred, the act of July 13, 1861, all the States named in the preamble to this resolution are now at war with the United States, and that the United States have not only the right but it is their duty to prosecute that war to a success by bringing them back, they being (not in a constitutional sense, but practically) out of the Union. Now, is it possible that the inhabitants of a State thus at war with the United States have a right to vote in any Presidential election for President of the United States?”

Mr. Cowan, of Pennsylvania, said: “I should

like to hear the honorable Senator from Maryland speak to this question, which is involved in the last clause of the amendment offered by the Senator from Vermont: suppose the rebellion to be entirely suppressed, is it necessary then, in order to restore them to their rights in the Union, that we should enact a law that it was suppressed?”

Mr. Johnson, of Maryland, replied: “My own opinion has been throughout that the States are not out, in one sense; and if all the inhabitants of those States were now to throw down their arms, admit their allegiance to the United States, and elect their members to the Senate, &c., hereafter, after the rebellion was entirely terminated, perhaps they would be entitled to their seats; but I am not prepared to say whether I shall hold that opinion upon examination or not. All that I mean to say now is, that it is incumbent upon us to provide by law for a contingency which has now happened, although it may never happen again, so far as the particular effects are concerned; and it is now, above all, the best time to provide for it, because, although we do not know officially that it will have the slightest effect upon the result, we do know that there is involved in an exigency of that description very great peril.”

Mr. Collamer, of Vermont, said: “I desire to add to the amendment that I have offered these words:

Nor shall any vote cast by any such electors elected by the votes of the inhabitants of any such State, or the Legislature thereof, be received or counted.

“According to my view, when a state of war has been declared to exist, declared according to law, we cannot recognize a state of peace and reconciliation in any other way but by declaring it by law, or authorizing the President to declare it by law.”

Mr. Ten Eyck, of New Jersey, said: “I am not in favor of the adoption of the substitute proposed by the Senator from Vermont, although it is always with the greatest diffidence in the world that I venture to differ from him in any well-considered proposition that he submits to the Senate. I understand his substitute to be based upon the idea that under the act of Congress and the President's declaration, we are now in an actual state of war with these eleven Southern States, and that it will require an act of Congress to enable them to resume their position again in the Federal Union. That presupposes, in the first place, that they are out of the Union, a fact which I am not willing to admit and can never assent to; but I do not propose to insist upon that. The main direction of the argument is, that inasmuch as the President has declared these States to be in a condition of insurrection under an act of Congress passed in 1861, therefore it will require an act of Congress to enable them to resume their legitimate or ordinary State functions; or, in other words, it will require an act of Congress to authorize them to elect electors for President and Vice-President, and, as a necessary conse-

quence, to elect Senators to this body, or Representatives to the House of Representatives.

"I do not mean to weary the Senate by reading at large the statute of 1861, but I may be permitted perhaps to refer to it for the purpose of showing the object, intent, and scope of that enactment. It is entitled, not 'An act to declare war against the States of South Carolina, Virginia, and others,' but 'An act further to provide for the collection of duties on imports, and for other purposes.' The fifth section authorizes the President in certain cases to declare the inhabitants of certain States to be in a state of insurrection by virtue of the power conferred upon him by the act of February 28, 1795. It goes on to declare that it shall be lawful for the President, whenever he shall call forth the militia, in pursuance of the act to which I have referred—

To suppress combinations against the laws of the United States, and to cause the laws to be duly executed, and the insurgents shall have failed to disperse by the time directed by the President, and when said insurgents claim to act under the authority of any State or States, and such claim is not disclaimed or repudiated by the persons exercising the functions of government in such State or States, or in the part or parts thereof in which said combination exists, nor such insurrection suppressed by said State or States, then, and in such case, it may and shall be lawful for the President, by proclamation, to declare that the inhabitants of such State, or any section or part thereof, where such insurrection exists—

"Not a state of actual war—

are in a state of insurrection against the United States; and thereupon all commercial intercourse by and between the same and the citizens thereof, and the citizens of the rest of the United States, shall cease, and be unlawful so long as such condition of hostility shall continue.

"This is the object of the act. When these people, in the opinion of the President of the United States, are in the condition specified in this act, he shall issue his proclamation declaring that fact; 'and thereupon all commercial intercourse by and between the same and the citizens thereof, and the citizens of the rest of the United States, shall cease, and be unlawful so long as such condition of hostility shall continue.

"In pursuance of that act of Congress the President issued his proclamation, and I shall refer to a portion of it. The proclamation bears the date of August 16, 1861. It recites the act of 1861 to which I have just referred; it also recites the act of 1795, under which he derives the authority, and then proceeds to declare:

Now, therefore, I, Abraham Lincoln, President of the United States, in pursuance of an act of Congress approved July 13, 1861, do hereby declare that the inhabitants of the said States of Georgia, South Carolina, Virginia, North Carolina, Tennessee, Alabama, Louisiana, Texas, Arkansas, Mississippi, and Florida (except the inhabitants of that part of the State of Virginia lying west of the Alleghany Mountains, and of such other parts of that State and the other States hereinbefore named as may maintain a loyal adhesion to the Union and the Constitution, or may be, from time to time, occupied and controlled by forces of the United States engaged in the dispersion of said in-

surgents), are in a state of insurrection against the United States, and that all commercial intercourse between the same and the inhabitants thereof, with the exceptions aforesaid, and the citizens of other States and other parts of the United States, is unlawful, and will remain unlawful until such insurrection shall cease or has been suppressed.

"The object, design, and intent of the act was to prohibit trade with these insurgents, to prevent persons in the loyal part of the Union from carrying on commercial intercourse with them, and from furnishing them with provisions and munitions of war with which they might continue to prosecute this rebellion; and then there was an exception from the scope and effect of the act in favor of the State of West Virginia and such other States or parts of States as maintained a loyal adhesion to the Union and the Constitution, or may be from time to time occupied and controlled by forces of the United States engaged in the dispersion of the insurgents.

"Now, if it comes to the knowledge of the joint convention to be assembled on Wednesday of next week that in either of these States this insurrection has been suppressed, and that the people of either one of those States have assumed the suspended functions of their State government, have reorganized a State constitution, have elected State officers, and have put their civil government into full execution and operation, and that fact comes before us attested and undisputed, I inquire whether, under the provisions of this law and the proclamation of the President, it is necessary that there should be an act of Congress passed in order to establish the fact that these people have reorganized and reassumed their ancient loyal functions! Why, sir, I thought that this whole war, the expenditure of thousands of millions of dollars and of oceans of blood, was for the very purpose of restoring this Union and bringing back these shooting stars to their ancient orbits.

"I differ with the Senator from Michigan, who would make the return of these States to the Union attendant with the utmost difficulty. Whenever I was satisfied that there was a true, genuine, loyal feeling among the inhabitants of any of these States to repudiate their heresies and return to their allegiance, and that there was a sufficient body of them to justify the proceeding, and to carry on all the essential, necessary operations of State governments, and to perform their duties within the limits of the Union, I should be disposed to extend the hand of encouragement to the loyal people, always saving and reserving not only terms of indignation for the leaders, but the privilege and firm determination of punishing in the most condign manner the guilty authors and leaders and instigators of the rebellion."

Mr. Cowan, of Pennsylvania, followed, saying: "The preamble states the fact of the rebellion prevailing in these States, and the resolution declares that because of this fact stated in the preamble these States ought not to vote. That is the proposition from the committee

The amendment of the honorable Senator from Vermont, on the other hand, proposes to take the question in blank, and to declare that all the States which were proclaimed to be in a state of insurrection by the President ought not to vote until that insurrection has been declared by law to be suppressed. I am opposed to that amendment for divers reasons, and I think if we come to examine this question fairly we shall see that any action of ours intended to prevent Louisiana, for instance, and Arkansas from voting, will be perhaps a breach of faith on the part of this Government, and a violation of that courtesy which is due from one department of it to another.

"Sir, what are the facts? It is said that by the act of July 13, 1861, these States are cut out from the Union and debarred from all their privileges as States, political as well as others. I do not so read the act of July 13, 1861; nor do I conceive that that was its purpose, because in endeavoring to get at a fair construction of a law, it is always necessary to ascertain what was the purpose of the lawgiver. I apprehend, so far from its being the purpose of that law to put these States out of the Union, it was its intention to keep them in; that is, it was intended to be a means to keep them in, although for the purpose of better achieving that end all commercial intercourse was cut off with them, but not political intercourse. They were not deprived of any of their rights as States, or from exercising any of the functions of States, provided they were able to do so in due time.

"In pursuance of that act of Congress, the President, by his proclamation of August 16, 1861, declared Louisiana in a state of insurrection. By the proclamation of January 1, 1863, he exempted thirteen parishes of the State from the operation of the emancipation proclamation. Why? Because he says in that proclamation that the rebellion does not exist in those thirteen parishes; that that condition of things upon which he was allowed before that time to issue his proclamation did not exist in those parishes, and therefore he exempted them. We recognized the validity of that proclamation, I believe; at least we have always treated it with that respect which is due to the act of another department of this Government when it is not grossly in violation of law or of the Constitution. By the proclamation, however, of the 8th of December, 1863, the President invited the people of Louisiana and of all the other States to resume their State rights and State functions, provided one-tenth of them would agree to make the proper organization.

"Now, as I understand the question here, it is simply this: in pursuance of that invitation extended by the President, and upon the footing of his proclamation declaring that those rights should be restored to them, and that they would be protected in the exercise of them, the people of Louisiana, in numbers sufficient to bring them within his terms, have

organized a State government, and have it now actually in operation in the State of Louisiana. The question simply is, whether we will carry out that arrangement of the President in good faith, or whether we will violate it; and that is the question which presents itself distinctly upon the propositions now before this body. The President has invited a number of the people of these States which have been oppressed with the rebellion to go to work to reorganize their State governments, and has promised that he will extend, and this Government will extend, to them the protection guaranteed by the Constitution; and he goes so far as to state that phrase of the Constitution *in hæc verba*. Will we stand by it? That is the question. Will we carry it out in good faith? If we are willing to do so, then there is no difficulty; and this one-tenth of the people, or whatever the number may be, will become for this occasion the State of Louisiana, and the State of Arkansas, or any other State that sees fit to accept those conditions:

Mr. Davis, of Kentucky, said: "The question now is, whether the two Houses in their legislative capacity may lay down certain principles and regulations to prevent disorder and confusion in the act of counting the presidential votes? I think they may.

"Where the Constitution directs an act to be done, it invests all needful power to enable that act to be conveniently done. As I understand the Constitution, the power to count the votes is vested in the two Houses of Congress. That is a power to be executed under the Constitution. A general provision of the Constitution provides that Congress may pass all laws necessary and proper to carry into execution any power vested by the Constitution in the Government of the United States or in any of the departments or officers thereof. This power to count the presidential votes is certainly vested by the Constitution somewhere. It is vested in the two Houses. The manner in which the count shall be made is not prescribed by the Constitution. Then comes in the general power given to Congress to pass all laws necessary and proper to execute any of the powers vested by the Constitution in the Government or in any department or officer thereof.

"I understand that that incidental power is simply proposed to be executed by this joint resolution in declaring certain principles and forms by which the count shall be made. This count is to be made in subordination to the Constitution. The Constitution declares that no man shall be eligible to the office of President unless he be a native-born citizen or a citizen of the United States at the adoption of the Constitution. Suppose the State of Louisiana had voted for a man who did not come up to that qualification, who was not a native citizen of the United States, or who had not resided in the United States at the time of the adoption of the Constitution, would it not be the duty of the two Houses, in counting the

vote, to decline to count the vote of Louisiana that had been cast for a person for President in direct conflict with the spirit and the letter of the Constitution? It certainly would. The vote must be counted. How can it be counted until it is ascertained? The vote must be identified. It must be identified, and ascertained in obedience to certain principles of the Constitution. One of those principles is that the candidate voted for must be thirty-five years of age; another is that he must have been a citizen of the United States at the time the Constitution was adopted, or he must be a native-born citizen. Any vote cast in opposition to these plain and palpable provisions of the Constitution would be null and void; it would not be a vote for President in conformity to the Constitution, and therefore it would be void. To ascertain whether this vote is so cast or not, the two Houses of Congress, acting in the count of the vote, must decide whether any State has voted for a man under thirty-five years of age, or voted for an alien, against the provisions of the Constitution. They are to ascertain whether such votes have been given or not, before they can make a constitutional count of the votes.

"Now, sir, as I understand the effect of this joint resolution, it is simply in a form to do that duty; that is, to ascertain whether the vote of certain States has been cast in conformity to the Constitution or not, and deciding that they have not been cast in conformity to the Constitution, to exclude them from the count."

Mr. Powell, of Kentucky, said: "I believe that the States in revolt are still States of the Union. I believe they are not out of the Union. I believe, furthermore, that when they choose to lay down their arms, and to elect officers of their State governments who acknowledge this Government, and to send members to the House of Representatives, and Senators to this chamber, they have the right to do so, and I believe that they ought to be permitted to do so. While I say that, I know of course that each House is the judge of the qualifications of its members, and each House is to judge for itself whether the resistance to the Government in any State has sufficiently ceased to entitle it to representation here, and hence it is that each case must stand upon its own merits as it is presented here. For myself, I would vote tomorrow to receive Senators in this hall from every State that is in revolt, provided I believed that a majority of the people of those States, unawed by the military power, uninfluenced by any outward force, of their own good will, in the exercise of their own volition, had in good faith elected those men in the way prescribed by their constitution and laws. I think, whenever they manifest such disposition to return, a majority of the people will indicate that it is our duty to allow them to return. We, of course, and the other House, must be the judges of that matter to a great extent; we

must sit in judgment upon each case; and we must decide whether or not a majority of the people of the State have ceased their resistance to the authority of the United States, and whether or not the parties who present themselves were elected by the free suffrages of those people, unawed by the military or any other power."

Mr. Cowan: "Allow me to ask the honorable Senator what he would do if a majority of the people of a State were to establish a monarchy?"

Mr. Powell: "The Constitution guarantees a republican form of government."

Mr. Cowan: "The inquiry which I put to the Senator from Kentucky I think is one which reaches to the very marrow of this question. The people of a State are divided; about half of them desire to preserve their connection with the Union, to give it their allegiance; but the other portion, say a majority, refuse, and insist upon secession. We are bound by the Constitution to preserve the Union and to preserve the rights of the people under union; not merely the rights of a majority, but the rights of the people, of all the people, and of any number of the people, however small. What are we to do? A minority of the people come forward and say, 'If you aid us for awhile, we can preserve this State and keep her in the Union.' 'But no,' according to the doctrine advanced here, 'there must be a majority of you before we can recognize you as in the Union.' Suppose they answer you, 'The majority, by persisting in abandoning the Union, can destroy forever the State and deprive us of our rights which were guaranteed to us as a portion of the people of the State.'

"A portion of the people of Louisiana come here and say, 'We are loyal, we owe you allegiance, we have a State government organized and in operation, and if you will aid and assist us we will keep it in organization and operation, and we will control and dominate after a time the rebels and secessionists.' What is it proposed to answer to them? 'You cannot come back; there are not enough of you.' That will be very poor encouragement for the loyal men of the rebel States to try and bring back their people to reason, and it presumes another thing that never was true—that the people, the masses of a country under circumstances like those which surround us, ever were in rebellion. The masses of the people even in the Southern States never were in rebellion against the Government of the United States. They never could have been. The masses never go into rebellion unless they have wrongs to redress and injuries to avenge. That was not the case in this rebellion. It is a rebellion of leaders, and the masses are deluded away by falsehoods industriously circulated everywhere, and inflammatory speeches made. It is impossible for them to get back unless we create some such scaffolding in the rebel States as these governments of Arkansas and Louisiana

will furnish. We ought to cultivate them. We ought not, I think, to stop and inquire whether they constitute a tenth or a twentieth of the inhabitants; we ought to make the most of them. They are all we have there; and if we repulse them and take away their authority, what is left in those States, what have we there? Will not those loyal men say, 'What is the bounty to loyalty that you propose? Why, that we wait without any State government, that we submit to this military rule and dictation, which is so much deprecated, until we can convert more than a majority of the people to establish a State government.'"

Mr. Wade, of Ohio, said: "Can any portion of a State attempt to govern the whole? Suppose you have got one loyal county in a State, can it control the destinies of all the rest of that State? If you have by military authority within the lines of your encampment a great city or a portion of a State where there is a population, is it very difficult for the President or for the commanding officers there to get up all the paraphernalia of a State upon a ten-acre piece of land? When you have done that, and under the shadows of your armies attempt to elect all the magistrates and all the officers necessary to perfect the machinery of your government and put it in operation, can you be so blind as to suppose that when you have by military power, for it is nothing else, clothed these men with authority to govern, it is a republican government? Sir, it is just as much a military government as it was before you went through the farce of selecting those officers. There is your military governor; has he ever been withdrawn from Louisiana; or if another governor has been substituted, by whom was he substituted? By the Commander-in-chief of all the armies of the United States. When the mandate went forth from the President to Mr. Hahn, 'Be Governor of that State,' he did not consult the Senate, he did not consult anybody in particular; but the mandate issued from the President of the United States unaided, unknown, unadvised by anybody, 'Mr. Hahn, be Governor of that State, call a convention, declare what your status shall be in the Republic, elect your Representatives, organize in form the shadow of a State government, and you shall be a State government.' They could make out the semblance, but it lacks all the reality of a government, because it does not represent the will of the people, or at least we have no evidence that it is the will of the people of the State.

"There is no alternative. If you have a rebellious people who are determined that they will not submit to the laws and authority of the General Government, if a majority of a State are thus inclined, a free government in that State is impossible. You need not talk to me about your one-tenth. The Senator from Pennsylvania wants to know if it takes a majority to govern a State. I wish he was here, because I want to put the question to him, how do you understand it; 'how readest thou?' is there any

principle of free government that has decided that any thing less than a majority of the people of a State, or of the voters of a State, can govern its destinies? I mean upon republican democratic principles. I speak not of the farce of a civil government overshadowed by a military governor, a wheel within a wheel, a military government dominating your whole political community, and inside of that and under it and subordinate to it, a civil government pretending to be a free government! I say it is a farce; it is unworthy of the American Senate to give it a moment's consideration.

"The Senator from Pennsylvania says he would permit one-tenth of the people to govern the State. Now I want to know of the Senator what protection that one-tenth will have when you withdraw all external power from them, and leave them to themselves? What chance will they have with the nine-tenths opposed to them?

Mr. Cowan: "That is the very question that we must now meet. It is the question now whether we will maintain State governments there in connection with the Union or whether we will treat these people as a conquered people, as conquered provinces; whether we will assume the task of governing them entirely, or whether we will do that which the President is endeavoring to do now. I am very free to say that I am in favor of his plan; I very much prefer it; and I have no doubt that the one-tenth of the people of a State organized with the reins of State government in their hands, the means of enforcing its authority, aided by the General Government, will finally bring back all these States to obedience, allegiance. I have no doubt about it. But repulse this one-tenth, repulse the loyal people of the States who are endeavoring to bring them back, drive them away into rebellion, what then? If you have not the one-tenth, you have nothing. If you have not these people who are your friends in Louisiana and Arkansas and the other States, whom have you? Are you determined to drive them all into utter and inextinguishable rebellion, or are you willing that the repentant, as well as those who have always been loyal, shall come back and endeavor to establish themselves in such form that the Union may be restored? To state the question, in my judgment, is to answer it.

"It is said that the tenth of the people do not represent the whole people. They may not represent the whole people, loyal and disloyal, but they represent the loyal people, and it is the loyal people of these States for whom we have made this tremendous struggle. Is there a Senator on this floor who would have embarked on this war if it were not to rescue the loyal people of these States from the usurpation which oppressed them? Certainly not. What right should we have had to do so? If the whole of this people had gone away into secession, what right should we have had to restrain and control them?"

A motion was now made by Mr. Lane, of Indiana, to postpone the resolution indefinitely, which was lost—yeas 11; nays 26; as follows:

YEAS—Messrs. Cowan, Doolittle, Farwell, Harlan, Harris, Howe, Lane of Indiana, Nesmith, Ten Eyck, Van Winkle, and Willey—11.

NAYS—Messrs. Anthony, Buckalew, Clark, Collamer, Conness, Davis, Dixon, Foster, Hale, Henderson, Howard, Johnson, Lane of Kansas, Morgan, Morrill, Nye, Powell, Sherman, Sprague, Stewart, Sumner, Trumbull, Wade, Wilkinson, Wilson, and Wright—26.

ABSENT—Messrs. Brown, Carlile, Chandler, Foot, Grimes, Harding, Hendricks, Hicks, McDougall, Pomeroy, Ramsay, Richardson, Riddle, and Saulsbury—14.

Mr. Doolittle, of Wisconsin, in opposition to the resolution, said: "The Senator from Ohio, in the course of his remarks, undertook to denounce in very strong terms the policy adopted or suggested by the President of the United States in his message as the policy upon which he would attempt the reorganization of civil government and civil institutions in the States where the insurrection had prevailed. There has been so much said about it, and so much misrepresentation also, that I desire for a few brief moments to call the attention of the Senate to that proposition.

"Every person knows that there must be some form of government in these States. If, with our armies, we enter into a State or country, and take possession of it by military power, some form of government must be established—military, of course, in the first instance. The civil government is displaced, so to speak, by military power. In the midst of arms the laws are silent, is the old expression of the Romans: *inter arma silent leges*. When the people of a district become so far obedient to their obligations of loyalty to the Government which thus assumes, by military power, to put down an insurrection, an attempt may be made to surrender the military power and establish a civil administration by the people themselves. For a time the form of government may be, to a certain extent, a mixed form, both of civil and military power, each leaning upon the other. As the thing progresses and grows still further, the military power may be more and more withdrawn, and still greater power and authority given to the civil administration and the civil officers of the government.

"Now, sir, what is the actual state of the case in relation to Louisiana? When we first captured New Orleans, and by our forces took possession of the rivers and the lands adjoining, there could be no government but that of a military character. But after an experience of one, two, or three years, the people there became so well satisfied of the great mistake of going into rebellion against the Government of the United States and of the necessity of submitting to its authority and its jurisdiction, that they began to come back to their allegiance to this Government, and were willing to join in the organization of the civil government of the State, and resume their relations to the Gov-

ernment of the United States. Accordingly we find that when asked to do so, eleven thousand four hundred and fourteen of the loyal citizens of that State joined in the organization of a new constitution, which was submitted to the people, adopted by them, and a Legislature and other officers chosen by virtue of it, and the whole machinery of civil government put into full operation in that State. By virtue of the authority of that constitution, they now have their own government, their own Legislature, they are making municipal laws and regulations for themselves. Their courts are sitting every day in judgment upon the rights of individuals. Under the authority of this new constitution, all the relations of life are now being regulated. Under the authority of this new constitution, I tell my friend from Ohio that nearly ninety thousand slaves, who were not reached by the emancipation proclamation, have had their fetters knocked from their limbs and freedom given to them. Yes, sir, freedom has been given to ninety thousand slaves by this very constitution which he would undertake to trample under his feet as a military usurpation and as a miserable farce. Can he stand up in the face of this country, when Louisiana presents herself in this attitude as a free State, knocking off the chains from ninety thousand of her slaves whom the emancipation proclamation did not reach (for they were excepted), and deny to free Louisiana her rights of representation here, and her right to be heard as one of the free States of this Union in voting upon the very constitutional amendment which we have submitted to the States for their ratification?

"But, sir, to return once more to this much-denounced policy of the President. It is denounced as a military usurpation. It is directly the reverse of that. It is an attempt on the part of the President to lay down the military power, to put it into the hands of the civilians; to take it from the army and to give it to the people. What does he say? He says this in substance: 'Whenever one-tenth or a portion of the population equal to one-tenth of the whole voting population of the district or the State before the rebellion began are willing voluntarily to undertake the business of administering civil government, I, as President of the United States and Commander-in-chief of the army, pledge to them my good faith that I will stand by them and try and enable them to do it.' That is all there is of it. So far from being a military usurpation, it is an attempt on the part of the President to lay down his military power; and under that provision of the Constitution which compels this Government to guarantee a republican form of government to every State in the Union, the President is endeavoring in good faith to do it."

Mr. Conness, of California, said: "With the Senator's consent, I ask him if he holds that the right of Congress to act upon the question of the organization or admission of the States now in rebellion can only occur and take place

when Senators present themselves from those States here, or if the Senator denies to Congress a right to participate in the question of their reorganization as States? I desire the information, because it is important."

Mr. Doolittle: "My opinion is very clear that we act upon the question when it is presented to us, and the Senators appear here and ask admission, first, whether there is a State to represent; secondly, whether a Legislature has been chosen which can send representatives; and, thirdly, whether the men who appear here have the constitutional qualifications; and on this subject our decision is final. The President has nothing to do with it; the House of Representatives has nothing to do with it; we are the sole and conclusive jurisdiction."

"The question raised by the Senator is not one that I have discussed in this argument. It is a very distinct and different question from the one I am now discussing, and I do not intend to go into a discussion of it now. Possibly on some other occasion it may come up, and I may discuss that question; but I understand it is a very different one from that I am now arguing."

Mr. Conness: "I so understand it; and I understand the Senator; but I understood him to say that upon the question of the admission of Senators from those States only could our right to act on the question occur or come up; and therefore I asked the Senator if he held the opinion that Congress has no right and no power to act upon the question of whether those States should be reorganized or not, because, although the Senator may not believe that the latter question is involved in the proposition now before the Senate, I differ with him, and believe that it is involved in it. Therefore I asked the Senator the question."

Mr. Doolittle: "I did not intend to go into the discussion of that question, which leads into a much broader field of inquiry, and there are certain other provisions of the Constitution that would have to be discussed that I do not intend to take up now. I prefer to go on with my train of argument, and finish what I have to say on the point directly under consideration."

"I was saying, Mr. President, that our decision on that question of the admission of Senators is without any appeal, and whatever law might be passed by Congress would not in any way whatever abridge our supreme jurisdiction over the question of the admission or rejection of Senators in this body. The House and the Senate act entirely independent of each other on that question. Take the case of Virginia. We have Virginia represented on this floor. The House of Representatives refused Virginia any representation in that body. We act upon our own responsibility, each for itself. We determine whether men shall come in here and sit as the Representatives of States. The House determine whether they shall go into that body as the Representatives of the districts of the several States."

"There is another question, it seems to me, that may be involved in this decision. If we assume to say, as is contended for by the Senator from Michigan (Mr. Howard), I believe, that these several States which have been declared to be in insurrection have ceased to be States of the United States, and are to be regarded as mere subjugated provinces or territories, as if acquired from some foreign power; if that doctrine is to prevail—a doctrine which finds support in some circles and places—this other consequence will follow."

Mr. Howard, of Michigan, replied: "What I stated, or intended to state, was this: that the power of the United States over a conquered State which has been in rebellion is the ordinary power of the conqueror over conquered territory; but that in this particular case there is superadded to the rights and duties of the conqueror a trust, growing out of the Constitution of the United States, which is to be performed by the United States in its discretion and in due time, in the shape of a restoration of the conquered State to the Union. Congress may take its own time to bring about this restoration. There are no limitations in the Constitution in regard to the mode or time in which it is to be done. The Territory, however, having been once a State, must be restored to its condition of a State by the action of Congress at some time, and according to the discretion of Congress, carrying out honestly and fairly the obligation of the Constitution; but in the mean time, understand me, I hold that while in this conquered state it is subject to be governed by military authority, by a provisional government, or by any other means which Congress may see fit to adopt; and I hold it to be the duty of Congress at an early day, as early as is reasonable and practicable, to pass an act which shall apply to all such cases, and not to leave it to the unlimited discretion of the Commander-in-chief of the armies of the United States."

Mr. Doolittle: "The point that I understood the Senator to make the other day, and I am not quite clear now whether I understand him to controvert it, was, that these States once declared in insurrection cease to be States of the Union. If I was mistaken in that I am glad to be corrected."

Mr. Howard: "If they are States in insurrection, as they have been pronounced to be by the constituted authorities of the United States, then as States, as political communities, they are enemies of the United States. Can a community which is an enemy of the United States be treated as one of the United States? It is only necessary to ask the question, to answer it. *De facto* these States are out of the Union, and all the gentleman's argument and all he may imagine cannot, *de facto*, constitute them States until our arms have triumphed."

Mr. Doolittle: "*De facto* out of the Union; they are no longer States of the Union. I do not wish to charge upon that Senator doctrines that he does not entertain. I know that it has

been advocated in certain other quarters that those States, by virtue of their insurrection, have ceased to exist as States, are no longer States of the Union; that they are not only out of the Union, but have ceased to be States at all.

"Now, I understand the Senator from Michigan to say that he regards them as States *de facto* out of the Union, and as States hostile to the United States, as public enemies. There is another provision of our Constitution that ought not to be forgotten; and that is, that when we elect a President and Vice-President they must both be residents of some State of the Union. We have elected Mr. Lincoln from Illinois. Undoubtedly that is a State in the Union. We have also elected Andrew Johnson from the State of Tennessee as Vice-President of the United States. Is he a public enemy? Does he live in a State of this Union, or does he live in some subjugated territory?

"Sir, whatever fine-spun theories gentlemen may give loose to in their imaginations, I tell you that the doctrine that any one of these States is out of the Union is the very doctrine which we have been fighting against from the beginning. The very ground on which we stand is, that they are not out of the Union, that they have no power to go out of the Union; and it is to maintain that doctrine that we have poured out our treasure and our blood like water upon every battle-field. In my opinion the doctrine—I do not say that the Senator contends for it, for I do not precisely understand his position—but the doctrine that says these States are no longer States of the United States is one huge, infernal, constitutional lie, that would stamp all our conduct from the beginning as murder, and cover us all over with blood."

Mr. Sumner: "I understood the Senator a few moments ago to say that the Constitution required that the President and Vice-President should come from two different States."

Mr. Doolittle: "Not be residents of the same State."

Mr. Sumner: "I think the Senator has not quoted it correctly. I have it before me. It is as follows:

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves.

"All that is required is that the candidate shall be a citizen of the United States; and I presume nobody ever questioned that Andrew Johnson was a great and loyal citizen of the United States."

Mr. Doolittle: "The Constitution also provides that—

No person, except a natural-born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President.

"And there is another provision in the Con-

stitution requiring their residence in the States of the Union."

The question was taken on the motion of Mr. Ten Eyck, to strike out "Louisiana" from the title, and lost, as follows:

YEAS—Messrs. Cowan, Dixon, Doolittle, Farwell, Harlan, Harris, Howe, Lane of Indiana, Lane of Kansas, Nesmith, Pomeroy, Ramsey, Ten Eyck, Van Winkle, and Willey—15.

NAYS—Messrs. Brown, Buckalew, Clark, Collamer, Conness, Davis, Foster, Henderson, Hendricks, Howard, Johnson, Morgan, Morrill, Powell, Saulsbury, Sherman, Sprague, Sumner, Trumbull, Wade, Wilkinson, and Wright—22.

ABSENT—Messrs. Anthony, Carlile, Chandler, Foot, Grimes, Hale, Harding, Hicks, McDougall, Nye, Richardson, Riddle, Stewart, and Wilson—14.

A motion to strike out the preamble was lost, yeas 12; nays 80.

The motion of Mr. Collamer to strike out the preamble and the whole of the resolution except the resolving clause, and to insert the following, was rejected, yeas 13, nays 27:

That the people of no State, the inhabitants whereof have been declared in a state of insurrection by virtue of the fifth section of the act entitled "An act further to provide for the collection of duties on imports, and for other purposes," approved July 13, 1861, shall be regarded as empowered to elect electors of President and Vice-President of the United States, until said condition of insurrection shall cease, and be so declared by virtue of the law of the United States; nor shall any vote cast by any such electors elected by the votes of the inhabitants of any such State, or the Legislature thereof, be received or counted.

Other amendments were made, and the joint resolution was passed by the following vote:

YEAS—Messrs. Anthony, Brown, Buckalew, Chandler, Clark, Collamer, Conness, Davis, Dixon, Farwell, Foster, Grimes, Hale, Harlan, Henderson, Hendricks, Howard, Johnson, Morgan, Morrill, Nye, Powell, Ramsey, Sherman, Stewart, Sumner, Trumbull, Wade, and Wright—29.

NAYS—Messrs. Cowan, Doolittle, Harris, Howe, Lane of Kansas, Nesmith, Saulsbury, Ten Eyck, Van Winkle, and Willey—10.

ABSENT—Messrs. Carlile, Foot, Harding, Hicks, Lane of Indiana, McDougall, Pomeroy, Richardson, Riddle, Sprague, Wilkinson, and Wilson—12.

It was as follows:

Whereas, the inhabitants and local authorities of the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, and Tennessee rebelled against the Government of the United States, and were in such condition on the 8th day of November, 1864, that no valid election for electors of President and Vice-President of the United States, according to the Constitution and laws thereof, was held therein on said day: therefore

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the States mentioned in the preamble to this joint resolution, are not entitled to representation in the Electoral College for the choice of President and Vice-President of the United States for the term of office commencing on the 4th day of March, 1865; and no electoral votes shall be received or counted from said States concerning the choice of President and Vice-President for said term of office.

In the House, on January 30th, Mr. Wilson, of Iowa, from the Committee on the Judiciary,

reported back the joint resolution relative to counting the electoral votes. The preamble recited that the inhabitants and local authorities of the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, and Tennessee, rebelled against the Government of the United States, and have continued in a state of armed rebellion for more than three years, and were in a state of armed rebellion on the 8th of November, 1864.

The joint resolution provides that the States mentioned in the preamble are not entitled to representation in the electoral college for the choice of President and Vice-President of the United States.

The previous question was called, and under its operation the resolution was passed.

In the Senate, on Feb. 6th, Mr. Sumner, of Massachusetts, offered the following joint resolution:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of such Legislatures, shall become a part of the Constitution, to wit:

Representatives shall be appointed among the several States which may be included within this Union according to the number of male citizens of age, having in each State the qualifications requisite for electors of the most numerous branch of the State Legislature. The actual enumeration of such citizens shall be made by the census of the United States.

He said: "I ask the reference of the joint resolution to the Committee on the Judiciary, and I content myself with remarking that that amendment, or something like it, seems to become necessary now since the adoption of the other constitutional amendment by which slavery is prohibited throughout the United States." It was so referred.

In the House, on Feb. 6th, the following joint resolution of the Senate was considered and adopted:

Resolved by the Senate (the House of Representatives concurring therein), That the following be added to the joint rules of the two Houses, namely:

The two Houses shall assemble in the hall of the House of Representatives at the hour of one o'clock, P. M., on the second Wednesday in February next succeeding the meeting of the electors of President and Vice-President of the United States, and the President of the Senate shall be their presiding officer. One teller shall be appointed on the part of the Senate, and two on the part of the House of Representatives, to whom shall be handed, as they are opened by the President of the Senate, the certificates of the electoral votes; and said tellers having read the same in the presence and hearing of the two Houses thus assembled, shall make a list of the votes as they shall appear from the said certificates; and the votes having been counted, the result of the same shall be delivered to the President of the Senate, who shall thereupon announce the state of the vote and the names of the persons, if any, elected, which an-

nouncement shall be deemed a sufficient declaration of the persons elected President and Vice-President of the United States, and, together with a list of the votes, be entered on the Journals of the two Houses.

If, upon the reading of any such certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the presiding officer, the Senate shall thereupon withdraw, and said question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall, in like manner, submit said question to the House of Representatives for its decision; and no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses, which being obtained, the two Houses shall immediately reassemble, and the presiding officer shall then announce the decision of the question submitted; and upon any such question there shall be no debate in either House. And any other question pertinent to the object for which the two Houses are assembled, may be submitted and determined in like manner.

At such joint meeting of the two Houses, seats shall be provided as follows: for the President of the Senate, the Speaker's chair; for the Speaker, a chair immediately upon his left; for the Senators, in the body of the hall upon the right of the presiding officer; for the Representatives, in the body of the hall not occupied by the Senators; for the tellers, Secretary of the Senate, and Clerk of the House of Representatives, at the Clerk's desk; for the other officers of the two Houses, in front of the Clerk's desk and upon either side of the Speaker's platform.

Such joint meeting shall not be dissolved until the electoral votes are all counted and the result declared, and no recess shall be taken unless a question shall have arisen in regard to the counting of any of such vote, in which case it shall be competent for either House, acting separately, in the manner hereinbefore provided, to direct a recess not beyond the next day at the hour of one o'clock, P. M.

In the House, on February 8th, the counting of the electoral vote for President and Vice-President took place. At five minutes past one o'clock, P. M., the Doorkeeper announced the Senate of the United States.

The Senate entered the hall, preceded by its Sergeant-at-Arms and headed by the Vice-President and the Secretary of the Senate, the members and officers of the House rising to receive them. The Senators took the seats set apart for them in the eastern section of the hall.

The Vice-President took his seat as presiding officer of the joint convention of the two Houses, the Speaker occupying a chair on the left of the Vice-President.

Senator Trumbull, the teller appointed on the part of the Senate, and Messrs. Wilson and Dawson, the two tellers appointed on the part of the House, took their seats at the Clerk's desk, at which the Secretary of the Senate and the Clerk of the House also occupied seats; two of the clerks of the Senate occupying seats at the reporters' desk.

The Vice-President: "The Senate and House of Representatives having met under the provisions of the Constitution for the purpose of opening, determining, and declaring the votes for the offices of President and Vice-President of the United States for the term of four years commencing on the 4th of March next, and it being my duty, in the presence of both Houses

thus convened, to open the votes, I now proceed to discharge that duty."

The Vice-President then proceeded to open and hand to the tellers the votes of the several States for President and Vice-President of the United States, commencing with the State of Maine.

Senator Trumbull, one of the tellers, read in full the certificate of the vote of the State of Maine, giving seven votes for Abraham Lincoln, of Illinois, for President of the United States, and seven votes for Andrew Johnson, of Tennessee, for Vice-President of the United States.

Senator Wade: "Mr. President, I move to dispense with the reading of every thing in the certificate except the result of the vote."

Mr. Cox: "Mr. President, I believe that it is not competent for this joint convention to have any motion submitted, but I suggest, as General Cass suggested in 1857, that only the result of the votes shall be announced."

The Vice-President: "That can be done, as suggested. The Chair does not think that it is within his power to receive the motion, unless the Senator from Ohio desires that the Senate shall separate in order to pass upon the question."

Senator Wade: "I do not propose any such thing. I believe we may dispense with the reading of all but the results."

The Vice-President: "The Chair will, therefore, if there be no objection, direct the results of the returns only to be read. The tellers will now read the results of the vote of the State of New Hampshire."

The tellers reported, through Senator Trumbull, that they had examined the vote of the State of New Hampshire, that they found it in due form, that all the votes given for President of the United States were five, all of which were for Abraham Lincoln, of the State of Illinois; and that all the votes given for Vice-President of the United States were five, all of which were for Andrew Johnson, of the State of Tennessee.

The same form was observed in announcing the votes of the other States.

The tellers having read, through Mr. Wilson, the certificate from the State of Nevada, showing that two votes had been given for Abraham Lincoln, of Illinois, for President, and two votes for Andrew Johnson, of Tennessee, for Vice-President,

The Vice-President said: "The Chair will state to the convention that the messenger who bore the returns from the State of Nevada communicated the fact that the third elector did not appear when the vote was taken. The State having been but recently admitted into the Union, had no law by which the vacancy could be filled; and consequently but two votes were given for President and Vice-President."

The vote of the State of Nevada having been recorded,

Senator Cowan said: "Mr. President, I in-

quire whether there are any further returns to be counted?"

The Vice-President: "There are not."

Senator Cowan: "And if there be, I would inquire why they are not submitted to this body in joint convention, which is alone capable of determining whether they should be counted or not?"

The Vice-President: "The Chair has in his possession returns from the States of Louisiana and Tennessee, but in obedience to the law of the land the Chair holds it to be his duty not to present them to the convention."

Senator Cowan: "I ask whether the joint resolution on that subject has become a law by having received the approval of the President of the United States?"

The Vice-President: "The Chair believes that the official communication of its approval by the President has not been received by either House. The Chair, however, has been apprised of the fact that the joint resolution has received the approval of the President."

Senator Cowan: "Then, as a motion is not in order in this body, I suggest, that the votes of Louisiana and Tennessee be counted, and that this convention determine the fact."

Mr. Cox: "I suggest the reading of the joint resolution by which our action is to be determined."

The Vice-President: "The Secretary will read the joint resolution under which the House and Senate are now acting."

The Secretary of the Senate then read as follows:

Resolved by the Senate (the House of Representatives concurring therein), That the following be added to the joint rules of the two Houses. (See preceding page.)

Mr. Stevens: "I do not think any question has arisen which requires the two Houses to separate. That, according to the wording of the joint resolution, can only be upon the reading of the returns which have been opened by the president of the convention."

Senator Cowan: "I merely wish to say that, believing as I do that it rests with this joint convention, in its joint capacity, to determine all questions which ought to arise here, I have done what I have thought to be my duty in bringing to the attention of the convention the question which I have raised. Having done so, I now beg leave to withdraw it."

The Vice-President: "The Chair did not understand the Senator from Pennsylvania (Mr. Cowan) as making any distinct motion, but merely a simple suggestion."

Senator Cowan: "I understood that no motion could be entertained in this convention."

The Vice-President: "Motions can be entertained upon any matters pertinent to the purpose for which the convention has assembled. The decision of those motions must be determined by the two Houses separately, after the Senate shall have withdrawn from the convention."

Mr. Yeaman: "Mr. President, if it requires a distinct motion to determine the question, I will move that all the returns before this joint convention be opened and presented for its consideration."

The Vice-President: "The Chair is of the opinion that the motion of the member from Kentucky (Mr. Yeaman) is in order, being pertinent to the object for which the House and Senate have assembled in joint convention. The member will reduce his motion to writing, so that the precise question shall be in possession of the Senate when it shall retire for the determination of the question presented for the consideration of the convention."

Mr. Pruyn: "I wish to inquire whether a second proposition, one in regard to the counting of the votes, can be entertained before the two Houses shall separate. If so, I desire to move that the tellers be instructed not to count the vote of the so-called State of West Virginia."

The Vice-President: "In the opinion of the Chair the motion of the member from New York (Mr. Pruyn) is made too late, the vote of the State of West Virginia having been already announced and declared."

Mr. Pruyn: "With all respect to the Vice-President, I desire to say that I understand the rule to be this: the certificates of the votes of the respective States have been opened, read, and announced, and now the tellers, as the proper officers of this joint convention, are to pass upon those votes, and announce the result. My motion is that the tellers be instructed not to count the vote of the so-called State of West Virginia."

Mr. Whaley: "If it be in order, I would ask the gentleman from New York (Mr. Pruyn) to state his reasons for his motion."

The Vice-President: "The language of the rule under which the two Houses are now acting is as follows:

If upon the reading of any such certificate by the tellers, any question shall arise as to the counting of the votes therein certified, &c.

"The question must be raised when the vote is announced. In the opinion of the Chair the member from New York (Mr. Pruyn) should have made his motion, in order to come within the rule, at the time the tellers announced the vote of the State of West Virginia."

Mr. Cox: "If the rule is that which has just been enunciated by the Chair, how is it that the gentleman from Kentucky (Mr. Yeaman) can submit his motion before the Vice-President shall have opened, and the tellers shall have announced, the votes of the States of Louisiana and Tennessee?"

The Vice-President: "In the opinion of the Chair the motion of the member from Kentucky (Mr. Yeaman) is in order. It does not apply to a return where objection is made, but it applies to a return which has not been submitted to the convention. It is a distinct motion that

a return shall be submitted to the convention. It comes within the latter clause of the joint resolution, which relates to any other motion pertinent to the object for which the two Houses have met in convention."

Senator Farwell: "I would suggest that the question raised by the member from Kentucky (Mr. Yeaman) has already been decided by the two Houses of Congress in the passage of the joint resolution which has just been read. It is not in order, therefore, to again raise the question in this convention, the point of order having already been determined by the two Houses of Congress."

The Vice-President: "Does the Senator from Maine (Mr. Farwell) raise a question of order upon the ruling of the Chair?"

Senator Farwell: "I raise the question of order that this question has already been decided by the two Houses of Congress in passing the joint resolution under which this convention is acting, which joint resolution has been approved by the President."

The Vice-President: "The fact of that approval of the President is within the knowledge of the Chair, and in consequence of that knowledge the Chair has seen fit to withhold the returns of the States in question. There has been no official promulgation of that approval of the President. Still, in the opinion of the Chair, if either branch of Congress shall be disposed to order the returns now upon the table to be read, it is within their power to do so. The reading of the returns would be one thing; then would arise another question, whether the vote in the return so read should be added to the count of the tellers. In the opinion of the Chair the motion of the member from Kentucky (Mr. Yeaman) is in order."

Mr. Yeaman: "Before I submit my motion in writing, I would inquire whether the submission of that motion would require the temporary dissolution of this convention and the resolving of the two Houses into their separate bodies in their respective chambers?"

The Vice-President: "The Chair has no doubt upon that point. Each House must determine the question in its own chamber; and each House has a negative upon the determination of the other."

Mr. Yeaman: "Then I desire to submit another suggestion."

Mr. Washburne, of Illinois: "I object to any debate."

The Vice-President: "All debate is out of order. The rule itself prescribes that no question shall be debated in the convention."

Mr. Yeaman: "Then I withdraw my motion, if it requires the separation of the convention into the two Houses."

The motion was accordingly withdrawn.

Senator Trumbull, on the part of the tellers, announced the following as the result of the vote for President and Vice-President of the United States:

List of votes for President and Vice-President of the United States for the constitutional term, to commence on the 4th day of March, 1865.

Number of Electoral Votes.	STATES.	President.		Vice-President.	
		Abraham Lincoln, of Illinois.	George B. McClellan, of New Jersey.	Andrew Johnson, of Tennessee.	George H. Pendleton, of Ohio.
7	Maine.....	7		7	
5	New Hampshire.....	5		5	
12	Massachusetts.....	12		12	
4	Rhode Island and Providence Plantations.....	4		4	
6	Connecticut.....	6		6	
5	Vermont.....	5		5	
33	New York.....	33		33	
7	New Jersey.....		7		7
26	Pennsylvania.....	26		26	
8	Delaware.....		8		8
7	Maryland.....	7		7	
11	Kentucky.....		11		11
21	Ohio.....	21		21	
13	Indiana.....	13		13	
16	Illinois.....	16		16	
11	Missouri.....	11		11	
8	Michigan.....	8		8	
8	Wisconsin.....	8		8	
8	Iowa.....	8		8	
5	California.....	5		5	
4	Minnesota.....	4		4	
3	Oregon.....	3		3	
3	Kansas.....	3		3	
5	West Virginia.....	5		5	
3	Nevada.....	3		3	
233	Total.....	212	21	212	21

The Vice-President: "The tellers report that the whole number of votes cast for President and Vice-President of the United States is 233; necessary to a choice, 117. For President of the United States, the tellers report that Abraham Lincoln, of Illinois, has received 212 votes; George B. McClellan, of New Jersey, has received 21 votes. For Vice-President of the United States, the tellers announce that Andrew Johnson, of Tennessee, has received 212 votes, and George H. Pendleton, of Ohio, has received 21 votes:

"Wherefore, I do declare that Abraham Lincoln, of the State of Illinois, having received a majority of the whole number of electoral votes, is duly elected President of the United States for four years commencing on the 4th day of March, 1865; and that Andrew Johnson, of the State of Tennessee, having received a majority of the whole number of electoral votes for Vice-President of the United States, is duly elected Vice-President of the United States for four years commencing on the 4th day of March, 1865."

[The announcement of the result of the vote was received with applause upon the floor and in the galleries.]

The Vice-President: "The object for which the House and the Senate have assembled in joint convention having transpired, the Senate will retire to its chamber."

In the Senate, on the 10th, the following message was read:

To the honorable the Senate and House of Representatives:

The joint resolution entitled "Joint resolution declaring certain States not entitled to representation in the electoral college" has been signed by the Executive, in deference to the view of Congress implied in its passage and presentation to him. In his own view, however, the two Houses of Congress convened under the twelfth article of the Constitution, have complete power to exclude from counting all electoral votes deemed by them to be illegal; and it is not competent for the Executive to defeat or obstruct that power by a veto, as would be the case if his action were at all essential in the matter. He disclaims all right of the Executive to interfere in any way in the matter of canvassing or counting electoral votes, and he also disclaims that, by signing said resolution, he has expressed any opinion on the recitals of the preamble, or any judgment of his own upon the subject of the resolution.

ABRAHAM LINCOLN.

EXECUTIVE MANSION, February 8, 1865.

In the Senate, on February 17th, the credentials of Joseph Segar, Senator elect to supply the vacancy occasioned by the death of Mr. L. J. Bowden, were presented.

Mr. Sumner, of Massachusetts, moved to refer them to the Judiciary Committee.

Mr. Willey, of West Virginia, opposed the motion, saying: "I trust that it will not be done. I know of no reason why it should be. The credentials, I believe, are proper on their face. They come to the Senate in due form under the seal of the State of Virginia. The gentleman who comes here is accredited the successor of Hon. Mr. Bowden, who died while a member of this body. Mr. Segar appears here to take his place and to supply the vacancy occasioned by his death. I see no more propriety in referring these credentials to the Judiciary Committee than I would have seen in referring the propriety of Mr. Bowden himself (if he were now living) retaining his seat on this floor. If Mr. Bowden was entitled to a seat upon this floor, I suppose this gentleman would be entitled to take his seat as his successor, provided the credentials be all regular and correct; and I know of no objection to them."

Mr. Cowan: "I hope that reference will not be made. I think it is a very extraordinary step indeed. It seems to me this question is *res adjudicata*. We have proceeded on that idea up to the present time, and it seems to me that no sufficient reason has been presented why we should change our policy now. I beg Senators to pause before doing so. If this Union is ever to be restored in the world it must be by the means which are now presented to us for our consideration. If we are to wait until the whole of a State is under our dominion and until all the people of a State are heard from, such a restoration will never take place, never. There was no such objection as this made when the predecessor of Mr. Segar presented himself here. When he came and claimed his seat he was allowed to take it, as other Senators were. I think it would be

making an invidious distinction if we now pursue a different course on this question. I hope, therefore, that the Senate will allow the person who has been properly accredited to take his seat as a Senator."

Mr. Hale: "I wish to ask the Senator whether Mr. Bowden presented himself here as a Senator from Virginia before or after the vote taken on the admission of West Virginia."

Mr. Cowan: "I do not know how that was; perhaps it was before."

Mr. Harris: "Yes, sir."

Mr. Foster, of Connecticut, said: "The simple reference of these credentials to the Judiciary Committee will merely, as I suppose, charge that committee with inquiring whether the credentials are in due and proper form. So far as I know, that would be all the duty with which the committee would be charged by the mere reference of the credentials."

Mr. Trumbull, of Illinois, replied: "I do not quite agree with the Senator from Connecticut as to the effect of a reference of the credentials to the Committee on the Judiciary. I suppose, if that reference be made, it will be the duty of the Committee on the Judiciary to ascertain whether these credentials come from a proper source. A public meeting might be held in the city of Washington, or in the State of Connecticut, or in the State of Illinois, and make out a credential in proper form to A, B, or C, as a Senator, and I suppose on the reference of such a credential the committee would inquire whether that public meeting had any authority to elect a Senator."

Mr. Foster: "I would ask the honorable Senator, with his permission, whether, if the credentials were in proper form and under the seal of a State, the committee would not be bound to take those credentials as they stood; and if the motion was simply to refer them to the committee, whether the committee could inquire whether the names were forged or the seal forged or any thing of the sort; whether the seal would not prove itself, and whether the document would not, under those circumstances, on its face be the evidence for the committee, to which they would be confined?"

Mr. Trumbull: "I apprehend not by any means. I suppose the members of the Senate are to take judicial notice of what is the Legislature in a State, of who is Governor of a State; and I suppose that if a credential was signed by A, B, and it was brought to the notice of the committee, or the committee of their own knowledge had notice, that A, B was not Governor of the State, or that no such Legislature had convened as purported to have made the election, they would report that fact to the Senate."

"I think that it is very proper, in the condition of things which we know to exist in the country, that these credentials should be referred before the claimant is permitted to be sworn as a member of this body; and I think the reference of the credentials will bring up

the question as it did in regard to Arkansas. In the case of persons claiming seats in this body from Arkansas a year ago, there was no objection to the credentials; they were in proper form; but the Senate proceeded to consider whether the body which undertook to elect them to the Senate was the Legislature of the State. The Constitution declares that this body "shall be composed of two Senators from each State, chosen by the Legislature thereof;" and when credentials are referred, it is competent to inquire whether the Legislature of the State has made such an election.

"We have made that inquiry frequently since I have been here. It arose in reference to the State of Indiana a few years ago, the question being whether the body which elected certain Senators was the Legislature of that State. It arose also in reference to the first election of my friend from Iowa (Mr. Harlan), whether the body which elected him was the Legislature of the State of Iowa. The Senate, wrongly as I think, decided in that case that the body which elected him was not the Legislature of the State of Iowa, and he was sent back and reflected afterwards. This is an inquiry that has been often made in this body; and I think that when the credentials are referred, something more is to be considered than simply whether on the face of the paper it purports to be the election of a Senator or not."

Mr. Howard, of Michigan, said: "I think that is a question upon which not only we but the whole country need to be enlightened. I shall be very much obliged to that committee, should the reference be made, if they will furnish to the Senate and the country a succinct history of all the proceedings which have resulted in the election of the gentleman who now presents his credentials. If I understand it rightly, the constituency which this gentleman will claim to represent in this body is now in a state of insurrection and rebellion against the United States; that constituency as a political community are the enemies of the United States, and at war with the United States; and I desire particularly that the Committee on the Judiciary shall furnish to us, if they can furnish some argument, to show that a political community at war with the United States has a right to be represented in this body or in the other House of Congress, and thus to enjoy the political privileges which belong to States that are at peace and performing their duty to the Government. I am very much inclined to deny the right of that community to any representation upon this floor, and am embarrassed not only about the right but also the matter of the election of this gentleman and his colleague, if he has a colleague, to this body."

Mr. Sumner, of Massachusetts, in support of the motion, said: "I regret that a question of this magnitude has been precipitated upon the Senate at this late period of the session when there is so much public business which has not yet received the attention of either House of

Congress. The Senator from Michigan does not exaggerate its magnitude. Sir, it is much to be a Senator of the United States, with all the powers and privileges pertaining to that office—powers and privileges legislative, diplomatic, and executive; and the question now is whether all these extraordinary powers and privileges shall be recognized in a gentleman whose certificate has been sent to the Chair. I thought it my duty, on hearing that certificate read as I entered the chamber, to move at once its reference to the Committee on the Judiciary. I am astonished that there can be any hesitation in making that reference. Sir, Senators who hesitate show an insensibility to the character of the question. Is the Senate ready to act blindfolded or with the eyes open? I insist that on a question of this magnitude the Senate shall act with the eyes open, wide open; and I know no other way in which they can be brought to act so except through the intervention of a responsible committee of this body. Therefore, sir, I proposed that the credentials should be referred to that committee. It will be the duty of the committee, as my friend from Michigan has suggested, to consider in the first place whether a State in armed rebellion like Virginia can have Senators on this floor. That is a great question, constitutional, political, practical. It will be their duty, then, to consider in the next place whether the gentleman whose credentials have been presented has been chosen legally under the Constitution of the United States by any State. Now, sir, I do not intend to prejudice either of these questions. I simply open them now for the consideration of the Senate."

Mr. Saulsbury: "I am glad, Mr. President, that we are furnishing evidence every day that we are a progressive people. We are learning something. These points, however, have not been presented to-day for the first time. I recollect that when my friend before me (Mr. Willey) and my other friend who is now absent from his seat (Mr. Carlile) applied for admission to this body as Senators from the State of Virginia, a few of us, a small corporal's guard, objected (not on account of any personal dislike to those honorable members) to their being admitted as members of this body, because we contended then that the Legislature of the State of Virginia had not sent those gentlemen here. We thought that the State of Virginia then was at war with the Government of the United States, and we thought that Senators professing to represent a State should in fact represent the sovereignty of that State.

"So, sir, it is too late for any member of this body to say that he opens these points now. They were opened years ago, and to my amazement, if I could be amazed at any thing transpiring either here or elsewhere in the country, I find some of those who were then most zealous for admitting the honorable Senators who claimed to represent the State of

Virginia here, now most vehement in their opposition to the admission of the new Senator."

Mr. Foster: "When I was up before I simply suggested that it did not appear to me that the question in the case would be raised on a simple reference of these credentials. I think so now. No gentleman has suggested that on these credentials any question but their due legal form arises, except the honorable Senator from Illinois (Mr. Trumbull), who cites cases that have been previously referred on credentials and considered on credentials. He has referred to the case of the State of Indiana.

"Now, the honorable Senator from Massachusetts (Mr. Sumner) speaks of this as a mighty question, and he says that persons who do not perceive that it is a mighty question are insensible to its greatness. I agree with him that it is a great question, and I certainly am not to be charged with overrating it when I suggest that the question is too mighty to be raised on the simple credentials. He speaks of the credentials as a certificate to enable men to sit here. By what else does the honorable Senator sit here, except by what he calls a certificate? He refers to the honorable Senator from New York, and to the honorable Senator from Pennsylvania. By what other tenure do they hold their seats here except a certificate, if the honorable Senator chooses to call it so? How does the certificate of either of those Senators differ from this? It has the seal of the State sending the Senator, certified by certain officers. If this has the same, what is the difference?"

Mr. Sumner: "The Senator refers, for instance, to myself as a Senator from Massachusetts. Suppose it was matter of public notoriety that I came into this chamber with a certificate from a body of men in Boston, little more in number and character than the common council of that city, by public report not in fact supposed to represent the State; suppose that that was a fact much received in the country; then I submit to the Senator whether it would not be the duty of the Senate before receiving my credentials to inquire into their origin."

Mr. Foster: "Certainly. I agree most decidedly in the case put by the honorable Senator that such would be the duty of the Senate; but if, in that state of facts, the honorable Senator came here with credentials verified according to the usual forms, signed by the Secretary of State of the State of Massachusetts, with the seal of that noble Commonwealth attached to the instrument, certifying that the honorable Senator had been duly elected a Senator in the Congress of the United States from such a date to such a date, and that credential was in due and proper form, I submit with great confidence that on merely referring that document to the Judiciary Committee no such question as the honorable Senator suggests would be raised before that committee or before the Senate."

Mr. Howard: "It seems to me the duty of

the committee goes beyond the formality of a mere seal having upon it the effigies of Virginia and the old motto of the Old Dominion, '*Sic semper tyrannis*.' Would the Senator from Connecticut ignore the fact that under an act of the Congress of the United States and the proclamation of the President, old Virginia, and the whole of it, is declared to be in insurrection against the United States, and as a community at enmity with them? He would ignore this most important fact according to his construction. He would forget entirely that there are now standing upon the soil of the Old Dominion half a million of armed men, testing the question whether that old Commonwealth shall belong to the United States or to the counterfeit confederacy instituted by the rebels. It strikes me that that fact is one of some little significance, one not to be lightly treated, and one in the face of which we may well recoil from suffering her to be represented in this Senate."

Mr. Foster: "If the honorable Senator will allow me, I should like to ask him a question right there, not to interrupt him. I should like to ask him whether, if such be the relation between the State of Virginia and the United States, the Senate is not ignoring that condition of things when they admit a man to come into the body, sit here by courtesy, present his credentials, recognize those credentials as proper credentials, at least so far forth as to receive them and refer them to a committee without one word of comment? In what position do the Senate of the United States place themselves on this question if they do that?"

The President *pro tempore*: "The question will be on the motion of the Senator from Michigan to instruct the Committee on the Judiciary in regard to the point suggested by him."

Mr. Wilson, of Massachusetts, said: "I understand this question to stand in this way: the Congress of the United States recognized a political government in Virginia, or a portion of it, as the State of Virginia proper. On the strength of that recognition men were admitted into this Senate and into the other House. On the strength of it we made West Virginia a State and brought her into the Union, and she is in the Union to-day. It seems to me, therefore, that we are bound by all our votes during the last three years to consider the Governor and Legislature of Virginia as existing."

Mr. Willey, of West Virginia, further said: "Sir, it is a fact, not only that the Senate of the United States has recognized the existence of Virginia as a State, and her right to be represented on this floor, but the executive branch of the Government has done so, I imagine; for I saw it stated in the papers the other day that the Secretary of State had transmitted the constitutional amendment for the abolition of slavery to the Executive of Virginia, and through him it was sent to the Legislature to be acted upon, and that Legislature had acted upon it and ratified the amendment. We shall place ourselves in a singular position if we reject

a gentleman who comes here accredited with a certificate of election in due form, and repulse him from our doors and refuse to allow him a seat on the floor, when we have another member representing the same State upon the floor, and when the executive branch of the Government recognizes the Virginia Legislature at Alexandria as the true Legislature, and Governor Pierpont as the true and legitimate Governor of Virginia. I trust that this matter will not be referred at all, but that we will hold out the inducement to the loyal people of Virginia to rally around the loyal Legislature at Alexandria."

"The Senator from Michigan said awhile ago that we had shed too much blood to bring Virginia back into the Union and be humbugged by proceedings like this. Why, sir, the very object is to bring Virginia back into the Union; and it strikes me there is no more available and desirable means by which to bring her back under the old flag, and to restore her to her allegiance and place in the Federal Government, than the very organization of the loyal people around the loyal Legislature, under a loyal government and a loyal Governor, as fast as the power of the United States can relieve the loyal people of Virginia from the pressure of the rebellion."

Mr. Sherman, of Ohio, said: "I wish to submit to the Senate one or two considerations on this subject, and I shall close my remarks by submitting a motion that is not debatable."

"The credentials presented to us purport to show that this gentleman was elected a member of this body on the 8th day of December last, and they bear date on the 12th day of December last. They have been held by him for more than sixty days. Every intelligent man must have known that the presentation of these credentials would give rise to debate, would involve grave political questions about which there are radical differences of opinion in this body and throughout the country. The condition of the State of Virginia, the condition of the rebel States, the effect of the rebellion, all these matters are involved in the question now presented to the Senate. This gentleman, holding these papers, might at any moment have presented them as a privileged question, and have stopped all the business of this body until they were disposed of, either referred or acted upon. Now, I ask the Senator whether it is reasonable for us at this period of the session to stop our deliberations when all the important bills of the session remain unacted upon for the purpose of considering this question? When this gentleman has had these papers in his possession for more than sixty days, when he had the right at any day to present them and call on us to decide the question raised by them, is it reasonable, I ask, to present them at this period of the session, and ask us to postpone all the important business of the session for the purpose of considering them? It seems to me it is not; and, therefore, without going into the merits of the proposition, which is a very grave

and difficult one, upon which I myself have not made up my opinion, although I have read and thought a great deal about it, I submit whether, under the circumstances, the best disposition is not to leave the question to be settled by the next Congress. Under the circumstances, therefore, I feel it my duty to submit a motion that the credentials do lie upon the table.

The motion prevailed, by the following vote:

YEAS—Messrs. Anthony, Brown, Buckalew, Chandler, Clark, Collamer, Conness, Cowan, Davis, Doolittle, Farwell, Foster, Hale, Harlan, Howard, Howe, Morgan, Morrill, Nye, Powell, Ramsey, Sherman, Sprague, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, and Wilson—29.

NAYS—Messrs. Dixon, Hendricks, Johnson, Lane of Indiana, Lane of Kansas, McDougall, Nesmith, Pomeroy, Richardson, Saulsbury, Van Winkle, Willey, and Wright—13.

ABSENT—Messrs. Carlile, Foot, Grimes, Harding, Harris, Henderson, Riddle, and Stewart—8.

In the Senate, on Feb. 23d, the joint resolution recognizing the government of the State of Louisiana, was considered. The resolution was as follows:

Resolved, That the United States do hereby recognize the government of the State of Louisiana, inaugurated under and by the convention which assembled on the 6th day of April, A.D. 1864, at the city of New Orleans, as the legitimate government of said State, entitled to the guaranty and all other rights of a State government under the Constitution of the United States.

Mr. Sumner, of Massachusetts, moved to strike out all after the enacting clause, and insert the following:

That neither the people nor the Legislature of any State, the people of which were declared to be in insurrection against the United States by the proclamation of the President, dated August 16, 1861, shall hereafter elect Representatives or Senators to the Congress of the United States, until the President, by proclamation, shall have declared that armed hostility to the Government of the United States within such State has ceased; nor until the people of such State shall have adopted a constitution of government not repugnant to the Constitution and laws of the United States; nor until, by a law of Congress, such State shall have been declared to be entitled to representation in the Congress of the United States of America.

This amendment was rejected by the following vote:

YEAS—Messrs. Brown, Conness, Grimes, Howard, Sprague, Stewart, Sumner, and Wade—8.

NAYS—Messrs. Anthony, Buckalew, Carlile, Collamer, Cowan, Dixon, Doolittle, Farwell, Foster, Hale, Harlan, Harris, Hendricks, Johnson, Lane of Indiana, Lane of Kansas, Morgan, Morrill, Nesmith, Nye, Pomeroy, Powell, Ramsey, Richardson, Riddle, Ten Eyck, Trumbull, Willey, and Wright—29.

ABSENT—Messrs. Chandler, Clark, Davis, Foot, Harding, Henderson, Howe, McDougall, Saulsbury, Sherman, Van Winkle, and Wilkinson—12.

Mr. Powell, of Kentucky, in opposition to the resolution, said: "The resolution under consideration proposes to recognize, as the legitimate State government of Louisiana, the government formed by the convention that assembled in New Orleans on the 6th day of April, 1864. In order to come to a just and correct

conclusion upon the question at issue, we must be informed of the action of the people of Louisiana, of the President of the United States, and of the military, in connection with this subject.

"Senators, before they can vote for this resolution, must maintain the doctrine contained in the President's proclamation of the 8th of December, 1863, when he proposed that one-tenth of the loyal voters of a State who would comply with the conditions set forth in his proclamation, should form a State government. They must further maintain, that the President of the United States, of his own volition, has power by decretal order to alter the constitution of a State. They must maintain further, that the President of the United States has the power to prescribe the qualifications of voters, and the qualifications of candidates for office in the States. They must further believe not only that the President possesses those powers, but that Major-General Banks possessed those powers in the State of Louisiana by virtue of his office as major-general of the army commanding in that district.

"Mr. President, I ask those who are in favor of this resolution, to tell me from whence the President of the United States derives the power to prescribe the qualifications of voters for the people of Louisiana. Whence does he derive the power to prescribe the qualifications for office? And yet all these things he does. Why, sir, he tells you plainly and distinctly in that proclamation, that none shall be qualified voters except those who take the oath prescribed in that proclamation. I can recognize no government as legitimate that has such a rotten foundation. Senators who vote for it, must admit that the President possesses these high powers of sovereignty. I have heretofore thought, and now maintain, that there is no power on earth that can lawfully form a constitution for the people of any State in this Union, save and except the sovereign people themselves. It is one of the highest acts of the sovereignty of the people to proclaim their fundamental law; but here in this pretended government of Louisiana, the Chief Executive of the United States undertakes to prescribe the qualifications of voters and to amend the constitution of Louisiana. When he prescribes the qualifications of voters, he amends the constitution of the State; for, under the constitution of that State as it existed before the rebellion, the qualifications of voters was prescribed in that instrument. The President's proclamation is the basis of the whole proceeding, and those who vote for this resolution in-dorse that proclamation.

"The sole object I had in view when I rose to address the Senate was to show, not from any outside testimony, but from the proclamations of the President, from the proclamations and orders of General Banks, and from the records before us, that this government was not formed by the free will of the people of Louisiana, that not one-tenth of the voters

even voted for the ratification of this constitution, but that it was a government formed by coercion, under the influence of the military authorities there.

"After the convention had been in session several weeks, Major-General Banks made them a visit, was received with an address, and graciously told the convention that he was pleased with what they had done so far. The power and influence of the military authorities are seen in this movement from the beginning to the end of the work. Major-General Banks is here urging with great assiduity and zeal, the ratification of his actings and doings in Louisiana. He is here, as he was in Louisiana, the most prominent actor; he has been before the committees of the two Houses, urging with hot zeal the ratification of his work. I hope and trust that he will not find the Senate and House of Representatives as obedient to his will as he found less than one-tenth of the down-trodden people of Louisiana.

"Now, sir, I am of the opinion that a government formed in that way will be of no service to the people of Louisiana or to the Union; I believe it will be absolutely detrimental and injurious. If the people of Louisiana are prepared to return to their allegiance to the United States, there certainly will be enough of them there unawed and uninfluenced by military power to reorganize their State government; but if at the point of the bayonet you force and coerce a small and insignificant minority to do it, you will inflict great injury on the people of that State."

Mr. Henderson, of Missouri, followed, saying: "The Senator from Massachusetts says that these State constitutions are not republican in form. Will he tell me in what respect?"

Mr. Sumner: "Because they do not follow out the principles of the Constitution of the United States."

Mr. Henderson: "I should like to know in what particular. The answer is a very general one, indeed. He refuses, then, to specify. The Senator can answer more particularly hereafter, if he chooses. He says these constitutions do not follow the Constitution of the United States. I have looked over them, and I find no objection to them. I can tell the Senator that if the constitution of Massachusetts is republican in form, so are the constitutions of these two States."

"If secession is potent enough to take a State out, and that was mere revolution, why cannot the loyal men perfect a revolution on the side of the Government as well as rebels perfect a revolution on the side of secession, outrage, and wrong?"

Mr. Sumner: "Does the Senator refer to me as having ever said that the act of secession took a State out?"

Mr. Henderson: "I understand the Senator to claim that these States are in a territorial condition; that they are not States; that by losing their State governments in the act of secession, they lose their specific identity as States."

Mr. Sumner: "I would rather the Senator should use my language than his own, when he undertakes to state my position. I have never stated that any act of secession took a State out. I have always said just the contrary. No act of secession can take a State out of this Union, but the State continues under the Constitution of the United States, subject to all its requirements and behests. The government of the State is subverted by secession; the Senator does not recognize it as legal or constitutional, I believe, any more than I do. Where, then, is the difference between us? There is no government which he or I recognize, but we do hold that the whole region, the whole territory, is under the Constitution of the United States, to be protected and governed by it."

Mr. Henderson: "The Senator then admits that the States are in the Union. Now, I ask him if we can restore the Union without restoring State governments in the seceded States?"

Mr. Sumner: "That is the desire I have most at heart, to restore State governments in those States."

Mr. Henderson: "Then I desire to ask the Senator, if the loyal men in one of those States acquiesce in the constitution presented here, are they not entitled to govern the State under it?"

Mr. Sumner: "If the loyal men, white and black, recognize it, then it will be republican in form. Unless that is done, it will not be."

Mr. Henderson: "Now, Mr. President, I desire to ask the Senator if the Congress of the United States can interfere with the right of suffrage in one of the American States of this Union? I put the question to him as a constitutional lawyer."

Mr. Sumner: "I answer at once as a constitutional lawyer that at the present time, under the words of the Constitution of the United States declaring that the United States shall guarantee to every State a republican form of government, it is the bounden duty of the United States, by act of Congress, to guarantee complete freedom to every citizen, and immunity from all oppression, and absolute equality before the law. No government that does not guarantee these things, can be recognized as republican in form according to the theory of the Constitution of the United States, if the United States are called to enforce the constitutional guarantee."

Mr. Henderson: "I ask the Senator now in all candor, as he believes the Government of the United States can thus interfere with the right of suffrage in one of the States, does he not also believe that the Congress of the United States may to-day declare that a State constitution is not republican in form because it denies the electoral franchise to women, because it prohibits intermarriage between whites and blacks, because it declares that one man shall be entitled to hold more property in the State than another? I content myself at present with laying down the following propositions as true, and if true the States should be admitted.

If untrue, I desire to know in what particular, and why they are untrue.

1. "I hold that the seceded States are still in the Union, and cannot get out of it except through an amendment of the Constitution permitting it.

2. "The seceded States being still in the Union are entitled to claim all the rights accorded to other States.

3. "That each State now in the Union has the right to stand upon the form of its constitution as it existed at the time of its admission. The people of such State may change its constitution, provided they retain a republican form of government; but neither the President nor Congress can reform, alter, or amend such constitution, nor prescribe any alteration or amendment as a condition of association with the other States of the Union. The General Government may properly lend its aid to enable the people to express their will; but any attempt to exercise power constitutionally reserved to the State, beyond what may be demanded by the immediate exigencies of war, will not tend to restore the Union, but rather to destroy our whole system of government.

4. "When citizens of a State rebel and take up arms against the General Government, they lose their rights as citizens of the United States, and they necessarily forfeit those rights and franchises in their respective States which depend on United States citizenship.

5. "If a seceded State be still in the Union, entitled to recognition as a State, and a majority of the people have voluntarily withdrawn their allegiance, the loyal minority constitute the State and should govern it.

6. "Congress should not reject the governments presented because of mere irregularity in the proceedings leading to their reorganization.

7. "If Congress has no right to make and impose a constitution upon the people of any State; if its power extends no further than to guarantee preëxisting republican forms of government; if the State still exists, and the loyal men are entitled to exercise the functions of its government, it follows that the only questions to be examined here are, first, is the constitution the will of the loyal men qualified to act? and, second, is it republican in form?

8. "The constitutions of Louisiana and Arkansas are thought to be republican in form, and it is admitted that the loyal men of those States respectively acquiesce in them. Hence the duty of Congress to recognize them, and the duty of each House to admit their representatives."

Mr. Sumner, of Massachusetts, presented the following amendment for the purpose of having it printed, proposing to move it at a future day:

That it is the duty of the United States at the earliest practicable moment, consistent with the common defence and the general welfare, to reëstablish by act of Congress republican governments in those

States where loyal governments have been vacated by the existing rebellion, and thus, to the full extent of their power, fulfil the requirement of the Constitution, that "the United States shall guarantee to every State in this Union a republican form of government."

SEC. 2. *And be it further resolved*, That this important duty is imposed by the Constitution in express terms on "the United States," and not on individuals or classes of individuals, or on any military commander or executive officer, and cannot be intrusted to any such persons, acting, it may be, for an oligarchical class, and in disregard of large numbers of loyal people; but it must be performed by the United States, represented by the President and both Houses of Congress, acting for the whole people thereof.

SEC. 3. *And be it further resolved*, That, in determining the extent of this duty, and in the absence of any precise definition of the term "republican form of government," we cannot err, if, when called to perform this guarantee under the Constitution, we adopt the self-evident truths of the Declaration of Independence as an authoritative rule, and insist that in every reëstablished State the consent of the governed shall be the only just foundation of government, and all men shall be equal before the law.

SEC. 4. *And be it further resolved*, That, independent of the Declaration of Independence, it is plain that any duty imposed by the Constitution must be performed in conformity with justice and reason, and in the light of existing facts: that, therefore, in the performance of this guaranty, there can be no power under the Constitution to disfranchise loyal people, or to recognize any such disfranchisement, especially when it may hand over the loyal majority to the government of the disloyal minority; nor can there be any power under the Constitution to discriminate in favor of the rebellion by admitting to the electoral franchise rebels who have forfeited all rights, and by excluding loyal persons who have never forfeited any right.

SEC. 5. *And be it further resolved*, That the United States, now called at a crisis of history to perform this guaranty, will fail in duty under the Constitution, should they allow the reëstablishment of any State without proper safeguards for the rights of all the citizens, and especially without making it impossible for rebels now in arms against the national Government to trample upon the rights of those who are now fighting the battles of the Union.

SEC. 6. *And be it further resolved*, That the path of justice is also the path of peace, and that for the sake of peace it is better to obey the Constitution, and, in conformity with its requirements in the performance of the guarantee, to reëstablish State governments on the consent of the governed and the equality of all persons before the law, to the end that the foundations thereof may be permanent, and that no loyal majorities may be again overthrown or ruled by any oligarchical class.

SEC. 7. *And be it further resolved*, That a government founded on military power, or having its origin in military orders, cannot be a "republican form of government" according to the requirement of the Constitution; and that its recognition will be contrary not only to the Constitution, but also to that essential principle of our Government which, in the language of Jefferson, establishes "the supremacy of the civil over the military authority."

SEC. 8. *And be it further resolved*, That in the States whose governments have already been vacated, a government founded on an oligarchical class, even if erroneously recognized as a "republican form of government" under the guarantee of the Constitution, cannot sustain itself securely without national support; that such an oligarchical government is not competent at this moment to discharge the duties and execute the powers of a State; and that its recognition as a legitimate gov-

ernment will tend to enfeeble the Union, to postpone the day of reconciliation, and to endanger the national tranquillity.

SEC. 2. *And be it further resolved*, That considerations of expediency are in harmony with the requirements of the Constitution and the dictates of justice and reason, especially now, when colored soldiers have shown their military value; that as their muskets are needed for the national defence against rebels in the field, so are their ballots yet more needed against the subtle enemies of the Union at home; and that without their support at the ballot box the cause of human rights and of the Union itself will be in constant peril.

Mr. Howard, of Michigan, said: "I find in the President's proclamation the following language:

And I do further proclaim, declare, and make known, that whenever, in any of the States of Arkansas, Texas, Louisiana, Mississippi, Tennessee, Alabama, Georgia, Virginia, Florida, South Carolina, and North Carolina, a number of persons not less than one-tenth in number of the votes cast in such State at the Presidential election in the year of our Lord 1860, each having taken the oath aforesaid and not having since violated it, and being a qualified voter by the election laws of the State existing immediately before the so-called act of secession, and excluding all others, shall reestablish a State government which shall be republican, and in no wise contravening said oath, such shall be recognized as the true government of the State, and the State shall receive thereunder the benefits of the constitutional provision which declares that "the United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or the Executive (when the Legislature cannot be convened), against domestic violence."

"There is an assertion of authority on the part of the Executive of the United States—made, I confess with pleasure, with the best of motives and intentions, and for patriotic ends—an assertion that the President of the United States, whenever one-tenth part of the people constituting the population of any one of the eleven rebellious States shall see fit to constitute a government for the State, will recognize of his own accord such government as being the legitimate government of the State, entitled to all the guarantees contained in the Constitution of the United States to a State peaceful and in the Union. And, sir, he gives this assurance at a time when all these States were engaged, by his own confession, the admissions of his own solemn proclamation, in a wicked, bloody, and wanton insurrection against the Government itself over which he is presiding as Chief Magistrate. Sir, I cannot recognize the authority of the President of the United States without the subsidiary aid of an act of Congress to give any such assurance to a community in insurrection against the United States. I ask the friends of this measure, I ask those gentlemen in this body who are so anxious for the passage of this resolution, which is, or will be, a recognition of this assertion on the part of the President of the United States, where in the Constitution do they find an authority given to him authorizing him to assure one-tenth part of the people of

an insurrectionary State that they, to the exclusion of all other portions of the population of that State, shall be recognized as the State, and be entitled to all the benefits of the guarantee contained in the Constitution? Sir, it seems to me, without imputing or intending to impute any wrongful intention to the excellent President of the United States, that here is an attempt to stretch the executive authority beyond any thing which the country has thus far witnessed, and I think it is time Congress, in whom, according to my ideas, rests, and rests solely, the authority of readmitting and reconstructing the rebellious States, should lay hold of this subject, assert their power, and provide by some statute of uniform application for the reconstruction, as it is called, and readmission, of the insurrectionary States. That is their right and their duty; that is not the right, it is not the duty, of the President of the United States, in my opinion.

"Mr. President, in order to determine what extent of power Congress possesses over a State once in rebellion, and now subdued by the national arms, we must look into the nature of the State governments, and the relations they bear to the national Government.

"What, then, is a State? What are its essential attributes, without which it is no State?

"A State is a moral person, a political community, possessing the faculty of political government. Its being does not consist of geographical extent, but of the united will of the persons who have their domicile within its limits. To attribute to the mere land the qualities of a State would be to mistake the cradle for the child, the vessel for the crew, the dress we behold moving before us for the immortal spirit within.

"The land is, of course, indispensable as affording room for the working of this will, but it is incapable of exercising or receiving any political faculty or right; as much so as is the tombstone of indicating the present thoughts of the departed. It is nothing, absolutely nothing, but the theatre on which the political community moves and acts, but is endowed with no thought, no right, no duty.

"It is not, therefore, in the argument of this question, entitled to any weight or consideration whatever, except as being the unconscious theatre and footstool of the thinking beings residing upon it; and we must, therefore, confine our attention to them. They constitute the State. They alone are the subjects we are to consider. If rights exist they alone possess them; if our powers are to be exerted it must be upon them only, and with a view to influence their action, with a view to bring their will into unison with our own.

"However captious and trifling may seem the objection founded on the inquiry, What is a State of the Union, it is fortunate that even this query was fully solved by the Supreme Court of the United States at an early day, and within a period of only seven years after

the present Constitution went into operation. The court says:

Every particle of authority which originally resided in Congress, or in any branch of the State governments, was derived from the people who were permanent inhabitants of each province in the first instance, and afterwards became citizens of each State; that this authority was conveyed by each body-politic separately, and not by all the people in the several provinces or States jointly; and, of course, that no authority could be conveyed to the whole but that which was previously possessed by the several parts; that the distinction between a State and the people of a State has in this respect no foundation, each expression in substance meaning the same thing.

"I refer to Penhallow's case, 3 Dallas's Reports, p. 94. If my friend from Missouri will look at that decision he will find a clear exposition of what was understood by the Supreme Court at that early day to be a State of the Union.

"A State of the Union or a State in the Union is, therefore, a people yielding obedience to the laws of the Union, that is, the acts of Congress and the national treaties. It is a people who willingly perform the duties of a State required to be performed by the Constitution; a people who have a State government which is republican in form; a people who were one of the original thirteen States which formed the United States, or a people who have, since the adoption of the Constitution, been, in the language of that Constitution, 'admitted by the Congress into this Union' as States upon an equal footing with the original States; for this equality of rights and powers as States is plainly implied by the language and the manifest intention of the instrument; and no other people except such original State or admitted State; none but a State which permits the laws of the Union to have full scope and force within its limits; none but a State which sends Senators and Representatives to Congress friendly to the Government itself, willing to vote men and money to support and uphold it, who believe that a person forcibly resisting its authority is a traitor and deserving of death; none but a State which is willing to bring to trial, to convict such a traitor, and to punish him for his treason; none but a State whose population is capable of furnishing both the grand jury to indict and the traverse jury to convict such a traitor; none but a State whose population and whose authorities are in favor not only of permitting the laws of the United States relating to civil rights to be executed, but who are willing that the punitive code of the nation, the code of vengeance against its enemies, shall be carried out; none but such are States of the Union. A State, being a moral person, must have a will; it must, in accordance with the reasoning of the same high tribunal in the same case, 'be a complete body of persons, united together for their common benefit to enjoy peacefully what is their own, and to do justice to others.'

"To be in fact a State of the Union and in

the Union, this will or consent of the people must be in harmony with the Constitution, and its movements subsidiary to it. It must regard the Constitution as its highest political good; its injunctions as the highest human law, its commands as the infallible and final measure of civil duty. In short, to be in the Union is to be actively and willingly coöperating with other States in the performance of all those acts and things without which the Federal Government cannot act or move, cannot perform the functions required of it by the Constitution; it is to elect Senators and Representatives to the Congress of the United States; to permit the courts of the United States to be held within their limits, and its citizens to act as jurors and officers of the court; to permit the judgments and sentences of the court to be executed against its citizens; to permit the United States mail to be carried through the State and its contents distributed according to law; to permit the officers of the United States to collect the Federal revenue whether derived from foreign or domestic products; to permit the United States to manage and control their own property, whether consisting of forts, dockyards, arsenals, mints, or public lands; to make such elections of Senators and Representatives freely and as the means of maintaining itself as a State in the Union; and to permit all these things willingly and freely as rights belonging to the Federal Government, with which neither the State government nor the people of the State have any right whatever to interfere. In short, to be a State in the Union is to use all those powers of the State which have a relation to the Federal Government in a manner friendly to that Government, and friendly to its existence and continuance, in a manner promotive of the objects of that Government; and to permit without hindrance the exercise within the State of all the powers of the Federal Government.

"Whether a State which should merely omit to send Senators and Representatives to Congress, would for that reason cease to be a State of the Union, it is not, perhaps, worth while now to inquire, though my opinion would be that such a State delinquency would not be followed by that consequence. But surely, if the State has gone further; if it has gone the length, as a political community, of not only refusing to participate in our legislation, but of making war upon us, concerted, open war, war evidenced by the employment of armies and navies against us, it would be folly, madness, to say that the State was not our enemy in every sense in which that term can be employed to describe hostile relations between independent communities. The State, in that case, becomes our enemy, and becomes such for the same reason that any other community becomes such, whose actual government for the time being wields the military forces of that community against us. By the law of civilized war, an organized community, and at

organized or recognized war on the part of that community, are all that are requisite to constitute its government a hostile government as to us, and its citizens or subjects our enemies. No one will pretend that such a community is in the Union in fact, for that would be to make an admission and in the same breath to contradict it. *De facto*, such a community, and, if it be bounded by State lines, such a State is as completely out of the Union as is Canada or Mexico, from the moment it assumes the attitude of hostility until it is subdued and conquered by our arms, or until it voluntarily lays down its arms, ejects its hostile government, and returns *in fact* to its once friendly sentiments and friendly relations to the Federal Government.

"Friendship for the Federal Government, in other words, loyalty, thus becomes the final test in solving the question, What is a State in the Union? If a State by its overt acts has shown a want of this friendship, it is no longer in the Union *de facto*, and cannot be treated as if it were. The Supreme Court, acting upon the soundest principles of public law, have decided the waging of war by a State, although acting under an illegitimate and revolutionary government, renders her territory enemy's territory, and the people there resident enemies of the United States, in the sense of the laws of war. And their decision could not have been different.

"Well, then, the State is in fact, though wrongfully, out of the Union—out of the Union because its actual, present government is disloyal and treasonable. It is out of the Union in the same sense in which Ireland or Scotland, if actually in arms against the authority of the British Parliament, would be out of the United Kingdom; in the same sense in which Ireland was out of her union with England when her people, at the instigation of the expelled James II., took up arms against the Prince of Orange, the actual reigning sovereign; in the same sense in which La Vendée was out of the French republic when, following the lead of George Cadoudal and other royalist chiefs, the people of that province took up arms against the then Government of France; out of it in the same sense in which an insurgent county of a State would, during its unsubdued hostility to the State, be out of the State; out of it, because unsubdued rebellion makes it for the time being an independent though unrecognized nation on the earth's surface, throwing off its allegiance to its paramount Government, and assuming by the sword to assert its separate nationality.

"But we are at war with the rebel States, and are told by those whose mouths are full of complaints and criticisms as to the mode in which this war is waged, and as to the imputed objects to be obtained by it, that the Government, so far at least as the rebel States are concerned, is under some peculiar constitutional restraint by which its hands are tied; that we

are prohibited from 'subjugating' those States; that all we can do, under the Constitution, is to break up the military array of the rebels, disperse their armed bands, take away their arms, and do that very indefinite duty, *restore order*; that thereupon our task is ended and the rebel States have a constitutional right to come back into the Union and participate in the enactment of Federal laws and the conduct of the Federal Government. And we are menaced both in Congress and out with terrible retributions if we conquer or attempt to conquer, if we subjugate or attempt to subjugate, the rebel States. It is admitted by these our critics that in an international war, a war in which the United States are one party belligerent and some other independent Power of the earth is the other, we should have all the rights and powers of other independent nations, and might rightfully conquer our adversary, subdue our adversary, subjugate our adversary; that is, that we might make a complete conquest of his people and his territory, as complete as that of Great Britain over Canada in 1762, when, as Mr. Bancroft tells us, the conquest of the province by Great Britain was complete; complete and perfect in all respects as is recognized by the modern code of war.

"Now, I need not tell the Senate that even under such a complete conquest the usages of war and the laws of nations allow the conqueror only to substitute his political authority for that of the former sovereign, and forbid him to disturb the titles of the peaceable and submissive subjects of that sovereign to their property, real or personal, or to inflict any hardship upon them beyond the ordinary war contributions required for the support of the victorious army. The municipal laws of the conquered country remain unchanged, save in so far as they are inconsistent with the change of sovereignty, and the property of individuals is protected by the conqueror on their submission to his authority. Now, it is lawful to wage such a foreign war for the purpose of effectuating such a complete conquest, and of course lawful to attain it; lawful to substitute the authority of the conqueror for that of his adversary; lawful to substitute the political authority of the United States for that of a hostile foreign nation in the case of an international war (for otherwise the war cannot be a successful one), and for that of the hostile State in the case of a war between the United States and a State. There is, because there can be, no difference between the two cases; for in each, the former actual hostile government must be supplanted by the Federal Government. In the case of foreign territory no one would or could doubt that it is the exclusive right of that Government to take the place of the former sovereign and to erect its own ensigns of power. In the case of a rebel State subdued by the arms of that Government, is not such State equally at its feet, or rather under the shield of its conquering protection? Who but that Government has then the right to give the law?

Has any other State or people? No. Has the rebel government that right? No; for that government is abolished and its agents dispersed. Have the conquered rebel people that right? No; for that would be to allow them at once to expel their conquerors by a popular decree, and to deny the supremacy of the Federal Government that had subdued them. Has the old State government, the once loyal government, the right to govern the conquered people? No; there is no such government. It has long since ceased to exist. Its functionaries have all forsworn and abandoned the old State government. They are gone; some driven into exile, many dead, but by far the largest part of them open traitors, hostile to the conquerors, and utterly opposed to reestablishing any State government acknowledging allegiance or friendship to the United States. In fact, there is no government there, none at all, which can for a moment be recognized or permitted by the United States, as the party now holding the actual mastery of the country; and like every other case where the possession of a country has arisen from the use of superior force, the will of the conqueror is the law—that is, the will of the United States expressed, in the absence of acts of Congress, by the Commander-in-chief of the army, but by the acts of Congress after Congress has spoken.

"I can see no escape from this conclusion, that the United States, as the other hostile party, the party who, in suppressing the rebellion by military power, has conquered the rebel country, and who holds it, as it must necessarily hold it, in the iron gripe of war; that the United States have the right, as the conqueror, to rule and govern the State as conquered country, subject for a time at least to their sole will. If this be not the case, then the State is without any government, and is exposed to all the horrors of anarchy, to murder, and private rapine. No one will deny that we have a right to subdue by arms and to reduce to quietude and submission a rebel State, that is, the people of a State in insurrection. But how absurd to make this concession, and at the same time to deny to us the constitutional power to occupy and hold the territory and its people in our military grasp!—an occupation just as necessary to the end in view as the firing of cannon, the charging of cavalry, or any other operation in the field.

"But the question forces itself upon us, has the Government of the United States the same rights of conquest, the same ample powers of control and disposition of a conquered State, as of a conquered foreign territory?

"What, then, are the powers of the United States over the rebellious States? I reject the idea that they can be converted into Territories. Plainly, under our system, a Territory of the United States implies land never lying in any State, land ceded to the United States either by the old States, or purchased or conquered from foreign nations. The term never has been used to describe a State, or any part of a State; and

it implies not only the ownership of the soil and right of disposition, but full and complete political jurisdiction in the Federal Government over the people resident there. On a question of such magnitude we ought to avoid inappropriate language and terms of equivocal meaning.

"The objects of the conquest being such as I have stated, it follows that it is the duty of Congress, on taking military possession, to endeavor by all reasonable means to effect those objects, and that in its very nature such forcible occupancy is temporary, and ought to cease the moment those objects are attained. This cannot be done without establishing a government to preserve order, life, and property—a provisional government, for that is the true historic name to be applied in this as in all cases where an old government has been overthrown; a provisional government instituted by the conqueror, and to be continued just so long as Congress may find it necessary to continue it for the attainment, and while attaining, those high objects. The occupancy, that is, the possession of all the reins of local government by the Federal authorities (for I do not wish to be misunderstood or to mislead by mere generality of phrase), is but temporary, provisional, fiduciary. It must necessarily last until the Federal Government has done its duty in the reestablishment of order and the revival of loyalty. Until then it is, and must be, the omnipotent sovereign of the State, holding actually by right of conquest, though for a particular purpose, and being itself necessarily the final judge to determine when its tutelary mission has been accomplished.

"I have said the Government must be the final judge how long this military occupation shall last. Its duty in this respect is plain. It is bound by the plain terms of the Constitution not only to suppress the insurrection, which it has done the moment it has obtained firm possession of the hostile territory and not less than the whole of it, but to guarantee to the once loyal but now conquered State a republican form of government. To perform this high and sacred trust, time of course is necessary, and not only time but a great variety of means and instrumentalities, of all which the Government of the United States must, because it has no superior, no equal in the matter, be the sole and final judge. These means may embrace acts of provisional legislation, creating private rights and duties not previously in existence, but existing by law and of a permanent nature, paramount to all subsequent State legislation because arising under the supreme authority of the nation, as for instance the giving freedom to slaves; or they may undoubtedly embrace conditions to be performed by the subdued States on taking their places again in the Union, such as would be an ordinance forever abolishing slavery in the State. And I cannot by any means admit as the true interpretation of this clause the narrow view taken of it by the Senator from Missouri, that it applies only to a

preëxisting republican form of government. It is, sir, in my view, a broad and beneficial power given to Congress for the safety not merely of each of the States, but of the nation; the great mass of Americans, who each and all, at home or abroad, have the deepest interest in the faithful exercise of this guardian power."

Mr. Johnson, of Maryland, followed, saying: "Mr. President, I propose in as few words as I can to state the reasons which will influence the vote I propose to give on the resolution now under discussion; but before I proceed to that duty I will state what I believe to be the facts out of which the question arises.

"The State of Louisiana was said to be in rebellion by the President's proclamation issued under the authority of the act of Congress of July 13, 1861, but a portion of the State was afterwards recovered to the United States, and the authority of the United States over that portion of the State was reinstated. From the time when the city of New Orleans and the surrounding country were taken possession of and subjected to the authority of the United States up to the present time, that possession has never been disturbed or that authority practically denied. Until the 22d of February, 1864, the United States authority existed only as a military authority. On that day an election was held of officers under the constitution existing at the time, that is to say, the constitution of Louisiana as it existed at the time of the rebellion, and as it theoretically existed on the 22d of February, 1864. An election was held of officers whose offices were created by that constitution, and for whose election it provided. At that election there were polled 11,414 votes. Of those 11,414 voters 808 were in the military service of the United States. By the then constitution of Louisiana citizens of Louisiana entitled otherwise to vote who were in the military service of the United States, were not authorized during the period of their continuance in that military service to exercise the right of suffrage. These 808 soldiers and sailors, for there were some sailors among them, would have been entitled to vote, and were entitled to vote if any citizen of Louisiana was so entitled, except for the fact that they were in the military service. They had all the qualifications required by the constitution of the State to give the right of suffrage except that.

"After that election a convention was provided for on the 28th of March, 1864. That convention met on the 6th of the succeeding month, and remained deliberating upon the business which brought them together until the 23d of July, 1864, I think, when what is now called the constitution of the State was adopted. It was submitted to the people and by the people was ratified in September, 1864, by a vote of 6,836 in the affirmative, and 1,566 in the negative, and the government for which that constitution provides was organized on the 3d of October, 1864.

"These, sir, are the facts. The Committee

on the Judiciary—and in the conclusion to which they came I concurred—were of opinion that under the circumstances in which the State was at the period when these proceedings were had, she could not be recognized as a State of the United States under that constitution adopted in 1864, except by an act of Congress. The committee were of opinion that it was not in the power of the Executive under the circumstances to bring the State back under that constitution. They were of opinion, however, that it was competent for Congress to do so, and the only question before the committee was, whether, under the circumstances in which the State was at the time, it was not the duty of Congress to bring the State back so as to have her represented in the Union.

"The objection to the conclusion of the committee—an objection which had great weight with me in the beginning—was that the proceedings which led to the adoption of the constitution were instituted at the instance and under the power of the military authorities of the United States. The precedent was apparently a bad one, it was really a bad one; and the proposition upon which we were called to decide was whether, if we were satisfied that the number of votes said to have been cast were in fact cast, and the persons voting were loyal citizens, we should deny to them the privilege of being represented in the councils of the nation, and on the contrary should subject them to a continuance of the military power. My impression is that, no matter how the proceedings were instituted, whether it was by the military authority, or by the coming together of the people of the State, if in point of fact the people of the State did act voluntarily and were competent to act under the original constitution, and were authorized to act by being loyal at the time they did act, it is the duty of the Government of the United States to receive them back.

"Another objection was that, however true it might be that it would be in the power of all the voters of the State to adopt a constitution for themselves, or to claim the right of coming back to the Union under the constitution existing at the time of the rebellion, it was not true that it was in the power of eleven thousand four hundred and fourteen voters, when the entire voting population of the State was fifty-one thousand, to take that course. At it seemed to me then, and seems now, there is no evidence to show that a single citizen of Louisiana was excluded from the right of voting. It by no means follows that there was an exclusion either in point of fact, or if in point of fact, that the exclusion was a legal one, because the vote of eleven thousand is much less than the vote that could have been cast before the rebellion commenced. First, as to the fact, where are the fifty-one thousand voters less the eleven thousand? This war commenced in 1861, and these proceedings were had in 1864. Do we not know that the greater proportion of the fighting, and

therefore, in a great measure, the voting population of Louisiana entered into the military service of the confederate government? Do we not know that the result of their entering into that service is that nine-tenths of them have forfeited their lives upon the battle-field; and do we not know also that those who were beyond the age of military service or under the age of military service have gone elsewhere, or if they remain in the State, that they have remained in the State not as loyal citizens of the United States, but as disloyal citizens? So then it by no means follows that the number of votes cast is not a large majority of the actual number of voters to be now found in the State of Louisiana, or however doubtful that may be, it is not only not certain, but the opposite fact would seem to be much more probable, that there was a single person excluded from the privilege of voting who should have been entitled to vote, if it be true that those who have been in the military and naval service of the Confederates, or who have been in any way instrumental in bringing about or assisting the rebellion, should not be entitled to vote; and I understand the Senators on the other side who object to the admission of Louisiana into the Union are of that opinion.

"That being the case, Mr. President, another thing is to be considered. What was the condition of the loyal citizens of Louisiana, in the relation in which they stand to the Government of the United States, by the act of secession? Did they cease to be citizens of the United States? Nobody pretends that. If loyal, were they not entitled to be protected by the power of the United States? If loyal, is it to be said of them that they have forfeited any of the rights which belonged to them before the rebellion commenced? I suppose nobody will say that. None of the laws of the United States have been violated by them; no obligation imposed upon them by the Constitution of the United States has been violated, but on the contrary observed. They have been kept from expressing their opinion by the power of the rebellion. They have had no voice by which they could ask to be admitted into the Union, because to speak such a desire was to subject themselves to punishment. They remained, however, loyal in point of fact; they remained entitled to the protection of the United States; and when the protection of the United States was afforded them and they saw that they could speak their sentiments without hazard, they met at their several election polls, organized their government under the existing constitution, and then, wishing to change it, met in convention and adopted the constitution which is now before us? Why should we not receive it?

"I suppose no one will deny that it is just as much in the power of the people of Louisiana, or of any one of the seceded States, when they are entitled to vote, either before they come back or after they are received into the Union,

to change their existing constitution. They have exercised an inherent right belonging to the American citizen; and he who questions the right of the eleven thousand men who have met together and adopted this constitution, questions it upon the ground, not that it is not a right which they originally held, but because there are others who have not joined in asserting it; and who are those others? Those who are in arms against the United States, men whom you would not receive if they were elected as members of the other House or appointed as Senators to this body, men who could not be received because they would be unable to comply with the provisions of a statute which you say, no doubt correctly, you had the authority to pass.

"Now, if it be true that the secession ordinance had no operation to carry the State out, and that I understand even the Senator from Massachusetts (Mr. Sumner) admitted last night; if it be true that the State is in the Union notwithstanding the ordinance, then the only question to be considered is, who are the people of Louisiana that are to exercise the sovereign authority belonging to the State of Louisiana? Are they the loyal or the disloyal? There can be but one answer to that inquiry. It must only be the loyal.

"If the State is not to be brought back in the way provided for by this joint resolution, in what way can the State come back? The honorable Senator from Michigan (Mr. Howard), in his speech this morning admitted that it is not in the power of the United States to change the territorial limits of the States that have gone out, because the Constitution prohibits it. If he had thought for a moment, he would have seen that the Constitution equally prohibits any interference on the part of the General Government with the exercise of the right of suffrage in a State. He and the member from Massachusetts who intimated his opinion last night, seem to suppose that under the Constitution of the United States Congress has the authority to interfere for some general undefined purpose with the exercise of the right of suffrage. I never heard it intimated before. The provision of the Constitution on that subject is, I submit, with due deference to the honorable members who entertain a different opinion, too clear for serious question. The fourth section of the first article says that—

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof, but the Congress may, at any time, by law, make or alter such regulations except as to the places of choosing Senators.

"That is to say, the whole power of Congress over the subject of the time, the place, and the manner of holding these elections is to alter the regulations of the State; but how the election is to be held with reference to those who are to vote is not only not given to Congress by what I have just read, is not only, according to my

interpretation of it, evidently excluded, but if there was any doubt on that question it would be solved by reference to the second section of the same article, which provides that—

The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

“Does the Constitution in any part of it say what those qualifications are? If the Constitution does not give to Congress the authority to prescribe the qualifications for electors of the most numerous branch of the State Legislatures, and if the Constitution itself does not prescribe those qualifications, it necessarily follows that the only authority in relation to the qualifications of electors is the authority possessed by the States. That is obvious, if there could be any doubt on the subject, by another consideration. What were the States before the Constitution was adopted? Had anybody a right to say who were to vote for Representatives or Senators of the State Legislatures except the State? That is very clear; and when they agreed to go into convention, and the people of the States to whom the adoption of the Constitution was submitted determined upon ratifying the Constitution, and by so doing made it a Constitution of Government for the United States, they not only in terms excluded any authority to interfere with the qualifications of electors for members of the State Legislatures, but guarded more effectually against it by providing in one of the amendments that the powers not delegated were to be considered as reserved to the States or the people of the States respectively.

“Then, if it be true that the qualification which an elector is to have to choose the most numerous branch of the State Legislature is to be prescribed by the State, what authority has Congress to interfere with it, and what has been the practical operation? I never heard it intimated, until the intimation fell from the honorable member from Massachusetts, that any authority under the Government of the United States existed to that extent. What have the Western States done? Many of them have admitted to the right of suffrage other than citizens; they have given it to male inhabitants. All of them almost—and that statement is equally applicable to some of the original States—have given it exclusively only to persons of a particular race, the white race, excluding the black. New York does it; Vermont does it; Connecticut does it; Michigan does it; Illinois does it; Ohio does it; Nevada does it; California does it; Maryland does it; and nearly all the States; and nobody ever supposed that they had not the power to exclude the black race, or any portion of the white race that they might think proper in the exercise of their sovereign power to exclude. In other words, the entire authority is in the people of the State, and it is for the people of the State to say who shall exercise

the right of suffrage; and it would be monstrous to hold that, because they admitted or excluded any portion of the people of their State into or from the exercise of the right of suffrage, their government was not republican in point of form.

“The honorable member from Massachusetts has laid upon the table this morning an amendment consisting of nine sections, which I have read hastily, but I believe I understand their result: the first is, that Congress alone has the power to say who shall be permitted to reorganize the State governments; the second is, that in the exertion of that power it is to see that the Constitution be republican in point of form; the third is, that it is not republican in point of form, either because of the truths declared in the Declaration of Independence or upon principles of justice independent of those truths, unless the blacks and the whites are given equally the right of suffrage. That is a most extraordinary doctrine, and where would it lead if true? Suppose the honorable member got the State of Louisiana back under the authority of an act of Congress such as he would draw, saying to that people, ‘You are authorized to frame a constitution for yourselves provided you will insert in it a clause that the right of suffrage shall be exercised by the black as well as the white,’ and they are admitted, does he think it would not be in the power of the people of Louisiana to change that afterwards? What is Massachusetts authorized to do now? Will the honorable member deny that it would be in the power of Massachusetts now to exclude the black? I suppose not; and yet, if by an act of Congress you place it out of the power of the seceded States when they come back, under the authority of that act, to change the qualifications of electors, they will not come back as the equals of Massachusetts. And yet nothing is more plain than that the theory of our Constitution is (no matter whether you consider it as a national Government, a consolidated Government, or a consolidated Union) that the States, with reference to the powers that the original States possessed, are all equal. With just as much propriety could you deny to either of these States the authority to come back unless they would surrender every other sovereign right belonging to a State.

“Now, Mr. President, the result to which I come is, that if a State were brought back under such a law as is suggested by the honorable member from Massachusetts, it would not accomplish his purpose; it could be changed the next day. It is a very easy thing for the honorable member from Massachusetts to say, and for the State of Massachusetts to say, that the negroes who are there, and who can read and write, shall vote, because there are very few there. It does not make a pin's difference whether they vote or not, so far as the result of their elections are concerned; but if they had thrown upon them the negro population of Louisiana, lost in ignorance, divested more

or less of moral sense, because of the horrid condition in which they have been kept, knowing not what the laws of God require, because they have been kept in a state of ignorance—if they were all assembled within the limits of Massachusetts, does not everybody know that there is no State in the Union that would exclude them more certainly than Massachusetts?"

Mr. Sumner, of Massachusetts, then offered the following amendment:

Provided, That this shall not take effect except upon the fundamental condition that within the State there shall be no denial of the electoral franchise, or of any other rights on account of color or race, but all persons shall be equal before the law. And the Legislature of the State, by a solemn public act, shall declare the assent of the State to this fundamental condition, and shall transmit to the President of the United States an authentic copy of such assent whenever the same shall be adopted, upon the receipt whereof he shall, by proclamation, announce the fact; whereupon, without any further proceedings on the part of Congress, this joint resolution shall take effect.

Mr. Clark, of New Hampshire, said: "Mr. President, I am against this amendment as it now stands, because it is an amendment to this resolution which proposes to recognize the government in the State of Louisiana, which is a State in my judgment, still a State in the Union, having its constitution overthrown, but desiring and attempting to establish a new constitution; and I hold that we have no power to amend that constitution; and that is the reason why I shall be obliged to vote against it here."

Mr. Hendricks, of Indiana, moved a postponement, saying: "Sir, the lessons of to-night have been instructive. There is a strife here; and it is not a strife between gentlemen. Senators are too honorable to have a personal controversy. It is a strife of principle; and the question is, what is to be done with the four million negroes when they are set free? There are Senators upon the Republican side who feel that it is a very troublesome question. That is the trouble here to-night. It is not whether a particular measure shall be considered, but that very thing; and I think the Democracy will eventually have some gains from gentlemen who will not go the extreme doctrine. The Senator from Massachusetts (Mr. Sumner) is determined that none of these States shall ever be heard in the halls of Congress until the men who speak from those States speak the voice of the negroes as well as of the white men. Other Senators say that shall not be. We Democrats are a unit upon that question. We believe in the sentiment of the illustrious Senator formerly occupying a seat in this body from Illinois, that this Government was made by white men for white men, and we expect to stand by that idea. Let the controversy go on. The Senators and the Republicans over the country who wish to elevate the negro to an equality, political and social, and civil and legal, with the white man, will have their controversy with Senators and Republicans who entertain

sentiments with the Senator from Wisconsin, who do not believe that the condition of the negro in the South is such as entitles him to control the legislation and policy of this great country."

Mr. Sherman, of Ohio, moved to suspend all prior orders to take up the revenue bill.

Mr. Trumbull, of Illinois, opposed the motion, saying: "Sir, the matter which has been under consideration for several days now, the recognition of the existing State government in Louisiana, has so far progressed that the Senate was ready to vote upon it on Saturday night, and a vote was only prevented by dilatory motions made—I wish not to say any thing offensive, but still the truth ought to be spoken—made in a factious spirit, avowedly made for the purpose of delay. It was manifest upon that occasion that a majority of the Senate, two-thirds of the body, desired action; and I ask, shall one-third of this body be permitted by factious opposition to delay an important bill of this character? Its merits are not under discussion at this moment, I know. If, sir, we can hold that measure before us, if the Senate, a clear majority of which has expressed itself by vote after vote in favor of action upon the Louisiana case, will say to this factious minority, 'Upon you belongs the responsibility of the public business of the country; we will continue to sit, commencing now, until you cease your factious opposition,' I hope that no Senator here acting upon the responsibility he owes to the country will be willing by mere motions of delay to continue the matter much longer."

Mr. Sprague, of Rhode Island, said: "I do not mean to discuss that question, but simply to suggest the point I wish to make in voting for the motion of the Senator from Ohio, and against the consideration of the measure suggested by the Senator from Illinois. I hold in my possession a paper indicating the names of the members of the Legislature of this State that we are called upon to recognize; and it shows that twenty-five, or twenty-seven, or thirty of those gentlemen who now constitute that Legislature, are office-holders under this Government or the government of the State, which is the same thing."

Mr. Sumner, of Massachusetts, followed, saying: "Mr. President, I remember last summer that good fortune threw me in the path of a distinguished gentleman just returned from Louisiana. I think he had been present at the sittings of the convention whose work finds such an advocate in my friend from Illinois; at any rate he had been in New Orleans at the time in the discharge of important public duties. In reply to an inquiry with regard to that convention, he said compendiously, that it was 'nothing but a stupendous hoax'—yes, sir, nothing but a stupendous hoax, and the product of that convention—"

Mr. Johnson, of Maryland, asked: "Will the member be kind enough to tell, if he is at lib

erty to tell, who the distinguished citizen is that said it was all a humbug?"

Mr. Sumner: "He did not call it humbug. He called it a stupendous hoax."

Mr. Grimes, of Iowa, said: "I only wish to make a suggestion to the Senator from Maryland. If he is anxious to obtain the names of those who were in New Orleans when the convention was held, and who do entertain the opinion stated by the Senator from Massachusetts, I can furnish him with a large number; and I will say furthermore in this connection that if the Senate will give a committee, I will undertake to prove and I will prove that the voters whose votes were polled in the outlying parishes at Thibodeaux and Plaquemines, and other places, were carried in army transports to those places where they polled the votes, being discharged soldiers and persons belonging in New Orleans, and were brought back to New Orleans, and were not residents of the places where they purported to vote."

Mr. Sumner: "I doubt not that my friend from Iowa is right, but I understand that it is not proper to discuss the merits of the proposition on this preliminary motion, and I do not design to discuss it. I was simply characterizing it, and I was going on to say that in my opinion the proposition which the Senator from Illinois is so earnestly pressing upon the Senate, when we consider its origin and character, is in itself very little different from a stupendous hoax. I say nothing about the convention, for I was not there. I did not see it. On that point I simply cite the testimony of another. But the proposition of the Senator is before us, and we are familiar with its nature. Every moment gives us new glimpses of the violence and fraud with which it is associated. Perhaps this expression I have quoted is hardly grave enough in speaking of such a proposition, where military power and injustice to a whole race have been enlisted in forming the constitution of a State, in defiance of the self-evident truths of the Declaration of Independence. The United States are bound by the Constitution 'to guarantee to every State a republican form of government.' Now, when called to perform this guaranty it is proposed to recognize an oligarchy of the skin. The pretended State government in Louisiana is utterly indefensible whether you look at its origin or its character. To describe it, I must use plain language. It is a mere seven-months' abortion, begotten by the bayonet in criminal conjunction with the spirit of caste, and born before its time, rickety, unfinished, unfinished—whose continued existence will be a burden, a reproach, and a wrong. That is the whole case; and yet the Senator from Illinois now presses it upon the Senate at this moment to the exclusion of the important public business of the country."

The motion to take up the prior orders was agreed to by the following vote:

YEA—Messrs. Anthony, Brown, Buckalew, Charles Chandler, Clark, Collamer, Conness, Cowan,

Davis, Dixon, Farwell, Foster, Grimes, Harlan, Henderson, Hendricks, Howard, Howe, Johnson, Morgan, Morrill, Nye, Powell, Riddle, Saulsbury, Sherman, Sprague, Stewart, Sumner, Wade, Wilkinson, Wilson, and Wright—34.

NAY—Messrs. Doolittle, Harris, Lane of Indiana, Lane of Kansas, McDougall, Nesmith, Pomeroy, Ramsey, Ten Eyck, Trumbull, Van Winkle, and Willey—12.

ABSENT—Messrs. Foot, Hale, Harding, and Richardson—4.

In the Senate, on Feb. 17th, Mr. Sumner, of Massachusetts, offered the following resolution:

Whereas, certain persons have put in circulation the report that on the suppression of the rebellion the rebel debt or loan may be recognized in whole or in part by the United States; and whereas such a report is calculated to give a false value to such rebel debt or loan: Therefore,

Resolved by the Senate (the House of Representatives concurring), That Congress hereby declares that the rebel debt or loan is simply an agency of the rebellion, which the United States can never, under any circumstances, recognize in any part or in any way.

It was adopted without a division.

In the House, on Feb. 6th, Mr. Edgerton, of Indiana, offered the following resolution, which was laid over:

Whereas the "Daily Morning Chronicle," of this city, the reputed political organ of the President, in recent editorials upon the subject of negotiations for peace, has referred to the President of the United States as having gone "in his sovereign capacity" to treat with the commissioners from Richmond, and has further described the President as "the sovereign head of the greatest Government on earth;" and whereas the Supreme Court of the District of Columbia has, by a late solemn adjudication, affirmed principles as the law of the land which recognized arbitrary dictatorial powers in the President, not only as to military but as to civil offenders, which are subversive of civil liberty and of the public welfare: Therefore,

Resolved (as the judgment of this House), That the President of the United States is in no constitutional sense the sovereign thereof, but that all his governmental powers are derived from the Constitution and constitutional laws of the United States, and are limited by them; and this House sincerely deprecates all political teachings and judicial decisions having a tendency to exalt the President above the Constitution and laws, or to clothe him with attributes unknown to them, or to derogate from the powers of Congress; and they affirm that the principle that the people are sovereign, and that all departments of the Government are their agents or servants, and should be kept in strict subordination to the Constitution and laws, is essential to the permanence of republican government and to civil liberty.

In the House, on Jan. 15th, Mr. Cox, of Ohio, offered the following resolution relative to pacification:

Whereas the country hails with manifestations of patriotic joy and congratulation the victories recently achieved by our brave armies; and whereas "the recognized object of war, at least among civilized and Christian nations, is an honorable and satisfactory peace; and that although we do not know that the insurgents are yet prepared to agree to any terms of pacification that our Government would or should deem acceptable, yet as there can be no possible harm resulting from ascertaining precisely what they are ready to do, and in order to refute the imputation

that the Administration contemplates with satisfaction a continuance of hostilities for their own sake, on any ground of mere punctilio, or for any reason than because it is compelled by an absorbing regard for the very end of its existence;" and whereas "an established and rightly constituted Government, combating armed and menacing rebellion, should strain every nerve to overcome at the earliest moment the resistance it encounters, and should not merely welcome, but seek satisfactory (however informal) assurances that its end has been attained:" Therefore,

Resolved, That now, in this hour of victory, which is the hour of magnanimity, it is eminently the duty of the President, on the basis of the present "rightly constituted Government," either to send or receive commissioners or agents with a view to national pacification and tranquillity, or by some other national means known to civilized or Christian nations, secure the cessation of hostilities and the Union of the States.

On motion of Mr. Washburne, of Illinois, it was laid on the table by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Anderson, Arnold, Ashley, Baily, John D. Baldwin, Baxter, Beaman, Boutwell, Boyd, Brandegee, Broomall, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Henry Winter Davis, Thomas T. Davis, Daws, Deming, Dixon, Donnelly, Eckley, Eliot, Frank, Garfield, Gooch, Grinnell, Griswold, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Ingersoll, Jenckes, Julian, Kasson, Kelley, Francis W. Kellogg, Knox, Littlejohn, Loan, Longyear, Marvin, McClurg, McIndoe, Samuel F. Miller, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Orth, Patterson, Perham, Pike, Price, William H. Randall, Alexander H. Rice, John H. Rice, Edward H. Rollins, Schenck, Schofield, Sloan, Smith, Smithers, Spalding, Starr, Stevens, Thayer, Thomas, Upton, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Webster, Wheeler, Williams, Winder, Wilson, Windom, and Worthington—84.

NAYS—Messrs. Ancona, Augustus C. Baldwin, Bliss, Brooks, James S. Brown, Chanler, Coffroth, Cox, Cravens, Denison, Eden, Edgerton, Eldridge, English, Finck, Hale, Hall, Harrington, Charles M. Harris, Holman, William Johnson, Orlando Kellogg, Kernan, King, Law, Lazear, LeBlond, Long, Mallory, Marcy, McAllister, McDowell, McKinney, James R. Morris, Morrison, Noble, Pendleton, Radford, Samuel J. Randall, Robinson, Rogers, Ross, Scott, John B. Steele, Stiles, Townsend, Wadsworth, Clinton A. White, Joseph W. White, Fernando Wood, and Yeaman—51.

NOT VOTING—Messrs. James C. Allen, William J. Allen, Blaine, Blair, William G. Brown, Clay, Creswell, Dawson, Driggs, Dumont, Farnsworth, Ganson, Grider, Harding, Benjamin G. Harris, Herrick, Hotchkiss, Hulburd, Hutchins, Philip Johnson, Kalbfleisch, Knapp, McBride, Middleton, William H. Miller, Moorhead, Nelson, Odell, Charles O'Neill, John O'Neill, Perry, Pomeroy, Pruyn, James S. Rollins, Shannon, William G. Steele, Strouse, Stuart, Sweat, Tracy, Voorhees, Ward, Whaley, Winfield, Benjamin Wood, and Woodbridge—48.

In the House, on December 7th, Mr. Sloan, of Wisconsin, offered the following relative to an amendment to the Constitution:

Resolved, That the Judiciary Committee be instructed to inquire into the expediency of so amending section two of article one of the Constitution of the United States, that Representatives in Congress may be apportioned among the several States which may be included within the Union, according to their respective numbers of qualified electors, and to report by bill or otherwise.

It was adopted by the following vote:

YEAS—Messrs. Alley, Allison, Ames, Arnold, Bailey, John D. Baldwin, Baxter, Beaman, Blow, Boutwell, Boyd, Broomall, Ambrose W. Clark, Cobb, Cole, Donnelly, Driggs, Eckley, Eliot, Farnsworth, Garfield, Grinnell, Hooper, Asahel W. Hubbard, Hulburd, Ingersoll, Julian, Kasson, Kelley, Orlando Kellogg, Longyear, Marvin, McBride, McClurg, Moorhead, Morrill, Daniel Morris, Leonard Myers, Norton, Charles O'Neill, Orth, Patterson, Perham, Price, William H. Randall, Alexander H. Rice, John H. Rice, Schenck, Shannon, Sloan, Spalding, Starr, Stevens, Thomas, Upton, Van Valkenburgh, Elihu B. Washburne, Wheeler, Williams, and Wilson—60.

NAYS—Messrs. James C. Allen, Ancona, Augustus C. Baldwin, Blair, Bliss, Brandegee, Brooks, James S. Brown, Chanler, Coffroth, Cox, Daws, Dawson, Deming, Denison, Dixon, Eden, English, Finck, Frank, Ganson, Grider, Harding, Harrington, Holman, Jenckes, Kalbfleisch, Kernan, Law, LeBlond, Marcy, Middleton, William H. Miller, James B. Morris, Morrison, Noble, Odell, John O'Neill, Pendleton, Pruyn, Radford, Rogers, Scott, Smith, Smithers, John B. Steele, William G. Steele, Stiles, Strouse, Stuart, Sweat, Townsend, Webster, Whaley, and Fernando Wood—55.

NOT VOTING—Messrs. William J. Allen, Anderson, Ashley, Blaine, William G. Brown, Freeman Clarke, Clay, Cravens, Creswell, Henry Winter Davis, Thomas T. Davis, Dumont, Egerton, Eldridge, Fenton, Gooch, Griswold, Hale, Hall, Benjamin G. Harris, Charles M. Harris, Herrick, Higby, Hotchkiss, John H. Hubbard, Hutchins, Philip Johnson, William Johnson, Francis W. Kellogg, King, Knapp, Knox, Lazear, Littlejohn, Loan, Long, Mallory, McAllister, McDowell, McIndoe, McKinney, Samuel F. Miller, Amos Myers, Nelson, Perry, Pike, Pomeroy, Samuel J. Randall, Robinson, Edward H. Rollins, James S. Rollins, Ross, Schofield, Thayer, Tracy, Voorhees, Wadsworth, Ward, William B. Washburn, Chilton A. White, Joseph W. White, Wilder, Windom, Winfield, Benjamin Wood, Woodbridge, and Yeaman—67.

On January 16th, Mr. Sloan offered a bill, which was referred to the Committee on the Judiciary, providing for submitting to the State Legislatures the following article as an amendment to the Constitution:

ART. XIII. Sec. 1. Representatives in Congress may be apportioned among the several States which may be included within this Union according to their respective numbers of qualified electors. The actual enumeration shall be made in the year 1870, and within every subsequent term of ten years, in such manner as Congress shall by law direct.

Sec. 2. Direct taxes shall be apportioned among the several States according to the appraised value of taxable property therein respectively. The rule of appraisal and taxation shall be uniform.

On February 13th, Mr. Dawson, of Pennsylvania, submitted the following resolution:

Whereas, the American people have now been engaged in a civil war of gigantic dimensions for nearly four years, which has resulted in frightful destruction of life, property, and treasure, creating an enormous public debt, imposing the most oppressive taxes, covering the land with affliction, corrupting the general morals, and putting in peril the liberties of the nation; and whereas, on the part of the United States and the people of the States which adhere to this Government this is, and ought to be, a war solely to vindicate the Constitution and restore the laws to their just supremacy, and to that we are bound by our oaths and by our solemn pledges made in the face of the world when the war commenced: Therefore,

Resolved, That the President of the United States be requested to use all honorable and just means to bring about a lasting peace and the reestablishment

of fraternal relations among all the people by a restoration of the Union upon the simple and just basis of the Constitution and laws, with every proper guarantee to the Southern States that they shall be protected in the full enjoyment of their rights, and that undisturbed control of their own local affairs which the Federal Constitution was intended to secure to them and to us.

It was laid on the table by the following vote:

YEAS—Messrs. Alley, Anderson, Ashley, Baily, John D. Baldwin, Beaman, Blaine, Boutwell, Boyd, Brandegee, Broomall, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Dawes, Deming, Dixon, Donnelly, Driggs, Eckley, Eliot, Garfield, Hale, Higby, Hooper, Asahel W. Hubbard, John H. Hubbard, Hubbard, Ingersoll, Julian, Kasson, Kelley, Francis W. Kellogg, Orlando Kellogg, Knox, Littlejohn, Longyear, Marvin, McBride, McClurg, McIndoe, Samuel F. Miller, Moorhead, Morrill, Daniel Morris, Amos Myers, Charles O'Neill, Orth, Perham, Pomeroy, William H. Randall, Alexander H. Rice, John H. Rice, Edward H. Rollins, Schenck, Scofield, Shannon, Smithers, Thayer, Thomas, Tracy, Upson, Van Valkenburgh, William B. Washburn, Webster, Whaley, Williams, Wilder, Wilson, Windom, Woodbridge, and Worthington—78.

NAYS—Messrs. James C. Allen, Ancona, Bliss, Brooks, William G. Brown, Chanler, Clay, Coffroth, Cox, Cravens, Dawson, Denison, Edgerton, Eldridge, Finck, Grider, Hall, Harding, Charles M. Harris, Herrick, Holman, Philip Johnson, William Johnson, Kalbfleisch, King, Lazear, Le Blond, Mallory, McAllister, Middleton, William H. Miller, James R. Morris, Morrison, Nelson, John O'Neill, Pendleton, James S. Rollins, Ross, William G. Steele, Stiles, Sweat, Wadsworth, Joseph W. White, and Yeaman—44.

NOR VOTING—Messrs. William J. Allen, Allison, Ames, Arnold, Augustus C. Baldwin, Baxter, Blair, Blow, James S. Brown, Creswell, Henry Winter Davis, Thomas T. Davis, Dumont, Eden, English, Farnsworth, Frank, Ganson, Gooch, Grinnell, Griswold, Harrington, Benjamin G. Harris, Hotchkiss, Hutchins, Jenckes, Kernan, Knapp, Law, Loan, Long, Marcy, McDowell, McKinney, Leonard, Myers, Noble, Norton, Odell, Patterson, Perry, Pike, Price, Pruyn, Radford, Samuel J. Randall, Robinson, Rogers, Scott, Sloan, Smith, Spalding, Starr, John B. Steele, Stevens, Strouse, Stuart, Townsend, Voorhees, Ward, Elihu B. Washburne, Wheeler, Chilton A. White, Winfield, Benjamin Wood, and Fernando Wood—65.

Mr. Williams, of Pennsylvania, submitted the following:

Resolved, 1. That there is no power under the Constitution, in any branch of this Government, to treat with the States confederated in rebellion against it, either for the severance of this Union or for the abrogation of any article of its fundamental law.

Resolved, 2. That inasmuch as the said Confederate States have taken up arms against the Government of the United States without any just provocation, and for the avowed purpose of asserting and establishing their independence thereof, and still persist in maintaining that position by armed resistance to its authority; and inasmuch also as the public authorities of this nation have not only declared, as was their duty, that they can accept no terms and entertain no propositions for any thing short of absolute and unconditional submission to its laws, and with a clemency and magnanimity almost without example in history, have proclaimed a general amnesty, without limits as to time, to such of the malefactors as shall return to their duty, with the exception only of the chief conspirators:

It is hereby declared to be the sense of this House that this Government has already exhausted all the

resources of a just and wise statesmanship—except so far as regards the further earnest and vigorous prosecution of the war for the enforcement of the laws—in the effort to restore peace to this nation, and has, to this end, done all that a proper regard for its own interests can allow, and all that a decent respect for the opinions of the world could demand of it; and that therefore any further overtures through embassies, public or private, official or unofficial, looking to treaty or compromise with the usurpers at Richmond, would be not only unprofitable, as they would be inconsistent with the rights and dignity of this nation, but are to be deprecated as absolutely mischievous, in giving encouragement to the insurgents and protracting their resistance, by exposing us to misconstruction, and giving color to the delusion that we mistrust our ability to subdue them to obedience, and are ready to accept something short of the restoration of the Union and the unconditional submission of those who have rebelled against it.

It was laid on the table by the following vote:

YEAS—Messrs. James C. Allen, William J. Allen, Alley, Ames, Ancona, Anderson, Baily, Blair, Bliss, Boutwell, Brandegee, Brooks, James S. Brown, William G. Brown, Chanler, Ambrose W. Clark, Clay, Coffroth, Cox, Cravens, Dawes, Dawson, Denison, Dumont, Eckley, Edgerton, Eldridge, Eliot, Finck, Frank, Gooch, Grider, Hale, Harding, Benjamin G. Harris, Charles M. Harris, Herrick, Holman, Hooper, John H. Hubbard, Hutchins, Philip Johnson, William Johnson, Kalbfleisch, Kasson, Orlando Kellogg, Law, Lazear, Le Blond, Long, Mallory, McKinney, Middleton, William H. Miller, Morrill, James R. Morris, Morrison, Nelson, Pendleton, Pike, Pomeroy, Pruyn, Alexander H. Rice, James S. Rollins, Ross, Spalding, William G. Steele, Stiles, Townsend, Wadsworth, Webster, and Joseph W. White—72.

NAYS—Messrs. Ashley, John D. Baldwin, Baxter, Beaman, Blaine, Boyd, Broomall, Freeman Clarke, Cobb, Cole, Dixon, Donnelly, Driggs, Higby, Asahel W. Hubbard, Hulburd, Ingersoll, Julian, Kelley, Francis W. Kellogg, Knox, Loan, Longear, Marvin, McClurg, McIndoe, Daniel Morris, Moorhead, Amos Myers, Charles O'Neill, Orth, Patterson, Perham, William H. Randall, John H. Rice, Edward H. Rollins, Schenck, Scofield, Shannon, Smithers, Starr, Thayer, Tracy, Upson, Van Valkenburgh, William B. Washburn, Williams, Wilder, Wilson, Windom, Woodbridge, and Worthington—52.

NOR VOTING—Messrs. Allison, Arnold, Augustus C. Baldwin, Blow, Creswell, Henry Winter Davis, Thomas T. Davis, Deming, Eden, English, Farnsworth, Ganson, Garfield, Grinnell, Griswold, Hall, Harrington, Hotchkiss, Jenckes, Kernan, King, Knapp, Littlejohn, Marcy, McAllister, McBride, McDowell, Samuel F. Miller, Leonard Myers, Noble, Norton, Odell, John O'Neill, Perry, Price, Radford, Samuel J. Randall, Robinson, Rogers, Scott, Sloan, Smith, John B. Steele, Stevens, Strouse, Stuart, Sweat, Thomas, Voorhees, Ward, Elihu B. Washburne, Whaley, Wheeler, Chilton A. White, Winfield, Benjamin Wood, Fernando Wood, and Yeaman—58.

In the Senate, on February 8th, the following resolution, offered by Mr. Sumner, of Massachusetts, was considered:

Resolved, That the President of the United States be requested, if in his opinion not incompatible with the public interests, to furnish to the Senate any information in his possession concerning recent conversations or communications with certain rebels, said to have been under executive sanction, including communications with the rebel Jefferson Davis, and any correspondence relating thereto.

Mr. Saulsbury, of Delaware, offered the following amendment:

And that he be also requested to inform the Senate whether he, or others acting under his authority, did not require, as a condition to reunion, the acquiescence of said persons mentioned in said resolution, or of the public authorities of the so-called Confederate States, in the abolition of slavery in said States; and also, whether he, or those acting by his authority, did not require as a condition to negotiation that the said confederates should lay down their arms. And that he be requested to inform the Senate fully in reference to every thing connected with or occurring in said conference or conferences in relation to the subject-matter of said conferences. And also that he be requested to state whether or not an armistice was not asked for by Messrs. Stephens, Hunter, and Campbell with the view to prepare the minds of the Southern people for peace and reunion of the States.

Mr. Sumner, of Massachusetts, objected to the amendment, saying: "I object to the amendment of the Senator from Delaware, and on this simple ground: to my mind it is not respectful to the President; it is in the nature of interrogatories addressed to an unwilling witness. I believe that, in the relations between the Senate and the President we have only to express to him our desire that he should communicate to us what in his opinion he can without any injury to the public interests. I believe that he will make a full and frank communication; and I believe I do not go too far when I say it is well known to many Senators that the President is ready to do it; perhaps I might say that he desires to do it. I think, therefore, there should be no delay in making this call upon him in order to give him that opportunity. The amendment as presented by the Senator from Delaware, I admit, does conflict with the resolution, but I presume the Senate will not be disposed to adopt it; there is no occasion for it."

Mr. Saulsbury replied, saying: "Mr. President, nothing was further from my intention than to offer any disrespect to the President of the United States. It never occurred to me that the amendment could bear any such construction. Inasmuch as the original resolution requests the President to communicate the conversations that occurred in that conference, I wish every thing that occurred to be made known. I have been informed that an armistice was requested by those Southern commissioners; and if that be a fact, the country ought to know it. I have been informed also that that request was refused. If that be so, the country has as much interest in knowing that fact as in knowing any other."

Mr. Sumner: "Let us vote it down."

The amendment was rejected, and the resolution was adopted. The reply of the President will be found in *ANNUAL CYCLOPEDIA*, 1864, page 713.

On the same day, in the House, the following resolution was adopted:

Resolved, That the President be requested to communicate to this House such information as he may deem not incompatible with the public interest relative to the recent conference between himself and the Secretary of State and Messrs. Stephens, Hunter, and Campbell, in Hampton Roads.

The reply of the President to this resolution will be found in *ANNUAL CYCLOPEDIA*, 1864, page 710.

In the House, on February 2d, the Committee of Conference relative to the bill to enact a Bureau of Freedmen's Affairs, made a report, consisting of a new bill.

Mr. Eliot, of Massachusetts, on presenting the report to the House, said: "This bill presents to the House no new proposition. Substantially, every provision contained there will be found, I believe, either in the provisions of the House bill or in the provisions of the Senate bill. Many of them are combinations of features of both bills."

Mr. Kernan, of New York, in opposition, said: "In my judgment experience shows that the policy proposed to be inaugurated by this bill will not accomplish the benevolent intentions of its promoters toward these people. They are a very numerous class of persons; and the policy of this bill seems to be to regulate, control, and govern this large class of persons by a code of laws, under the name of regulations, which regulations are to be made and administered by an appointee of the President and the Senate called a commissioner. Lands are to be assigned and leased to them. There are to be superintendents to regulate their employment and wages, decide their controversies, and pay the surplus of their earnings, over and above expenses, into the Treasury of the United States. In my judgment this policy will not work out satisfactorily any such social problem as that presented by the colored population of the Southern States. You will not be able to really benefit this class of persons by placing them by the hundred thousand under the guardianship and subject to the control of a commissioner who is to make regulations for their government, and by his agents manage and control them. Some other mode of dealing with this question must be devised, if there is to be any effectual, benevolent, or economical action in reference to this class of persons.

"Again, where and to what consequences will this policy lead? According to this bill the Government, by a bureau like that of agriculture, is to take charge of people by the hundred thousand in States of this Union, and become their guardians, and regulate them by special provisions and regulations to be made by an appointee of the President. Does any man believe that we will succeed in benefiting this really suffering class by any such measure as this?

"But I particularly desire to call the attention of the House to the twelfth section of the bill, which, if this bill is to pass, I trust will be stricken out. I earnestly hope there will be no further legislation by Congress to subject civilians to trial and punishment by military commissions.

"This twelfth section, provides that the superintendents, clerks, and all others con-

nected with this proposed bureau shall be tried for all sorts of alleged offences by military commissions. Where do we get the power to pass any such law? The Constitution declares that no person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service in time of war or public danger; that no person shall be deprived of life, liberty, or property, without due process of law; and that in all criminal prosecutions the accused shall enjoy the right of a trial by an impartial jury. Does any one believe that we can constitutionally subject a class of civilians to the jurisdiction of these military tribunals by declaring, as this twelfth section does, that they shall be deemed to belong to the Army or Navy of the United States, or engaged in its military or naval service? As well might we take the right of trial by jury from any other class of citizens as from the class subjected to trial and punishment by military tribunals under this twelfth section. They can in no sense be correctly said to belong to the Army or Navy. They are civilians, employed in purely civil affairs. If we can do this, we can take away the right of any class of civilians by saying that they shall be deemed to be in the military service of the United States, when we know that all their duties are duties of civilians.

"Sir, I submit that the experience of the last few years must have made it apparent to every gentleman here, that these military commissions are characterized by a want of certainty as to the conviction of the guilty, and the certainty of frequently convicting the innocent. Acts of Congress have been passed declaring that certain contractors and other parties, should be deemed to be in the military service and subject to trial by these commissions; and you have had military commissions sitting in this city and elsewhere in the loyal States, trying men who never were of the class mentioned in the acts of Congress, and there seems to be no power to take them from under the control of these military tribunals, or to get any review of their decisions. Now, I trust that we shall take no further steps in the direction of subjecting civilians, I care not of what class, to this unconstitutional mode of trial. We should be warned by the history of these courts, not only in this country, but in other countries. The Court of High Commission in England, under the influence of those who desired that arbitrary power should prevail, carried its oppressive proceedings to such an extent as to bring on a collision, as such assumptions of power must do in any country where liberty is to be preserved. There is no good reason why these men, for felony, or embezzlement, or any other offence, shall not be tried under the guarantees of the Constitution, and in accordance with the forms, and by the tribunals which it prescribes. We should do something to put a stop to and guard against the wrongs which innocent men have suffered by

being deprived of trial by jury and by being subjected to military commissions. I refer gentlemen to a statement made a few days ago in the other end of the Capitol by a distinguished Senator, that a military commission is sometimes efficient for the conviction of those who have become obnoxious to parties by exposing frauds upon the Government.

Again, the thirteenth section of this bill proposes to do, what? To repeal the joint resolution made a part of the act of Congress as to confiscation, passed in July, 1862, by which confiscation was limited to the life estate in land of the traitor. This subject, the repeal of this joint resolution, has been fully discussed in this House. A bill to effect this was passed at the last session, and went to the Senate. The Judiciary Committee of that body reported, as I understand, unanimously, that that bill ought not to pass. That bill died. Yet now there is an attempt to effect the same object by passing this bill, which comes from a conference committee of the two Houses, and has never been subjected to the scrutiny of any regular committee of either House. I trust that we shall not pass a bill repealing that joint resolution, until there has at least been some discussion or scrutiny of the matter. I ask the Clerk to read an extract from the message of the President of the United States, approving of the confiscation act, and the joint resolution as a part of it, now proposed to be repealed; and I ask members on the other side of the House whether they are prepared to enact a law on the subject of confiscation, which President Lincoln declared he could not sign because it was in violation of the Constitution, without discussion or examination by any appropriate committee. This is the effect of passing the bill now before us."

The Clerk read, as follows:

That to which I chiefly object, pervades most part of the act, but more distinctly appears in the first, second, seventh, and eighth sections. It is the sum of those provisions which results in the divesting of title forever.

For the causes of treason and ingredients of treason, not amounting to the full crime, it declares forfeiture extending beyond the lives of the guilty parties; whereas the Constitution of the United States declares that "no attainer of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted." True, there is to be no formal attainer in this case; still, I think the greater punishment cannot be constitutionally inflicted in a different form for the same offence.

With great respect, I am constrained to say I think this feature of the act is unconstitutional.

* * * * *

Again, this act, *in rem*, forfeits property for the ingredients of treason without a conviction of the supposed criminal or a personal hearing given him in any proceeding. That we may not touch property lying within our reach because we cannot give personal notice to an owner who is absent endeavoring to destroy the Government, is certainly satisfactory. Still, the owner may not be thus engaged; and I think a reasonable time should be provided for such parties to appear and have personal hearings. Similar provisions are not uncommon in connection with proceedings *in rem*.

"Mr. Speaker, this was the language of the President of the United States in reference to the act of 1862, when submitted to him for his approval without the joint resolution explaining and limiting it. It is now proposed to repeal the joint resolution which induced him to approve the act, and to leave the latter in force as a law in the form in which the President declared he could not sign it because it was unconstitutional."

The report was postponed and printed, and on February 9th brought up for consideration again in the House.

Mr. Eliot said: "I do not propose at this time, Mr. Speaker, to say any thing in defence of the bill; but I am prepared and shall be glad to answer all objections that may be urged against the bill, if any shall be, in the course of any debate upon it. Congress has within a few days done all that we could do to make free all the slaves within the United States. But it will be remembered that, although that freedom was initiated by the President in his proclamation of the 1st of January, 1863, yet, up to this time, there has been no legislative action which has had in view the welfare of that class of men. We have legislated for the Treasury. We have done what we could to provide for the leasing of the abandoned lands, in view of revenue. But thus far nothing has been done in connection with the freedmen or their welfare, except a law passed on the 2d of July, I think, of the last session of Congress. That law, in one of its provisions, put into the care of the Treasury Department this whole business. I desire to refer to a few of the provisions of that law.

"By that act the agents of the Treasury Department, that is, the special supervising agents, the agents who were appointed under the act, I believe, of March, 1863, to whom was given in charge the taking possession of abandoned lands and other property, and the leasing of lands for the largest revenue that could be obtained, and the selling of property for the use of the Government; these special agents are empowered to 'take charge of and lease the abandoned lands, houses, and tenements within the rebel districts; and they shall also provide, in such leases or otherwise, for the employment and general welfare of the freedmen.' That is to say, as gentlemen will find by examining the law, these agents are now required to lease the lands, and in those leases or otherwise to provide for the employment of these freedmen; the United States being the lessors, parties going from all sections of the country being the lessees, the freedmen being the subjects of the contract."

Mr. Wilson, of Iowa, said: "I would like to know of the gentleman from Massachusetts if it is the intention of the committee that this bill, if it becomes a law, shall be operative after the reestablishment of civil authority?"

Mr. Eliot: "As soon as civil authority is reestablished, and those States are admitted into the Union, or readmitted, as gentlemen may

please, and their social and political relations resumed, there can be no doubt that those States will have the same rights as the State in which my friend lives, or the State in which I live, may have concerning all the matters which may come within the jurisdiction of such States."

Mr. Wilson: "I intended that question as a leader to another, which is, that if this law is not to be operative in those States after the reestablishment of civil authority, then what courts does the gentleman refer to when he speaks of those parties having the proper remedies in the courts of justice?"

Mr. Eliot: "I have not stated that the law would not be operative, nor would it follow from any remark I have made that such would be the case. I have said, and it is true, that each State would have a right to do all those things within its boundary that the State of Iowa or Massachusetts would have. It may be that for the passing time the operations of this bill might be continued for the care of those freedmen after that point of time should have arrived. That would perhaps depend upon the legislation of each State. When the time comes that action should be had which would terminate the charge which this bill would have, provisions would be made which would probably cover all the difficulties suggested by the gentleman from Iowa.

"I shall close by asking to have read at the Clerk's desk some passages from a communication to the President of the United States, and then I wish that the message of the President on the subject shall be read."

The Clerk read, as follows:

WASHINGTON, D. C., December 1, 1863.

SIR: We appear before you a committee of gentlemen representing the Freedman's Aid Societies in Boston, New York, Philadelphia, and Cincinnati, and, in general, the anxieties and sympathies of the American people in regard to the present position and future prospects of the freedmen created by your proclamation of emancipation.

It is not, Mr. President, that we are seriously in doubt as to the methods to be adopted with the freedmen, for we have not been disappointed in the schemes in their favor we have already planned and executed. It is only that these schemes are small, and must continue so, while the demand for their adoption is large, beyond even our present power to meet it, and growing with prodigious strides every hour. It is the magnitude, not the nature of the work, that appalls us, and drives us to the Government for aid and support. We have found the freedman easy to manage, beyond even our best hopes; willing and able to fight as a soldier; willing and able to work as a laborer; willing and able to learn as a pupil; docile, patient, affectionate, grateful, and although with a great tribal range of intellect from nearly infantile to nearly or quite the best white intelligence, yet with an average mental capacity above the ordinary estimates of it.

We have no doubts of the aptitude of the slave for freedom under any fair circumstances. But we see that his circumstances must inevitably be unfair under the best arrangements the Government can make, and that, independently of a great paternal care on the part of the Government, they will be so bad as to

wring cries of shame and indignation from the civilized world, dishearten the friends and advocates of emancipation at home, and give new vitality to the disloyal suggestions of the slaveholders' allies in the North and West.

Has the Government any moral right to free the slave without seeing to it that, with every chain it breaks, the best within its power is done to keep the freedman from hankering after his master and his bondage, from feeling that his liberty is a burden, his life a curse, and his domestic affections even more fatal to his peace under our flag than beneath the plantation whip? Shall he hunger and thirst, shall he go naked and cold, shall he wander houseless and die unburied, shall his aged parents and young children be scattered where he cannot find them, and in unspeakable misery lay their bones together, too old and too young to contend with their fate upon the strange and distant soil to which fear and want have driven them? While any thing remains undone within the power of the nation or the Government to do to alleviate or diminish this misery, the Christian principle and pity of our people will allow none who are responsible for it to rest in peace.

It is plain to us, with our experience, that the question is too large for anything short of Government authority, Government resources, and Government ubiquity to deal with. The plans, the means, the agencies within any volunteer control are insignificant in their adequacy to the vastness of the demand. Our relief associations have discharged their highest duty in testing many of the most doubtful questions touching the negro's ability and willingness to come under direction when direction has lost its authoritative character. They have proved the freedman's diligence, docility, and loyalty, his intelligence and value as a laborer. They have alleviated much want and misery also. But were their resources ten times what they are, and ten times what they can be made, they would be no substitute for the governmental watchfulness and provision which so numerous a race under such extraordinary circumstances requires. In our judgment the present and the future of the freedmen demand a kind and degree of study, of guidance, and of aid, which it is in the nature of things impossible the Government should give indirectly, or by means of any existing bureau or combination of bureaus.

We ask, then, your interposition with Congress, recommending the immediate creation of a bureau of emancipation, charged with the study of plans and the execution of measures for easing, guiding, and in every way judiciously and humanely aiding the passage of our emancipated and yet to be emancipated blacks from their old condition of forced labor to their new state of voluntary industry. We ask it for many reasons, but we will content ourselves with stating only two:

1. It is necessary that there should be a central office, to collect from original investigations, and to receive from investigations already made and making, the now scattered information and varied and undigested testimony respecting the condition, wants, and prospects of the freedman. The amount of knowledge now existing in private hands, or local spheres and associations, is already great; but it is nearly useless for want of being arranged and brought into systematic order. If offered to the Government, as it constantly is, it is brought to officials already overburdened with care and duties, and laid before Departments which are not yet agreed as to the precise sphere within which it falls. The honest differences of Departments as to their authority and responsibility in the case have been a chief obstruction to the methods of dealing promptly with the necessities of the freedman. Were a bureau in existence with no other duty but to attend to this vast and ever-expanding class of our fellow-creatures, countrymen, and citizens, it would at once be able to concen-

trate, and in the shortest possible time to methodize, the now diffused and disjointed testimony in the case, and from its central and commanding point of view to devise plans and measures which would satisfy the humanity and relieve the anxieties of the nation.

2. It is not merely a central office that is wanted. It must be a Government bureau. The various freedmen's associations, rich, numerous, and powerful, might unite and establish a central office at Washington, in which should converge all the light and knowledge collected at the most distant points of the circumference, and from which wise and humane plans might originate and radiate in all directions; but such a central office, disconnected from the Government, as in that case by the hypothesis it would be, without any right to official information or assistance, would lack the chief illumination now required, which is simply this: a knowledge how the existing machinery of the Government in all departments can be brought to bear on the problem of guidance, support, and relief in this temporary though not brief state of the transition of millions of bondmen from forced to free labor. This is a problem in which the vast, costly, omnipresent machinery and agencies of the Government already existing, with the least possible additions and the least possible disturbance, are to be economized and applied to the work of starting and aiding a humane process of emancipation.

But, apart from political economy, there is a moral economy to be considered. It is really a matter of small consequence whether the humane and successful exodus of the negro cost more or less. The honor, the dignity, the moral and religious character of this nation is at stake. Our duties to God and man are not to be sacrificed to any mere pecuniary considerations. We are bound by the highest spiritual obligations to make the process of emancipation for the slaves as safe and as little unhappy and obstructive to them as possible. Again, apathy, an indifference to human life—the terrible accompaniment of a state of war—is demoralizing in the extreme to civil and social order. White life is not safe when negro life is held cheap.

The neglect of the negro is self-neglect; and his abuse, or his needless decimation, is certain to produce murder, and arson, and violent crimes at home. We cannot escape the vengeance inhabiting violated laws. We are members one of another, and if one of the members suffer all the members suffer with it. It is, therefore, with an instinct of self-preservation, as well as with a fear of the righteous retribution of God, that the moralized and intelligent, the humane and Christian people of this country, cry out to their national Government that the forced and military emancipation of the negro shall be made as humane as the difficult and serious circumstances of the case will permit. The Christian heart, the moralized brain of the nation, will not suffer their Government to do less than the utmost in the ordering of this great and solemn matter.

Let not this anxiety for a bureau of emancipation, as an expression and organ of Government solicitude and care, be confounded with a disposition to overdo the care of the freedmen to come between them and the natural laws of political economy; to substitute supervision and direction for their own latent energies and self-helpfulness. The utmost extent to which the ordinary principles of free light and labor can be applied to the blacks should be insisted on; the least possible done for them, the most possible expected of them; as little difference made as can be between them and other laborers, their treatment always leaning rather to too little than too much aid and direction. It is to learn by careful inquiry the utmost extent to which this sound canon of civilization can be applied to the freedmen that the first study of the bureau of emancipation would be directed. But experience has already taught that it cannot be applied to at least a million of them further

than it is applied to our own children. If, in obedience to the general principle that all aid and direction is weakening to human beings, we are ready to cast our own offspring at a tender age upon their own resources, we may think it wise to deal with like Spartan severity with the freedmen, of whom so many are children in character when not children in years. We must lead leading strings to these babes of liberty, and, would we have them go alone, see that they do not dash out their own brains before they learn to walk.

Imploring the blessing of God on the nation, the freedman, the country's cause, and the President of the United States, we are, with profound respect, your Excellency's fellow-citizens and fellow-countrymen,

Mr. Eliot: "I now ask the Clerk to read the message of the President of the United States."
 The Clerk read as follows:

To the Senate and

House of Representatives of the United States.

Herewith I lay before you a letter addressed to myself by a committee of gentlemen representing the Freedman's Aid Societies in Boston, New York, Philadelphia, and Cincinnati. The subject of the letter, as indicated above, is one of great magnitude and importance, and one which these gentlemen, of known ability and high character, seem to have considered with great attention and care. Not having time to form a mature judgment of my own as to whether the plan they suggest is the best, I submit the whole subject to Congress, deeming that their attention thereto is almost imperatively demanded.

ABRAHAM LINCOLN.

December 17, 1863.

Mr. Eliot: "That letter of the President was written in December, 1863. Nearly one year before that time, in January, 1863, I offered the first bill upon this subject, establishing a Bureau of Emancipation, which was referred, as gentlemen will remember, to a select committee, at the head of which, I think, was Judge White, of Indiana. That committee was prepared to report a bill, but having the charge of the bill concerning Missouri and one or two other bills, they were prevented from doing so.

"The bill was again offered at the next session of Congress, and stands No. 1 upon the Calendar. It was referred to a committee, and reported again as House bill No. 51, and it now comes up for action from the committee of conference. Since January, 1863, we have been endeavoring to mature some legislation on this subject."

Mr. Wadsworth, of Kentucky, said: "What

is the object of the thirteenth section of the conference report?"

Mr. Eliot: "I will explain that to the gentleman. After the House had passed the confiscation act it went to the Senate for its sanction. An honorable gentleman from Tennessee, Mr. Maynard, called upon some of his friends on this side of the House and stated that there was a provision in that act which he thought would be retroactive in its operation, and desired that it should be amended. In order to amend it he offered a single explanatory resolution, providing that the part of the act to which he referred should not be retrospective. That resolution was passed by the House and sent to the Senate. While the resolution was in the Senate the confiscation act was before the President for his examination, it having passed the Senate. Before it came back from the President, for reasons which the gentleman will not perhaps want me to occupy the time of the House in detailing, it was found expedient in the Senate to amend the explanatory resolution which had gone to them from the House by adding to it the clause which is referred to in this thirteenth section; that is to say, the clause which limited the operation of the confiscation act to the life of the parties who owned it when confiscated."

Mr. Wadsworth: "I merely want to know if that limitation would be repealed if this report is adopted."

Mr. Eliot: "Most certainly. This thirteenth section repeals the last clause of that explanatory resolution, and will leave the confiscation act in the same condition in which it was when it left this House and went to the Senate."

Mr. Ganson: "I desire to ask the gentleman whether, if that repealing clause is kept in this bill, it will not insure a veto from the Executive? I understand that the Executive would not approve the original joint resolution upon the ground that it violated, in his opinion, the Constitution, and the explanatory resolution was adopted to meet his objection to the original resolution. Now, if this repealing clause is put in here, and the Executive has not changed his mind as to what the Constitution means, it will insure the veto of this bill."

Mr. Eliot: "The inquiry of the gentleman is whether in case this bill goes to the President as it is, it will not be vetoed. I think it will be signed. The gentleman from New York has progressed very greatly since July, 1862."

Mr. Ganson: "I desire to know whether the President has progressed upon this subject also."

Mr. Eliot: "The President is always progressing in the right direction. I call the previous question."

The question was put; and it was decided in the affirmative—yeas 64, nays 62, not voting, 56; as follows:

YEAS—Messrs. Allison, Ames, Arnold, Ashley, John D. Baldwin, Baxter, Beaman, Boutwell, Boyd, Broomall, Ambrose W. Clark, Cobb, Cole, Dawes, Deming, Donnelly, Eckley, Eliot, Frank, Grinnell, Hooper,

John H. Hubbard, Hulburd, Ingersoll, Jenckes, Julian, Kasson, Kelley, Orlando Kellogg, Knox, Littlejohn, Loan, Longyear, Marvin, McBride, McClurg, McIndoe, Samuel F. Miller, Morrill, Amos Myers, Leonard Myers, Norton, Charles O'Neill, Orth, Patterson, Pike, Pomeroy, Alexander H. Rice, John H. Rice, Edward H. Rollins, Scofield, Sloan, Spaulding, Starr, Stevens, Thayer, Upson, Van Valkenburgh, William B. Washburn, Wilder, Wilson, Windom, Woodbridge, and Worthington—64.

NAVS.—Messrs. James C. Allen, Ancona, Bailly, Augustus C. Baldwin, Brooks, William G. Brown, Chandler, Clay, Coffroth, Cox, Cravens, Thomas T. Davis, Dawson, Edgerton, Eldridge, English, Finck, Ganson, Grider, Hall, Harding, Benjamin G. Harris, Charles M. Harris, Holman, Philip Johnson, Kalbfleisch, King, Knapp, Le Blond, Long, Mallory, McAllister, McKinnery, Middleton, William H. Miller, James R. Morris, Nelson, Noble, Odell, John O'Neill, Pendleton, Radford, William H. Randall, Rogers, Ross, Schenck, Smithers, John B. Steele, William G. Steele, Stiles, Strouse, Sweat, Townsend, Tracy, Wadsworth, Ward, Elihu B. Washburne, Webster, Whaley, Wheeler, Joseph W. White, and Winfield—62.

NOT VOTING.—Messrs. William J. Allen, Alley, Anderson, Blaine, Blair, Bliss, Blow, Brandegee, James S. Brown, Freeman Clarke, Cresswell, Henry Winter Davis, Denison, Dixon, Driggs, Dumont, Eden, Farnsworth, Garfield, Gooch, Griswold, Hale, Harrington, Herrick, Higby, Hotchkiss, Asahel W. Hubbard, Hutchins, William Johnson, Francis W. Kellogg, Kernan, Law, Lazear, Marcy, McDowell, Moorhead, Daniel Morris, Morrison, Perham, Perry, Price, Pruyn, Samuel J. Randall, Robinson, James S. Rollins, Scott, Shannon, Smith, Stuart, Thomas, Voorhees, Chilton A. White, Benjamin Wood, Fernando Wood, and Yeaman—56.

So the report was agreed to.

The report of the Committee of Conference was taken up in the Senate on February 21st.

Mr. Grimes, of Iowa, said: "The first objection that I have to it is that it creates an independent department, which was not contemplated by either branch of Congress that passed the original bills that were sent to the Committee of Conference from whom this report comes.

"Now, why not put it at once under the Secretary of War? If we are to have this bureau, why not allow it to be connected with the War Department and make the officers immediately responsible to the military authorities? In what an anomalous position will these officers be whom it is authorized to select from the army who are to be commissioners and supervising agents under this bill! Are they to be civil officers from the time they are thus appointed, or are they to be military? Is there any greater degree of responsibility that is to attach to them than would attach if they were selected from civil life?

"Another objection that I have to this bill is that it only applies to the rebel States. Is it not known that there are at least twelve thousand colored refugees in this city at this moment who are in the utmost distress? Is it not just as desirable that this Government should take care of and protect those refugees as it is of those that are within the rebel lines, or in the States in hostility to us? I want the Secretary of War authorized to do by some act what I know he is doing at this moment, furnishing the proper provisions, and clothing, and fuel,

for the protection of these people; and I want them to be placed upon the same footing as they would be if they were across the river in the State of Virginia.

"The fifth section of this bill gives to the commissioners who are to be appointed under the act the right to bestow all the lands within the rebel States upon these colored refugees or freedmen. Now I suppose it is known to all the members of this body that we have in some of those Southern States, as Mississippi, Alabama, Louisiana, and Arkansas, immense tracts of public land. Under the provisions of this fifth section all of these public lands will fall to the colored men, and there is no provision for that very destitute class of Union white men of whom we have heard so much, and of whom I am happy to believe there are many in each of those Southern States, who are left, by this war, in just as unfortunate and helpless a condition as that in which the colored men are left. I am not prepared to say by the passage of this bill that all the lands and all the abandoned plantations in that country are to be given, under an act of Congress, simply to the colored people, and that the white refugees and the white people residing there, who are in exactly as destitute a condition as these colored men, shall not have any advantages.

"But, Mr. President, the principal objection I have to this bill is embraced in the ninth section, which provides—

That whenever the commissioner cannot otherwise employ any of the freedmen who may come under his care, he shall, as far as practicable, make provision for them with humane and suitable persons at a just compensation for their services.

"When the amendment out of which this section has sprung was before the Senate, which was proposed by the Senator from West Virginia (Mr. Willey), I voted for it. It then provided that these commissioners might provide homes for these freedmen, and authorized the commissioners to open negotiations or correspondence with the Governors and municipal authorities of the other States in order to accomplish that purpose; but that last clause which authorized them to open correspondence with other States has been stricken out; the word 'homes' has been stricken out, and the word 'provision' has been inserted. What is meant by the word 'provision'? The commissioner is to make provision for these colored persons, as far as practicable, 'with humane and suitable persons.' Who are to determine whether these men are humane and suitable persons? The commissioner, nobody else. There is no appeal from the commissioner. He shall make provision, for what? Evidently, for the labor of these freedmen; because the next clause says, 'at a just compensation for their services.'"

Mr. Grimes moved a postponement.

Mr. Sumner, of Massachusetts, opposed the motion, saying: "I am pained by this opposition. It is out of season. I am pained by it especially from the Senator from Iowa. I do

not judge him. But he will pardon me if I say that from the beginning he has shown a strange insensibility to this cause. He is for liberty, but he will not help us assure it to those who have for generations been despoiled of it. Sir, I am in earnest. Seriously, religiously, I accept emancipation as proclaimed by the President, and now, by the votes of both Houses of Congress, placed under the sanctions of constitutional law. But even emancipation is not enough. You must see to it that it is not evaded or nullified, and you must see to it especially that the new-made freedmen are protected in those rights which are now assured to them, and that they are saved from the prevailing caste, which menaces slavery under some new *alias*; and this is the object of the present measure.

"Would you know the perils of freedmen ever since emancipation? Listen, then, to the words of that true patriot, General Wadsworth, who, after his visit to the valley of the Mississippi, and personal observation of the freedmen there, wrote thus:

There is one thing that must be taken into account, and that is, that there will exist a very strong disposition among the masters to control these people and keep them as a subordinate and subjected class. Undoubtedly they intend to do that. I think the tendency to establish a system of serfdom is the great danger to be guarded against. I talked with a planter in the La Fourche district, near Thibodeauxville; he said he was not in favor of secession; he avowed his hope and expectation that slavery would be restored there in some form. I said, "If we went away and left these people now, do you suppose you could reduce them again to slavery?" He laughed to scorn the idea that they could not. "What," said I, "these men who have had arms in their hands?" "Yes," he said; "we could take the arms away from them, of course."

"But this emphatic testimony is simply in harmony with accumulated testimony from other quarters. The freedmen, now rejoicing in recovered rights, must for a while be saved from the traditional harshness and cruelty to which, for generations, they have been exposed. Call it protection; call it what you will. The power of the Government must be to them a shield. And yet you hesitate.

"The Senator from Iowa renews now the objections which he made at an earlier stage of this legislation. It will not be forgotten that he most earnestly protested against the bill as giving to persons a control of the freedman. It was then shown, I think, to demonstration, that he was mistaken. But out of deference to his sensibilities, and that nothing might seem to be wanting to the protection of the freedman, other safeguards were introduced, as amendments on his motion, or in pursuance of his suggestions. But all this is not enough to secure his favor. He objects again.

"Very well. So far as I understand his objection then and now, it is twofold: first, that the freedman is placed under constraint, and that he is not a free man; and, secondly, that he is treated too much as an infant or a pupil.

Now, I undertake to say that the objection is both these forms is absolutely inapplicable."

The motion to postpone was lost—yeas, 13; nays, 16.

Mr. Hale, of New Hampshire, in opposition, said: "Now, sir, the report of this Committee of Conference goes upon the supposition that the negro is wholly incompetent to take care of himself. The reasons assigned for slavery by slave-masters for the last fifty years has been that these people are helpless, utterly unable to take care of themselves; that they have been under the guardianship of their masters so long that you cannot trust them with their own interests. As long as you keep them under the guardianship either of their masters, or of overseers to be appointed under this bill, so long will they be helpless and unable to take care of themselves. As long as you hold them up they will never stand alone; but the very moment you make them freemen and secure their rights in the courts of justice, I believe they will be fully competent to take care of themselves. This proposition of the committee of conference only proposes a change of masters, under the provisions of the ninth section. You appoint commissioners who have a right to take possession of the farms, lease them to whomsoever they please, and then they may hire out these negroes at any price they shall agree upon between themselves and the lessees of the lands. That is what I understand to be the provisions of the bill; and under such provisions, it would introduce, in my opinion, a system of fraud and swindling unheard of in the history of the world. You give these poor creatures to the kind protection of broken-down politicians and adventurers, and decayed ministers of the gospel, and make them overseers to make fortunes out of these poor creatures; and they will treat the negroes, in my opinion, under this bill, far more cruelly than their masters under the old slave system did. I am opposed to the theory of a Freedman's Bureau. I would make them free under the law; I would protect them in the courts of justice; if necessary, I would give them the right of suffrage, and let loyal slaves vote their rebel masters down and reconstruct the seceded States; but I wish to have no system of guardianship and pupillage and overseership over these negroes.

"If this objection were not insuperable with me, the constitutional objection to placing under the Rules and Articles of War persons who have never belonged to the naval and military service would be sufficient; and if that reason did not stand in the way, there is another reason: this bill comes here in a questionable shape. The House of Representatives passed one bill upon the subject of freedmen, the Senate passed another; they differed in their provisions; and the Committee of Conference instead of, under parliamentary law, taking into consideration the disagreeing votes of the two Houses, over which alone they had any jurisdiction, come in and report a substitute essentially dif-

ferent from either the provisions of the House bill or of the Senate bill. In my opinion they had no earthly power to do so. Is not the whole character of the bill changed? The bill as it passed the Senate provided simply for a Bureau of Freedmen; this provides for all the machinery of a great national Department of the Government, looking to no temporary duration or consequences, but a permanent system by which four million freed Africans are to be billeted upon the Treasury for all time to come. We make them free upon the theory that they deserve freedom, that they can take care of themselves. If I had believed these four million people were as helpless and as unable to take care of themselves as the Senator from Massachusetts seems to believe by his proposition, I should have cared little about their emancipation from one master to place them in the hands of another task-master under the forms of law."

The Senate refused to concur in the report of the Conference Committee by the following vote:

YEAS—Messrs. Anthony, Brown, Chandler, Foot, Howard, Morgan, Morrill, Pomeroy, Ramsey, Sprague, Stewart, Sumner, Wade, and Wilson—14.

NAYS—Messrs. Buckalew, Carlile, Cowan, Davis, Dixon, Doolittle, Grimes, Hale, Harlan, Harris, Henderson, Howe, Johnson, Lane of Indiana, McDougall, Nesmith, Powell, Richardson, Riddle, Ten Eyck, Trambull, Van Winkle, Willey, and Wright—24.

ABSENT—Messrs. Clark, Collamer, Conness, Farwell, Foster, Harding, Hendricks, Lane of Kansas, Nye, Saulsbury, Sherman, and Wilkinson—12.

A new Committee of Conference was then appointed, consisting of Messrs. Wilson, Harlan, and Willey.

In the Senate, on February 28, Mr. Wilson, of Massachusetts, made another report from the Conference Committee, on the bill to establish a Bureau of Freedmen's Affairs, as follows:

The Committee of Conference on the disagreeing votes of the two Houses on the bill (H. R. No. 51) entitled "An act to establish a Bureau of Freedmen's Affairs," having met, after full and free conference have agreed to recommend to their respective Houses as follows: "That the Senate recede from their amendment to the said bill, and the committee agree to the following as a substitute":

AN ACT TO ESTABLISH A BUREAU FOR THE RELIEF OF FREEDMEN AND REFUGEES.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established in the War Department, to continue during the present war of rebellion, and for one year thereafter, a Bureau of Refugees, Freedmen, and Abandoned Lands, to which shall be committed, as hereinafter provided, the supervision and management of all abandoned lands, and the control of all subjects relating to refugees and freedmen from rebel States, or from any district of country within the territory embraced in the operations of the army, under such rules and regulations as may be prescribed by the head of the bureau and approved by the President. The said bureau shall be under the management and control of a Commissioner, to be appointed by the President, by and with the advice and consent of the Senate, whose compensation shall be \$3,000 per annum, and such number of clerks as may be assigned to him by the Secretary of War, not exceeding one chief clerk, two of the fourth class, two of the third class, three of the second class, and five of the first class. And the Com-

missioner and all persons appointed under this act shall, before entering upon their duties, take the oath of office prescribed in an act entitled "An act to prescribe an oath of office, and for other purposes," approved July 2, 1862. And the Commissioner and the chief clerk shall, before entering upon their duties, give bonds to the Treasurer of the United States, the former in the sum of \$50,000 and the latter in the sum of \$10,000, conditioned for the faithful discharge of their duties respectively, with securities to be approved as sufficient by the Attorney-General, which bonds shall be filed in the office of the First Comptroller of the Treasury, to be by him put in suit for the benefit of any injured party, upon any breach of the conditions thereof.

SEC. 2. *And be it further enacted,* That the Secretary of War may direct such issues of provisions, clothing, and fuel as he may deem needful for the immediate and temporary shelter and supply of destitute and suffering refugees and freedmen, and their wives and children, under such rules and regulations as he may direct.

SEC. 3. *And be it further enacted,* That the President may, by and with the advice and consent of the Senate, appoint an assistant commissioner for each of the States declared to be in insurrection, not exceeding ten in number, who shall, under the direction of the Commissioner, aid in the execution of the provisions of this act; and he shall give a bond to the Treasurer of the United States in the sum of \$20,000, in the form and manner prescribed in the first section of this act. Each of said assistant commissioners shall receive an annual salary of \$2,500, in full compensation for all his services. And any military officer may be detailed and assigned to duty under this act without increase of pay or allowance. The Commissioner shall, before the commencement of each regular session of Congress, make full report of his proceedings, with exhibits of the state of his accounts, to the President, who shall communicate the same to Congress, and shall also make special reports whenever required to do so by the President or either House of Congress. And the assistant commissioners shall make quarterly reports of their proceedings to the Commissioner, and also such other special reports as from time to time may be required.

SEC. 4. *And be it further enacted,* That the Commissioner, under the direction of the President, shall have authority to set apart for the use of loyal refugees and freedmen such tracts of land within the insurrectionary States as shall have been abandoned, or to which the United States shall have acquired title by confiscation, or sale, or otherwise. And to every male citizen, whether refugee or freedman, as aforesaid, there shall be assigned not more than forty acres of such land, and the person to whom it is so assigned shall be protected in the use and enjoyment of the land for the term of three years, at an annual rent not exceeding six per cent. upon the value of said land as it was appraised by the State authorities in 1860, for the purpose of taxation; and in case no such appraisal can be found, then the rental shall be based upon the estimated value of the land in said year, to be ascertained in such manner as the Commissioner may, by regulation, prescribe. At the end of said term or at any time during said term, the occupants of any parcels so assigned may purchase the land and receive such title thereto as the United States can convey upon paying therefor the value of the land, as ascertained and fixed for the purpose of determining the annual rent as aforesaid.

SEC. 5. *And be it further enacted,* That all acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

HENRY WILSON,	{	<i>Managers on the part of the Senate.</i>
JAMES HARLAN,		
W. T. WILLEY.		
ROBERT C. SCHENCK,	{	<i>Managers on the part of the House</i>
GEORGE S. BOUTWELL,		
JAMES S. ROLLINS,		

Mr. Powell, of Kentucky, opposed the bill, saying: "That bill will involve an expense to this Government of millions upon millions of dollars, and put these freedmen, as they are called, in a state of peonage. I do not think a more offensive bill has been presented to this Congress, or one that requires greater deliberation and more mature consideration. It will create a multitude of office-holders. It will send them upon these States as the locusts were sent upon Egypt, and they will be quite as destructive to the people there. In my judgment, this report ought to lie upon the table to enable Senators to look at it, and then, to-morrow morning, if the Senate be full and they choose to pass it, very well."

Mr. Howard, of Michigan, said: "Mr. President, I cannot vote in favor of this report of the Committee of Conference. It places this whole subject in the control and under the superintendence of the Secretary of War. It becomes a sort of appendage to the War Department; and the government, if there shall be any thing in the shape of government, established among the negro population, will be a sort of military government. For one, I am not in favor of extending that peculiar jurisdiction any further than is required by absolute necessity, and I do not think it is required by necessity to be extended among the blacks. The report is full of imperfections. It is wanting in specification of the powers and authorities given to the commissioners and other officers who are required to act under it. It is a loosely-drawn statute, one which, in my opinion, is capable of great abuse, furnishing perpetual occasion for construction and interpretation; wanting in certainty and in precision in all points; and, sir, rather than vote for such a bill as that, anxious as I am to establish a good and salutary system over the freedmen, I prefer to have none at all."

The report was agreed to in the Senate.

The House agreed to it, after having refused to lay on the table, by the following vote:

YEAS—Messrs. James C. Allen, Ancona, Bailly, Bliss, Brooks, Coffroth, Cox, Dawson, Denison, Eden, Edgerton, Eldridge, English, Finck, Ganson, Grider, Harding, Benjamin G. Harris, Charles M. Harris, Herrick, Holman, Philip Johnson, Kalbfleisch, Kernan, Knapp, Law, Le Blond, Long, Marcy, McAllister, McKimney, William H. Miller, James R. Morris, Morrison, Nelson, Odell, John O'Neill, Pendleton, Pruyn, Samuel J. Randall, William H. Randall, Ross, Scott, John B. Steele, Stiles, Strouse, Stuart, Townsend, Voorhees, Wheeler, Chilton A. White, and Yeaman—77.

NAYS—Messrs. Alley, Allison, Ames, Arnold, Ashley, John D. Baldwin, Baxter, Beaman, Blaine, Blow, Boutwell, Brandegee, Broomall, Ambrose W. Clark, Freeman Clarke, Cobb, Cole, Henry Winter Davis, Thomas T. Davis, Dawes, Deming, Eliot, Farnsworth, Frank, Garfield, Gooch, Grinnell, Higby, Hotchkiss, Asahel W. Hubbard, John H. Hubbard, Hulburd, Ingersoll, Kasson, Kelley, Francis W. Kellogg, Orlando Kellogg, Knox, Littlejohn, Loan, Longyear, Marvin, McBride, McClurg, Moorhead, Morrill, Daniel Morris, Amos Myers, Leonard Myers, Norton, Charles O'Neill, Orth, Patterson, Perham, Pike, Price, John H. Rice, Edward H. Rollins, James S. Rollins, Schenck, Scofield, Shannon, Sloan, Spalding, Thayer,

Thomas, Tracy, Upson, Van Valkenburgh, Elihu B. Washburne, William B. Washburn, Whaler, Williams, Wilder, Wilson, Windom, and Woodbridge—77.

The regular session of Congress closed on March 4th by an adjournment *sine die*. The acts respecting the National Currency, the Finances of the Government, and direct Taxation, are stated elsewhere in this volume.

In the Senate, on March 4th, at 12 M., the Vice-President, Hon. Hannibal Hamlin, and the Vice-President elect, Hon. Andrew Johnson, entered the chamber, accompanied by Mr. Doolittle, one of the committee of arrangements. Mr. Johnson was conducted to a seat to the right of the chair of the Vice-President.

For some time the Senate chamber had been crowded with those distinguished persons to whom admission was accorded as witnesses of the inauguration ceremonies. The judges of the Supreme Court of the United States, a large attendance of ambassadors from foreign governments, officers of the Army and Navy, with innumerable others, and lastly, the members of the House of Representatives, with their Speaker and Sergeant-at-Arms at their head, entered and were conducted to the seats prepared for them, the Speaker, Hon. Schuyler Colfax, being seated to the left of the Vice-President.

The Vice-President then, in a few words, addressed the Senate for the last time, and said: "Is the Vice-President elect now ready to take and subscribe the oath of office?"

The Vice-President elect (Hon. Andrew Johnson, of Tennessee), "I am. [Then turning to the Senate he said:] Senators: I am here to-day as the chosen Vice-President of the United States, and as such, by constitutional provision, I am made the presiding officer of this body. I therefore present myself here in obedience to the high behests of the American people to discharge a constitutional duty, and not presumptuously to thrust myself in a position so exalted. May I at this moment—it may not be irrelevant to the occasion—advert to the workings of our institutions under the Constitution which our fathers framed and Washington approved, as exhibited by the position in which I stand before the American Senate, in the sight of the American people! Deem me not vain or arrogant; yet I should be less than man, if, under such circumstances, I were not proud of being an American citizen, for to-day, one who claims no high descent, one who comes from the ranks of the people, stands, by the choice of a free constituency, in the second place in this Government. There may be those to whom such things are not pleasing, but those who have labored for the consummation of a free Government, will appreciate and cherish institutions which exclude none, however obscure his origin, from places of trust and distinction. The people, in short, are the source of all power. You, Senators, you who constitute the bench of the Supreme Court of the United States, are but the creatures of the American people; your exalta-

tion is from them; the power of this Government consists in its nearness and approximation to the great mass of the people. You, Mr. Secretary Seward, Mr. Secretary Stanton, the Secretary of the Navy, and the others who are your associates—you know that you have my respect and my confidence—derive not your greatness and your power alone from President Lincoln. Humble as I am, plebeian as I may be deemed, permit me, in the presence of this brilliant assemblage, to enunciate the truth that courts and cabinets, the President and his advisers, derive their power and their greatness from the people. A President could not exist here forty-eight hours if he were as far removed from the people as the autocrat of Russia is separated from his subjects. Here the popular heart sustains President and Cabinet officers; the popular will gives them all their strength. Such an assertion of the great principles of this Government may be considered out of place, and I will not consume the time of these intelligent and enlightened people much longer; but I could not be insensible to these great truths, when I, a plebeian, elected by the people the Vice-President of these United States, am here to enter upon the discharge of my duties. For those duties I claim not the aptitude of my respected predecessor. Although I have occupied a seat in both the House of Representatives and the Senate, I am not learned in parliamentary law, and I shall be dependent on the courtesy of those Senators who have become familiar with the rules which are requisite for the good order of the body and the despatch of its business. I have only studied how I may best advance the interests of my State and of my country, and not the technical rules of order; and if I err, I shall appeal to this dignified body of representatives of States for kindness and indulgence.

"Before I conclude this brief inaugural address, in the presence of this audience—and I, though a plebeian boy, am authorized by the principles of the Government under which I live to feel proudly conscious that I am a man, and grave dignitaries are but men—before the Supreme Court, the representatives of foreign governments, Senators, and the people, I desire to proclaim that Tennessee, whose representative I have been, is free. She has bent the tyrant's rod, she has broken the yoke of slavery, and to-day she stands redeemed. She waited not for the exercise of power by Congress; it was her own act, and she is now as loyal, Mr. Attorney-General, as is the State from which you come. It is the doctrine of the Federal Constitution that no State can go out of this Union; and, moreover, Congress cannot eject a State from this Union. Thank God, Tennessee has never been out of the Union! It is true the operations of her government were for a time interrupted; there was an interregnum; but she is still in the Union, and I am her representative. This day she elects her Governor and her Legislature, which will be convened on the first Monday of April, and again her Sen-

ators and Representatives will soon mingle with those of her sister States; and who shall gainsay it, for the Constitution requires that to every State shall be guaranteed a republican form of government?

"I now am prepared to take the oath of office and renew my allegiance to the Constitution of the United States."

The oaths prescribed by law were then administered to the Vice-President elect by the retiring Vice-President.

The Vice-President: "The term prescribed by the Constitution for the termination of this Congress having arrived, by virtue of the authority in me vested, I now declare it adjourned without day."

CONNECTICUT. The Democratic Convention of Connecticut assembled at Middletown on February 8th, and renominated Origen S. Seymour for Governor, and the same candidates for other State offices selected in the previous year. A series of resolutions on national questions was adopted, including the following in favor of State sovereignty and against the antislavery amendment to the Constitution of the United States:

Resolved, By the Democracy of Connecticut in convention assembled, that the corner-stone of our liberties is to be found in the great principle of State sovereignty, and therefore we solemnly reaffirm the resolves of the Democracy of this State enunciated by its several State conventions held during the present terrible civil war, and hereby assert with renewed fervor our devotion thereto, believing as we do that the Union constructed by our fathers, now menaced and endangered by the fell spirit of discord, can never be restored except by a strict and rigid adherence to the letter and spirit thereof.

Resolved, That the recent so-called amendment to the Constitution of the United States, passed by Congress and submitted to the Legislatures of the several States, is a covert attempt to overthrow and destroy the great Democratic idea of "State Rights," and was, in our judgment, designed as another step to consolidated power, an insuperable obstacle to any propositions for a peaceful adjustment of the difficulties now existing between the North and South, and as an eternal barrier to the Union.

The Republican Convention assembled at New Haven on February 15th, and renominated the following State officers, elected in the previous year: Governor, William A. Buckingham; Lieutenant-Governor, Roger Averill; Secretary of State, J. Hammond Trumbull; Treasurer, Gabriel W. Coite; Comptroller, Leman W. Cutler. Their resolutions expressed undiminished confidence in the ability, integrity, and patriotism of President Lincoln; opposed the settlement of national difficulties except upon the basis of unconditional submission by the seceded States; congratulated the people on the passage of the Constitutional amendment abolishing slavery; denounced the "doctrine of State Rights, as asserted and upheld by the rebel leaders, and adopted by the self-styled Democratic party of the State of Connecticut in its recent convention," and expressed gratitude to the soldiers and sailors engaged in the defence of the country. The election took

place on April 2d, and resulted in the choice of the Republican candidates by majorities of ten thousand and upwards. The following is the vote for Governor:

	1865.	1864.
William A. Buckingham	42,874	39,920
Origen S. Seymour	31,839	34,163
Majority for Buckingham	11,035	5,658

The following was the result of the election for members of the Legislature:

	Senate.	House.	Joint Ballot.
Republicans.....	21	161	189
Democrats.....	0	76	76
Republican majority.	21	85	106

At the same election Henry C. Deming, S. L. Warner, Augustus Brandagee, and John H. Hubbard, Republicans, were elected by large majorities, to represent the four districts of Connecticut in the Thirty-ninth Congress.

The Legislature convened at Hartford on May 3d, and was organized by the election of O. J. Hodge as President *pro tem.* of the Senate, and E. K. Foster as Speaker of the House of Representatives, both being members of the Republican party. Governor Buckingham and the other State officers elect then took the oath of office, and the annual message of the Governor was delivered.

The funded debt of Connecticut in May, 1865, was \$8,000,000, and the unfunded debt \$2,523,113.74, while the amount to the credit of the sinking fund was \$1,128,394.79. The following exhibits the disbursements of the State treasury up to the time of the meeting of the Legislature in May:

The payments during the year for ordinary expenses, as reported by the Comptroller, were	\$417,818 80
For soldiers' families.....	633,516 73
Advances to the Paymaster-General for State bounties, and payments for other purposes connected with volunteers and militia.....	3,503,350 00
Total.....	\$4,705,685 03

The valuation of real and personal property for the year was \$254,627,407, an increase of \$17,477,243 over that of the preceding year; and as an evidence of the resources of the State it may be noted that her total indebtedness is less than four and one-quarter per cent. of her last valuation, and less than two-thirds of the excess of that valuation over the previous one. The claims of Connecticut against the General Government for moneys expended in arming, raising, and equipping troops, appear in the following table, prepared in August, 1865:

Her entire claim thus far, is	\$1,872,882 84
She has received, being an advance before the first settlement was made.....	\$606,000 00
Balance on first settlement.....	612,785 71
Balance on last settlement.....	171,495 70
Leaving a difference of.....	\$1,390,281 41
	\$462,601 43

being little more than twenty-five per cent. of the amount claimed to have been expended. So much of this sum as has been suspended on account of property not properly accounted for or

not issued to troops, will be allowed on presentation of receipts of army officers showing that the property has been turned over to the General Government, or upon evidence that it has been issued to troops mustered into the United States service.

The School Fund, amounting to more than \$2,000,000, was unimpaired during the year, and yielded an income of full seven per cent., of which \$132,048.75 was expended in the education of one hundred and fourteen thousand eight hundred and twenty-four children between the ages of four and sixteen years. The scrip for one hundred and eighty thousand acres of land received from the United States, was sold for \$135,000, and that sum invested in Government bonds, bearing five per cent. interest in gold. The avails of the interest in currency were \$13,233.05, which has been paid to the Treasurer of Yale College, to be used in accordance with the provisions of the act of Congress making the grant. The average attendance during the year at the public schools was seventy per cent. of the enumeration, and a larger amount was raised by districts for school purposes than ever before. One hundred and thirty-nine pupils from sixty-eight towns attended the Normal School, and more than one hundred from that institution engaged in teaching.

The railroad interests of the State during 1864-'65 were unusually prosperous. A million more passengers were carried than during the previous year, and the gross earnings and net earnings were both largely increased. Notwithstanding almost every railroad was reported in good condition and safely managed, one hundred and nineteen accidents were reported, of which fifty-two proved fatal. The following statistics are compiled from the report of the Railroad Commissioners:

The chartered capital of the several railroads lying in the State, in whole or in part, is....	\$23,532,043 00
Of which there has been paid in.....	17,206,581 00
Total length of road constructed under charters granted, in whole or in part, by the State, is.....	7884 miles
Of which is constructed in the State.....	6914 "
The aggregate length of double track is.....	125 "
Making the entire length of track in use.....	9144 "
The total expenditure for working the road, as reported by the different companies, amounted to.....	\$4,685,769 51
For fuel, oil, and waste.....	633,738 87
For salaries, wages, etc., chargeable to passenger, freight, and miscellaneous expenses...	633,909 57
There has been expended during the year for maintenance of way.....	741,194 22
For maintenance of motive power and cars...	630,493 01
Making, for repairs and renewal, a total cost of.....	1,861,556 23
The total income of the railroads in the State during the past year has been.....	6,547,355 00
Their net earnings have been.....	2,162,583 59
Passenger and other trains have run in all.....	3,064,939 miles
carrying 4,512,518 passengers.	

By the report of the Bank Commissioners it appears that during the year ending April 1, 1865, twenty-three banks, with an aggregate capital of \$7,850,800, changed from State to national institutions. The following table shows the amount of capital invested in banking business:

On the first day of April, 1864, the banking capital of the State amounted to.....\$20,606,939
Increase of capital the past year.....817,688

Decrease of capital by the change of twenty-three banks.....\$20,924,850
.....7,850,900

Present capital.....\$18,073,850

This capital is distributed among forty-nine banks, which hold deposits amounting to \$5,-297,802.49, specie amounting to \$852,792.96, or about eleven and five-eighths per cent. of their circulation, and United States securities to the amount of \$6,881,417.63. Their circulation is \$7,305,024, and bills discounted during the year ending April 1, 1865, amounted to \$15,273,001.21. The tax paid to the State by the banks during the year was \$32,257.69; licenses and tax paid to the United States for three quarters ending April 1, 1865, \$174,-125.10; proportioned tax for the quarter ending July 1, 1865, \$58,041.70; making the whole amount of taxes \$264,424.49. The aggregate amount of deposits in savings banks January 1, 1865, was \$29,142,288.58; an increase of \$2,160,066.74. The market value of their assets was \$31,087,145.85, leaving a margin on the amount due depositors of \$1,944,857.27, a fraction over six per cent. The number of depositors January 1st was 121,682, being an increase during the year of 5,001. Total taxes paid during the year amounted to \$244,045.14, of which \$178,310.77 were paid to the State, and \$65,734.37 to the United States.

From the Adjutant-General's report it appears that on April 1, 1865, the State had a surplus of 6,089 in three years' men, without reference to its quota on the call of December, 1864, for 300,000 men. There were enlisted during the year, for organizations in the field, 2,898 men, and 3,849 substitutes for enrolled men were furnished. Of the whole number of substitutes, but 1,552 had reached the regiments in the field up to the date of last reports, at least one-half of those mustered into service having deserted before reaching the front. During the year ending April, 1865, 926 men enlisted into the United States army and Veteran Reserve Corps, and were credited to the State. The quotas assigned to Connecticut under all calls except the last, amounted to 47,622. The State having a large surplus when the call of December, 1864, was made, was never called upon to furnish a quota under that call. The number of men actually furnished by her during the war amounted to 54,468. Reducing these credits to the standard of three years, the State account stands as follows, not including the three months' men, who numbered 2,340:

	Three years' men.
5,672 nine months' men, equal to.....	1,400
539 one year " ".....	176
35 two years " ".....	16
44,142 three years' " ".....	44,142
134 four years' " ".....	84
1,504 not known " ".....	1,804

Total equivalent of three years' men... 47,572

The enrolled militia of the State at the date

of the last report numbered 41,565, of whom 1,485 were active militia.

The following table exhibits the vital statistics of the State for the year ending December 31, 1864:

Number of births.....	9,784
Loss from previous year.....	151
Marriages.....	4,171
Gain over previous year.....	1,680
Deaths.....	9,109
Gain on previous year.....	563
Excess of births over deaths.....	675

Notwithstanding the increase in the number of deaths, there was no epidemic generally prevalent, the percentage from zymotics being less than for two years preceding. The following have been the ten most fatal causes, in their order: consumption, 1,171; pneumonia, 592; diphtheria, 499; typhus and typhoid fevers, 442; old age, 405; scarlet fever, 322; dysentery, 283; cholera infantum, 234; croup, 225.

The Legislature adjourned on July 21st, after the longest regular session ever held in the State. Among the prominent bills passed were those imposing a tax of four mills on the dollar, reorganizing the militia, raising the salaries of members of the Legislature, from \$1.50 to \$3.00 per diem, forbidding railroad companies to raise the price of commutation tickets, and authorizing the treasurer to issue two millions of dollars more of State bonds at six per cent., which should be free of taxation. The following resolutions on national affairs were adopted at the close of the session:

GENERAL ASSEMBLY, May Session, A. D. 1865.

Grateful to Almighty God who has brought the American people safely through the perils of civil war, and has opened before them a prospect of peace, prosperity, and power, the General Assembly, of Connecticut, considering the present condition of public affairs, thinks fit to declare as follows:

The American people are a nation, and not a confederacy of nations.

The States have certain constitutional rights which ought to be preserved inviolable; but, as between the Nation and the States, the Nation is sovereign and the States are not.

All men within the limits of the United States ought to be absolutely free; and no permanent discrimination in rights and privileges ought to exist between different classes of free men.

Treason against a Republican government is the greatest of crimes, and ought to be treated as such. Nevertheless a humane and generous policy ought to be exercised by the national Government toward the misguided masses of the Southern people who were not primarily responsible for the late rebellion.

The public opinion of Europe, in reference to the domestic affairs of this country, must henceforth be of little value to the American people.

The Government of the United States, in settling upon its domestic policy, and especially in deciding what course it will pursue toward the leaders of the rebellion, ought not to be influenced by the wishes, the advice, the warnings, the entreaties, or the public opinion of foreign nations, but ought, on the contrary, to look with jealousy and suspicion upon all attempts from such quarters to affect its action.

The Government of the United States ought never to recognize any government which has been imposed upon any nation on this continent by the arms of any European power.

In its diplomacy, the Government of the United States ought, while courteous, to be frank. It ought

not to make pretences of friendship toward nations that have manifested hatred of this country in its late distress. But peace, with friendship toward our friends, and peace without friendship toward those who are not our friends, ought to be maintained at all times, if possible, as the true and permanent policy of the United States.

Andrew Johnson, President of the United States, by his great abilities, his undoubted patriotism, and his eminent public services, has entitled himself to the confidence of the nation; and since he is manifestly surrounded by many and great difficulties, and is compelled to adopt experimental policies without assurance of their success, he ought to be sustained in the exercise of great freedom of action, and in all his efforts to tranquillize the country, to maintain its peace and dignity, and to promote its welfare, he ought to receive a frank and generous support from the people.

His Excellency, the Governor, is hereby requested to cause a copy of these declarations to be transmitted to the President of the United States, and a like copy to each of the Senators and Representatives of this State in Congress.

At the same session an act was passed, in the Senate unanimously, and in the House by a two-thirds vote, submitting to popular ratification the following amendment to the State Constitution: "Every male citizen of the United States who shall have attained the age of twenty-one years, who shall have resided in this State for a term of one year next preceding, and in the town in which he may offer himself to be admitted to the privileges of an elector, at least six months next preceding the time at which he may so offer himself, and shall be able to read any article of the Constitution, or any section of the statutes of this State, and shall sustain a good moral character, shall, on taking such oath as may be prescribed by law, become an elector." This was intended to nullify that clause of the Constitution which denied the right of suffrage to colored persons, except those who were citizens of the State at the time of the adoption of the Constitution, in 1811. The election took place on October 2d, with the following result:

For the Amendment.....	27,217
Against the Amendment.....	33,459
Majority against Amendment.....	6,272

CORWIN, Hon. THOMAS, an eminent American statesman, born in Bourbon County, Ky., July 29, 1794, died in Washington, D. C., December 18, 1865. In 1798 his father removed to what is now Lebanon, Ohio; the son working upon the home farm till he was about twenty years old. He enjoyed very slender educational advantages; but commenced the study of law in 1815, and was admitted to the bar in 1818. His ability and eloquence as an advocate soon gained him an extensive practice. He was first chosen to the Legislature of Ohio in 1822, serving therein seven years, and was first chosen to Congress in 1830. His district (the Miami) was strongly Whig, and he in hearty sympathy with its politics, having supported Clay for President in 1824, Adams in 1828, and zealously supporting Clay again in 1832; as he did Gen. Harrison in 1836 and 1840. In the latter

year—Gen. H. having received the Whig nomination at Harrisburg—a certain militia Gen. Crary, who represented Michigan in the House, having made a speech criticizing and assailing Gen. Harrison's military career, Mr. Corwin answered it in a vein of mingled humor and sarcasm which has rarely been equalled. The extinction of the unfortunate member from Michigan was so complete, that when John Quincy Adams casually alluded in debate next day to "the late Mr. Crary," the House fairly shook with the general merriment.

In 1840 Mr. Corwin was the Whig candidate for Governor of Ohio, and canvassed the State with Gen. Harrison, addressing enormous gatherings in most of the counties. At the election, he was chosen by some 16,000 majority, Gen. Harrison receiving over 23,000 in the Presidential election that soon followed; yet, two years later, Gov. Corwin, on a reduced poll, was run out by Wilson Shannon, whom he had so heavily beaten in 1840: the vote standing—Shannon, 129,064; Corwin, 125,621; King (Abolition), 5,404.

In 1844 the Whigs, on a full poll, again carried the State, giving its electoral vote to Mr. Clay, and sending Mr. Corwin to the United States Senate, where he made in 1847 a speech against our war in Mexico, thoroughly exposing and reprobating the iniquity of that foray. He served in the Senate until Mr. Fillmore's accession to the Presidency (July, 1850), when he was called to the head of the Treasury, where he remained till the expiration of Mr. Fillmore's term, when he returned to private life and the practice of law at Lebanon, and was in 1858 returned once more a Representative in Congress by an overwhelming majority; being reelected, with but a shadow of opposition, in 1860. On Mr. Lincoln's accession to the Presidency, he was appointed Minister to Mexico, where he remained until the arrival of Maximilian, when he came home on leave of absence, and did not return; remaining in Washington and engaging in the practice of law, but taking a warm interest in public affairs, and earnestly coöperating in every effort to restore peace to our country.

His style of oratory was captivating, and his genial and kindly nature made him an almost universal favorite. His death, though occurring at a ripe age, and after some months of infirm health, was sudden and somewhat unexpected, resulting from a paralytic attack.

COSTELLO, DUDLEY, an Irish author and journalist, born in 1803, died at St. John's Wood, London, September, 1865. He was the son of a military officer, and brother of Louisa Stuart Costello, the well-known authoress. He was educated for the army at Sandhurst, and, obtaining a commission, served with his regiment on the staff in various foreign stations, and finally at Bermuda, W. I. Here strong literary tastes developed themselves, and most of his leisure time was devoted to drawing and literature. He also issued a newspaper once a

fortnight, written mostly himself in different styles and on all the topics of conversation in the island, being at this time scarcely twenty years of age. Having relinquished his commission in the army, he pursued his studies on the Continent for some years, residing in Paris with his accomplished sister. For a time he was private draughtsman and amanuensis to the famous Baron Cuvier. Afterwards he devoted himself to copying illuminated manuscripts in the "Bibliothèque Royale," and it is said that he and his sister were the first who drew public attention to copying ancient illuminations, both in Paris and at the British Museum. Returning to London in 1833, he became successively foreign editor of the "Morning Herald," and "Daily News." Besides a volume of travels, "A Tour through the Valley of the Meuse" (1845), Mr. Costello produced a number of works of fiction, among which are "Stories from a Screen" (1855), "The Joint Stock Banker" (1856), "The Millionaire" (1858), "Faint Heart Never Won Fair Lady" (1859), and "Holidays with Hobgoblins" (1860). He had also been connected with the "Examiner" newspaper since 1845, and for thirty years had contributed to many of the periodicals of the day. Mr. Costello's latest separate publication is "Italy from the Alps to the Tiber," an illustrated work in two volumes. He was, a few years since, placed on the pension list of the Royal Literary Fund on account of his literary ability.

CROCKER, NATHAN B., D.D., a clergyman of the Protestant Episcopal Church of the United States, and for more than sixty years rector of St. John's Church, Providence, R. I., born in

Barnstable, Mass., July 4, 1781, died at Providence, October 19, 1865. He completed his preparatory studies at the Sandwich Academy, graduated at Harvard College in 1802, and soon after commenced the study of medicine under Dr. Leonard, of Portsmouth, and subsequently with Dr. Jeffries, of Boston. Theology, however, having greater attractions for him, he took orders in 1808, and was elected rector of the church in Providence, over which he presided until his death, with the exception of an interval of a few years, during which his health obliged him to suspend preaching. In 1808 he was ordained a priest, and made a Fellow of Brown University, and Secretary of the College Corporation, and retained his connection with the University throughout his life. The ministerial life of Dr. Crocker is intimately identified with the history, growth, and progress of the Episcopal Church of that diocese. When he removed to that State it contained but four Episcopal churches, all of which were established under the auspices of the English Propagation Society, in the early part of the last century. In 1827 he received the degree of Doctor of Divinity from Geneva College, N. Y. As a preacher Dr. Crocker was simple, faithful, and evangelical, dealing but little in controversial divinity, and rarely attempting philosophical argument. He aimed to be instructive more than eloquent, was fond of reading, and his written discourses probably averaged from sixty to seventy yearly, a few of which, as well as some of his occasional addresses and lectures, were published. In person he was tall, but well formed and erect, and his manners were dignified and courteous.

D

DAVIS, Hon. HENRY WINTER. An American statesman, born in Annapolis, Md., in 1817, died at Baltimore, Dec. 30, 1865. He was the son of an Episcopal clergyman and professor in St. John's College, Annapolis; was partly educated at that college, but finally graduated at Hampden Sidney College, Va., studied law and was admitted to the bar at Alexandria, Va. Here he rapidly rose to distinction. His intellect was admirably suited to his profession—keen, inventive, salient, and with that power of continuous thought which is essential to every man that has to do with affairs of the forum or of the State. After practising a few years in Alexandria, he removed to Baltimore, and first attained celebrity there in the Episcopal Convention of Maryland, by his defence of Dr. H. V. D. Johns against the accusation of Bishop Whittingham, for having violated the canon of the Episcopal Church, in consenting to officiate on one occasion in the Eutaw Methodist Episcopal Church. In 1855 he was elected a Representative from Maryland, and was reelected the two following terms, serving through all on the Committee

of Ways and Means. As a politician his unflinching integrity often assumed the appearance of audacity, and by nature self-reliant, he seldom permitted the opinions of friends to influence his own resolutions; hence by those who made expediency their cardinal doctrine, he was sometimes denounced as self-willed and impracticable. In 1859 he voted for Mr. Pennington, the Republican candidate for Speaker. The act drew down on him a storm of reproach and abuse. The Legislature of his own State passed a resolution that he had misrepresented Maryland, and forfeited the confidence of her people. In a speech made in Committee of the Whole in the House, immediately after, he told the members of the Maryland Legislature to take their message back to their masters, for only to their masters, the people, would he reply! In a still higher key he declared that he should rejoice if his duty to his country could always be made to square with the interests of his immediate constituents, but there might be occasions when it would be necessary to consider the welfare of the nation,

and disregard the wishes of those who elected him. When his State stood ready to plunge into secession, he resisted that purpose with his utmost zeal and ability. Representing a slave State and a border State, he was, nevertheless, conspicuous in Congress for his uncompromising radicalism, his early advocacy of emancipation, of arming the negroes, &c. His great speech at Chicago last summer was for negro suffrage. His Southern birth and education, his political hopes, which were always high, and his professional interests, to which he was much attached, weighed as nothing against his faith in the principles of the Declaration, of "humanity, of freedom, and of equal rights." In 1868 Mr. Davis was elected to the thirty-eighth Congress, in which he served with distinguished ability as Chairman of the Committee on Foreign Affairs. In 1852 he published a book entitled the *War of Ormuzd and Ahriman in the Nineteenth Century*. His death was caused by typhoid pneumonia, brought on by taking a cold bath while under the influence of a heavy cold.

DELANCEY, Right Rev. WILLIAM HEATHCOTE, D. D., D. O. L., Bishop of the diocese of Western New York, of the Protestant Episcopal Church, born in Westchester County, N. Y., October 8, 1797, died at his residence in Geneva, N. Y., April 5, 1865. He was educated at Yale College, New Haven, where he graduated in 1817.

Having studied theology under Bishop Hobart, he was admitted in 1822 to the order of priests, and soon became an assistant minister in the associated parishes of Christ Church, St. Peter's, and St. James's in Philadelphia. From 1823 to 1830 he was annually chosen Secretary of the Diocesan Convention, and from 1823 to 1829 was also Secretary of the House of Bishops. In 1828 he became Provost of the University of Pennsylvania. After remaining in that office for five years, he became again an assistant minister of St. Peter's church, and on the death of Bishop White, the rector of that parish.

In 1838 he was chosen bishop of the newly constituted diocese of Western New York. His consecration to the Episcopal office took place May 9, 1839. He then removed to Geneva, the seat of the Diocesan College, where he afterwards resided. In his new position he soon proved himself one of the most energetic and efficient prelates of his Church. The visitation of his large diocese required a journey of more than four thousand miles, and during the earlier years of his administration had to be made almost entirely by the old-fashioned stage coaches, or often by a private conveyance over rough roads and through a thinly settled country; still he was enabled to make this journey annually until the introduction of railways in that section of the country relieved him of much of the fatigue incident to his visitation. Through his endeavors all the Church institutions throughout his district were placed upon a firm

basis, and ample endowments for them and for the episcopate were secured.

Bishop Delancey was one of the leaders of the High Church party in this country, and threw his whole influence in its favor. His Church sympathies, however, were broad and generous. Of late years he has been prominent from his efforts to bring about intercommunion with the Greek Church. He twice visited England, first in 1852, as one of the delegates chosen to represent the American Episcopal Church at the third jubilee of the Society for the Propagation of the Gospel. His fellow delegates were the Bishop of Michigan and the late Bishop Wainwright, of New York, and all three received the honorary degree of D. C. L. from the University of Oxford. Bishop Delancey's second visit to England was made in 1858. His death was partially the result of paralysis.

DELAWARE. Area, 2,120 square miles; population in 1860, 112,216. Until the commencement of the recent war a State debt was unknown in Delaware. The resources of the State had been amply sufficient to meet the ordinary expenses, and the policy to guard against indebtedness had become settled. Upon the issue of the orders of the Federal Government to draft the citizens into the military service, the Legislature determined to extend the credit of the State to aid them in relieving themselves from the operation of the draft by obtaining substitutes. For this purpose the State Treasurer was authorized to prepare and issue bonds to the amount of \$1,000,000. This amount was increased during 1865 by the addition of \$110,000, making the total \$1,110,000. A loan of bonds to the amount of \$170,000 was made to the Delaware Railroad Company by the State in 1855. As a security for this loan the State holds a mortgage of the railroad guaranteed by the Philadelphia, Wilmington, and Baltimore Railroad Company—a part of the line from Philadelphia to Baltimore and Washington—and also a sinking fund by the operation of which the entire loan will be paid before the maturity of the bonds. The payment of the principal and interest of the general bonded debt was provided for by the appropriation of certain sums from time to time paid to the Treasurer for the use of the State. The amount thus paid by a tax on the Philadelphia, Wilmington, and Baltimore Railroad during the eleven months ending October 31, 1865, was \$94,782, to which adding the taxes from other sources, and the aggregate was \$95,203. This sum, if the tax justly due upon carriers by steam had been paid by all, and the tax upon the railroad had yielded in the same proportion for November, would have been increased to upwards of \$160,000 for the year ending December 1, 1865—a sum sufficient to pay the annual interest on all the bonds and leave forty thousand dollars to be applied to the principal.

The annual current expenditures have hitherto been met by the income from the invest-

ments of the State, together with certain taxes, fees, fines, forfeitures, &c.

Under the act of Congress of July 30, 1864, imposing a tax of ten per cent. on the circulation of State banks, the alternative was presented to them to adopt the national system authorized by act of Congress, or to go into liquidation. The State of Delaware owned \$365,700 of the capital of the Farmers' Bank. An act was therefore passed authorizing the change to the national system.

The subject of internal improvements has for years received much attention from the people of this State. The construction and operation of the Delaware Railroad has added greatly to the wealth and convenience of the people, and especially those residing in close proximity to it. It is now being rapidly extended, by its connection with a Maryland road, through the Eastern shore of Maryland to the waters of the Chesapeake, and promises, when completed, still further to enhance the wealth and prosperity of the whole section of country through which it passes. The Delaware and Maryland Railroad is now in process of rapid construction, and the expectation of those having charge of this improvement is that it will be completed within the present year. This road will be of immense advantage to a very productive section of Kent County, greatly in need of facilities for transporting produce to market. The completion of the Junction and Breakwater Railroad from Milford, by way of Georgetown to Lewes, is greatly desired by all the citizens.

The amendment to the Constitution of the United States, which had been ratified at the close of the year, abolished slavery in the State of Delaware. The number of slaves in the State in 1860 was 1,798. During the excitement of the war this number had been greatly reduced, and but few remained to receive any benefit from the measure. The free colored population in 1860 was 19,829. In the Legislature of the State this amendment was rejected.

DENMARK, a kingdom in Europe. King, Christian IX., born April 8, 1818, succeeded on November 15, 1863, King Frederick VII., in virtue of the "London Protocol" of May 8, 1852, and the Danish law of succession of July 31, 1853. Oldest son of the king, and heir apparent to the throne, Crown Prince Frederick, born June 8, 1843. Since the cession of the Duchies Schleswig, Holstein, and Lauenburg to Prussia and Austria, on October 30, 1864, the area of Denmark Proper consists of 15,896 square miles, containing (February 1, 1860) 1,608,095 inhabitants. The other dominions of Denmark (Faroe Islands, Iceland, Greenland, and the Island of St. Croix, St. Thomas, and St. John, in the West Indies) had, in 1860, a population of 124,020. The average annual increase of the population from 1855 to 1860 was 1.34 per cent. Four cities have a population above 10,000 inhabitants. Copenhagen, 155,143; Odense, 14,255; Aarhus, 11,009;

Aalborg, 10,069. On February 1, 1860, there were in Denmark only 12,907 persons not connected with the Lutheran State Church, of whom the Jews were 4,214; Roman Catholics, 1,240; Reformed, 1,761; Mormons, 2,657; Baptists, 2,270; Anglicans, 114; Apostolical Free Church, 203; and Evangelical Lutheran Free Church, 162. Since 1860 the Methodist Episcopal Church has also been established in Denmark, and in 1865 full religious liberty was granted to that body. The receipts in the budget of 1865-'66 was calculated at 9,819,682; the expenditures at 13,979,348 rix-dollars. The public debt of the Danish monarchy, inclusive of Schleswig, Holstein, and Lauenburg, was on March 31, 1864, 113,254,944 rix-dollars; the particular debt of Denmark Proper, 8,879,339 do. The share of the duchies in the public debt was fixed in the treaty of Vienna at 29,000,000 rix-dollars. The Danish army, on the peace-footing, consists of 12,000 men; during the war against Austria and Prussia it was raised to about 55,000. The fleet, in March, 1865, consisted of 29 steamers (of which 4 were iron-clads), with 376 guns, besides a number of sailing vessels.

DIALYSIS, NEW APPLICATIONS OF. *Conversion of Salt Meat into Fresh, etc.*—An article on the UTILIZATION OF BRINE will be found in the volume of this CYCLOPEDIA for 1864, the method—applied by Mr. A. A. Whitelaw, of Glasgow—being that of *dialysis*, for which see also preceding volumes. In a note in the *Jour. of the Franklin Institute* for July, 1865, it is stated that in a paper read by Dr. William Marcet before the London Chemical Society, and to be found in its journal (December, 1864), but which the writer of this has not met with, that author asserts that the material procured from brine by the dialytic process, as shown by his experiments, lacks in considerable degree the crystalloid constituents of flesh, such as the phosphates, the lactates, kreatine and kreatinine; and that it is thus in reality very poor in nutritious matter.

Another application of dialysis, however, later made by Mr. Whitelaw, that namely of a mode of freshening salted meats, appears, so far as published accounts have yet been met with, to promise a more decided practicability and success. The process, as stated by the inventor (*Chem. News*, May 28, 1864), consists essentially in placing the salt meat within a dialytic bag made of untanned skin or other suitable material, and which is further to be nearly filled with brine from the barrel; then immersing this dialyser, so charged, in a sufficient quantity of sea-water, and allowing the interchange of materials through the texture of the bag to go on for several days. As the brine becomes freed of salt, the meat gradually parts with its salt to the brine, and this portion also is in turn withdrawn by the liquid without. The process should continue until the meat is fresh enough for use—or, say, until the enclosed brine is within 1° or 2°

(Twaddell's hydrometer) of the strength of seawater. Meanwhile the piece of flesh expands like a wetted sponge, gradually acquiring at the same time a great part of the natural juice it had previously lost by salting. The brine left in the bag can, after a night's dialysis separately within fresh water, be used for soup. Salted meats so treated become, it is stated, in effect fresh; while, if without bone, they gain in juices about one-third of their weight. They may accordingly be cooked in a variety of ways not suitable for salt meats; and it is anticipated that through adoption of the process at sea, not only the palatableness of flesh foods, but also the health of those consuming them, may be improved.

In the journal last quoted (June 11, 1864), Mr. S. Johnson suggests an extension of the dialytic process, in a new manner, to the purpose of freshening and rendering edible the carcasses of animals which may have been preserved by Dr. Morgan's method—the injecting of antiseptic and preservative substances into the blood-vessels. The writer thinks that Dr. Morgan's mode of curing and preserving the flesh of animals, in applying which the carcasses must be preserved entire, must sooner or later come into quite general use, at least in certain of the British colonies, where now millions of animals are annually stripped for their hides, and left to birds and beasts of prey. He proposes that to prepare the preserved carcasses for use, when required, a current of water shall be made to circulate through the system of blood-vessels (though he does not enter into particulars as to the manner of effecting this), the vascular system of the animal thus being made to serve the purpose of Whitelaw's dialytic membrane. On shipboard, after removal of the preservative agents, the phosphates, etc., sometimes recommended for supplying the want created through lack of vegetable food, could be introduced. The writer also thinks that the objection to curing meats by creosote, or by phenic acid, owing to difficulty of afterward removing their flavor, may by the like process be obviated. A later note states that the French Government has had trial made of Dr. Morgan's method, in the preserving of entire sheep and oxen, and that the results have been found satisfactory. The flesh of animals killed and so injected was, several months later, found good.

If the processes now indicated prove to be practicable, it would appear that through a resort to them the transportation of game and of slaughtered animals to distances in the warm season could be carried on to an extent which circumstances do not now permit; and that, both for land transportation and for use at sea, a very considerable saving might be effected in the way of dispensing with the necessity of packing in ice.

Detection of Vegetable Poisons by Dialysis.—M. Grandeau has found the dialytic method highly applicable to the separation of the alkaloids from animal matters with which they

are liable to be found intermixed. He cites instances of detection of digitaline in urine containing but 0.01. gramme of that substance, and also of the separation by the method in question of morphine, brucine, and digitaline from animal matters.

In the second volume of the "Clinical Lectures and Reports" of the London Hospital, Dr. Letheby has two papers on the subject of poisons and their detection, the first entitled "On Liquid Diffusion in Relation to Physiology and Toxicology." In this, he confirms Grandeau's conclusion as to the value of dialysis as a mode of detecting the presence of organic poisons, and shows its application also in case of arsenic and tartar-emetic. While thus admitting, however, the utility of the process for discovering the presence of such poisons, he judges that dialysis is not well suited to determining their quantity.

DIMAN, Hon. BYRON, Governor of Rhode Island, 1846-'47, born in Bristol, R. I., in 1795, died at Bristol, August 1, 1865. He grew up before the era of public schools, enjoying the private tuition of the excellent Bishop Griswold, whose faithful and judicious instructions he always recalled with affectionate regard. His studies at school formed, however, but a small part of his acquisitions. Up to a late period in his life he remained a diligent reader, and few men, devoted to active business, possessed a more varied store of general information. He was particularly at home in all matters of geography and topography, and would often astonish his friends with the exactness of his knowledge of places he had never visited. There was scarcely a European city of note with the general outline of which he was not well acquainted. The most marked feature, however, in his intellectual character, was his fondness for antiquarian lore. Possessing a wonderful retentive memory for dates and persons, he delighted to discuss the days gone by, and call back the men of a former generation. With him, it may be safely affirmed, perished one of the largest funds of local history possessed by any man of his time. Nor was his knowledge limited to local traditions. He was well versed in New England history, and in the history of the mother country, especially during the Commonwealth. An ardent admirer of the Puritans, and especially of their great hero, Cromwell, he always stood firm for rational liberty in Church and State, and gave his most emphatic approval to the great measures of President Lincoln. Of English politics he also possessed a very exact knowledge. At an early age Gov. Diman entered the counting room of the late Hon. James De Wolf, who, during the war of 1812, had accumulated one of the largest estates, for that time, in New England. At the death of Mr. De Wolf, in 1837, he continued for a long time to manage much of the property. At one time he was extensively engaged in the whale fisheries, and used to show with just pride a beautiful model

of a ship completely equipped, presented to him by one of his officers upon whom he had conferred a favor. As the whale fishery declined, he turned his attention to cotton manufactures, and became treasurer and afterward president of the Bristol Steam Mill. He was also for many years president of the Bank of Bristol. He always took great interest in the affairs of the church which he attended, and at one time was president of the "Catholic Congregational Society." He was a liberal contributor toward the erection of the solid and beautiful structure, whose granite buttresses will long stand as a grateful memorial of the labors of his pastor, the venerable Dr. Shepard. For the greater part of his life he felt a deep interest in political questions, and took an active part in political contests. He was one of the convention which nominated Gen. Harrison for the Presidency in 1850, and did all in his power to effect the election of his favorite political leader, Henry Clay. For Mr. Clay he cherished that almost idolatrous enthusiasm which that eminent statesman, more than any American who has lived since Alexander Hamilton, seemed everywhere to awaken. For many years, under the old charter, Gov. Diman was either a member of the General Assembly or a Senator, and was Lieutenant-Governor for three years after the adoption of the present constitution. He was elected Governor in 1846, in the exciting canvass that attended the disruption of the famous "Law and Order" party. Since that time he felt less interest in politics, until the great issue came up which resulted in the civil war. His death was the result of a severe apoplectic attack.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. Some important correspondence took place during the year 1865 relative to events of interest to the United States.

Recognition of the End of the War.—The following letter was addressed by Earl Russell to the Lords Commissioners of Admiralty, recognizing the close of the war in this country:

FOREIGN OFFICE, June 2d, 1865.

MY LORDS: I have the honor to state to your Lordships, that since the date of my letter of the 11th ultimo, intelligence has reached this country that the late President of the so-called Confederate States has been captured by the military forces of the United States, transported as a prisoner to Fortress Monroe, and that the armies hitherto kept in the field by the Confederate States have for the most part surrendered or dispersed. In this posture of affairs, her Majesty's Government are of the opinion that neutral nations cannot but consider the civil war in North America as at an end. In conformity with this opinion, her Majesty's Government recognize that peace has been restored within the whole territory of which the United States of North America, before the commencement of the civil war, were in undisturbed possession. As a necessary consequence of such recognition, on the part of her Majesty's Government, her Majesty's several authorities in all ports, harbors, and waters, belonging to her Majesty, whether in the United Kingdom, or beyond the seas, must henceforth refuse permission to any vessels of war carrying the Confederate flag, to enter such ports, harbors,

and waters, and must require any Confederate vessels of war, which at the time when these orders reach her Majesty's authorities in such ports, harbors, and waters, may have already entered therein, on the faith of a proclamation heretofore issued by her Majesty, and which having complied with the provisions of such proclamation, may be actually within such ports, harbors, and waters, forthwith to depart from them.

But her Majesty's Government consider that due regard for national good faith and honor require that her Majesty's authorities should be instructed as regards any such Confederate vessels so departing, that they should have the benefit of the prohibition heretofore enforced against the pursuit of them within twenty-four hours by a cruiser of the United States lying at the time within any such ports, harbors, and waters, and that such prohibition should be then and for the last time maintained in their favor. If, however, the commander of any Confederate vessel of war which may be found in any port, harbor, or waters of her Majesty's at the time these new orders are received by her Majesty's authorities, or may enter such port, harbor, or waters within a month after these new orders are received, should wish to divest his vessel of her warlike character, and after disarming her, to remain without the Confederate flag within British waters, her Majesty's authorities may allow the commander of such vessel to do so at his own risk in all respects, in which case he should be distinctly apprised he is to expect no further protection from her Majesty's Government, except such as he may be entitled to in ordinary course of administration of law in time of peace. The rule as to twenty-four hours would, of course, not be applicable to the case of such vessels.

I have addressed a similar letter to the Secretary of State for the Home, Colonial, India, and War Offices, and also to the Lords Commissioners of her Majesty's Treasury, requesting them, as I do your Lordships, to issue instructions in conformity with the decision of her Majesty's Government to the several British authorities at home or abroad who may be called upon to act in the matter.

I am, &c., RUSSELL.

Official notification having been given to the Government, that the end of the war was recognized, as stated, Mr. Seward writes to the British Minister, Sir F. W. H. Bruce, at Washington, as follows:

DEPARTMENT OF STATE, WASHINGTON, June 19, 1865.

SIR: Due consideration has been given to a despatch which Earl Russell addressed to you on the 2d of June, instant, and of which, on the 14th inst., you were so kind as to leave a copy at this department. The President is gratified by the information which that paper contains, to the effect that her Majesty's Government have determined to consider the war which has lately prevailed between the United States and the insurgents of this country to have ceased *de facto*, and that her Majesty's Government now recognize the reestablishment of peace within the whole territory of which the United States were in undisturbed possession at the beginning of the civil war.

The President is also gratified to learn from Earl Russell's despatch that her Majesty's Government will forthwith send to her Majesty's authorities in all ports, harbors, and waters belonging to her Majesty, whether within the United Kingdom or beyond the seas, orders henceforth to refuse admission into any such ports, harbors, and waters of any vessel of war carrying the insurgent flag, and to require any insurgent vessels of war, which after the time that the orders may be received by her Majesty's authorities may have already entered such ports, and which having complied with the previous proclamations of the British Government, may be actually within such

ports, harbors, and waters, forthwith to depart from the same.

It is with regret, however, that I have to inform you that Earl Russell's despatch is accompanied by some reservations and explanations which are deemed unacceptable by the Government of the United States. It is hardly necessary to say that the United States do not admit what they have heretofore constantly controverted, that the original concession of belligerent privileges to the rebels by Great Britain was either necessary or just, or sanctioned by the law of nations.

The correspondence which took place between this Government and that of her Majesty at an early stage of the insurrection shows that the United States deemed the formation of a mutual engagement by Great Britain with France, that those two Powers would act in concert in regard to the said insurrection, to be an unfriendly proceeding, and that the United States therefore declined to receive from either of those powers any communication which avowed the existence of such arrangement. I have therefore now to regret that Earl Russell has thought it necessary to inform this Government that her Majesty's Government have found it expedient to consult with the Government of France upon the question whether her Majesty's Government will now recognize the restoration of peace in the United States.

It is a further source of regret that her Majesty's Government avow that they will still continue to consider that any United States cruiser, which shall hereafter be lying in a British port, harbor, or waters, shall be detained twenty-four hours, so as to afford an opportunity for an insurgent vessel, then actually being within said port, harbor, or waters, to gain the advantage of the said time for her departure from the same port, harbor, or waters.

It is a further source of regret that her Majesty's Government have deemed it proper to make the additional reservation in favor of insurgent vessels of war, that for the period of a whole month which shall elapse after the new orders now to be issued by her Majesty's Government shall have been received by the said authorities, any insurgent vessel which may be found in or which may enter any port, harbor, or waters of her Majesty's dominions, and which may desire to divest itself of its warlike character, and to assume the flag of any nation recognized by her Majesty's Government, with which her Majesty is at peace, will be allowed to do so; and further, that such vessels, after disarming themselves, will be permitted to remain in such port, harbor, or waters without an insurgent flag, although the twenty-four hours' rule will not be applicable to the cases of such vessels. Far from being able to admit the legality or justice of the instructions thus made, it is my duty to inform your Excellency that, in the first place, the United States cannot assent to an abridgment of reciprocal hospitalities between the public vessels of the United States and those of Great Britain. So long as her Majesty's Government shall insist upon enforcing the twenty-four hours' rule before mentioned, of which the United States have so long, and as they think, so justly complained, the United States must apply the same rule to public vessels of Great Britain.

Again, it is my duty further to state that the United States cannot admit, and on the contrary they controvert and protest against the decision of the British Government, which would allow vessels of war of insurgents or pirates to enter or leave British ports, whether for disarmament or otherwise, or for assuming a foreign flag, or otherwise. As to all insurgent or piratical vessels found in ports, harbors, or waters of British dominions, whether they entered into such ports, harbors, or waters before or after any new orders of her Majesty's Government may be received by any authority of her Majesty's Government established there, the Government maintains and insists that such vessels are forfeited to and ought to be de-

livered to the United States upon reasonable application in such cases made, and that if captured at sea, under whatsoever flag, by a naval force of the United States, which capture will be lawful.

Notwithstanding, however, the exceptions and reservations which have been made by her Majesty's Government, and which have been herein considered, the United States accept with pleasure the declaration by which her Majesty's Government have withdrawn their former concessions of belligerent character to the insurgents, and this Government further admits that the normal relations between the two countries being practically restored to the condition in which they stood before the civil war, the right to search British vessels has come to an end by an arrangement satisfactory in every material respect between the two nations.

It will be a source of satisfaction to this Government to know that her Majesty's Government have considered the views herein presented in a spirit favorable to the establishment of a lasting and intimate friendship between the two nations. I have, &c.

WILLIAM H. SEWARD.

On the same day Mr. Seward addressed the following note to the Secretary of the Navy:

DEPARTMENT OF STATE, WASHINGTON, June 12, 1865.
Hon. Gideon Welles, Secretary of the Navy:

SIR: I have the honor to transmit for your information a correspondence between Sir Frederick W. H. Bruce and the department, upon the subject of the withdrawal of the pretended concession of belligerent rights to the insurgents.

In view of this correspondence I suggest, therefore, that you communicate to the naval officers of the United States the results following therefrom, namely:

Great Britain withdraws her concessions heretofore made of a belligerent character from the insurgents.

That the withdrawal of the twenty-four hours' rule has not been made absolute by Great Britain, and that therefore the customary courtesies are not to be paid by our vessels to those of the British navy.

The right of search of British vessels is terminated. Of course this has no bearing upon the operation of the existing slave-trade treaty.

Any insurgent or piratical vessels found on the high seas may be lawfully captured by vessels of the United States.

I have the honor to be, sir,

Your obedient servant,

WILLIAM H. SEWARD,

Secretary of State.

This was soon followed by a complete restoration of intercourse between the two countries, on the same footing as before the war. Letters also issued from the Governments of France and other nations recognizing the close of the war, but in more complete and positive terms than that of Earl Russell.

The Shenandoah.—The departure from London, under the British flag, of the steamer *Sea King*, with the view of meeting near the Island of Madeira another steamer, the *Laurel*, despatched from Liverpool under the same flag and freighted with arms, munitions of war, and supplies, and having on board officers and crew for the purpose of arming and equipping the other vessel to carry on hostilities against the United States, the meeting of the ships at the point of rendezvous, the formal transfer of the *Sea King* to emissaries of the Confederate States, her being declared a Confederate man-of-war, under the name of the *Shenandoah*, and

the transshipment of the cargo and men from the *Laurel* to the other, thus fitting out, equipping, and manning her as a rebel cruiser, in which character she was used to depredate on American commerce, afforded grounds for a continuance of the correspondence between the representatives of the two Governments upon this violation of neutrality, and the claim of the United States for indemnity for losses sustained from vessels so furnished and fitted out. Under date of October 21, 1865, Mr. Adams addressed Earl Russell as follows:

LEGATION OF THE UNITED STATES, }
LONDON, October 21, 1865.

MR LORD: Under instructions from my Government, I have the honor to submit to your consideration copies of certain papers relative to the destruction of the whaling barque *William C. Nye* by the vessel known under the name of the *Shenandoah*.

I am further directed to state, that in view of the origin, equipment, and manning of that vessel, my Government claims to look to that of Great Britain for indemnification for this and other losses that have been occasioned by her depredations.

In order that the facts attending this particular case may be fully laid before you, I pray your Lordship's attention to the series of papers herewith transmitted, which relate to a very material portion of this vessel's career.

In the statement of this case I shall endeavor to confine myself to a recapitulation of the principal facts. To this end it will be necessary for me to recall your attention to certain portions of the correspondence which I have heretofore had the honor to hold with your Lordship.

In the letter which I was directed to address to your Lordship on the 8th of September, 1864, when I was under the painful necessity of remonstrating against the conduct of the commander of the yacht *Deerhound* in rescuing from the hands of the victor in the strife many of the crew of the *Alabama*, I received orders to submit to your consideration four propositions, two of which were in the following words:

3. That the continuance of these persons to receive from any British authorities or subjects pecuniary assistance or supplies, or the regular payment of wages, for the purpose of more effectually carrying on hostile intentions from this kingdom as a base, is a grievance against which it is my duty to remonstrate, and for which I ask a remedy in their conviction and punishment.

4. The occasion has been thought to warrant a direction to me to ask with earnestness of her Majesty's Government that it should adopt such measures as may be effective to prevent the preparation, equipment, and outfit of any further naval expedition from British shores to make war against the United States.

To these propositions your Lordship was pleased to reply on the 26th of September, by stating that the rescue of these people from the sea, and from their captors, was regarded by you as a praiseworthy act of humanity, and that after their escape into this kingdom as a refuge any attempt to restore them could be viewed by you only as a violation of hospitality. No action whatever, so far as I have had an opportunity of knowing, has followed upon either of these requests.

On the 10th of November following I took the liberty of calling your Lordship's attention to the fact, that these refugees, who had been enjoying the hospitality of a neutral kingdom, were in reality persons most of them British subjects, originally enlisted within this kingdom for an unlawful purpose, actually still engaged in the same business, and held together with a view of making a part of another enterprise of the same sort with that of the *Alabama*, conceived and executed in all its parts by agents of

the rebels residing all the time under the protection of her Majesty's neutral territory at Liverpool.

The result, as displayed in the papers now submitted, shows conclusively that the "refuge" spoken of by your Lordship has been turned into a den of robbers; and that the humanity so freely commended has in its consequences been productive of widespread suffering to many industrious and innocent men.

On the 18th of November, 1864, I had the honor to transmit to your Lordship certain evidence which went to show that on the 8th of October preceding a steamer had been despatched under the British flag from London, called the *Sea King*, with a view to meet another steamer, called the *Laurel*, likewise bearing that flag, despatched from Liverpool on the 9th of the same month, at some point near the Island of Madeira. These vessels were at the time of sailing equipped and manned by British subjects, yet they were sent out with arms, munitions of war, supplies, officers and enlisted men, for the purpose of initiating a hostile enterprise to the people of the United States, with whom Great Britain was at the time under solemn obligations to preserve the peace.

It further appears that on or about the 18th of the same month these vessels met at the place agreed upon, and there the British commander of the *Sea King* made a formal transfer of the vessel to a person of whom he then declared to the crew his knowledge that he was about to embark on an expedition of the kind described. Thus knowing its nature, he, nevertheless, went on to urge these seamen, being British subjects themselves, to enlist as members of it.

It is also clear that a transfer then took place from the British steamer *Laurel* to the *Sea King* of the arms of every kind with which she was laden for this same object; and, lastly, of a number of persons, some calling themselves officers, who had been brought from Liverpool expressly to take part in the enterprise. Of these last a considerable portion consisted of the very same persons, many of them British subjects, who had been rescued from the waves by British intervention at the moment when they had surrendered from the sinking *Alabama*, the previous history of which is but too well known to your Lordship.

Thus equipped, fitted out, and manned from Great Britain, this successor to the destroyed corsair, now assuming the name of the *Shenandoah*, though in no other respect changing its British character, addressed itself at once to the work for which it had been destined. At no time in her later career has she ever reached a port of the country which her commander has pretended to represent. At no instant has she earned any national characteristic other than that with which she started from Great Britain. She has thus far roamed over the ocean receiving her sole protection against the consequences of the most piratical acts from the gift of a nominal title which Great Britain first bestowed upon her contrivers, and then recognized as legitimizing their successful fraud.

I am not unmindful of the grounds which have been heretofore assigned by your Lordship as releasing her Majesty's Government from responsibility for the flagrant conduct of this vessel. It is urged that there is no power to prevent vessels bearing the semblance of merchant ships from leaving the ports of this kingdom and meeting each other at some place on the ocean far beyond her Majesty's jurisdiction for the execution of a purpose like that now in question. The parties to it violate no law of the land, provided they commit no offence against the neutrality of the kingdom within its territorial limits. While I cannot myself quite appreciate the force of this reasoning, so far as it may be applied to absolve one nation from its international obligations with another merely on account of the skill of its subjects in evading the local law, I am at the same time not disposed to underrate the difficulties which the best

intentioned Government may, in performing its duty, experience from that cause. Its will may certainly be sometimes baffled by the arts of desperate and profligate adventurers.

Did the merits of this case depend upon the mere fact of the escape of the vessel from a British port by eluding the vigilance of the authorities, it might, perhaps, be considered as not entailing upon her Majesty's Government so heavy a responsibility. There are other circumstances connected with that event which aggravate its nature. One of the most grave appears to be the fact that, after the escape had occurred, and the nefarious project had been consummated, her Majesty's Government, nevertheless, instead of taking prompt measures to denounce the transaction thus completed in defiance of its authority, and refusing to give it the smallest countenance in any British port, deliberately proceeded to accept the result as legitimate, and to direct that this vessel so constituted should be from that moment entitled to all the privileges which an honest belligerent might claim or any vessel of the United States would enjoy.

The consequences of what I cannot but regard as this most unfortunate construction of international law, by which success in committing the fraud was made the only test to purge it of its offensive nature, have been manifested in the manner in which the *Shenandoah* was received wherever it went in the British dependencies. The supplies there obtained, under one pretence and another, particularly in the remote ports of Australia, have enabled this vessel to keep the seas, and to continue her depredations long after she had been stripped of the last shadow of the character with which her Majesty's Government voluntarily chose to invest her at the outset. It is impossible to read the papers which have been forwarded to my Government from the Consul at Melbourne, copies of which are submitted with this note, without feeling that in no instance on record have similar concessions been made to a vessel of such a fraudulent origin, or of such offensive partiality being manifested toward it by a portion of a nation professing to style itself neutral. In consenting to receive this vessel, after the facts of its illegal origin and outfit had been satisfactorily established, I cannot resist the conviction that her Majesty's Government assumed a responsibility for all the damage which it has done, and which, down to the latest accounts, it was still doing, to the peaceful commerce of the United States on the ocean.

I pray permission to call your Lordship's attention to still another of the circumstances which appear to me among the most grave belonging to this case. This enterprise seems to have been the last of the series conceived, planned, and executed exclusively within the limits of this kingdom. It emanated from persons established here since the beginning of the war as agents of the rebel authorities, who have been more effectively employed in the direction and superintendence of hostile operations than if they had been situated in Richmond itself. In other words, so far as the naval branch of warfare is concerned, the real bureau was fixed at Liverpool, and not in the United States. The vessels were constructed or purchased, the seamen enlisted, the armament obtained, the supplies of every kind procured, the cruises projected, and the officers and men regularly paid here. In other words, all the war made on the ocean has been made from England as the starting point. I have had the honor to furnish from time to time to your Lordship evidence of the most conclusive character touching most of these points, and I have even designated the chief individuals to whom the supreme direction of the operations had been intrusted. I fail to be able to recall in history a case of more flagrant and systematic abuse of the neutrality of a country by a belligerent, kept up for an equal length of time. But what I cannot but think still more remarkable is that, notwithstanding the fact of the frequent representations and remonstrances made by myself under

the instructions of my Government, so far as I have been permitted to learn, not a single effort was ever made by her Majesty's Government either to prevent or to punish the persons known to be engaged in this most extraordinary violation of the law of the land. Prosecutions have been instituted, indeed, against a few persons who were alleged to have been acting in contravention of the provisions of the Enlistment Act. Mr. Rumble, after escaping from justice by the leniency of a jury, received a decided censure from the Government; Captain Corbett, the officer commanding the *Sea King*, though prosecuted, appears never to have been brought to trial. But these and a few minor cases were exclusively those of British subjects, who appear to have been acting merely as instruments of a power above their heads. Not a single individual directly connected with the rebellion, and sent here to conduct the operations, has ever been molested in any manner. It cannot, therefore, be at all a matter of surprise when the main-spring of the various naval enterprises, the director of the *Alabamas*, *Floridas*, *Georgias*, and *Shenandoahs*, was left wholly undisturbed, that it has been impossible to put a stop to the damage which has ensued to the people of the United States from the ravage and depredation committed upon them by the operations carried on from this kingdom. At the very time when the fortunate encounter of the *Alabama* by the United States steamer *Kearsarge* terminated in the destruction of one of these corsairs, the offspring of the violated law of this land, and when the people of the United States were congratulating themselves that one great cause of irritation between the two countries was at last laid to rest, it now appears that the directing power to which I have alluded at once turned its attention to a husbanding of the seamen saved by a trick from the hands of the victor, with a view to the immediate production of a successor to the same work. The evidence which I now have the honor to submit shows that many of the crew saved from the *Alabama* have been from the beginning, and still continue to be, a part of the crew of the *Shenandoah*. Neither does it appear from any thing within my knowledge that the smallest attention was ever paid by her Majesty's Government to the representations which I had the honor to submit at the time touching the probability of precisely such an operation.

That the principal person engaged in the direction of this bureau was an officer by the name of J. D. Bullock, expressly despatched from Richmond for the purpose of organizing it, is a fact to which I had the honor to call your Lordship's attention in many different forms during the progress of the struggle. Yet, in spite of all this evidence, Mr. Bullock appears to have been permitted to conduct his operations, and especially to shape the outfit and the entire cruise of the *Shenandoah*, without the smallest interference from any official quarter.

It may, however, be objected that, whatever may have been the nature of my remonstrances, no sufficient evidence was presented of the official character and proceedings of Mr. Bullock to sustain the initiation of any prosecution against him in the Courts. To which I am pained to be constrained to reply that my Government has reason to believe that her Majesty's Government has in one instance considered that evidence sufficient to sustain it in recognizing the authority of Mr. Bullock over the commander of the *Shenandoah* so far as to stop its career, and in consenting to furnish the medium by which to transmit his orders to that vessel. The power to prevent certainly implies the previous existence of a power to control. I beg permission to express the hope that inasmuch as the papers in which this fact appears have not come into the hands of my Government by direct communication from your Lordship I may presume them not to be genuine.

Should the fact be otherwise, however, while readily conceding that the motive for such a proceeding

may have been substantially of the most friendly nature, in accelerating the termination of the ravage committed by that vessel, I do not at the same time feel at liberty longer to disguise from your Lordship the sense of extreme surprise which the knowledge of it has caused, not less on account of the singular recognition thus incidentally made of the authority of one, long pointed out as the principal offender against the neutrality of this kingdom, and enjoying a degree of impunity difficult to be understood, than of the fact that her Majesty's Government appears to have determined thus to act without deigning any signification of its purpose to the party most directly interested in the decision.

Since the preceding was written I have had the honor to receive unofficially from your Lordship the gratifying intelligence that her Majesty's Government have decided to send orders to detain the *Shenandoah* if she comes into any of her Majesty's ports, and to capture her if she be found on the high seas. I have taken great pleasure in transmitting this to my Government. At the same time, I trust I may be pardoned if I am compelled to remark that had her Majesty's Government felt it to be consistent with its views to adopt this course at the time when it adopted that upon which it has been my painful duty to animadvert, it would have most materially contributed to allay the irritation in my own country inseparable from the later outrages committed by that vessel.

Having thus acquitted myself of the unpleasant duty with which I have been charged, I pray, &c.

CHARLES FRANCIS ADAMS.

On the 6th of November, 1865, the *Shenandoah* arrived at Liverpool, with a crew of 133 men. She was given up by her commander to the British authorities at Liverpool, and her officers and crew suffered to depart—Earl Clarendon stating, in answer to the remonstrance of Mr. Adams, that on inquiry none known to be British subjects were on board, and that in the absence of some definite charge of an offence cognizable by British law, and supported by legal evidence, the British Government could not assume or exercise the power of keeping any of them under any kind of restraint.

On the 10th of November, the vessel with her stores, etc., was delivered up by the senior naval officer at Liverpool to the United States Consul at that point. An answer to Mr Adams' letter of October 21st, was despatched by Earl Clarendon, who had succeeded Lord Russell in the foreign office.

FOREIGN OFFICE, NOV. 13.

SIR: I have now the honor to reply to the letter which you addressed to my predecessor on the 21st of October last respecting the proceedings of the late Confederate steamer *Shenandoah* in the Pacific.

But I must in the first instance observe, that in alluding to the answer given to you by Lord Russell, on the 26th of September, 1864, respecting the conduct of the yacht *Deerhound* in rescuing from the sea a portion of the crew of the Confederate steamer *Alabama*, after her conflict with the United States cruiser *Kearsarge*, you omit to notice the principal passage in that answer, in which Lord Russell says: "In point of fact, however, her Majesty's Government have no lawful power to arrest and deliver up the persons in question" (that is, the persons rescued from the sinking *Alabama*). "They have been guilty of no offence against the laws of England, and they have committed no act which could bring them within the provisions of the treaty between Great Britain and the United States for the mutual surrender of offenders; and her Majesty's Government are, therefore, entirely without any legal means by which, even

if they wished to do so, they could comply with your above-mentioned demand" (namely, that those officers and men should now be delivered up to the Government of the United States as escaped prisoners of war).

I may add, that if beyond the limits of British territory the commander of the *Deerhound* had improperly interfered to protect the officers and crew of the *Alabama* from the belligerent rights of the United States, it was for the commander of the *Kearsarge* to use the means in his power for the prevention of such interference. Once upon British soil, they were entitled to the protection of British laws, which they had in no respect violated; and her Majesty's Government could not deprive them of that protection because of the possibility (whether afterwards realized or not) that they might again leave this country and become engaged in further hostilities with the United States. The demand for their delivery up, which was made by you in fact, was identical with one which had at various times been made by foreign Governments for the extradition or expulsion of other foreign refugees—Poles, Hungarians, and others; and to which the invariable answer had been that the laws of this country did not empower the Government to take any such measure. The answer to every such demand is found in the fundamental institutions of this country, in the law of *habeas corpus*, and of trial by jury. If any evidence had been offered to her Majesty's Government identifying any of those persons as British subjects who had unlawfully enlisted in the service of the Confederate States, or who were guilty of any other violation of our laws, they would have been duly prosecuted; but no such evidence was brought forward.

The case of the *Deerhound*, therefore, furnishes, when examined, no materials for complaint against her Majesty's Government.

The next subject of complaint preferred by you is the conduct of her Majesty's Government in not preventing the vessel called the *Sea King* from leaving the shores of England to join another vessel called the *Laurel*, which was sent to meet her near Madeira with arms and ammunition.

You do not affirm that her Majesty's Government had any power or jurisdiction over either of these vessels when beyond the limits of British territory; but, unless that assertion be made or implied, the complaint falls to the ground. For while these vessels were in British waters no information was given (much less any evidence offered) to her Majesty's Government to show that any persons concerned in their outfit or equipment were guilty of or were contemplating any infringement of the Foreign Enlistment Act, or of any other law in force in the United Kingdom, nor even that they were suspected of being engaged in any design whatever, hostile or dangerous to the United States.

Your complaint, indeed, is against the general laws of this country. The executive power of the British Crown does not, nor does the executive power (as the Act of Congress of 1813 is understood in this country) of the United States, extend to the detention and seizure of an unarmed merchant vessel, on the mere suspicion that she will or may be armed at sea in the waters of a foreign power.

Under the municipal law of this country (which goes at least as far as any obligation which may be supposed to attach to it under the law of nations) the British Government is able to detain and prosecute natural-born British subjects who may enter into the war service of a foreign power without the license of the Crown, or who within her Majesty's dominions may fit out, arm, or equip (or attempt to fit out, arm, or equip) vessels to cruise or commit hostilities against any State in amity with her Majesty. But the British laws do not and cannot effectually reach subjects of her Majesty who may go to a foreign State, and there enter into any kind of naval or military service. You are well aware that many subjects

of her Majesty have gone from this country to the United States, and have there, during the present war, entered into the military service of the United States, and fought against the armies of the Confederates, contrary to her Majesty's proclamation.

Such occurrences as these the law of England (and, her Majesty's Government believe, the law of the United States) cannot prevent, and has very rarely the power to punish. It is obvious (as you indeed admit) that the law which prohibits the equipment of vessels destined to make war on States with which her Majesty is at peace may, like most other human laws, be evaded. No human means can in all cases effectually prevent individuals from purchasing or otherwise acquiring a vessel with the secret intention of arming her beyond the territorial limits of the country, and then cruising against a State with which her Majesty is at peace, or from successfully executing that intention. It is distinctly denied that the Government of any State is, upon any recognized principle of international law, responsible for such an event.

Feeling, as it would seem, that for the equipment and armament of the Shenandoah no original responsibility can reasonably be cast on her Majesty's Government, you represent, as the main substance of this part of your complaint, that this vessel, after she had been equipped and commissioned was recognized by her Majesty's Government as a public ship of war of a lawful belligerent, and was admitted as such into British ports.

This is in truth nothing more than the often repeated objection to the course adopted by her Majesty's Government in recognizing both parties in the late war as belligerents, and (if belligerents at all) then as belligerents wherever they were found actually carrying on war, whether by sea or by land. You are of course aware that the Sea King was transferred, when beyond the territory of her Majesty, to the agents of the Confederate States, and from them (while still beyond her Majesty's territory) received a commission as a ship of war under the name of the Shenandoah. It was a necessary consequence of the principle of neutrality, and of the recognition of the state of war (by virtue of which alone the blockade was enforced with so much severity against neutrals by the United States), that the validity, for the purposes of the war, of such a commission should be recognized by the Government of this country.

The supplies given to this vessel, and the hospitality afforded to her in a British port during the continuance of the war, were merely the same which were always afforded to the vessels of war of the United States; to refuse them in such a case would have been not to vindicate, but to depart from the neutrality declared by her Majesty. If the fact were (as you suggest) that the supplies so afforded had the effect of enabling the Shenandoah to continue hostilities after the Confederate States had ceased to be belligerents, it is obvious that such an occurrence might equally take place in any other case in which a ship of war of any belligerent nation, having taken in ordinary supplies at a neutral port, might continue hostilities after the restoration of peace, either through ignorance of that fact, or from any less excusable motive.

So far, then, as your objection to the enjoyment of belligerent rights by the Shenandoah in the ports of Great Britain is founded on the allegation of her original illegal equipment, I have already sufficiently pointed out that the circumstances of her equipment were not such as in the eye of the English law, or consequently in the view of the English Government, could be regarded as illegal. She was, therefore, as long as the war subsisted, naturally treated on the same footing as any other vessel of a recognized belligerent power.

But even had the case been otherwise, and had her equipment and origin been undoubtedly illegal, I should have experienced hardly less surprise at the

claim put forward on behalf of the United States in the following sentence of your despatch:

In consenting to receive the vessel after the facts of its illegal origin and outfit had been satisfactorily established, I cannot resist the conviction that her Majesty's Government assumed a responsibility for all the damage which it has done.

If I needed (which in this case I do not) to find an answer to a claim founded upon such principles, I should have to seek no further than the records of recent American law and the practice of modern American statesmen. In that chapter of American history which has lately become familiar in these discussions, relating to the transactions which arose out of the revolt of the South American Republics, will be found a complete refutation from American authorities of the doctrine on which you now appear to insist.

As you are well aware, numerous vessels of war were fitted and refitted under the commission of the revolted States in the ports of the United States to cruise against the commerce of Spain and Portugal. These vessels started on their original voyage, manned and armed in the ports and by the subjects of the United States, and returned to the same ports over and over again after repeated cruises. Though the fact of the illegal origin and equipment of such vessels was established, not by vague surmise or *ex parte* statement, but (in several instances) by judicial proof adduced in suits instituted for the restoration of their prizes when brought within the neutral jurisdiction, the Government of the United States does not appear ever to have taken any step for the purpose of excluding any of those vessels from the full and unrestricted enjoyment, within their own ports or elsewhere, of the same rights (with the single exception of the right to retain prizes brought in) which it accorded to any other ships of war of a belligerent power.

Nevertheless, so far from admitting that by such conduct, as you now contend, they "assumed a responsibility for all the damage done" by such vessels, your Government distinctly repudiated any such responsibility when urged upon them by arguments almost identical with those on which you now rely.

While admitting that several prosecutions have been instituted by her Majesty's Government against persons amenable to British law who had been shown by probable evidence to have been guilty of violating the Foreign Enlistment Act (Capt. Corbett, of the Sea King, to whom you refer as having never been brought to trial, is awaiting his trial at the present moment), you make it, nevertheless, matter of complaint that no legal proceedings have been taken against any of the Confederate agents in this country, under whose direction and management various operations, in abuse of her Majesty's neutrality, are said to have been conducted.

But no information supported by evidence on which a prosecution could be judiciously instituted or successfully maintained has ever been had before her Majesty's Government for the purpose of showing that the laws of this country were, in fact, so violated by any of those persons.

You are well aware of the extent to which not only municipal, but also international law, permits either of two belligerents to avail themselves of the resources of a neutral country, by mercantile agencies, by loans of money, and by the purchase and shipment of every kind of munitions of war, without giving to the other belligerent any cause of complaint against the country where such operations are carried on. Full advantage has been taken of this state of international law by the United States themselves during the recent contest.

If, in addition to operations of this nature, the Confederate agents in this country superintended or directed other designs involving the violation of our laws, they were careful (as it might be expected they would be) to keep their participation in any such ill

gal acts as far as possible out of sight. The agency of Captain Bullock for the Confederate Government was, indeed, to some extent disclosed by parts of the evidence relating to ships which were the subject of actual or contemplated proceedings by her Majesty's Government, but not in such a manner nor to such an extent as to make it probable, in the judgment of her Majesty's advisers, that if proceedings had been instituted against him personally they would have been attended with a successful result.

You refer, indeed, to the recent transmission, under the orders of her Majesty's Government, of Captain Bullock's letter to the commander of the Shenandoah, directing him to cease from the further prosecution of hostilities, as proof that her Majesty's Government have, at least in one instance, considered themselves to be in possession of sufficient evidence of Captain Bullock's authority to control or prevent such hostilities. But it is not clear that proof, even of the extent and kind of authority assumed in that letter, over the Shenandoah when at sea, would have supplied the want of further evidence of any infringement alleged to have been committed by Captain Bullock of the laws of this country. Your surprise, however, on hearing of that circumstance, as well as the inference which you draw from it, of the previous possession of evidence against Captain Bullock by her Majesty's Government, will, I hope, cease when you learn that this letter was transmitted by her Majesty's Government in compliance with the request of Mr. Mason (the known and accredited agent in Europe of the Confederate States) made to Earl Russell in a letter dated the 20th of June last, after the conclusion of the war.

Whatever might have been the extent of the previous knowledge or ignorance of her Majesty's Government with respect to the acts of Captain Bullock, they were entitled to believe, on Mr. Mason's authority, that the letter sent by him for transmission would be effectual for its intended purpose; in which, being a purpose of humanity, especially beneficial to the United States, her Majesty's Government felt they might safely endeavor so far to coöperate without any risk of being misunderstood by the United States Government. I am, &c., CLARENDON.

November 18, 1865, Mr. Adams addressed a reply to a letter of Earl Russell, which was afterwards referred to as a substantial answer to the above communication of Earl Clarendon, of November 18. He says:

LEGATION OF THE UNITED STATES, }
LONDON, November 18, 1865. }

MR LORD: I have the honor to acknowledge the reception of a note from your predecessor, the Right Hon. Earl Russell, dated the 2d instant, in reply to one which I addressed to him on the 18th of September last, on certain important questions now under consideration between her Majesty's Government and that which I have the honor to represent.

It is with the most profound regret that I am thus compelled to open my relations with your Lordship in a spirit of controversy. I can only urge in extenuation of this proceeding the great importance of the subjects under consideration—not simply as between two countries, but from their wider bearing on the future relations of all the civilized nations on the globe. Furthermore, I flatter myself that, from the contraction necessarily going on of the topics under treatment, we may, before long, arrive at some sort of termination of a discussion already on my part, I fear, rather tediously protracted.

His Lordship's note appears to be substantially confined to the consideration of two classes of facts, both of them bearing upon the establishment of one general principle of the law of nations—to wit, the obligation of a neutral country to belligerents to do every thing within its power to maintain its neutrality inviolate. This obligation his Lordship appears to

maintain to be fully acquitted by the adoption of such measures as the neutral itself may judge sufficient without regard to any remonstrances of the belligerent. And without entering into argument on the abstract question, he contents himself with vouching in the conduct of the United States in past cases in full justification of the course taken by Great Britain, and complained of by the United States in the progress of the late war. The chief of the cases relied upon by his Lordship is that in regard to certain claims for indemnity for injuries done to the commerce of Portugal by vessels illegally fitted out in the United States.

In order to define the nature of the question thus raised, it would seem to be proper first to note how far his Lordship and I are agreed. After which it may be made more clearly to appear wherein we are so unfortunate as to differ.

But consenting to cite the language and the action of the United States Government in the Portuguese case so freely as his Lordship does as a precedent to justify the latter course of her Majesty's Government now drawn into question, it is obvious that he must have given to them the high sanction of his approbation.

On my side, I have already, in a preceding note, expressed it as my opinion that the grounds taken in that case by my Government were inpregnable.

It necessarily follows that on this point we are fully agreed. Where there is no difference, it is obviously superfluous to continue an argument.

Here I would beg permission to observe that in all the previous examination of this topic I have carefully abstained from the task of affirming that a neutral Power is absolutely responsible for the injurious consequences of any and every violation of neutrality that may originate within its territorial limits, without regard to the circumstances attending each case. The proposition which I have affirmed, and still do continue to insist upon, is, that a neutral is responsible for all injuries which may so ensue to a friendly nation when it fails to exercise all the means in its power for prevention, and constitutes itself the sole judge of the extent to which it will refuse to resort to stronger ones within its reach, when the old ones are proved by the injured party to have been wholly inadequate to the emergency.

With the light shed by this explanation, I now propose very briefly to set forth those points in the respective action of the United States toward Portugal and of Great Britain toward the United States, wherein they appear to me to differ so essentially and radically as to make it impossible to bring them within a reasonable parallel:

1. The United States did not recognize the insurgents in South America as a belligerent until the fact of the presence of their armed vessels was made patent to them on the ocean. But Great Britain did erect the insurgents in the United States into a belligerent before they showed a vessel on the sea, before they organized an army on land, and before they had done a thing but declare an intention to do what they never subsequently executed.

2. Upon the first notice given to the Government of the United States that the neutrality of their ports was violated by South American insurgents making outfits in connection with their own citizens, they immediately put in force the provisions of the existing law; prosecutions were instituted against the foreign agents, as well as citizens; and decrees of restitution were obtained from the the judicial tribunals in the cases of captured property. In other words, nothing was left undone that energy could do to bring to bear existing preventive legislation against these offenders.

One particular instance of the desire to perform these obligations is worthy to be presented to your notice, more particularly inasmuch as it incidentally explains as well the public sense of the extent of the obligation of a neutral Power in similar cases, as of

the responsibility entailed from an insufficient performance of it.

It appears that some of the insurgent emissaries, in conjunction with desperate adventurers of the United States, went to the extent of seizing and occupying two different spots on the American coast, neither of them within the jurisdiction of the Union, nor yet within that of any responsible Power. Here they made bases from which to conduct their hostile operations against the commerce of Spain and Portugal, very much in the manner, but not nearly with so much success, as Liverpool in this kingdom and the port of Nassau were made basis of, against the commerce of the United States, by insurgent emissaries during the late war. These proceedings soon attracted the attention of the President, who dwelt upon the necessity of adopting prompt measures of prevention in his annual recommendations to Congress in the year 1817. The matter was referred in course to the consideration of the Committee of the House of Representatives, which made a report recommending that these establishments should be at once suppressed by force, if necessary.

Among the reasons given for resorting to this summary proceeding are the following, to which I ask a moment of your Lordship's attention:

The immediate tendency of suffering such armaments, in defiance of our laws, would have been to embroil the United States with all the nations whose commerce with our country was suffering under these depredations: and if not checked by all the means in the power of the Government, would have authorized claims from the subjects of foreign Governments for indemnities at the expense of this nation, for captures by our people in vessels fitted out in our ports, and, as could not fall of being alleged, countenanced by the very neglect of the necessary means of suppressing them.

It would be difficult to express in more forcible language the principle established by the law of nations than is done in these sentences. The action recommended was, moreover, performed so promptly, that soon afterwards the President, in a special Message, was enabled to announce that the piratical establishments at Amelia Island and at Galveston had been suppressed. The paramount necessity had been thought to justify the exercise of power even over territory not within the national jurisdiction.

But when I turn my attention to the proceedings of her Majesty's Government as they are noted in the dreary list of my representations and complaints contained in the printed Memorandum furnished to me with his Lordship's note of the 2d inst.; when I perceive real justice to have been so seldom done and so often defeated, however good the intentions may have been; when I note the omission of all reference to the endless remonstrances made by myself against the establishment of a naval bureau in Liverpool, conducted by insurgents mentioned and particularized by name; because not a single step was ever taken either to prevent their action or to punish them—I cannot but be sensible of a difference in the preventive action of the two countries in similar circumstances, which would ever forbid me from classing them together in one connection for a single moment.

8. It is not, however, denied that, in the one case as in the other, several cases of illegal outfits took place which the existing laws proved inefficient to prevent or punish.

In that of the United States the representative of the aggrieved Power made at once a direct appeal to the Government, stating the cause of the difficulty, and soliciting a new movement for the purpose of obtaining from the requisite source stronger powers of prevention; to which that Government immediately responded by recognising the justice of the complaint, and at once adopting the suggestion.

If her Majesty's Government has at any time in this struggle followed that example, it has escaped my observation. I should be glad to be corrected when I affirm that it has done the directly opposite thing.

Here I may be permitted for a moment to refer to a passage of his Lordship's note, which appears to have been called out by a hypothetical description I ventured to give of the consequences that might ensue to the world if neutral nations constituted themselves the sole judges of the degree in which they had done their duty under a code of their own making. To this phrase his Lordship is pleased to retort as follows:

Yet, as far as I can judge, your Secretaries of State always maintained that the United States, as a neutral Power, were the sole judges of the degree in which it had done its duty under a code of its own making.

To which I would beg permission to observe that his Lordship can scarcely presume me to maintain that, in the literal sense, my country does not make its own code of laws. What I did mean to do, was to distinguish by this term a country which was ready to accept suggestions from Foreign Powers, for an improvement of a code designed to give them the protection they are entitled to by treaties as well as by international law, from one which determined to abide by its own system without regard to external representations. By keeping in mind this distinction, in connection with the fact already stated of the action of my Government, it will then appear that his Lordship is in error when he declares that "our Secretaries of State" (meaning those of the United States) "made themselves the sole judges of the degree in which the country had done its duty under a code of their own making." So far was this from being true, that they admitted that the country had not done its full duty, and they proceeded to amend the code at the suggestion of a Foreign Power that claimed to be aggrieved. Hence it is that the "code" was "not of their own making."

If there be a shadow of doubt left on this point, I will proceed to disperse it by the following extracts:

On the 20th of December, 1816, M. Correa de Cerra addresses these words to the Secretary of State:

I apply, therefore, to this Government, in the present instance, not to raise alterations, or to require satisfaction which the Constitution of the United States has not perhaps enabled them to give, but because I know that the supreme Executive of this nation, all-powerful when supported by law, is constitutionally inactive when unsupported by law. What I solicit of him is the proposition to Congress of such provisions by law as will prevent such attempts for the future.

To which application Mr. Monroe, then Secretary of State, replies as follows on the 27th of December, 1816:

I have communicated your letter to the President, and have now the honor to transmit to you a copy of a message which he has addressed to Congress on the subject, with a view to obtain such an extension, by law, of the executive power, as will be necessary to preserve the strict neutrality of the United States in the existing war between Spain and the Spanish Colonies, and effectually to guard against the danger in regard to the vessels of your Sovereign which you have anticipated.

And on the 18th of March Mr. Rush, then Acting Secretary, writes to him as follows:

The act of Congress passed on the 8d of this month, to preserve more effectually the neutral relations of the United States, being upon the subject brought under consideration in your letter to this department of the 20th December last, I have the honor, by direction of the President, to transmit for your information the enclosed copy of it. The President feels sure that your Sovereign will perceive in the spirit and scope of its provisions a distinguished proof of the desire which animates this nation to maintain with his dominions and subjects the most harmonious relations.

But when I turn to the other side of the picture, and view the action which her Majesty's Government has thought it proper to take in answer to similar representations made by me on behalf of my Government; when I observe that the appeals to the existing law have been almost uniformly of a kind to prove its utter inefficiency; and when, upon my making representations as to the expediency of further legislation to enlarge the powers of the Government to an

extent adequate to the emergency, I find that proposal positively declined, it seems to me that here again the parallel sought to be made utterly fails.

I would respectfully ask whether, in the correspondence just laid before your Lordship, there be any language similar to that which his Lordship, in one of the notes which he did me the honor to address me, used to me:

Surely we are not bound to go on making new laws *ad infinitum* because new occasions arise.

Here I would respectfully submit that if his Lordship be right in his assertion that new laws *ad infinitum* are not required by new occasions, it is difficult to explain the reason for the existence of so many legislative bodies and such multiplied statute books. Surely the Government which I represent, would not have so repeatedly acceded to the solicitations of her Majesty's Government as it has done, to "make new laws for new occasions," under any other plea.

But I am in candor bound to observe that, even in this doctrine, there has been during the late struggle a singular variation in the practice of her Majesty's Government, which I ask your Lordship's permission to point out.

At a very early date the exposed nature of the frontier bordering upon Canada became so much a subject of anxiety to my Government that I was instructed to bring the matter to the attention of his Lordship, with a view to the establishment of more effective preventive measures on the Canadian side than were thought to be then within reach. To that end, in the early part of December, 1863, in a conversation which I had the honor to hold with his Lordship, after explaining the reasons of my Government for the danger apprehended in this quarter, I proceeded to propose the adoption of a form of law on the part of Canada resembling that which had been enacted on our part in 1833, to meet a similar emergency then happening there. It is true that for a considerable period I had no reason to presume that this proposal had been more favorably received than any other of the same kind I had been called to make. But when, one year later, information was received of the extreme peril into which Canada had been thrown by the violent enterprise executed by some of the insurgents established in that province upon the peaceful town of St. Albans, I then had the satisfaction of learning from his Lordship that the suggestion had been adopted so far as that her Majesty's Government had recommended to the authorities of Canada to procure the enactment of the suggested law.

In this case, then, it is clear that the imminent danger of a rupture between the two countries had brought on an acknowledgment of the necessity of going on to "make a new law to meet a new occasion." But surely her Majesty's Government would not be willing to give even a color to an inference that nothing but a necessity to avoid a war would be a sufficient motive to induce it to recognize an obligation to make a new law. If the reasons for the suggestion were equally valid in all cases, I fail to perceive upon what principle the nature of the answer should be made to depend upon the merely accidental pressure of the circumstances attending the moment it was made.

Without pressing this topic further, I would then beg to observe that in any event, however the facts attending the Portuguese claim as now explained may be viewed, one thing is indisputable, and that is that there is a wide divergency in the nature of the two cases sought to be brought together. It is plain that neither in the commencement, nor in the proceedings under the existing laws, nor yet in the mode of treating the suggestion of new legislation, was there any resemblance whatever in the tone or the action of the respective Governments. Hence I am constrained to arrive at the conclusion that, whatever may be thought of the conduct of the Government

of the United States in its relation toward Portugal, there is no parallel to it in that of Great Britain toward the United States by which the latter may be tested in the way of justification. Considered as a precedent, for which alone the case seems to have been quoted by his Lordship, I must insist that the evidence entirely fails to establish its authority.

On a general review of these marked differences, considered in the light of the rule of international law laid down at the outset of this letter, it may now be said that one Government appears to have done all that it was reasonably asked to do, and all that it could do, to preserve its neutrality; while the other certainly could have done more, but deliberately refused, and accepted the responsibility of that refusal.

Hence, I must respectfully submit that before his Lordship concludes to adopt the language used by the United States in answer to Portugal, he should be prepared with proof to show that he has likewise adopted the action on which they based it.

I should here gladly close my portion of this long controversy if it were not that his Lordship has, in his note to which I now have the honor to reply, thought fit to open a new matter which I cannot decline to notice.

It has happened in the course of this extended discussion that he has, on more than one occasion, deigned to give me the fruits of his examination of various points of history in my own country. In the first instance, his Lordship was pleased to apprise me that Spain had never received any compensation for the claims of her citizens against the United States. By the aid of a little light I think I succeeded in dispersing that illusion, so that it has not been made to appear again. Again, his Lordship was pleased to inform me that the Enlistment Acts of the respective countries were in their main provisions similar and coextensive. Here I respectfully pointed out to his attention the fact that certain important provisions were contained in the one that were not to be found in the other; provisions which we, at least, regarded as having proved in practice the most efficient in the whole law.

His Lordship, in the note to which I am now replying, has been kind enough to take notice of this difference, and goes on to describe the nature of the provisions he had overlooked; but it appears to be only for the purpose of trying to convince me that in my statement of their superior efficacy I am utterly wrong. Hence, the argument appears to follow somewhat after this fashion: his Lordship having proved to his satisfaction that those provisions of the law which her Majesty's Government did not adopt were as susceptible of evasion as all the others which it did adopt, it must necessarily follow that her Majesty's Government were fully justified in declining a proposal to make any amendment whatever of its existing statute.

To which I would respectfully venture to reply that, even had the result proved to be as supposed, yet the position of her Majesty's Government, if it had consented to make the experiment, would have been, at least in my eye, infinitely stronger than it is now. It might then have replied to all complaints, as the United States replied to Portugal, that every thing in its power had been done, even to the extent desired by the complaining party. Whereas, by a refusal to recognize the justice of the request, it appears to have placed itself in the attitude of a party deliberately assuming the responsibility of declining to use those powers legitimately within its reach wherewith to fulfil its most imperative obligations.

But I am constrained to go further, and affirm that I can by no means subscribe to the opinion which his Lordship is pleased to express as to the ineffective nature of the provisions of the law to which he has referred. It is not without extreme surprise that I find him use the precise language respecting it which I beg permission here to quote:

Now, I contend, first, that for ten years these provisions

proved utterly inefficacious to prevent the fitting out of privateers at Baltimore, as shown by the fact that the complaints of the Portuguese Ministers of captures and plundering by American privateers were more frequent and extended to a larger amount of property after 1818 than they had done from 1816 to 1818.

It is difficult for me to describe the high degree of astonishment with which I have read these lines.

In opposition to this grave affirmation of facts, which I must beg leave to observe no attempt is made to sustain by any distinct evidence, I am driven to take the liberty to affirm on my own side, first, that there is not a tittle of specification to show that the fitting out of privateers continued in any appreciable sense for ten years after the year 1818; and, secondly, that no pretence of that kind is to be found in any of the official remonstrances of the representatives of Portugal to which I have had access, with one single exception, which I propose presently to notice.

In relation to the point of the efficiency of the law, I shall venture, in opposition to his Lordship's reasoning as to what it might be, to confront that which, in the mind of M. Correa de Serra, the person through whom all the transactions passed during much the largest part of the period in question, and who had every opportunity to be familiar with them, it really was.

On the 4th of February, 1819, about two years after it had gone into operation, he deliberately used the following language:

This law, so honorable to the spirit of justice of the Government that enacted it, has also been found in practice the most useful of the laws existing on this subject. Unhappily the continuance and recent aggravations of the evil it was intended to remedy seem to render it necessary that this law may still continue in force for some time. I apply, therefore, to this Government in order to obtain the continuance of this law, so necessary to the peaceful trade of the subjects of my Sovereign, and so honorable to the character of the United States, perfectly confident that my request is according to the just and friendly intentions of the Chief Magistrate and legislators of the Union, and conducive to the consolidation of good harmony between my Sovereign and the United States.

On the 4th of June, 1820, he again writes to the Secretary of State as follows, thanking him for still more effective legislation:

Permit me, sir, to profit of this occasion to offer my thanks to this Government for the law that prohibits the entrance of privateers in the most important ports of the Union, and for the other that declares piracy the landing and committing outrages ashore in foreign lands. I acknowledge the salutary influence of the Executive in obtaining these ameliorations.

Notwithstanding the very great deference with which it is my desire, as well as my habit, to bow to the judgment of his Lordship, if I find myself so unfortunate as to be constrained to express an humble opinion in this case of conflicting authority, I cannot in candor disguise my conviction that the correct view is most likely to be that of M. Correa de Serra.

But, however efficient this law may have been found to be by M. Correa de Serra at so late a date as the 4th of June, 1820, it is now gravely affirmed that it so wholly lost its efficacy for the next ten years following that more property was captured after 1818 than before, and the complaints of the Portuguese Minister for these captures and plundering were more frequent than ever.

The natural corollary, should this statement be sustained, would be that, assuming the exertions of the Government to have continued the same, instead of improving the efficacy of the old law, the addition of the new provisions must have only made it more worthless than it was before, upon which logic might doubtless be based a very good justification of her Majesty's Government for declining to try further legislation altogether. But, unfortunately, the whole argument falls to the ground when its base disappears. It is not denied that some outfits escaped from Baltimore after the year 1818. But it is denied that the complaints made for captures after that time

bore any fair proportion to those made before. It never has been pretended that any law could be made so perfect, or any vigilance could be so complete, as to put an end to the efforts of profligate and desperate men. The grave error into which his Lordship has fallen appears to have originated in an *ex parte* letter written by a Minister from Portugal to Washington thirty years after the date of the events, in which letter and the caption of a list embracing the names of vessels captured, he includes them vaguely within two distant dates of 1816 and 1828. It is, however, remarkable that in the letter itself, containing his own recapitulation of the facts, no date of a capture is given later than 1820. By turning to the original representations made by his predecessors the same fact distinctly appears. I have carefully examined those representations, to trace the dates of the claims embraced in that list, and find much the greater proportion included within the period of residence of M. Correa de Serra ending in that year. So also of the gross amount of value assigned in 1850 as an indemnity for all the damage done during the entire period, which is less than 300,000*l.*, I find a great proportion embraced in an early and more trustworthy representation made by the same person.

Such being the facts, I submit whether, with such small support as can be given by this wholly *ex parte* and vague averment, his Lordship has not a little crossed the verge of international courtesy, by venturing, without any personal experience whatever of American legislation, and in the face of the statement of M. Correa de Serra, which he must have read, to hazard an assertion, and, still more, give rise to an impression like that necessarily produced by the language already quoted. Standing as I do, the defender of the law of my country, it is with regret I am compelled to protest against it as wholly unsubstantiated by any facts adduced, and in every essential particular incorrect.

Neither were those the only cases in which the efficacy of these provisions of law have been fully tested. It is not a very long time since I had the honor of calling the attention of her Majesty's Government to an instance of the remarkable promptness with which action was had under them upon a request made by the representative of her Majesty's Government at Washington. When Mr. Crampton, on the 11th of October, 1855, directed the attention of my Government to the character of a vessel in New York then believed by him to be fitting out as a privateer, it was by virtue of the authority vested in it by one of the sections of this law that she was seized on the 19th of the same month and taken possession of by the officers of the law in such a manner as to prevent all possibility of escape. It required but four days to prosecute the investigation before her Majesty's representative was led to declare his satisfaction with the result to which it had reached, and desired the process to be stopped. When I compare the celerity of this effective proceeding with the feeble nature of the process that ended in the escape of the Alabama, in defiance of the British authority, while I give due credit to her Majesty's Government for good intentions, it seems difficult to assent to the view which his Lordship has been pleased to take of the slight difference in the inefficiency of the legislation of the respective nations. In any event, I cannot but think that future harmony would have been much more certainly secured by a consent to try the experiment in season than by an endeavor, after great injury has been done, to prove that it might not, under any circumstances, have been averted.

But it would appear superfluous to pursue this investigation further in the view of the fact that whether these provisions of the American law were or were not effective, it was never any part of my instructions to urge the adoption upon her Majesty's Government. I was instructed only to suggest the expediency of having recourse to such additional measures as it

might think proper to choose to the end of making the laws of Great Britain more effective. And it was in that form only that her Majesty's Government decided to decline the proposal. The decision was not against the adoption of the law of the United States. It was against doing any thing at all.

Neither in presenting the argument which I have been called to do, in the course of my duty here, can I for a moment permit an implication that my Government has either "made a demand which aims at the diminution of British freedom, or which assumes, without warrant from any previously recognized authority or practice, the existence of an extent of obligation on the part of neutrals toward belligerents, going beyond any which the Government of a free country could have power, though acting with entire good faith, punctually to fulfil."

I feel very sure that my country is quite as jealous of the preservation of the true principles of freedom as Great Britain is, or ever has been, and, further, I fully believe that neither Government would consent to give to the term that latitude which would encourage the power of doing wrong with perfect impunity.

The suggestion which his Lordship has been pleased to make toward the close of his note of improvements in the statutes of both nations, to the end that greater security may be given to the respective nations against those who endeavor to evade its laws, though it appears to me to be in substance little more than it has been the object of my Government from the outset of the war to obtain, is yet one which I cannot but receive with great respect, and which I shall transmit to my Government with pleasure. If the reasons for it are sound now, I am at a loss to perceive why they did not avail during a period when my country could have felt the benefit of them. I trust that I need not repeat how much pain it has given me heretofore to witness the evil consequences that ensue from the alienation of sentiment that has grown out of this struggle between people of the same race, and how cheerfully I welcome every appearance of a desire to bring them back to harmony. Yet, with regard to the proposition immediately before me, I cannot forbear to observe that it is predicated upon an assumption that the legislation of the two countries is now equally efficacious—which I cannot entertain for a moment. On the contrary, the necessity for some action in future seems to me to be inoperative, because that legislation as it now stands is not coextensive.

For it is hardly possible for me to imagine that the people of the United States, after the experience they have had of injuries from the imperfection of British legislation, and a refusal to amend it, would be ready cheerfully to respond to another appeal like that made in 1855 by her Majesty's Representative to the more stringent and effective protection extended to their own. The great preservative of harmony between nations is the full recognition of reciprocity in their obligations. So long as the heavy list of depredations upon American commerce, consequent upon the issue of a succession of hostile cruisers, built, fitted out, armed, manned, and navigated from British ports with perfect impunity, continues to weigh upon their minds, it would be the height of assurance in me to hold out any encouragement to the acceptance of proposals the practical consequence of which might be to place Great Britain in precisely the same degree of security in dangerous emergencies which she herself, when applied to, had deliberately refused to accord to them.

In regard to the parting words of his Lordship's note, I have already too often had occasion to express the sentiments of my Government to leave any doubt of the sense in which I accept them.

In the performance of a duty which has been too often painful, while his Lordship has been officially the person to whom it has been my lot to address my representations, I have been steadily cheered by the

conviction that he was substantially animated by the feeling that prompted those lines. I have the greatest pleasure in believing that, in assuming the duties of his post under his auspices, my country may rest satisfied that the accession of your Lordship has brought about no unfavorable change.

I pray, &c.

CHARLES FRANCIS ADAMS.

Mexico.—Three subjects have given rise to correspondence in connection with our relations with Mexico:

1st. As to the emigration from the South to Mexico.

2d. Respecting the occupancy of Mexico by French troops.

3d. In regard to the steps taken by the so-called Emperor of Mexico, or by European Powers, to obtain from the United States a recognition of the so-called Empire of Mexico.

In reference to emigration from the South, Señor Romero had, in July, 1864, called the attention of Mr. Seward to the address of General Magruder and Governor Vidaurri's reply, claiming that they showed a perfect understanding between the French and their adherents in Mexico and the insurgents in the United States, and intimating that the French Minister to Mexico was working to that end, and that armed emigration from the Atlantic States and from California was in immediate contemplation. Under date of February 6, 1865, Señor Romero notifies Mr. Seward of the understanding that a settlement had been proposed by Napoleon, by virtue of which the Mexican States of Tamaulipas, New Leon, and Coahuila, with parts of San Luis Potosi, Zacatecas, Durango, and Chihuahua, and almost the whole of Sonora and the peninsula of Lower California were to be ceded to France; and that to make so considerable cession of Mexican territory acceptable, the Emperor would plant there a military colony, which would shelter the remainder of the country from filibustering attacks from the United States.

This arrangement, of which he cites evidences from Mexico, California, and Paris, he protests against, reminding the Secretary of a fact slightly resembling the present, when the Representatives of the French Government in Mexico protested against a treaty concluded between Mexico and the United States of much less importance than the present, only because of a vague rumor, more or less founded, that it had been concluded, and before they had official notice of its execution.

Mr. Seward replies, under date of February 25, 1865, that the protest had been placed on file as testimony to the course of Mr. Romero, and additional evidence of the zealous and patriotic discharge of his functions, and for such other purposes and uses as future events may render it necessary to apply it.

On the 20th of April Mr. Romero communicated to Mr. Seward the correspondence between the rebel Gen. Slaughter and the Mexican Gen. Mejia relative to the capture of the

Mexican steamer *Orizaba* by the rebels, under the plea that she was manned by citizens of the United States, as additional proof of the identity of the political interests which exist between the insurgents of this country and the partisans of the French cause in Mexico.

In a communication, dated July 4th, Minister Romero adduces further evidence of Mexican complicity with the rebels, and states that the commander at the post of Bagdad, a Belgian, informed Gen. Slaughter that he had secret instructions to permit the introduction of all the arms and munitions of war that might be desired, and that they should pass freely for the use of the Confederacy.

He also asserts that there was in Monterey an agent of the Confederacy accredited to the agents of the French so-called Imperial authorities, and that Gen. Mejia, the French agent in Mexico, had promised Gen. Slaughter that he would do every thing that he could in his favor. He also shows that the trade which the Confederate States were carrying on with Mexico and other countries through the ports of Mexico, was carried on with the consent of the French agents in Mexico. To all these statements Mr. Seward promises to give all the attention they are entitled to.

July 8. — Minister Romero communicates statements and letters relating to the schemes of Gwin for organizing a colony in Mexico under the protection of France, and showing that Gen. Bazaine, in command of the French forces, had authority to lend him all needed assistance. Gwin writes, after the surrender of Lee: "The startling news from the United States has made the blood of every Southern man and sympathizer run cold with horror. No one will be safe in our native country. I thank Providence my lot has been cast elsewhere, and that very soon I will have a home for my wife and children where they will be safe from oppression."

Mr. Seward writes to Minister Bigelow, July 18th, enclosing these letters, and requests him to present them to M. Drouyn de Lhuys, and frankly informs him that the sympathies of the American people are already considerably excited in favor of the Republic of Mexico, and they are disposed to regard with impatience the continued intervention of France in that country; that any favor shown to the proceedings of Dr. Gwin by the titular Emperor of Mexico or by the Imperial Government of France, with reference to those agents, will tend greatly to increase the popular impatience, because it will be regarded, perhaps justly, as importing danger to, or at least as a menace against the United States. If these statements are to be believed, Mr. Seward assumes, with the sanction of the President, that the Emperor of France has deserted his position of neutrality.

Respecting the French occupation documents are very voluminous, commencing as far back as March 25, 1865, and ending with December 4, 1865.

Mr. Seward, in a letter to Mr. Bigelow, dated September 6, 1865, says the intense popular interest which was awakened by a civil war of vast proportions during the few years past, has tended in some degree to moderate the solicitude which the situation of our foreign affairs was calculated to create; but that interest is now rapidly subsiding, and it may be reasonably anticipated that henceforth the Congress of the United States and the people in their primary assemblies will give a very large share of their attention to questions of an extraneous character, and chief among these is likely to be that of our relations toward France with regard to Mexico. Nor does it seem unwise to take into consideration the fact that the presence of the two military forces of the two nations—sometimes confronting each other across the border—has a tendency, which both of them may well regret, to produce irritation and annoyance. The French Government has not shown itself inattentive to this inconvenience hitherto, while this Government has been desirous to practise equal prudence; but the time seems to have come when both nations may well consider whether the paramount international peace and friendship do not require the exercise of thoughtful and serious attention to the political questions to which I have thus adverted.

November 6, the Secretary of State addresses Minister Bigelow, and represents that the presence and operations of the French army in Mexico, and its maintenance of an authority there, is a cause of serious concern to the United States. Nevertheless, the objection of the United States is still broader, and includes the authority itself which the French army is thus maintaining. That authority is in direct antagonism to the policy of this Government and the principles on which it is founded. Every day's experience of its operations only adds some new confirmation of the justice of the views which this Government expressed at the time the attempt to institute that authority first became known.

The United States have hitherto practised the utmost frankness on that subject. They still regard the attempt to establish permanently a foreign Imperial Government in Mexico as disallowable and impracticable. For these reasons they could not now agree to compromise the position they have assumed. They are not prepared to recognize or pledge themselves hereafter to recognize any political institutions in Mexico which are in opposition to the Republican Government with which we have so long and constantly maintained relations of amity and friendship. The Secretary says in closing: "It is hardly necessary to say we should not be dwelling so earnestly upon this branch of our political relations if it had not been our conviction that these relations at the present moment supersede those of commerce in the consideration of the American people."

Mr. Bigelow, under date of November 30

reports reading the despatch of Mr. Seward to M. Drouyn de L'huy, who thanked him, though he felt obliged to say he derived neither pleasure nor satisfaction from its contents.

Mr. Seward, in a letter to Mr. Bigelow, dated December 14, 1865, says: "I have to acknowledge the receipt of your despatch of November 26. While it is very interesting, it seems to discourage any expectation on our part of an early withdrawal of the French forces from Mexico. It is to be remembered, however, that the opinions on that subject which you have received from M. Drouyn de Lhuys were expressed by him not only without the positive sanction of the Emperor, but also in the absence of knowledge on the part of the French Government of the definitive conclusion of the President on the subject discussed. It is desirable to leave no part of those conclusions open to misapprehension, and it is equally desirable that we shall be authorized to infer that such expositions of the Imperial views as are given us in the name of the French Government are made with the Emperor's approval. I trust that both these ends will have been accomplished before you receive this despatch."

Mr. Seward, December 16, says it is the President's purpose that France should be respectfully informed upon two points: First, that the United States earnestly desire to cultivate sincere friendship with France. Second, that this policy would be brought into imminent jeopardy unless France could deem it consistent with her interests and honor to desist from the prosecution of armed intervention in Mexico—to overthrow the domestic Republican Government existing there, and to establish upon its ruins the foreign monarchy which has been attempted to be established in the capital of that country. In conclusion he says, the United States will not recognize Maximilian, even if the French troops should be withdrawn from Mexico.

The despatches include letters from the French Legation with reference to Mexican refugees in New York and Washington preparing a movement in favor of Juarez. The first one is as far back as July, 1865.

The papers submitted include a confidential letter from M. Drouyn de L'huy to Le Marquis de Montholon, dated Paris, October 18, 1865, saying that he had renewed the assurance of the French Government to withdraw its auxiliary corps as soon as circumstances would allow it. The French Government had been ready to adopt without a moment's delay the basis of an understanding with the Government at Washington. What is asked of the United States was to be assured that it is not their intention to impede the consolidation of the new order of things found in Mexico, and the best guaranty that the French Government could desire would be the recognition of the Emperor Maximilian by the Federal Government.

Mr. Seward, under date of December 6, 1865, writes: "After a review of all the facts, the

President is gratified with the assurance you give of the Emperor's good disposition. I regret, however, to be obliged to say the condition which the Emperor presents is one which seems to be impracticable."

In regard to the recognition of Maximilian's Government a communication, addressed by Señor Arroyo to Mr. Oorwin, dated March 2, 1865, expresses a desire to see Mr. Seward extra officially, and to ascertain whether the recognition of consuls can be obtained because of the embarrassments which exist in consequence of their non-inhabitation, while in Mexico the exercise of their functions has been continued without embarrassment to American consuls, and stating the government, which was that of Don Benito Juarez, does not exist either *de facto* or *de jure*.

August 1st Minister Romero informs Acting Secretary Hunter that Don Luis Arroyo assumes to act as Commercial Agent in New York without an exequatur or other recognition by the United States Government, and asks whether Government recognized the right of Maximilian to make such appointment, or whether, as he believes is the case, this Government only sees in the Republic of Mexico a war between it and France, without recognizing Maximilian even as a government *de facto*. The charge, he intimates, may seem to show that the Government of the United States tacitly recognizes French intervention in Mexico.

Mr. Seward replies, August 9th, that no law of the United States prevents a person from advertising himself as Consul, but that the Government in all its official correspondence has recognized no other Government in Mexico except that of Juarez, and assures him that such Commercial Agent can perform no Consular act relating to the affairs of his countrymen in the United States. To prohibit him from attesting invoices and manifests, says the Secretary, would be tantamount to an interdiction of trade between the United States and those Mexican ports which are not in possession of the Republican Government of that country. The Consuls of the United States in Mexico who have their exequaturs from that Government, only themselves discharge their duties as Commercial Agents in the ports which are not under the control of that Government, in all respects like those which the person Arroyo, in the same way and to the same extent, claims to do in New York, in respect to said ports.

Señor Romero, on the 12th, explains that no positive answer is given to his inquiries, and notifies Mr. Seward that he has submitted the correspondence to his Government, and will wait for his instructions. Mr. Seward makes formal acknowledgment of the receipt of this communication, without further explanation.

A memorandum by Mr. Seward notes that Marquis Montholon, on the 17th of July, called at the Department of State, saying that a special agent had arrived from Mexico, bearing a letter from Maximilian to the President of the United

States, with papers, making certain explanations relative to transactions on the Rio Grande, upon which the Government of the United States had made representations to the Imperial Government of France. The Secretary, on the 18th, after a conference with the President, returned the letter to Count Montholon, saying that the Government of the United States was in friendly communication with the Republican Government of Mexico, and therefore the President declined to receive the letter, or to hold intercourse with the agent who brought it.

Extradition.—An extradition case was argued and decided in the Court of Queen's Bench in England, early in the spring, which settled some important points in reference to the treaty providing for the rendering up of persons charged with offences; the following is a history of the case and the decision:

One Charles Windsor, of New York, made fraudulent entries in the books of the Mercantile Bank of that city, "whereby the bank was defrauded of \$200,000." He escaped arrest by flight to England. Such a fraudulent entry is punishable in the State of New York, under statute, as forgery. Forgery is one of the crimes mentioned in the extradition treaty. Mere fraud or embezzlement is not. At common law, or by the law of England, these fraudulent entries do not amount to forgery. It is of the essence of the crime that a writing should be made or uttered as the writing of somebody else than the writer. Windsor being arrested in England and held for extradition, was brought before the Court of Queen's Bench, *Habeas Corpus*, Chief Justice Cockburn, Mr. Justice Blackburn, and Mr. Justice Shee sitting. The pretension of the prisoner's counsel was that a mere local statute could not create offences, or change the name of offences, and thus bring them within the scope of a treaty if they were not contemplated or intended by both parties in using the words employed in it; that this was not forgery as intended by the Ashburton treaty, or the British statute giving effect to it, and therefore the prisoner was not properly held to extradition under it. Counsel cited the Anderson case, in which a rule had been granted virtually to set aside the ruling of the Upper Canada judges, as a case in point. Mr. Justice Blackburn, however, observed that nothing was definitely decided in that case, only a rule *nisi* granted.

On the other side, the Gerity case was cited, in which counsel urged it had been laid down that the piracy meant must be piracy under the local law, not piracy *jure gentium*, which could be tried anywhere, and therefore not properly the subject of a treaty of extradition. That was an express recognition of the creation of offences by local legislation. It was necessary, therefore, that the offence should be the same in both countries.

The prisoner was discharged on the ground most succinctly put by Mr. Justice Shee: "The offence must satisfy in all material respects the

definition of the offence by the law of both countries. The terms of the treaty must be taken as the language of both countries, and therefore must be construed as used in the same sense and in the sense common to both. In this case the false entry was not really forgery by the general or common law of either country, and therefore was clearly not within the stipulation of this country."

Claim was also made under the treaty with Great Britain, for the delivery of Young and his companions in the raid upon St. Albans, Vermont, during 1864. The matter was heard before Mr. Justice Smith, of Montreal, who discharged the prisoners; his opinion, given at length, treats of the case as follows:

That the evidence before him proved the existence of the following state of facts as constituting the leading features of the attack on St. Albans by the prisoners and others on the 19th October last.

1. That on that day the prisoner, Bennet H. Young, and about twenty other persons, suddenly appeared in the town of St. Albans, took possession of the three banks and pillaged them, at the same time set fire or attempted to set fire to several buildings; took and held a number of the citizens prisoners during the occupation of the town; seized horses, and were finally fired upon and driven out of the town by the people, exchanging shots with them to an extent which does not clearly appear by the evidence, after having been apparently in some degree in possession of the town for about half an hour. During the pillage of one of the banks a sum of money was taken under threats of violence from one Breck, who entered the bank where the prisoners were with the money in his hand, and it is in evidence that one man was shot dead in the streets of the town, though the circumstances of his death are not described. The charge of robbing Breck being the charge embodied in the information before the Court.

That on the 19th October last, Bennet H. Young was an officer in the army of the so-called Confederate States, holding the rank of first Lieutenant, under an appointment made by Mr. Davis of the 16th June, 1864, as signified to Mr. Young by Mr. Seddon, the Secretary of War; that the other prisoners were soldiers in that army acting under his orders, and that in the attack on St. Albans he and his party assumed and declared themselves to be acting as such officer and soldiers on behalf of the Confederate States, alleging that they were detailed for the purpose as a measure of retaliation for the mode in which they asserted the war had been carried on by the United States in the South.

2. That Lieutenant Young received written instructions from Secretary Seddon, bearing the same date as his appointment, authorizing him to organize in the territory of the enemy for special service a company of twenty men from among persons belonging to the Confederate service and then beyond the Confederate States. By one set of these instructions he was ordered to proceed to the British Provinces to report to Messrs. Thompson and Clay, who appear to be agents for the Confederates in this country, to execute such enterprises as should be entrusted to him, to violate no local law, and to obey implicitly their instructions. Another letter of instructions conveys similar orders to him, except that he is directed to Mr. C. C. Clay alone, instead of Messrs. Thompson and Clay.

3. That during the autumn of 1863, Young escaped from prison as a prisoner of war of the United States and reached Toronto, where he remained till the spring of 1864, during which time he attended lectures at the University. That he left Toronto in the spring, declaring his intention of going to Richmond,

that he was in Halifax in May, with the same expressed intention; that he received his appointment and three letters of instructions at Richmond in June; that he returned to Toronto with his papers in July; that he was in Chicago with a large number of Confederate soldiers in August; that he was at St. Catharines in Canada, where Mr. Clay resided, in September; that he was in Montreal about the beginning of October, at St. Johns, C. E., on the 11th of October, and at St. Albans on the 19th of the same month. That Spurr, Huntly, and Teavis were also seen in Canada; Spurr in Toronto in the winter of 1863-'64, and Spurr, Teavis, and Hutchinson at St. Johns at the same time with Young, though leaving that place separately, and that they also were at Chicago in August last.

4. That large numbers of Confederates collected at Chicago in August for the purpose of releasing the prisoners at Camp Douglas. That upon the failure of that enterprise the expedition against St. Albans was organized there by Lieutenant Young from among the Confederates, he raising his party there under instructions from his Government, which he is proved to have exhibited as his authority, and in his capacity as a commissioned officer, which is proved to have been known among the Confederates there. That he then reported the formation of his company, and his doings generally, to Mr. C. C. Clay in St. Catharines, from whom he received a memorandum approving them, and authorizing the expedition against St. Albans; which it is also proved he also then did verbally, and that Mr. Clay gave him a check for \$400 for his expenses.

That if the case rested solely upon the evidence for the prosecution, which merely established the taking of Breck's money by violence, and if as was contended by the applicants he had no right to look into the whole of the facts connected with the case, it would be his duty to commit the prisoners; but that he held that he was bound to consider the pretensions of the prisoners, namely, that they were not robbers, but soldiers and subjects of a belligerent engaged in a hostile expedition against the enemy, under the authority and on behalf of their Government; and that the act charged was a mere incident to that hostile expedition; and that though he had no power to try the case, he must necessarily so far investigate it as to ascertain whether or no the offence committed fell within the provisions of the treaty.

That a state of war existed between the Northern and Southern States, usually described as the Federal and Confederate States; that the British Government had recognized this state of war, and the contending parties as belligerents; and that as belligerents the Confederate States were entitled to all the rights incidental to that quality, and to a recognized state of war, among which must be claimed that of raising armies, and in so doing of appointing officers and levying soldiers; and also that of carrying on the war in such manner *quoad* the other belligerent as they may deem fit and proper. And that no neutral or other power had any jurisdiction or right to adjudicate between the belligerents upon the measures which either of them might choose to adopt in so doing.

That under the circumstances already shown to have been proved, the foregoing rules are applicable to the case now under consideration, and that as Lieutenant Young was a commissioned officer of one of the belligerent armies, in command of a party of the soldiers of that army, carrying out a hostile expedition planned in that capacity, and submitted to and approved by the agent of his Government, to whom he had been referred by that Government for instruction for his guidance; his acts on that expedition in the enemy's country, in so far as they have a hostile character, do not fall within the purview of ordinary criminal law, but within that branch of international law which treats of the laws of war. But that whether or no those acts were in accordance with the modern

or other usages of war, is a question to be settled between the belligerents by such means as the law of nations and the rules of war indicate, and not by a judge in a neutral country; and that the obligation of taking this view of the law is imposed upon this country and upon its judges, by the recognition by the Imperial Government of the belligerent character of the Confederate States.

That the attack on St. Albans must, therefore, be regarded as a hostile expedition, undertaken and carried out under the authority of the so-called Confederate States by one of the officers of their army.

That it was, therefore, both a belligerent act of hostility and a political offence, *quoad* the State now demanding extradition, and that the Ashburton Treaty did not contemplate, nor do the Statutes of the Province authorize the extradition of belligerents or political offenders.

That if any violation of the laws of this empire, with regard to the preservation of neutrality, was committed by the prisoners, which seems doubtful, as the expedition was organized in Chicago, and as only a portion of the party is proved to have passed through Canada, and that separately; that fact would not, in any respect, affect the question of their liability to extradition—as that must depend upon their acts in the territory of the State demanding extradition, and upon the character and intent, in and with which those acts were committed; and that such breach of neutrality, if it existed, could only be complained of and punished by our courts, at the instance of our own Government, as a violation of its law, and of its dignity and sovereignty.

That there is no proof of record that the prisoners acquired any domicile in Canada, or lost their national character by any residence here. That so far from there being *animus manendi*, the *animus revertendi* was plainly indicated; and, in fact, that under the circumstances proved, the acquisition of a domicile here would not affect the question of extradition, though the prisoners might be violating the laws of the country.

That the extraordinary change which has taken place in the United States must have an important bearing upon questions arising under the Ashburton Treaty, when acts for which extradition is sought under the treaty are only claimed to be criminal by one section of the State which was a party to the treaty, while they are approved of and regarded as meritorious by the other.

That, therefore, the prisoners should be discharged. (See BRITISH NORTH AMERICA.)

DRAYTON, Capt. PERCIVAL, U. S. N., chief of the Bureau of Navigation, born in South Carolina, August 25, 1812, died suddenly at Washington, D. C., August 4, 1865. He was a son of the Hon. William Drayton of that State, member of Congress from 1825 to 1833, and a prominent member of the Union party in opposition to nullification in 1830, and who, on account of his sentiments, removed from the State to Philadelphia, succeeding Nicholas Biddle as President of the Bank of the United States. Young Drayton was possessed with an active, untiring, and rather acute intellect, and his knowledge of languages was quite extensive. He entered the navy as midshipman in December, 1827, was promoted to lieutenant in February, 1838, and from that time to 1852 was successively attached to the Brazilian, Mediterranean, and Pacific squadrons. He was then ordered to the National Observatory in Washington, whence he was assigned to ordnance duty in New York. His promotion as

commander was made in 1855. He was in the Paraguay expedition in 1858, and in the subsequent year was ordered to the Brazilian squadron on the staff of the present Admiral Shubrick. In 1860 he was assigned to ordnance duty at the Philadelphia yard; and here it was, in the city which had been adopted as the home of his father when, thirty years before, the seeds of rebellion were sown in his native State—that the outbreak of war found Commander Drayton. The son faithfully sustained the principles of the father, rejected all proffers of place in the South, and was soon in command of the steamer *Pocahontas* in the expedition against Port Royal, under Admiral Du Pont, and on that occasion fought against his brother, Gen. T. F. Drayton (a graduate of West Point), who commanded the Confederate troops at Hilton Head. He was afterwards transferred to the *Pawnee*, in which vessel he was of great service on the Southern coast. He made repeated reconnoissances up St. Helena Sound and adjacent waters; was at the capture of Fernandina and St. Mary's, the occupation of Stono River, etc. He was promoted to captain on the 16th of July, 1862, and in the fall of that year was ordered to the monitor *Passaic*, the second of that class of vessels. In this iron-clad he bombarded Fort McAllister, and was in the first attack upon Fort Sumter, under Admiral Du Pont. After a short ordnance duty in New York, he was appointed Fleet Captain of the West Gulf squadron, under Admiral Farragut, and was with him in the Hartford at the time of the fight with and capture of the rebel fleet in Mobile Bay, August 5, 1864. It was as flag officer that Captain Drayton was particularly distinguished. Having the most refined and gentlemanly manners, and speaking with great fluency and correctness French, Spanish, and Italian, his services in that position were desired and sought for by every commanding officer with whom he sailed. He remained with Admiral Farragut until the return of that officer to New York, and perhaps no one in the navy enjoyed his confidence to a greater extent than Capt. Drayton. On the 28th of April last he was appointed chief of the Bureau of Navigation, as successor to Rear-Admiral Davis. His disease was strangulation of the bowels, and the fatal result was reached after a brief illness.

DUANE, Hon. WILLIAM J., Secretary of the United States Treasury under President Jackson, born in Clonmel, Ireland, in 1780, died at Philadelphia, September 26, 1865. His father was born in this country, but at eleven years of age was taken to Ireland to be educated for a Roman Catholic priest. At the age of nineteen he married a young Protestant lady, for which he was disinherited. Subsequently he learned the printing trade, became an editor and publisher, and in 1795 removed with his family to America, and was for some years editor of the 'Philadelphia Aurora,' then an important political paper.

William J., the subject of this sketch, like his father, learned the trade of printer, and was at one time a dealer in printing paper and printing ink. He studied law, and in 1803 was admitted to the bar. He repeatedly represented the city of Philadelphia in the Pennsylvania Legislature, and was the author, in 1821, of the resolutions against the admission of Missouri into the Union as a slave State. He also filled several minor offices in the city, his attention being principally devoted to the public schools, in which he took a deep interest, as well as in every thing pertaining to the internal improvement schemes of his State. He was the legal agent for many years of Stephen Girard, and in 1831 wrote the famous will by which Girard transmitted his vast inheritance to the city of Philadelphia. By the terms of this will Mr. Duane was made a trustee, and, subsequently, a director of Girard College, and one of the five executors of the Girard estate. Two years after this will was executed Mr. Duane abandoned his practice to accept office, and was appointed by President Jackson Secretary of the United States Treasury. It is said he accepted with reluctance. A few months subsequently, upon receiving an order from the President to remove the United States deposits from the United States Bank at Philadelphia, he felt it his duty to refuse, and in consequence was dismissed in September, 1833. His place was immediately filled by Roger B. Taney, who agreed in the financial policy of the President, and the deposits were removed. Mr. Duane retired to the practice of the law at Philadelphia, and since the death of his father, in 1835, had withdrawn from public life. He was considered remarkably well informed upon local history.

DUPIN, ANDRÉ MARIE JEAN JACQUES, a French lawyer and politician, born in Vazzy, department of the Nièvre, February 1, 1783, died in Paris, November 9, 1865. He was the oldest of three brothers, each of whom became eminent, was educated for the bar, and was admitted to practice early in the present century. In 1815 he was elected to the Legislative Chamber, and from that time was concerned in nearly every important cause, political or civil, which came before the tribunals. He was again elected to the Chamber in 1827, and then took his place among the opposition. He had previously established himself in the favor of Louis Philippe, and in 1830 he assisted at the revolution which dethroned Charles X. The new government received him as a member, and shortly afterwards rewarded his fidelity with the post of Procureur General of the Cour de Cassation. Later he became President of the Chamber, an office from which he retired after eight years' service. On the fall of Louis Philippe, M. Dupin resigned himself to fate and became President of the republican Chamber, and retained even after the *coup d'état* of 1852 his office of Procureur General. He was, however, shamed into retiring when the confiscation of

the Orleans property was decreed, but even then he did not wholly quit public life. In 1857 he again accepted the office of Procureur, justifying his doing so by the observation that he "had always belonged to France, and never to parties." For the latter portion of his life he had devoted his time mainly to an attempt to reform the present luxurious, extravagant style of dress and living. A few years since he published a pamphlet, which had an extensive sale, entitled "*Le Luxe Effréné des Femmes*," and in which he demonstrated that the present system of extravagance among women was the great cause of many of the troubles in the world and the precursor of greater ones in the future.

DU PONT, SAMUEL FRANCIS, U. S. N., a rear-admiral in the navy of the United States, born at Bergen Point, N. J., September 27, 1803, died in Philadelphia, Pa., June 23, 1865. He was of French origin on his father's side, his grandfather being P. S. Du Pont de Nemours, the intimate personal friend of Madison and Jefferson. He was appointed a midshipman in the navy by President Madison, December 19, 1815. His appointment was made from Delaware, of which State he became a resident in his boyhood. His first cruise was in the *Franklin*, seventy-four, under Commodore Stewart; from this he was transferred to the sloop-of-war *Erie*, Captain Ballard. His second cruise was on the Mediterranean station in the *Constitution*, and twice subsequently he returned to the Mediterranean for three years in the *North Carolina*, seventy-four, and in the sloop-of-war *Ontario*. He also served on the West India station and on the coast of Brazil in the frigate *Congress*, under Commodore Biddle. On the *North Carolina* he had been promoted to be sailing master, and in 1826 he was commissioned Lieutenant and ordered to the schooner *Porpoise*. From 1835 to 1838 he served as executive officer on the *Warren* and *Constellation*, and from 1838 to 1842 on the *Ohio*, the flag-ship of Commodore Hull. In 1845, having been promoted to the rank of commander, he was ordered to the Pacific in command of the frigate *Congress*, bearing the flag of Commodore Stockton, and in 1846 was transferred to the corvette *Cyane*. The outbreak of the Mexican war brought his services into request. In the *Cyane* he captured San Diego, and landed John C. Fremont. He cleared the Gulf of California of Mexican vessels, capturing and destroying thirty. He took possession of La Paz, the capital of Lower California, spiked the guns of San Blaz, and established the blockade of Mazatlan, which latter port he subsequently assisted in capturing, leading the line of boats which entered the main harbor under the orders of Commodore Shubrick in November, 1847. He was next despatched in the *Cyane* to defend Lower California against the Indians and Mexicans. He covered La Paz until it could be fortified, landed at San José with a force of one hundred marines and sailors, de-

feated and scattered a largely superior force of Mexicans, and rescued a small party under Lieut. Heywood, who were beleaguered in the Mission House. He led or took part in a number of expeditions into the interior, capturing many prisoners and cooperating with Col. Benton and Lieutenant (now Maj.-Gen.) Halleck, approaching from the north, scattered the Mexicans and Indians, and gained complete possession of the peninsula of California. In 1848 he returned to Norfolk in the *Cyane* after an absence of three years. After a service of forty years, sixteen as lieutenant and thirteen as commander, he was made a captain in 1855. In 1857 he was ordered to the command of the *Minnesota*, and sent on a special service to China, with W. B. Reed minister to that empire. After a cruise of two years, during which he visited Japan, Western India, and Arabia, he returned in June, 1859, to Boston, in the *Minnesota*. On January 1, 1861, he was appointed to the command of the Philadelphia navy-yard, relieving Commodore Stewart. Here he was stationed at the commencement of the war, and by his promptitude and experience rendered great service in securing Washington. In June, 1861, he was made president of a Board called at Washington to establish a plan of naval operations from the examination of the records of the coast survey and other data.

On the division of the Atlantic squadron into two distinct commands, in September, 1861, Capt. Du Pont was appointed to the command of the South Atlantic squadron, where he remained until his recall on the 3d of June, 1863. His first enterprise afloat with his squadron was the brilliant bombardment and capture of Forts Beauregard and Walker, at the entrance of Port Royal Harbor, S. C., and the occupation by a joint land and naval force of the islands adjacent. This was justly regarded as one of the finest and most admirably conducted naval conflicts of the war. He also rendered essential service in the establishment of a very close blockade of the coast of Carolina and Georgia; in the occupation of Tybee Roads and Tybee Island, which gave the army their base for the reduction of Fort Pulaski; in the expedition for the destruction of the batteries on the mainland at Port Royal ferry; in the capture in March, 1862, of Cumberland Island and Sound, Amelia Island, the river and town of St. Mary's, Ga., Fernandina, Florida, and Fort Clinch. The inlets along the coast were also occupied or carefully examined, the rivers ascended, Jacksonville and St. Augustine, Florida, taken, and the yacht *America*, which had been sunk, was raised. At Charleston alone the blockade was ineffective, the force at command not being sufficient to cover completely the circuit from the bay to Stono, and the demands upon the navy rendering the reinforcement of the squadron impossible. The capture of Charleston, it was hoped, would complete the blockade, and in April, 1863, a resolute attempt was made, the rear-admiral himself leading the attack to

bombard, and if possible pass Fort Sumter. It failed, one of the iron-clads being sunk and others disabled, and the brave admiral did not feel warranted in renewing the attack. The Secretary of the Navy deeming him distrustful of the iron-clads of the Monitor type, removed him from the command of the squadron, but his successor, with a larger fleet and an efficient coöperative land force, was no more successful.

On the 16th of July, 1862, while in command of the squadron, Capt. Du Pont was made a rear-admiral, ranking second in the list. After his withdrawal from the South Atlantic squadron he held no active command, but served, as occasion required, on naval commissions and courts-martial. He had been active in the gen-

eral improvement of the navy during all his period of service; had assisted in the organization of the Naval Academy, and was a member of the Light House Board; had twice aided in revising the Rules and Regulations of the Navy; was a member of the Naval Retiring Board; and had at various times contributed important papers on subjects relating to the interests of the naval service. Among these one on coast defences has been republished and widely circulated. He was a brave and accomplished sailor, a fearless and greatly beloved commander, an earnest, sincere, and consistent Christian. His death was occasioned by a sudden attack of quincy, a disease to which he had been for some years subject.

E

EASTLAKE, Sir CHARLES LOCK, Knight, D.C.L., LL.D., an English painter, president of the Royal Academy, London, born in 1793, at Plymouth, England, died at Florence, Italy, December 24, 1856. He began the pursuit of his artistic studies at an early age under Fuseli at the Royal Academy, of which institution he was made president in 1850, having given evidence of great proficiency in his art by a variety of pictures, of which his "Christ Weeping over Jerusalem," "Escape of Francesco di Carrara," "Pilgrims arriving in sight of Rome," "Christ blessing little Children," "Hagar and Ishmael," and the "Raising of Jairus's Daughter," are the best. Among his early paintings may be mentioned an interesting portrait of Napoleon I., as he appeared on board the Bellerophon, and the most famous of his poetical pictures is an illustration of a passage in Byron's "Dream." Having spent several years in Italy and Greece, he exhibited, in 1828, at the Royal Gallery, views of the bridge and castle of St. Angelo, and other pictures illustrative of Italian life. In 1827 he was elected an associate of the Royal Academy, and in 1830 he attained the rank of Royal Academician. About this time he began to devote himself more especially to religious subjects. In 1841 he was appointed to the office of Secretary to the Royal Commission of Fine Arts, and in 1843 Keeper of the National Gallery. In 1855 Sir Charles Eastlake was appointed Director of the National Gallery. His appointment seems to have left him but little leisure for art, as he has produced but few pictures from his easel for some time past. He did, however, find time to cultivate the literature of the fine arts, a field of labor most congenial to his tastes, and in which his reputation will be more lasting than from his paintings. His notes to "Kugler's Handbooks of Painting," which were translated by Lady Eastlake, are very valuable. His "Contributions to the Literature of the Fine Arts," and his "Materials for a History of Oil Painting," are works of such great utility and merit

as to excite our regrets that their author had not lived to complete the comprehensive work of which they form so admirable a beginning. Like the late Count Cavour, Sir Charles fell a victim to professional prejudice in the adoption of a merciless course of blood-letting, which so completely prostrated him as to destroy the power of taking nourishment.

ECUADOR, a Republic in South America. President (1865 to 1869), Geronimo Carrion. There are three ministerial departments, two of which were, in 1865, filled by Manuel Bustamante, who was regarded as the actual ruler of Ecuador. He is a statesman of decided conservative views. Minister of the United States near the Government of Ecuador, Friedrich Hassaureck (appointed in 1861). The republic is divided into three departments: Guayaquil, Quito, and Assuay; having together an area of 240,000 square miles, and 1,040,371 inhabitants, of whom 600,000 are whites. Capital, Quito, with 76,000 inhabitants. Chief port, Guayaquil. Receipts of the Government in 1858, 991,750 piastres; expenditures, 1,000,000 piastres. The republic has neither a standing army nor a fleet. The value of the exports from the port of Guayaquil amounted, in 1864, to 2,953,649 piastres (chief article of export cocoa, 2,028,000 piastres). The number of ships entering the port of Guayaquil was, in 1864, about 220. In May, 1865, the chiefs of the Democratic party, Urbina, Franco, and Robles, made a new insurrectionary movement, and succeeded in seizing, in the port of Guayaquil, a war-steamer of the Government. They defeated the Government troops, under Col. Lara; but, in June, President Moreno seized a mail-steamer sailing under the British flag, attacked and captured the three small steamers of the insurgents, and put an end to the rebellion. Twenty of the captured rebels, among them Generals Franco, Marcos, and Robles, were shot. The people of Ecuador deeply sympathized with the republics of Chili and Peru in their struggle against Spain.

EUROPE. The only change in the territorial division of Europe which was effected in 1865, was the annexation of the duchy of Lauenburg to Prussia, in consequence of a separate treaty between Prussia and Austria. The fate of Schleswig and Holstein remained in suspense; Prussia assuming, provisionally, the government of Schleswig, and Austria that of Holstein. (*See PRUSSIA and SCHLESWIG-HOLSTEIN.*)

The death of the king of Belgium gave rise to a report of an imminent partition of Belgium between France and Prussia, or France and Holland, but the Government of France disavowed all designs of this kind. (*See BELGIUM.*)

No war disturbed the peace of Europe during the year. There were slight disturbances in Spain and Italy, but these were suppressed without difficulty. In Ireland, considerable excitement was produced by the movements of the Fenian Brotherhood, whose avowed object was the dissolution of the union between England and Ireland, and the establishment of an Irish Republic. The arrest by the English Government of a number of the leaders, among them the Head Centre for Ireland, James Stephens, prevented any outbreak; and the Fenian excitement, after the conclusion of the trial of the prisoners, most of whom were sentenced to long imprisonment, considerably abated.

While, however, the peace of Europe itself was not disturbed, many of the European Powers carried on wars in other parts of the world. Russia continued to extend her territory in Asia; France had to fight in Mexico and against the Algerian insurgents; England had a war in India; Spain was engaged in conflicts with Peru and Chili. The relations of England and France to the United States were more amicable than in former years, and intervention and mediation in view of the approaching end of the rebellion, were no longer mentioned. After the surrender of Gen. Lee, all the Governments of Europe announced that they should no longer acknowledge any belligerent rights of the Confederates. On learning the news of the assassination of President Lincoln, all the Governments officially expressed their condolence with the loss of the United States; still it was evident that the expression of sympathy on the part of the Liberals of Europe was much more cordial than on the part of the Governments.

England, Italy, and Spain elected, in the course of the year, representatives of the people in the lower houses of the Parliaments. In England, the issue was between the Tories on the one hand, and the combined Ministerialists and Radicals, classed together under the name of Liberals, on the other. The majority of the latter during the electoral campaign advocated a reform of the electoral law, and a large extension of the suffrage, as the measure which the country most needed; while the Tories, though most of them admitted the

necessity of a partial reform, severely denounced the principles of democracy, toward which, as they charged, the Liberal party was steadily drifting. The issue of the hot contest was a decisive defeat of the Conservatives. The death of Lord Palmerston, and the accession of Earl Russell to the Premiership, greatly increased the hopes of the Liberal party for a speedy success of the reform movement. In Italy, the "Left," the most progressive of the political parties, succeeded in increasing the number of its members in the House of Deputies from fifty to over one hundred. The "Right," or "Catholic" party, although making the most strenuous efforts, was unsuccessful, counting no more than about one dozen members in the new house. The Government, as before, controlled the majority, though considerably reduced by the success of the "Left." (*See ITALY.*) In Spain, the Progressistas and the Democratic parties abstained again from taking part in the election, which resulted, therefore, in the return of an immense majority for the candidates of the Government. (*See SPAIN.*)

At the municipal elections, which, in July, were held throughout France, the Government of that country abandoned its practice of openly proposing to the people "official" candidates, although it used its influence for the success of its candidates no less vigorously than in the years before. The result of the election did not materially differ from that of the general election in the previous year. In a great majority of the towns, the Government candidates were elected, while the Opposition displayed the same strength as before in the large cities. The Opposition gained a considerable number of votes, and a few members of the Corps Legislatif, at the supplementary elections for members of this body held in 1865. The expectations of internal reform in France were totally disappointed. (*See FRANCE.*) An important victory was gained by the Progressive party of Sweden, which, with the active support of the Government, prevailed upon the Houses of Nobles and the Clergy to consent to a radical constitutional amendment, in virtue of which a legislature composed of two elective Houses, is to take the place of the former four Houses of the Nobles, the Clergy, the Burghers, and the Peasants. (*See SWEDEN.*) In Austria, the Emperor, seeing the impossibility of prevailing upon Hungary and other eastern provinces of the Empire to accept the Constitution of 1851, suspended this Constitution, in order to make an attempt to reconcile the Hungarians by far-reaching concessions. This measure, and those of a like kind that followed it, were received with great dissatisfaction in the German provinces, the Diets of which protested against the Imperial rescript as a violation of the Constitution; while most of the non-German provinces sent to the Emperor addresses of thanks for giving greater guarantees of equal rights to the non-German nationalities of the Empire than they found in

the old Constitution. (*See AUSTRIA and HUNGARY.*) In Prussia, the breach between the King and the people continued as before, without, however, leading to any practical consequence. (*See PRUSSIA.*) The Federal diet of Germany passed several resolutions contrary to the views of Austria and Prussia, but was too timid and powerless to push matters to an open rupture. (*See GERMANY.*) In Russia, the first elective provisional Diets were held. The nobility of several petitioned the Emperor to grant a Constitution of the Empire, embracing a legislature of two Houses; but the Emperor severely censured this movement. (*See RUSSIA.*)

The hope of effecting a telegraphic communication between Europe and America was again doomed to disappointment; but the Atlantic Telegraph Company at once resolved not to relinquish the object; and it has since officially announced that in June, 1866, another effort will be made to raise the old cable, and to lay a new one. The interest in a telegraphic connection of Europe with America is so great that, besides the English-American Company, several new companies have been formed in other countries, to try different routes for the same object. But all of these are likely to be forestalled by the company which has undertaken to connect Eastern Asia with the western coast of North America.

An interesting fact in the commercial history of Europe is the great difference in the movements of shipping of the several countries during the period from 1856 to 1868. Looking at the ratio of increase only, we find Norway at the head of all, having had a total addition to her mercantile navy in the period mentioned of 169,000 tons, or 6 per cent. annually. Next comes Hanover, with a total increase of 45,000 tons, or 6 per cent. annually; Prussia, with a total increase of 105,900, or 5.5 per cent. annually; Hamburg, with a total increase of 66,100 tons, or 5.5 per cent. annually; Bremen, with a total increase of 54,000 tons, or 5.1 per cent. annually; Italy, with a total increase of 153,900 tons, or 4 per cent. annually; Mecklenburg, with a total increase of 33,600 tons, or 4 per cent. annually; Oldenburg, with a total increase of 19,400 tons, or 3.3 per cent. annually; Great Britain, with a total increase of 878,000 tons, or nearly 3 per cent. (2.85 per cent.) annually; Sweden, with a total increase of 44,100 tons, or 2.4 per cent. annually; France, with a total increase of 127,000 tons, or 1.9 per cent. annually; Denmark, with a total increase 43,400 tons, or 1.8 per cent. annually; Spain, with a total increase of 40,000 tons, or 1.4 per cent. annually; Russia, with a total increase of 12,000 tons, or 0.5 per cent. annually; Lubeck, with a total increase of 500 tons, or 0.4 per cent. annually. In contrast to the rapid increase there is a perceptible diminution in the commercial shipping of other nations. The Dutch commercial fleet actually lost, in the same period, a total of 28,100 tons, or 0.7 per cent. annually; Greece lost a total of 3,600 tons, or 1.5

per cent. annually; Austria lost a total of 53,800 tons, or 2 per cent. annually; and Belgium lost a total of 14,800 tons, or 3.6 per cent. annually. By summing up and comparing these several items with each other, it will be found that while in the septennial period mentioned all Europe added 1,980,000 tonnage to the capacity of her mercantile fleet (possessing ships of 11,892,600 tons in 1868, against 9,912,000 in 1856), Prussia and the minor States of Germany augmented their commercial strength by 324,500 tons, against a corresponding increase in Great Britain by 878,000 tons; in Italy, by 153,000 tons; and in France by 127,000 tons. Thus, while the British, German, French, and Italian shipping are on the ascending scale, the Austrian is falling off, and the Russian can be hardly said to be making progress.
